A GRIT needs to be established in a state that grants spendthrift protection to a trust for the settlor's benefit, because subjecting the trust's assets to the donor's creditors may cause the gift to be wholly incomplete.

III.B.2.c.i. Completed Gift to Self-Settled Trust

If a court in a creditor-friendly state cannot obtain jurisdiction over the trustee or over the trust's assets, then the rules of the protective state would tend to prevail.[6508]

Uhl v. United States, 241 F.2d 867 (7th Cir. 1957), held no estate inclusion beyond that attributable to what the grantor had absolute right to receive at the time of death. Although the trustee had uncontrolled discretion to distribute more, creditors could not reach anything beyond the fixed sums to which the grantor was entitled.

[6505] See part III.B.5.e.ii Code § 6166 Deferral.

[6506] The sale might be a formula sale, buying back the portion of business assets having a value equal to the remaining value of the note, as finally determined for federal gift tax purposes. See part III.B.3 Defined Value Clauses in Sale or Gift Agreements or in Disclaimers.

[6507] For the latter, consider whether Code § 1014(e) might apply and whether the assets should therefore be bequeathed to persons other than the irrevocable grantor trust.

[6508] *Hanson v. Denckla*, 357 U.S. 235 (1958).

Rev. Rul. 76-103 had the following facts:

> The grantor created an irrevocable inter vivos trust on September 2, 1975. During the lifetime of the grantor, trust income may, in the absolute discretion of the trustee, be paid to the grantor or accumulated and added to principal. Any amount of trust principal may be distributed to the grantor at any time, in the absolute discretion of the trustee. Upon the death of the grantor, any remaining principal is payable to the issue of the grantor. The surrounding facts indicated that the trust had not been created primarily for the benefit of the grantor.
>
> The trust was created in State X and has been administered under the laws of that State from the date of the transfer. The terms of the trust include, however, a provision allowing the trustee, in its absolute discretion, to move the situs of the trust to any other State.
>
> Under the law of State X, the trust is a "discretionary trust" and the entire property of the trust may be subjected to the claims of the grantor's creditors, whenever such claims may arise.
>
> The question presented is whether the transfer in trust is an incomplete gift for Federal gift tax purposes because the assets of the trust are subject to the claims of creditors of the grantor.

Rev. Rul. 76-103 quoted Reg. § 25.2511-2(b), (c) then reasoned:

> In *Alice Spaulding Paolozzi*, 23 T.C. 182 (1954), *acq*. 1962-1 C.B. 4, a grantor empowered the trustees to determine how much of trust income should be distributed, in their absolute discretion, in the best interest of the grantor. Any unpaid income was to be added to principal. The Tax Court agreed with the petitioner's interpretation of Massachusetts law as allowing both prior and subsequent creditors of the grantor to reach the maximum amount of income that the trustees could in their discretion pay out to the grantor. The grantor could thus effectively enjoy all the trust income by relegating the creditors to the trust for settlement of their claims. Therefore, the court held that no taxable gift of trust income had been made.
>
> In the present case, the law of State X is similar to that of Massachusetts when the *Paolozzi* case, above, was decided. As long as the trustee continues to administer the trust under the law of State X, the grantor retains dominion and control over the trust property.
>
> Accordingly, in the instant case, the grantor's transfer of property to the trust does not constitute a completed gift for Federal gift tax purposes.
>
> If and when the grantor's dominion and control of the trust assets ceases, such as by the trustee's decision to move the situs of the trust to a State where the grantor's creditors cannot reach the trust assets, then the gift is complete for Federal gift tax purposes under the rules set forth in section 25.2511-2 of the regulations (quoted above).
>
> Furthermore, if the grantor dies before the gift becomes complete, the date of death value of the trust corpus will be includible in the grantor's gross estate, for Federal estate tax purposes, under section 2038 of the Code because of the grantor's retained power

to, in effect, terminate the trust by relegating the grantor's creditors to the entire property of the trust.

Rev. Rul. 77-378 had the following facts:

> On January 16, 1975, approximately one half of the grantor's income- producing property was conveyed to an irrevocable inter vivos trust created on that day. The terms of the trust require the trustee (a corporation) to accumulate income and add it to principal during the lifetime of the grantor. Upon the death of the grantor, the trust will terminate and its assets will be paid to the grantor's spouse and children.
>
> Pursuant to the trust agreement the trustee was empowered to pay to the grantor such amounts of the trust's income and principal as it determines in its absolute and uncontrolled discretion. However, under the applicable state law the trustee's decision whether to distribute trust assets to the grantor is entirely voluntary. The grantor cannot require that any of the trust's assets be distributed to the grantor nor can the creditors of the grantor reach any of the trust's assets.

Rev. Rul. 77-378 quoted Reg. § 25.2511-2(b) then reasoned:

> Even though a trustee may have an unrestricted power to return all of the trust's assets to the grantor, if the grantor's interest in the trust is not enforceable either by the grantor or on the grantor's behalf, then the grantor has parted with dominion and control over the property transferred into trust. See section 25.2511-2(b) of the regulations. Furthermore, if the grantor retains such a mere expectancy that the trustee will distribute trust assets to the grantor rather than an enforceable interest in the trust, the expectancy does not prevent the completion or reduce the value of the gift. *Herzog v. Commissioner*, 41 B.T.A. 509 (1940), *aff'd*, 116 F. 2d 591 (2nd Cir. 1941).
>
> In *Herzog*, the grantor transferred assets in trust with instructions to the trustee to pay the income to the grantor or the grantor's wife at such times and in such amounts as the trustee should deem proper with a remainder over to certain named beneficiaries. On the same day the trust was created the trustee directed that all of the trust income be paid to the grantor. The grantor argued that for gift tax purposes the value of property transferred in trust should be reduced by an amount representing the value of the income for life receivable by the grantor if the trustee in the trustee's uncontrolled discretion should so direct. The Board of Tax Appeals stated:
>
>> There would be no doubt of his nonliability for gift tax upon the value of the income if he had reserved to himself the absolute right to the income for his life. But he made no such reservation. He transferred the entire property. Whether he would enjoy any of its income depended entirely on the trustee, who, in his uncontrolled discretion, could deprive him of it completely. It was only by virtue of the trustee's direction, which on this record must be regarded as entirely voluntary. that the donor received any of the income; and this direction might be terminated whenever the trustee deemed it proper that the wife should receive the income. Such a hope or passive expectancy is not a right. It is not enough to lessen the value of the property transferred. [41 B.T.A. at 510] (citations omitted).
>
> Accordingly, the Board held that since the transfer by the grantor was complete the gift tax was, by its own terms, applicable to the value of the entire property transferred.

> In the instant case, the grantor has parted with dominion and control over the property that the grantor transferred into trust. Although the trustee has an unrestricted power to pay trust assets to the grantor, the grantor cannot require that any of the trust's assets be distributed to the grantor nor can the grantor utilize the assets by going into debt and relegating the grantor's creditors to the trust. See *Paolozzi v. Commissioner*, 23 T.C. 182 (1954), *acq.*, 1962-2 C.B. 5. Whether the grantor would enjoy any of the trust's assets is dependent entirely on the uncontrolled discretion of the trustee. Such a hope or passive expectancy does not lessen the value of the property transferred. Accordingly, the Federal gift tax is applicable to the entire value of the property transferred to the trust by the grantor.
>
> In Rev. Rul. 62-13, 1962-1 C.B. 181, the Service announced that it would follow the decisions in *Commissioner v. Vander Weele*, 254 F. 2d 895 (6th Cir. 1958) and *Gramm v. Commissioner*, 17 T.C. 1063 (1951), *acq*., 1962-1 C.B. 4. In the *Vander Weele* and *Gramm* cases the courts held that the grantors of irrevocable inter vivos trusts had not completely parted with dominion and control over the trust assets since they retained enforceable rights to some or all of the trusts' assets. For example, in *Vander Weele*, the court noted that under state law the settlor could in actuality retain the economic benefit and enjoyment of the entire trust income and corpus by borrowing money or by selling, assigning, or transferring the grantor's interest in the trust fund and relegating the grantor's creditors to the trust fund for payment. 254 F.2d at 898. Thus, in view of the settlor's retained rights there was no assurance that anything of value would pass to the remaindermen and the gift was entirely incomplete. See *Holtz v. Commissioner*, 38 T.C. 37 (1962), *acq*., 1962-2 C.B. 4. Also, the court in *Gramm* made it clear that where the grantor reserves no interest, the gift is complete. It did this by distinguishing Herzog on the ground that there "the grantor did not reserve the income to himself, and whether he received it or not was in the uncontrolled discretion of the trustee." However, Rev. Rul. 62-13 may be read to imply that broad powers given to a trustee to invade trust income and corpus for the benefit of the grantor may be sufficient to render the gift incomplete even though the grantor's interest in the trust assets is unenforceable. Therefore, Rev. Rul. 62-13 is hereby clarified to remove any implication that an entirely voluntary power held by a trustee to distribute all of the trust's assets to the grantor is sufficient to render a gift incomplete either in whole or in part.
>
> Accordingly, in the present case, the Federal gift tax is applicable to the entire value of the property transferred to the trust by the grantor.

Some might read that as holding that the IRS will look only to the law of the state in which the trust has situs. However, Rev. Rul. 2004-64, Situation 3, refers to whether applicable local law subjects the trust's assets to the grantor's creditors; Rev. Rul. 2004-64, which is discussed further in fns. 6961-6980, is found in part III.B.2.j.iv.(a) Grantor Trust Reimbursing for Tax Paid by the Deemed Owner.

Outwin v. Commissioner, 76 T.C. 153 (1981), provided an Official Tax Court Syllabus:

> Edson S. Outwin created four irrevocable trusts under which he was to be the sole potential beneficiary during his lifetime. The trustees were authorized to distribute income or corpus to him in their absolute and uncontrolled discretion. His wife, Mary M. Outwin, was named a beneficiary in the event she survived her husband. The trust agreements further provided that all discretionary distributions to Edson S. Outwin required the prior written consent of his wife. Parallel provisions were incorporated in an

irrevocable trust created by Mary M. Outwin. Under her trust agreement any discretionary distributions she received required the prior written consent of her husband. None of the trusts have made any discretionary distributions; consequently, neither spouse has been asked to give his or her consent to such distributions. Held: Under Massachusetts law the creditors of the grantor of each trust could reach the trust assets for satisfaction of claims, notwithstanding the veto power over discretionary distributions vested in the grantor's spouse. Thus, the grantors failed to relinquish dominion and control over the property and the transfers were incomplete for gift tax purposes. *Paolozzi v. Commissioner*, 23 T.C. 182 (1954), followed.

The entire opinion finding for the taxpayers is below:

We must decide whether the transfers by the petitioners to their respective discretionary trusts in 1969 constituted completed gifts subject to tax under section 2501. The gift tax provisions of the Internal Revenue Code do not define the term "completed gift"[2] but it is well settled that a conveyance in trust will not be subject to gift tax where the donor retains dominion and control over the property transferred. *Estate of Sanford v. Commissioner*, 308 U.S. 39 (1939); *Burnet v. Guggenheim*, 288 U.S. 280 (1933); *Estate of Mandels v. Commissioner*, 64 T.C. 61 (1975); *Hambleton v. Commissioner*, 60 T.C. 558 (1973); *Estate of Holtz v. Commissioner*, 38 T.C. 37 (1962); sec. 25.2511-2(b), Gift Tax Regs. In the present cases, the discretionary trusts are irrevocable under the terms of the written trust agreements. In each instance the grantor may receive lifetime distributions of trust income or corpus only in the "absolute and uncontrolled discretion" of the trustees. The trustees are empowered to distribute the entire corpus to the grantor even though such distribution results in the termination of the trust. Additionally, the trust agreements require the grantor's spouse to give his or her prior written consent in an individual capacity to any such distributions. Upon the death of the grantor, the surviving spouse acquires the right to mandatory distributions of trust income on at least an annual basis, plus distributions of principal in the unfettered discretion of the trustees. The grantor's spouse is also given a special testamentary power of appointment over the trust corpus. Under these circumstances, we must decide whether petitioners have sufficiently parted with dominion and control over their property so as to qualify the transfers as completed gifts.

[2] Sec. 2511(a) provides that "section 2501 shall apply whether the transfer is in trust or otherwise, whether the gift is direct or indirect, and whether the property is real or personal, tangible or intangible."

Petitioners contend that no completed gifts resulted because the trustees of the discretionary trusts had orally agreed prior to the execution of the written agreements to (1) distribute the trust income or corpus whenever the grantors requested such funds, and (2) terminate the trusts upon their request by making liquidating distributions of all the remaining corpus. Consequently, petitioners maintain that they never relinquished dominion and control over the property transferred. In the alternative, they argue that under Massachusetts law the creditors of a grantor-beneficiary of a discretionary trust can reach the assets of the trust for satisfaction of their claims, notwithstanding the veto power over discretionary distributions vested in the grantor's spouse. Accordingly, they contend that the gifts are incomplete under the principle established in *Paolozzi v. Commissioner*, 23 T.C. 182 (1954).

Respondent contends that the evidence is insufficient to prove the existence of the oral agreements alleged by the petitioners, and that, even if such agreements did exist between the grantors and the trustees, there was no agreement between the grantors (petitioners) which would restrict the right of either grantor to veto distributions from the other's discretionary trust(s). Respondent further argues that the transfers in trust were completed gifts under sections 25.2511-2(b) and 25.2511-1(g)(2), Gift Tax Regs.,[3] since there are no fixed or ascertainable standards enforceable by or on behalf of the grantor which limit the trustees' discretion to make distributions. Finally, respondent contends that under Massachusetts law the assets of a discretionary trust cannot be subjected to the claims of the grantor's creditors where (1) distributions are subject to the approval of the grantor's spouse, who is also a secondary beneficiary, and (2) there are no enforceable standards to limit the trustees' discretion in making such distributions. Thus, respondent maintains that the rule of law in Paolozzi is inapplicable. We hold for petitioners.

[3] [this footnote reproduced Regs. §§ 25.2511-2(b) and 25.2511-1(g)(2).]

Where the trust agreement specifies, as here, that distributions to the settlor are to be made in the absolute discretion of the trustees, with no enforceable standard provided, the transfer is generally held to be complete for gift tax purposes. *Herzog v. Commissioner*, 116 F.2d 591 (2d Cir. 1941); *Rheinstrom v. Commissioner*, 105 F.2d 642 (8th Cir. 1939); *Estate of Holtz v. Commissioner*, 38 T.C. 37, 42 (1962); sec. 25.2511-(b), Gift Tax Regs. *Cf*. *Commissioner v. Irving Trust Co.*, 147 F.2d 946 (2d Cir. 1945); *Estate of Toeller v. Commissioner*, 6 T.C. 832 (1946), *affd*. 165 F.2d 665 (7th Cir. 1948). A different result obtains, however, where state law permits creditors of the settlor-beneficiary to pierce the trusts for satisfaction of claims.

In *Paolozzi v. Commissioner*, 23 T.C. 182 (1954), the taxpayer created a trust under the terms of which the trustees were authorized to pay her so much of the trust income as they in their absolute discretion determined to be in her best interest. Upon her death the trust assets were to be distributed to her issue. She reported a taxable gift when the trust was established in an amount equal to the value of the assets transferred reduced by the value of a life estate for an individual her age. Respondent determined that the amount of the gift should be undiminished by the value of the life estate since here interest in the trust income was at best an expectancy, and not susceptible of valuation by actuarial methods. This Court rejected respondent's determination on the ground that, under Massachusetts law, the creditors of a settlor-beneficiary of a discretionary trust could reach for satisfaction of claims the maximum amount which the trustee could pay to the settlor or apply for her benefit. Thus, we concluded that the taxpayer could at any time obtain the economic benefit of the trust income simply by borrowing and then forcing her creditors to look to her interest in the trust income for a source of repayment. On this basis, we held that the gift was incomplete to the extent of the value of her life estate. Accord, *Vander Weele v. Commissioner*, 27 T.C. 340, 343-344 (1956), *affd*. 254 F.2d 895 (6th Cir. 1958) (involving Michigan law). See also *Estate of Holtz v. Commissioner*, 38 T.C. 37, 42 n. 3 (1962); *Herzog v. Commissioner*, 116 F.2d 591 (2d Cir. 1941) (reaching a contrary result under New York law); Rev. Rul. 76-103, 1976-1 C.B. 293. Cf. *Hambleton v. Commissioner*, 60 T.C. 558, 565-566 (1973).

Under the rule of Paolozzi, then, we must determine whether the assets of the Edson S. Outwin and Mary M. Outwin discretionary trusts could be subjected to the claims of the grantor's creditors under Massachusetts law, which governs the interpretation and administration of the trusts.

The general rule in this country regarding the rights of creditors of a settlor-beneficiary of a discretionary trust is expressed in 1 Restatement, Trusts 2d, sec. 156(2) (1959):"Where a person creates for his own benefit a trust for support or a discretionary trust, his transferee or creditors can reach the maximum amount which the trustee under the terms of the trust could pay to him or apply for his benefit." An example of the application of this rule is set forth in Griswold, Spendthrift Trusts, sec. 481 (2d ed. 1947):

> §481. Discretionary trusts. The settlor may attempt to retain a beneficial interest free from the claims of his creditors, by giving his property to a trustee and investing the trustee with complete discretion to decide whether the income shall be paid to him and, if so, how much of it. Thus, A may convey property to T on trust to pay A during A's life so much of the income as in T's uncontrolled discretion he deems wise, with a provision that on A's death the principal and any accumulated income shall be conveyed to B. The remainder, so far as the principal is concerned, being a present vested remainder in B and not subject to A's control, is beyond the reach of A's creditors, unless the transfer is a fraudulent conveyance. Does the fact that the trustee is given discretion over the disposition of the income exempt the income, likewise, from the claims of creditors? The courts have very properly held that in such a case creditors of the settlor may reach the entire income from the trust property during his life. A person can not settle his own property so that it will be free from the claims of creditors and yet retain the right to receive the income, if it is paid to any one, during his lifetime. [Fn. ref. omitted.]

See also 2 A. Scott, Trusts, sec. 156.2 (3d ed. 1967); G. Bogert, Trusts & Trustees, sec. 228 (2d ed. 1965).

The Supreme Judicial Court of Massachusetts formally adopted this general rule in *Ware v. Gulda*, 331 Mass. 68, 117 N.E.2d 137 (1954). In that case the settlor established a trust which provided for payments of income or principal for her support and maintenance in the sole discretion of the trustee. During her lifetime, she was the sole potential beneficiary; upon her death, the property was to go to her two daughters and her son, who was also the named trustee. An attorney brought suit against the settlor for the purpose of collecting past-due legal fees and won a court order directing the Second National Bank of Boston, which became a successor trustee following the death of the settlor's son, to pay the claim out of the trust assets. Following an appeal by the bank the Supreme Judicial Court upheld the order and offered the following explanation (117 N.E. 2d at 138):

> The substance of what happened is this. Louise with her own property created a trust of which she was, for her lifetime, to be the sole beneficiary, if there was to be one at all. The decision as to making or withholding payments, as to both principal and income, was to be entirely in the discretion of the trustee. She was to be incapable of making an assignment of any interest in the trust property, which was intended to be beyond the reach of creditors. At the moment there is no amount which the trustee has exercised its discretion to pay to Louise, although in the past it has made payments to her both of principal and of income.

> Merely because the trustee has not exercised the discretionary power conferred upon it by Louise seems to us to be an insufficient ground to distinguish this case in principle from the rule of years' standing we recently restated in *Merchants National Bank v. Morrissey*, 329 Mass. 601, 605, 109 N.E.2d 821, 823: "*The established policy of this Commonwealth long has been that a settlor cannot place property in trust for his own benefit and keep it beyond the reach of creditors*. *Pacific National Bank v. Windram*, 133 Mass. 175; *Jackson v. Von Zedlitz*, 136 Mass. 342; *Taylor v. Buttrick*, 165 Mass. 547, 551, 43 N.E. 507; *Forbes v. Snow*, 245 Mass. 85, 89, 140 N.E. 418."
>
> The rule we apply is found in Restatement: Trusts, § 156(2): "Where a person creates for his own benefit a trust for support or a discretionary trust, his transferee or creditors can reach the maximum amount which the trustee under the terms of the trust could pay to him or apply for his benefit." It has substantial support in authority. *Greenwich Trust Co. v. Tyson*, 129 Conn. 211, 224, 27 A.2d 166; Warner v. Rice, 66 Md. 436, 8 A. 84; *Hay v. Price*, 15 Pa.Dist.R. 144; *Menken Co. v. Brinkley*, 94 Tenn. 721, 728-729, 31 S.W. 92; *Petty v. Moores Brook Sanitarium*, 110 Va. 815, 817, 67 S.E. 355, 27 L.R.A., N.S., 800; Scott, Trusts, § 156.2; Griswold, Spendthrift Trusts (2d ed.) § 481. See Am. Law of Property, § 23.18. Although every exercise of the power might take property away from the remaindermen, that is no objection where the trustee could pay the entire principal to the creator of the trust.

[Emphasis added.]

Thus, the Massachusetts Court held that creditors of the settlor-beneficiary could reach the trust assets despite the fact that under the terms of the trust instrument, distributions by [pg. 165]the trustee to or on behalf of, the settlor were completely within its discretion, and even though the interests of the remaindermen beneficiaries would be adversely affected by such action. See also *State Street Bank & Trust Co. v. Reiser*, 7 Mass. App. Ct. 633, 389 N.E.2d 768 (1979). The *Gulda* decision provided the basis for our holding in Paolozzi v. Commissioner, supra, to the effect that a settlor-beneficiary of a discretionary income interest in a Massachusetts trust had failed to relinquish dominion and control over such interest for gift tax purposes.

Respondent does not dispute the correctness of Gulda or its continued viability as a part of Massachusetts trust law. Nor does he challenge the propriety of our decision in *Paolozzi*. Rather, he seeks to distinguish those cases on the ground that discretionary distributions from the trusts herein require the prior individual consent of the grantor's spouse, who is also a remainderman beneficiary thereof. The presence of such a veto power in an interested party, respondent contends, imposes a significant limitation on the trustees' discretion and thereby removes these cases from the general rule of *Gulda*. We disagree.

After a rather extensive search of the law of Massachusetts as well as other jurisdictions, we have found no authorities, nor have the parties cited any, which have addressed this precise issue. The decision of the Mississippi Supreme Court in *Deposit Guaranty National Bank v. Walter E. Heller & Co.*, 204 So. 2d 856 (Miss. 1967), relied on by petitioner, is clearly distinguishable. There, the settlor created a trust and retained the right to request distributions, of principal of up to 25 percent of the trust assets in any given year. Before the trustee could make such distributions it was required to obtain the approval of a third party designated as "Advisor to the Trustee." The court allowed a creditor to attach the trust assets despite the incorporation of a spendthrift clause in the trust agreement and notwithstanding the approval power vested in the adviser (204 So. 2d at 861):

Of course, the withdrawals mentioned had to be with the approval of the advisor. This does not save the situation; for if there were no advisor it would have to be with the approval of the Trustee. In either event, if a man were setting up a trust of his own property and were naming the trustee and the advisor as in this case, it would be easy for him to select some person who would approve any demand for withdrawal that he made.

However, in contrast to the present cases, the individual vested with the approval right did not have an interest in the trust which could influence the manner in which he exercised that right.

Nevertheless, it is our opinion that the veto power bestowed upon the grantor’s spouse in connection with the trusts herein is insufficient to render the *Gulda* rule inapplicable. The Gulda opinion and the cases cited therein evidence a strong public policy in Massachusetts against persons placing property in trust for their own benefit while at the same time insulating such property from the claims of creditors. That policy would be easily frustrated if creditors were prevented from reaching the trust assets merely because the settlor’s spouse is given an interest in the trust and the right to veto discretionary distributions which might deplete that interest. It is not unreasonable to assume that, because of the marital relationship, the settlor could anticipate the complete acquiescence of his spouse in any discretionary distributions which he might receive, regardless of their effect on her interest as a remainderman. Thus, in the absence of unforeseen circumstances, such as divorce, the possibility of a spousal veto in such situation may be at best a remote possibility. This is particularly true in the present cases, where the fact that each spouse has the right to veto distributions from the other’s discretionary trust(s) could discourage the exercise of that authority through fear of reprisal. For these reasons, we think that the veto powers held by the petitioners do not, by themselves, place the trusts outside the scope of the Gulda decision.

Respondent, however, argues that the interest of the grantor’s spouse as a remainderman beneficiary makes him or her truly adverse in spite of the marital relationship. He draws an analogy between this case and certain gift tax authorities which hold that a power in the grantor to revoke or alter a trust does not render a gift incomplete if the power is exercisable only in conjunction with a person having “a substantial adverse interest” in the trust. Sec. 25.2511-2(c) and (e), Gift Tax Regs.; see *Latta v. Commissioner*, 212 F.2d 164 (3d Cir. 1954), *cert. denied* 348 U.S. 825 (1954); *Camp v. Commissioner*, 195 F.2d 999 (1st Cir. 1952); *Commissioner v. Prouty*, 115 F.2d 331 (1st Cir. 1940). Both Camp and Prouty indicate that the grantor’s spouse may qualify as an adverse party if he or she possesses a direct legal or equitable interest in the trust property. Yet, while this may be true for gift tax purposes, it does not necessarily follow that the concept is relevant in determining the rights of creditors under State law respecting assets placed in a discretionary trust for the settlor’s own benefit. In the latter case, the principal concern is not whether a completed gift has occurred, but rather whether a transfer in trust will be permitted to shield the grantor’s assets from the claims of present or future creditors. In that context we think the veto power held by the grantor’s spouse would be ineffective to shelter the discretionary trust assets from such claims, even though the spouse qualifies as an adverse party under general gift tax principles.[4]

[4] Although in *Prouty* the First Circuit stated that the donor's spouse could qualify as an adverse party, the Court did express some doubts on the matter and we share in its perceptions as they pertain to the issue before us (*Commissioner v. Prouty*, 115 F.2d 331, 335 (1940)):

> "Examining these intimate family trusts, one must recognize an element of unreality in the inquiry whether a beneficiary's interest is substantially adverse to the grantor. The supposition is that, given a sufficient stake in the trust, the beneficiary is not likely to yield to a wish of the grantor to revoke the trust. In many cases the grantor may have full confidence in the compliant disposition of the member of the family he selects to share his power of revocation, even though such member is named as beneficiary of a handsome interest in the trust. The very fact that the grantor reserved a power to revoke indicates a mental reservation on his part as to the finality of the gift; and if the grantor wishes to hold on to a power of recapture, it stands to reason he will vest the veto power in someone whose acquiescence he can count on. *** However, we cannot read into the gift tax, any more than into Sections 166 and 167, the proposition that a member of the grantor's immediate family can never be deemed to have "a substantial adverse interest." So far as the gift tax is concerned, it is fair enough to take the grantor at his word. *** [Citation omitted.]"

Respondent further contends that *Gulda* does not apply because there are no enforceable standards under State law to limit the trustees' discretion in making distributions to the grantors. In *Gulda* the discretionary distributions were to be made for the "support and maintenance" of the settlor. Respondent contends that (1) such language creates an enforceable standard under Massachusetts law whereby the settlor could legally compel the trustees to distribute sufficient funds to satisfy that standard, and (2) to the extent the settlor had such a right, she had an interest which could be reached by creditors. Since there are no ascertainable standards to govern the trustees' discretion in the present cases, respondent maintains that the grantors had no enforceable right to discretionary distributions and therefore *Gulda* does not control.

Again we must disagree. Regardless of whatever judicial restrictions Massachusetts courts might place on the exercise of the trustees' discretion, we see no basis for assuming that the *Gulda* decision was predicated on the existence of an enforceable right in the settlor to discretionary distributions. The rule adopted by the Massachusetts Supreme Court and set forth in 1 Restatement, Trusts 2d, sec. 156(2) (1959), refers only to amounts which the trustee could pay to the settlor; it makes no mention of amounts which the trustee could be required to pay in the event the settlor seeks judicial review of the trustee's actions. None of the authorities we have consulted cite the existence of an enforceable right to discretionary distributions as the rationale for the Restatement rule. See generally 2 A. Scott, Trusts, sec. 156.2 (3d ed. 1967), and the cases cited therein. Moreover, we note that this Court applied the *Gulda* rule in *Paolozzi* where the trust agreement required only that discretionary distributions of income be made in the settlor's "best interest," a standard generally considered to be less explicit than the support and maintenance provision found in *Gulda*. See 3 A. Scott, Trusts, sec. 187.2 (3d ed. 1967). Yet, this Court found it unnecessary to consider whether and to what extent the standard was judicially enforceable under Massachusetts law. Similarly, we applied the *Paolozzi* rule in *Vander Weele v. Commissioner*, 27 T.C. 340 (1956), *affd*. 254 F.2d 895 (6th Cir. 1958), without regard to the enforceability of the standard provided ("comfortable well-being and enjoyment") under Michigan law.

We hold, therefore, that creditors of the petitioners could reach the assets of their respective discretionary trusts for reimbursement under Massachusetts law, and under the holding of *Paolozzi* the petitioners have failed to surrender dominion and control over the trust assets.[5]

[5] Although the transfers in trust in these cases are not subject to gift tax, the settlor's ability to secure the economic benefit of the trust assets by borrowing and relegating creditors to those assets for repayment may well trigger inclusion of the property in the settlor's gross estate under secs. 2036(a)(1) or 2038(a)(1). See *Estate of Uhl v. Commissioner*, 25 T.C. 22 (1955), *revd*. 241 F.2d 867 (7th Cir. 1957) (Seventh Circuit disagreed with this Court's finding that creditors of the settlor had the right to reach the trust assets under Indiana law, but did not directly dispute the conclusion that such a right, had one existed, would cause inclusion in the settlor's gross estate under the predecessor to sec. 2036(a)); Rev. Rul. 76-103, 1976-1 C.B. 293 (inclusion required under section 2038(a)); see also C. Lowndes, "Some Doubts About the Use of Trusts to Avoid the Estate Tax," 47 Minn. L. Rev. 31, 36-37 (1962).

In reaching our decision in this case we expressly disavow any reliance on the oral understandings between the petitioners and the trustees to the effect that the trustees would be totally responsive to any requests from the petitioners for discretionary distributions. On occasion, this Court has considered extrinsic evidence, such as the settlor's financial condition, his purpose in establishing the trust, and oral assurances by the trustees that the funds would be made available upon request, to help determine whether a right to discretionary distributions rendered a transfer in trust incomplete for gift tax purposes. See Estate of Holtz v. Commissioner, 38 T.C. 37, 43-44 (1962); Vander Weele v. Commissioner, 27 T.C. 340, 345-346 (1956), affd. 254 F.2d 895 (6th Cir. 1958); *Gramm v. Commissioner*, 17 T.C. 1063, 1066 (1951). In each of these cases, however, a standard limiting the trustee's discretion was provided in the trust instrument and the extrinsic evidence served primarily to indicate the probability that the trust funds would be used to satisfy that standard. There are no ascertainable standards in the trust agreements before us. In fact, other than the requirement that the trustees act in good faith, there are absolutely no limitations placed on the trustees' discretionary authority. They are specifically directed to exercise their discretion without regard to the independent financial resources of any beneficiary, and without regard to whether any anticipated distributions would lead to the termination of the trust. Yet, these provisions vesting absolute discretion in the trustees are flatly contradicted by the oral understandings to which the petitioners and the trustees testified. We are inclined to give such testimony little weight for several reasons: (1) The petitioners' testimony is self-serving; (2) the trustees are close personal friends of the petitioners; and (3) the petitioners have yet to receive any distributions from their respective discretionary trusts.[6] Furthermore, we note that, while the testimony indicates that the petitioners received the specified assurances from trustees Henry B. Thielbar and Morris H. Bergreen, there is insufficient evidence to prove that either of the petitioners agreed in advance to consent to any proposed distributions from the other's trust(s). Accordingly, we rest our decision in this case solely on the creditor's rights theory set forth in *Paolozzi*.

> [6] Petitioner Edson S. Outwin and trustees Henry B. Thielbar and Morris H. Bergreen testified that distributions from the discretionary trusts would eventually be necessary to pay off loans made by the Outwin Investment Co. to the Edson S. Outwin Revocable Trust, which loans currently exceed the revocable trust's capital account balance in the partnership. The fact remains, however, that the only distributions petitioner has received thus far have come from the revocable trust, and we see no reason to speculate on whether and to what extent distributions from the discretionary trusts might be forthcoming in the future.

Estate of German v. Commissioner, 7 Cl. Ct. 641 (1985), described the issue at hand:

> The question presented is whether the decedent divested herself of her interest in property in 1969 when she transferred such property to a trust with a proviso that the trustees might, in their absolute discretion, pay any or all of the income or principal to decedent at any time during her lifetime, if they received the written consent of the person who was entitled to receive the principal and accumulated income of the trust after her death, or, whether she continued to enjoy the right to the income or principal of the trust up to the date of her death, because under Maryland law if she chose to incur any debts her creditors could still attach or levy upon the trust assets to collect them.

This was a refund case, so the IRS was the defendants. The court reasoned and held:

> The government's theory is based upon the rationale of *Outwin v. Commissioner*, 76 T.C. 153 (1981) (*acq*., 1981-2 C.B. 2), a gift tax case. There the taxpayer had created four irrevocable trusts, which were to accumulate the income during his lifetime. After his death, if his wife survived him she was entitled to mandatory distributions of the trust income annually, and to distribution of the corpus to her only in the absolute and uncontrolled discretion of the trustee. In addition, she was given a special testamentary power of appointment over the corpus. Notwithstanding the foregoing, the trustees were given the power at any time during the life of the grantor, to pay to, or apply for the benefit of, the grantor, such part or parts of the income and principal as the trustees should determine in their absolute and uncontrolled [pg. 85-1579]discretion, for any reason whatsoever, notwithstanding that such payments might result in the termination of the trust; but such distributions by the trustees required the prior written consent of the grantor's spouse.
>
> The Commissioner determined that in transferring property to such trusts Mr. Outwin had made a completed taxable gift, while the taxpayer contended to the contrary. The Tax Court overruled the Commissioner on the ground that the gift was not completed because the donor retained dominion and control over the property transferred. The court stated that "[w]here the trust agreement specifies … that distributions to the settlor are to be made in the absolute discretion of the trustees, with no enforceable standard provided, the transfer is generally held to be complete for tax purposes." *Id*. at 162. However, "[a] different result obtains … where state law permits creditors of the settlor-beneficiary to pierce the trusts for satisfaction of claims." *Id*. This result follows, the court said, from the fact that if under state law the creditors of a settlor-beneficiary of a discretionary trust may reach for satisfaction of claims the maximum amount which the trustee may pay to the settlor or apply for her benefit, the taxpayer may at any time "obtain the economic benefit of the trust income simply by borrowing and then forcing [his] creditors to look to [his] interest in the trust income for a source of repayment." *Id*. Because it found that the settlor-beneficiary's creditors did have such a right under

Massachusetts law, which was applicable to the Outwin trust, the court held that the gift was incomplete to the extent of the value of the settlor-beneficiary's life estate. Accord *Commissioner v. Vander Weele*, 254 F.2d 895 (6th Cir. 1958) (applying Michigan law); *Paolozzi v. Commissioner*, 23 T.C. 182 (1954) (also applying Massachusetts law); and Rev. Rul. 76-103, 1976-1 C.B. 293. But see *Herzog v. Commissioner*, 116 F.2d 591 (2d Cir. 1941), and *In Re Uhl's Estate*, 241 F.2d 867 (7th Cir. 1957), reaching contrary results under New York and Indiana law, respectively.

Defendant claims that under Maryland law, which is applicable to the trusts herein, decedent's creditors could have reached the principal and interest of such trusts until the time of her death, and, accordingly, she had not disposed of her right to possession and enjoyment of the property and the transfer took effect upon her death. On the other hand, plaintiff maintains that Maryland law did not give decedent's creditors such right, and, accordingly, her gifts were completed at the time she transferred the assets in trust and they were no longer subject to estate tax. Thus, the narrow issue to be decided herein is as to the extent of decedent's creditors' rights with respect to the trust income and assets under Maryland law.

The authority upon which defendant relies primarily for Maryland law is the decision in *Warner v. Rice*, 66 Md. 436, 8 A. 84 (1887). That case presented the question as to whether or not the income of a debtor, from certain property embraced in a deed of trust made by himself and his wife prior to incurring the debts, was liable to attachment or execution in a suit for his debts. The deed was made "[i]n trust for the use and benefit of said George Warner and his immediate family, free from liability for any of his debts, contracts, or engagement; and when, if so by said trustees found requisite, by him being proper, to apply to uses, rents, income, and profits to the support and maintenance of said George and his said family during his, said George's, life, and, after his decease, the same to go as he by last will may have directed, or, in case of his decease intestate, the same to go according to law under the existing statutory provisions of the law of Maryland." *Id*. 8 A. at 85. The court held that Mr. Warner's creditors could reach the income of this trust because "a beneficial legal estate, in fee or for life, cannot be conveyed or devised to a person with a provision that it shall not be alienated, or that it shall not be subject to the debts of the legal owner" (id.); that "equitable estates cannot be effectually created with a proviso against alienation, or that they shall not be liable to the debts of the *cestui que trust* …and, generally, whenever property is subject to alienation by the owner it is subject to his debts" (*id*. at 85-86); and because, in this case -

> The object of the deed of trust was not to destroy or divest himself of his right of property, but simply to place a legal estate therein in a trustee, as, perhaps, a guard against improvident management. But the equitable estate remains in George Warner during his life, with full power of disposition by will, and, in default of will, the property devolves on his heirs and representatives at his death, when the trust will terminate. It is only during his life that the rents, profits, and income from the property are directed to be applied to the support of himself and his family, when and as the trustee may deem proper. Full and complete control is retained in the cestuis que trust over the investments, and change of investments; and they declare, moreover, that they are entitled and reserve the right to collect, receive, and have, each for her or himself, the rents, issues, and profits of his or her share, conformably with the trust declared. As we have seen, there is no limitation over or cesser of George

> Warner’s equitable life-estate, or his interest in the rents and profits of the property, upon seizure of the same by his creditors. (*Id*. at 86.)

In response to the argument by Warner that the trustee had discretion as to whether or not he would pay over the rents and profits to Warner, the court noted that if the trustee did not pay them over, he had no authority to accumulate them for any other purpose; they would still belong to the estate of George Warner and the trustee would have to account to his executor or administrator for such arrearage. Id. Accordingly, “[t]he discretion given the trustee, if the terms of the direction can be construed into a power to exercise a discretion at all, can only apply to the manner of the application, and not to any power to withhold or divert the rents and profits, and apply them to any other purpose.” *Id*.

The instant case is distinguishable from *Warner* in several respects: First, if the trustee here, in the exercise of his discretion, did not distribute the income or principal to Mrs. German, it would go to the specified remaindermen; whereas in Warner the undistributed trust income would be accumulated for the settlor’s benefit and the corpus distributed pursuant to his will. Second, unlike *Warner*, before the settlor here could receive any distribution from the trustees, the consent of a beneficiary having an adverse interest had to be obtained. Third, the trusts here, but not in Warner, made dispositions of the property upon the death of the settlor and were not intended solely to shield her assets from her creditors.

In *Mercantile Trust Co. v. Bergdorf Goodman & Co*. 167 Md. 158, 173 A. 31 (1934), the Maryland Court of Appeals confirmed that where there is no proof of fraud the rights of attaching creditors to property in a trust created by a debtor depend upon whether the property which is not distributed to the settlor-beneficiary or according to his direction goes back to the settlor or to a third-party at his death. There the settlor had created an inter vivos trust, retaining a life estate in the trust assets and a power of appointment by will, which, if not exercised, would result in the property going to her then living issue or next of kin. The Maryland court held that although the creditors could attach the settlor’s income from the life estate, in the absence of a fraudulent conveyance they could not reach the corpus of the trust, because, “there was an immediate vesting of the remainder in the next of kin of the settlor”, and “[w]ith the ownership of the corpus in the remaindermen, even though the possession may be delayed or defeated by the will of the donor, … the corpus cannot be attached to satisfy the creditors of the settlor.” (*Id*. at 165-66, 173 A. at 34-35.) Accord, *United States v. Baldwin*, 283 Md. 586, 391 A. 2d 844 (1978). If the unexercised right of the settlor in Mercantile Trust Co. and Baldwin to dispose of the corpus by will was not sufficient to render the trust property subject to execution by creditors because of the interests of the remaindermen in such property in default of appointment, for the same reason it would appear that the unexercised discretion of the trustees of Mrs. German’s trust with respect to both principal and income would not render either vulnerable to Mrs. German’s creditors under Maryland law.

Apart from *Warner v. Rice*, defendant has not cited any Maryland decision in which creditors were able to reach income or corpus which could be distributed to the settlor of a trust, not as a matter of right, but in the uncontrolled discretion of the trustee.

Equally important, defendant has cited no decision, either in the Maryland courts or elsewhere, where the creditor was held entitled to attach trust property where the

> trustee's discretion could only be exercised with the prior consent of those who would receive the property in default of such exercise. In *Outwin*, the Tax Court likewise confessed that it had been unable to find any authorities in any state which addressed the precise issue. *Outwin*, 76 T.C. at 165. However, it resolved that problem by reasoning that in view of the strong public policy of the Massachusetts courts against persons placing property in trust for their own benefit while at the same time insulating such property from the claims of creditors the veto power of a spouse would not be a barrier to such creditors under Massachusetts law, because it assumed (1) that (in the absence of divorce) the possibility that the spouse would veto a disbursement by the trustee to her husband was remote, and (2) the fact that the husband might reciprocate by veto of disbursements to the wife under her similar trust would tend to further discourage her veto. *Id*. at 166-67. This court finds no such strong public policy in the Maryland courts where there is a remainder interest. It finds no assumption by the Maryland courts that the wife may be deemed merely the husband's alter ego for purposes of insulating property from a settlor's creditors in a nonfraudulent conveyance transaction. Indeed, *Watterson v. Edgerly*, 40 Md. App. 230, 388 A.2d 934 (1978), appears to be to the contrary. And the instant case does not involve reciprocal husband and wife trusts.
>
> Thus, defendant has not established that under Maryland law creditors of the settlor could have reached the trust income or principal of her discretionary trusts up to the time of her death.
>
> The most satisfactory resolution of this question of state law would have been by certification to the Maryland Court of Appeals. See *United States v. Baldwin*, 283 Md. 586, 391 A.2d 844 (1978). Unfortunately, while the Uniform Certification of Questions of Law Act, Md. [Courts and Judicial Proceedings] Code Ann. §§ 12-601-12-609 (1984), grants jurisdiction to the Maryland Court of Appeals to answer questions of law certified to it by a United States District Court or United States Court of Appeals, it does not allow certification from this court. Accordingly, it is the duty of this court to approximate the law of the state from decisions of its highest court as best it can. See *Commissioner v. Estate of Bosch*, 387 U.S. 456 (1967).

The Official Tax Court Syllabus of *Estate of Paxton v. Commissioner*, 86 T.C. 785 (1986), states:

> During his lifetime, decedent created two trusts to which he and his spouse transferred, in exchange for certificates of beneficial interest in the trusts, their residence, stock in several corporations, patents, and virtually all other property they owned except a patent royalty agreement with one of their corporations. They later transferred some of their [pg. 786] certificates to other family members. Decedent's son, his accountant, his attorney, and other close associates served as trustees. Under the terms of the trust instruments, the trustees were given full discretionary power to distribute the income and corpus of the trusts to the holders of certificates of interest, and the distributions were not required to be proportionate among the holders of such certificates. Held, on consideration of all the facts, decedent retained "enjoyment of, or the right to the income from" the transferred property within the meaning of sec. 2036(a)(1), I.R.C. 1954, because (1) there was an understanding, express or implied, that decedent would receive distributions of corpus or income from the trusts if, as, and when he requested them; and (2) decedent could incur indebtedness and relegate his creditors to the trusts for repayment. Held, further, even though decedent's estate did not file an estate tax return,

it is not liable for an addition to tax under sec. 6651(a), I.R.C. 1954, because, in failing to file such a return, the executor of the estate relied upon the advice of tax counsel. *United States v. Boyle*. 469 U.S. 241, 105 S.Ct. 687 (1985), followed.

In the portion of the Tax Court's opinion titled, "Retention of Interest Creditors Could Reach," the court said:

> As settlor-beneficiary, decedent retained the economic benefit and enjoyment of the entire trust income and corpus because he could borrow money or otherwise incur indebtedness and relegate his creditors to the trust for payment. Retention of the right to use the trust as a form of security for his indebtedness in this manner left Mr. Paxton with a significant interest in the property. See *United States v. Estate of Grace*, 395 U.S. 316, 320 (1969). In our opinion, that is sufficient to require his transfers to the trusts to be included in his gross estate under section 2036(a)(1).
>
> The widely accepted legal principle controlling the rights of the creditors of a settlor-beneficiary of a trust in which the trustees are given discretion, not controlled by an ascertainable legal standard, to make distributions to the settlor, is stated in 1 *Restatement, Trusts 2d*, sec. 156(2) (1959), as follows:
>
>> Where a person creates for his own benefit a trust for support or a discretionary trust, his transferee or creditors can reach the maximum amount which the trustee under the terms of the trust could pay to him or apply for his benefit.[26]
>>
>> [26] See also 2 A. Scott, Trusts, sec. 156.2 (3d ed. 1967). G. Bogert, *Trusts and Trustees*, sec. 223, at 438-439 (2d rev. ed. 1979), states:
>>
>>> "If a settlor creates a trust for his own benefit and inserts a spendthrift clause, it is void as far as then existing or future creditors are concerned, and they can reach his interest under the trust. Numerous cases uphold this doctrine, and many statutes assert it. [Fn. refs. omitted.]"
>>
>> The omitted footnotes list the decisions of 16 State courts and the statutes of 18 States. Comment e, accompanying 1 *Restatement, Trusts 2d*, sec. 156 (1959), deals with discretionary trusts of the type created by Mr. Paxton as follows:
>>
>>> e. Discretionary trust for the settlor. Where by the terms of the trust a trustee is to pay the settlor or apply for his benefit as much of the income or principal as the trustee may in his discretion determine, his transferee or creditors can reach the maximum amount which the trustee could pay to him or apply for his benefit.
>>
>> See also E. Griswold, *Spendthrift Trusts*, sec. 481 (2d ed. 1947).
>
> To permit the owner in creating a trust to retain for his own benefit an interest in the entrusted property which cannot be reached by creditors is against public policy. *Nelson v. California Trust Co.*, 33 Cal. 2d 501, 202 P.2d 1021 (1949); *In re Mogridge's Estate*, 342 Pa. 308, 20 A.2d 307, 309 (1941).
>
> This principle has been applied in both estate and gift tax cases.[27] Where the decedent at any time during his life could have obtained the economic benefit of the trust income

or corpus by borrowing and then forcing creditors to look to his interest in the trust income for a source of repayment, this interest has been held sufficient to require the inclusion of the transferred property in decedent's gross estate under section 2036(a)(1). *Estate of Uhl v. Commissioner*, 25 T.C. 22 (1955), *revd. and remanded* 241 F.2d 867 (7th Cir. 1957); see also *Estate of Boardman v. Commissioner*, 20 T.C. 871 (1953). In reversing the *Uhl* decision, the Court of Appeals did not directly dispute the Tax Court's view that the settlor of a trust is regarded for tax purposes as retaining any interest in the trust which his creditors can reach but concluded that under Indiana law the settlor's creditors could not have reached the trust property.[28]

[27] See note 18 *supra*.

[28] See Lowndes, "Some Doubts About the Use of Trusts to Avoid the Estate Tax," 47 Minn. Law Rev. 31, 36 (1962); Covey, "Power to Distribute to Grantor," 98 Trusts and Estates, 322, 325 (1959); *Estate of German v. United States*, 7 Cl.Ct. 641, 643 (1985).

Similarly, in the related gift tax area, transfers to a discretionary trust have been held to be incomplete and not subject to the gift tax where, under the applicable State law, the creditors of the settlor-beneficiary could reach the income or corpus of a discretionary trust. *Paolozzi v. Commissioner*, 23 T.C. 182, 186-187 (1954) (Massachusetts law); *Vander Weele v. Commissioner*, 27 T.C. 340, 343-344 (1956), *affd*. 254 F.2d 895 (6th Cir. 1958) (Michigan law); *Outwin v. Commissioner*, 76 T.C. 153, 162-165 (1981) (Massachusetts law). The principle was explained in *Vander Weele v. Commissioner*, 254 F.2d at 898, holding that no gift tax was incurred by a settlor-beneficiary of a trust, as follows:

> The trustees were granted almost unrestricted power to invade the corpus of the trust for the benefit of the trustor, with the possibility of the repayment of the entire trust fund to her. The trust conveyance in effect created no completed taxable gift to the remaindermen - the husband and children of the trustor. There was no assurance that anything of value would pass to the remaindermen. The settlor could in actuality retain the economic benefit and enjoyment of the entire trust income and corpus of the trust estate by borrowing money or by selling, assigning, or transferring her interest in the trust fund and relegating her creditors to the trust fund for payment.

On the other hand, a gift tax has been held applicable where under State law, as interpreted by the court, the settlor-beneficiary's creditors could not reach the trust corpus or income. *Herzog v. Commissioner*, 116 F.2d 591 (2d Cir. 1941), *affg*. 41 B.T.A. 509 (1940) (New York law);[29] see also *Rheinstrom v. Commissioner*, 105 F.2d 642 (8th Cir. 1939), *affg. on this issue* 37 B.T.A. 308 (1938).

[29] Since *Herzog v. Commissioner*, 116 F.2d 591 (2d Cir. 1941), *affg*. 41 B.T.A. 509 (1940), was decided, the New York courts have come to accept the Restatement rule as the law in that State. See *Vanderbilt Credit Corp. v. Chase Manhattan Bank*, 100 A.D.2d 544, 473 N.Y. Supp. 2d 242, 245-246 (1984), where the court stated:

> "when a person creates for his own benefit a discretionary trust, his creditors can reach the maximum amount which the trustee under the terms of the trust could pay to him or apply for his benefit, even though the trustee in the exercise of his discretion wishes to pay nothing to the beneficiary or to his creditors, and even

> though the beneficiary could not compel the trustee to pay him anything (see *Ware v. Gulda*, 331 Mass. 68, 117 N.E.2d 137; *State Street Bank & Trust Co. v. Reiser*, 7 Mass. App. 633, 389 N.E.2d 768; *Greenwich Trust Co. v. Tyson*, 129 Conn. 211, 27 A.2d 166; *Restatement, Trusts 2d*, sec. 156, subd. [2]; 2 *Scott, Trusts* [3d ed.], sec. 156.2; contra *Herzog v. Commissioner of Internal Revenue*, 116 F.2d 591 (2nd Cir))."

In the instant case, according to the Yakima County Superior Court, the trustees of the PFO trust could make distributions of income or corpus to the holders of certificates of interest and the distributions need not be made pro rata in proportion to the number of units of beneficial interest held by the distributees. Within their discretion, therefore, the trustees could have made distributions to Mr. Paxton, up to and including the entire trust corpus. Under Washington law, we are convinced, his creditors could have reached such amounts. Accordingly, his inter vivos transfers to the trusts are includable in his gross estate under section 2036(a)(1).

Two Washington statutes address this issue. Wash. Rev. Code Ann. sec. 6.32.250 (1977), one of the provisions dealing with exemptions from seizure, states:

> Property exempt from Seizure. This chapter does not authorize the seizure of, or other interference with, … property held in trust for a judgment debtor where the trust has been created by, or the fund so held in trust has proceeded from, a person other than the judgment debtor….[30]

[30] Wash. Rev. Code Ann. sec. 6.32.250 (1977) is subject to two statutory limitations: Wash. Rev. Code Ann. sec. 30.30.120 (1977), which expressly exempts from Wash. Rev. Code Ann. sec. 6.32.250 (1977) claims for furnishing "the necessities of life," claims of "support for the children under the age of eighteen of any beneficiary," and a vested remainder in the trust upon its expiration; and Wash. Rev. Code Ann. sec. 19.36.020 (1977), which states the rule that a person cannot create a spendthrift trust for himself. Wicker, "Spendthrift Trusts," 10 Gonzaga L. Rev. 1, 9 (1974); Comment, "Spendthrift Trusts in Washington—The Statutory Restraint Upon Involuntary Alienation," 58 Wash. L. Rev. 831, 836-837 (1983).

The Washington supreme court has stated that the "practical effect of [this] statute has been to clothe every active trust with statutory spendthrift provisions,"[31] *Seattle First Nat. Bank v. Crosby*, 42 Wash. 2d 234, 254 P.2d 732, 738 (1953), but the "other than the judgment debtor" language limits the statute to trusts created by one who is not also a beneficiary.[32] This limitation appears to be an implicit recognition of the principle of 1 *Restatement, Trusts 2d*, sec. 156(2) (1959), quoted above. Bogert, *Trusts & Trustees*, sec. 223, at 440, n. 99 (2d rev. ed. 1979). In other words, this provision does not prevent the seizure of property held for a judgment debtor in a trust created by the judgment debtor.

[31] A spendthrift provision provides that the interest of the beneficiary is inalienable and that creditors cannot reach the interest in satisfaction of their claims. Griswold, *Spendthrift Trusts*, sec. 1 (2d ed. 1947).

[32] See E. Griswold, sec. 473, at 541.

Wash. Rev. Code Ann. sec. 19.36.020 (1977) further provides:

> Deeds, etc., in trust for grantor void as to creditors. That all deeds of gift, all conveyances, and all transfers or assignments, verbal or written, of goods, chattels or things in action, made in trust for the use of the person making the same, shall be void as against the existing or subsequent creditors of such *person*.

This section is in substance a statutory enactment of the Restatement rule. 2 A. Scott, *Trusts*, sec. 156.2 (3d ed. 1967). We think the statute means exactly what it says. Petitioners argue, however, that the section is applicable only where the property was transferred to the trust with a specific intent to defraud creditors. Petitioners argue that the section does not apply here because Mr. Paxton had no intention of defrauding his current or subsequent creditors.

Most of the cases in which Wash. Rev. Code Ann. sec. 19.36.020 (1977) has been applied were cases in which there was evidence of actual fraud. *Allard v. La Plain*, 152 Wash. 211, 277 P. 843 (1929); *Van Stewart v. Townsend*, 176 Wash. 311, 28 P.2d 999 (1934); *Carroll v. Carroll*, 18 Wash.2d 171, 138 P.2d 653 (1943); *Jones v. Jones*, 56 Wash.2d 328, 353 P.2d 441 (1960). However, we have found no Washington case in which the court held that fraud must be proved to invoke Wash. Rev. Code Ann. sec. 19.36.020 (1977).[33]

[33] Comment a. on 1 *Restatement, Trusts 2d*, sec. 156(2) (1959), makes clear that intent to defraud is not a factor in applying the rule, as follows:

> a. Intention to defraud creditors not required. The rules stated in this Section are applicable although the transfer is not a fraudulent conveyance. The interest of the settlor-beneficiary can be reached by subsequent creditors as well as by those who were creditors at the time of the creation of the trust, and it is immaterial that the settlor-beneficiary had no intention to defraud his creditors.

See also E. Griswold, sec. 473, at 540.

Nevertheless, if petitioner is correct that Wash. Rev. Code Ann. sec. 19.36.020 (1977) is limited to transfers with actual intent to defraud, and Wash. Rev. Code Ann. sec. 6.32.250 (1977), referred to above, also does not apply here because the trusts created by Mr. Paxton fall within the exception, we are then left with the common law on the rights of creditors to reach trust income and corpus where the trust was created by the debtor and the trustees have discretion to distribute income and corpus to him. We have found no cases (and petitioners have cited none) suggesting that the courts of Washington would not follow the almost universally accepted rule of 1 *Restatement, Trusts 2d*, sec. 156(2).[34] Accordingly, we find that because decedent's [pg. 819]creditors could reach the maximum amount which, under the terms of the trust declarations, could be distributed to him, decedent's transfers to the trusts are includable in his gross estate under section 2036(a)(1).[35]

[34] The Court of Appeals for the Ninth Circuit in applying the Restatement rule has recognized that a "spendthrift trust" provision in Massachusetts, California, and generally, is invalid as to the creditors of the trustor. *Hughes v. Commissioner*, 104 F.2d 144, 148 (9th Cir. 1939). See also, *e.g.*, *Matter of Goff*, 706 F.2d 574, 587 (5th Cir. 1983) (law of Texas) ("the general rule is well established"); *Liberty Nat. Bank*

v. Hicks, 173 F.2d 631, 634 (D.C. Cir. 1948) ("the universal rule"); *Byrnes v. Commissioner*, 110 F.2d 294, 295 nn. 1&2 (3d Cir. 1940), *revg*. 39 B.T.A. 594 (1939) (law of Pennsylvania); *Vanderbilt Credit Corp. v. Chase Manhattan Bank*, 100 A.D. 544, 473 N.Y. Supp. 2d 242, 245-246 (1984); *Elec. Workers v. IBEW-NECA Holiday Trust*, 583 S.W.2d 154, 162 (Mo. 1979); *Proctor v. Woodhouse*, 127 Vt. 148, 241 A.2d 785, 790 (1968) ("prevailing authority"); *Merchants Nat. Bank of New Bedford v. Morrissey*, 329 Mass. 601, 109 N.E.2d 821, 823 (1953) ("weight of authority"); *Nelson v. California Trust Co.*, 33 Cal.2d 501, 202 P.2d 1021, 1022 (1949); *McArthur v. Faw*, 183 Tenn. 504, 193 S.W.2d 763, 768 (1946) ("well settled limitation"); *Greenwich Trust Co. v. Tyson*, 129 Conn. 211, 27 A.2d 166, 171 (1942) ("overwhelming weight of authority"); *Harrison v. City National Bank of Clinton, Iowa*, 210 F. Supp. 362 (S.D. Iowa 1962).

[35] We think our conclusion is consistent with the Washington State courts' treatment of the Washington statutory scheme regarding spendthrift trusts and creditors' rights. Historically, the courts have sought to limit the broad scope of these statutes, and consequently, have often found the statutes inapplicable to the given situation and have applied instead the common law rule, *Erickson v. Bank of California, N.A.*, 97 Wash.2d 246, 643 P.2d 670, 673 (1982) (Wash. Rev. Code Ann. sec. 30.30.120 (1977), not applicable to trusts with express spendthrift provisions); *Knettle v. Knettle*, 197 Wash. 225, 84 P.2d 996, 998 (1938) (Wash. Rev. Code Ann. sec. 6.32.250 (1977) not applicable to "passive" trusts); see also Comment, "Spendthrift Trusts in Washington - The Statutory Restraint Upon Involuntary Alienation," 58 Wash. L. Rev. 831, 846-849 (1983).

Furthermore, the court in *Erickson* concluded that Wash. Rev. Code Ann. sec. 30.30.120 (1977) was not meant to restrict the common law as it applies to spendthrift trusts, and finding that section inapplicable to express spendthrift trusts, applied 1 *Restatement, Trusts 2d*, sec. 157(b). We likewise have found no indication that Wash. Rev. Code Ann. secs. 6.32.250 and 19.36.020 (1977) were intended to restrict the common law of Washington.

Letter Ruling 8037116 failed to address the issue of creditor attack, concluding that the ability of this decedent to receive income and principal under the terms of the trust he created is not sufficient to require inclusion of the property under Code § 2036(a)(1).

Letter Ruling 9837007 involved the following facts:

> According to the facts submitted, Donor, a resident of State, proposes to create an irrevocable trust (Trust) for the benefit of herself and her descendants. Trustee will be appointed as the only trustee. Trustee is to pay, during the Donor's lifetime, any part or all of the income and/or principal in such amounts and at such times, as the Trustee, in its sole and absolute discretion determines, among one or more of the class consisting of the Donor and the Donor's living descendants. Any income that is not distributed is to be added to the corpus of the trust. Upon the Donor's death, the corpus is to be divided into separate trusts for each then living child of Donor, and a separate trust for each child who died leaving issue. The Trustee is to distribute the income and principal, in its discretion, among the beneficiaries. If no descendant of Donor is living at the time of Donor's death, the income and principal of the Trust is to be distributed to one or more organizations described in sections 170(c), 2055(a), and 2522(a) of the Internal Revenue Code, as the trustee may determine.

Under Articles SIXTH and NINTH of the Trust, Donor, her descendants, or any person related or subordinate to these persons (within the meaning of section 672(c) of the Code) are precluded from serving as trustee. Donor will not have the power to remove or replace the trustee or to appoint a successor trustee. It is represented that Donor is not a shareholder, director, officer, or employee of Trustee. If Trustee should cease to serve as trustee, Donor's authorized representative will name a successor trustee.

It is represented that there is no agreement, express or implied, between the Donor and the Trustee as to how Trustee will exercise its sole and absolute discretion to pay income and principal among the beneficiaries.

Donor proposes to fund Trust with cash, securities and/or undeveloped land located in State valued at approximately $x. It is represented that Donor has no known or anticipated debts other than a home mortgage loan and that Donor is not under any obligation or order of child support.

Article TENTH provides that the interest of a beneficiary (including the grantor) of the trust may not be either voluntarily or involuntarily transferred before payment or delivery of the interest to the beneficiary by the trustee.

Under Article EIGHTH, section 8.1, the validity, construction and effect of Trust is to be governed by the law of State. Further, section 8.2 provides that the situs of the Trust shall be State.

State Statute provides that a person who in writing transfers property in trust may provide that the interest of a beneficiary of the trust may not be either voluntarily or involuntarily transferred before the payment or delivery of the interest to the beneficiary by the trustee. If a trust contains this transfer restriction, the restriction prevents a creditor existing when the trust is created, a person who subsequently becomes a creditor, or any other person from satisfying a claim out of the beneficiary's interest in the trust unless:

1. the transfer was intended in whole or in part to hinder, delay, or defraud creditors or other persons;

2. the trust provides that the settlor may revoke or terminate all or part of the trust without the consent of a person who has a substantial beneficial interest in the trust and the interest would be adversely affected by the exercise of the power held by the settlor to revoke or terminate all or part of the trust;

3. the trust requires that all or a part of the trust's income or principal, or both, must be distributed to the settlor; or

4. at the time of the transfer, the settlor is in default by 30 or more days of making a payment due under a child support order.

Letter Ruling 9837007 cited Reg. § 25.2511-2(b) and Rev. Rul. 77-378 and reasoned and held:

In the present case, Donor proposes to create Trust, to be administered under the laws of State, for the benefit of herself and her living descendants. The trustee will have sole and absolute discretion to pay, during the Donor's lifetime, part or all of the income

> and/or principal of Trust to Donor and the Donor's living descendants. It is represented that there is no agreement, express or implied, between the Donor and the Trustee as to how Trustee will exercise its sole and absolute discretion to pay income and principal among the beneficiaries.
>
> In addition, under State Statute, because the trust contains certain language specified in the statute, a creditor of the grantor will be precluded from satisfying claims out of the grantor's interest in the trust.
>
> Based on the representation that there is no express or implied agreement between the Donor and the Trustee as to how Trustee will exercise its sole and absolute discretion to pay income and principal among the beneficiaries, we conclude that the proposed transfer by Donor of property to Trustee to be held under the Trust agreement will be a completed gift for federal gift tax purposes.
>
> We are expressly not ruling on whether the assets held under the Trust agreement at the time of Donor's death will be includible in Donor's gross estate for federal estate tax purposes.

Letter Ruling 200944002 ruled that transfers to a self-settled spendthrift trust was a completed gift and that the trust's assets would not be included in the grantor's estate, but We are specifically not ruling on whether Trustee's discretion to distribute income and principal of Trust to Grantor combined with other facts (such as, but not limited to, an understanding or pre-existing arrangement between Grantor and trustee regarding the exercise of this discretion) may cause inclusion of Trust's assets in Grantor's gross estate for federal estate tax purposes under § 2036. For more discussion, see Rothschild, D. Blattmachr, Gans, and J. Blattmachr, IRS Rules Self-Settled Alaska Trust Will Not Be in Grantor's Estate, *Estate Planning Journal* (WG&L) (1/2010).

Argentina set up a trust under its own law, but its assets were held by a New York person, allowing a New York creditor to reach the assets. *EM Ltd. v. Republic of Argentina*, 2009 WL 2568433 (S.D.N.Y. 2009), *aff'd* 389 Fed. Appx. 38 (2nd Cir. 2010), *cert. den. Republic of Argentina v. EM Ltd.*, 131 S.Ct. 1474, 179 L.Ed.2d 301 (U.S. 2011).

In *Weitz v. Weitz*, 2012 N.Y. Slip. Op. 30767(U), N.Y. Sup. Ct. No. 016811-08 (3/22/2012), a New York trial court held that, when assets that were subject to a divorce judgment were transferred to a Cook Islands trustee, the receipt of a fraudulent conveyance subjected the trustee to New York's jurisdiction, even though the trustee:

> 1) does not own, lease or have any other interest in any real property located in New York; 2) does not have an office in New York; 3) does not have a bank account in New York; 4) does not have any officers or employees in New York; 5) does not have a telephone number in New York; 6) has never filed a lawsuit in New York; 7) has no investments in any business located in New York; 8) is not licensed to do business in New York; 9) has never warehoused or stored inventory or supplies in New York; and 10) does not advertise in New York.

An Illinois resident set up a Cook Islands trust with all of the contacts needed to be governed by Cook Islands law, but the Illinois Supreme Court held that the trust was void as against the creditors of the settlor/beneficiary. *Rush University Medical Center v. Sessions*, 980 N.E.2d 45 (Ill. 2012), Illinois Supreme Court upheld the trial court and reversed the appellate court:

This rule has a 500–year lineage (see Erwin N. Griswold, *Spendthrift Trusts Created in Whole or in Part for the Benefit of the Settlor*, 44 Harv. L. Rev. 203, 204 (1930) (citing 3 Hen. VII, c. 4)), has been consistently applied as the law in Illinois for over 140 years (see, *e.g.*, *Guffin v. First National Bank of Morrison*, 74 Ill. 259 (1874); *Crane*, 238 Ill. App. 257 (1925); *In re Morris*, 151 B.R. 900 (C.D. Ill. 1993); *In re Marriage of Chapman*, 297 Ill.App.3d 611, 231 Ill. Dec. 811, 697 N.E.2d 365 (1998); *Dexia Credit Local v. Rogan*, 624 F.Supp.2d 970, 976 (N.D. Ill. 2009)), at least until the instant appellate court's decision, and remains the law in the vast majority of states throughout the nation (see Helene S. Shapo et al., *Bogaert's Trusts and Trustees* § 223 (3d ed. 2007); *Restatement (Third) of Trusts* § 58 cmt. e (2003)).

The court's broad statement, "void as to existing and future creditors," sounds like the whole trust is void. However, the following excerpt (downloaded 3/3/2017) from the above citation to *Bogert's* clarifies that the scope as limited to the settlor's interest:

> The entire spendthrift clause, both as to voluntary and involuntary alienation, is void. The creditors can reach the settlor-beneficiary's interest,[11] and the settlor-beneficiary can transfer her interest.[12] The trust itself is not void, however, and the settlor cannot have it set aside on the ground of attempted fraud on creditors.[13] If the settlor is the sole beneficiary, she will be able to revoke the trust or ask for its termination.[14] If she is not the sole beneficiary she may not revoke in the absence of statutory authority.[15]
>
> [11] A spendthrift trust provision is invalid as to a contingent interest provided for the settlor in a trust. *Hughes v. Commissioner of Internal Revenue*, 104 F.2d 144, 39-2 U.S. Tax Cas. (CCH) ¶9538, 23 A.F.T.R. (P-H) ¶24 (C.C.A. 9th Cir. 1939), citing text, § 224.
>
> Where a settlor is the sole beneficiary of a spendthrift trust, his creditors can reach principal and income for the satisfaction of their claims on the ground that "it is against public policy to permit a man to tie up his property in such a way that he can enjoy it but prevent his creditors from reaching it." *Nelson v. California Trust Co.*, 33 Cal. 2d 501, 202 P.2d 1021 (1949).
>
> *Abrahams v. New York State Tax Com'n*, 131 Misc.2d 594, 500 N.Y.S.2d 965 (Sup 1986).
>
> A spendthrift clause in a trust for the settlor is void as to his interests. *Pilkington v. West*, 246 N.C. 575, 99 S.E.2d 798 (1957), citing text.
>
> [12] [various citations omitted]
>
> Where a settlor creates a spendthrift trust for himself, he may nevertheless assign the income of it…
>
> A settlor who made herself a life beneficiary of a spendthrift trust and accepted the interest can later destroy the trust as to herself by an instrument renouncing her interest and conveying it to the remaindermen beneficiaries, whose interests are then accelerated…. The spendthrift clause is not effective as to the settlor.
>
> Where a statute validates spendthrift trusts and declares that attempted assignments of the interests of beneficiaries thereunder are void, there is an implied exception of the

case where the settlor is the beneficiary and an assignment by such beneficiary is valid. ….

A spendthrift clause is not binding on a settlor-beneficiary and he may transfer his interest….

The spendthrift clause did not prevent a settlor-life beneficiary from assigning his right to receive income from the trust, but a right to receive principal on demand, which was vested in him personally, was not transferable....

The settlor created a trust to give his wife an annuity of $5,000 a year, and provided that any excess income should be paid to him, and that the principal should go to him at the death of the life tenant, or if he died before his wife that the principal should be disposed of as he appointed or to his heirs and next of kin if no appointment was made. Spendthrift provisions were inserted in the trust instrument as to both beneficiaries. The court held the clause as to the settlor was invalid; he could assign his interest under the trust to creditors and give them security, there being no proof that he was insolvent at the time he made the assignments. The power of appointment was destroyed by the assignments. On the death of both husband and wife the assignees of the husband are entitled to the capital of the trust….

Notwithstanding a spendthrift clause, a settlor-beneficiary can transfer his interest….

Where a settlor creates a spendthrift trust for herself for life, and later consents to taking less than the amount provided by the trust instrument, she is in effect giving a part of her interest to the remainder beneficiaries, which she may do, since the spendthrift provisions for the settlor are invalid….

[13] A spendthrift trust provision as to a settlor's life interest is invalid, but this does not invalidate the trust or make the trust subject to attack by the settlor. It merely results in the striking of the spendthrift clause. *Liberty Nat. Bank v. Hicks*, 173 F.2d 631, 9 A.L.R.2d 1355 (D.C. Cir. 1948). Noted in 37 Geo. L.J. 648 (1949); 17 U. Chi. L. Rev. 516 (1950).

[14] See § 1004, post.

[15] *Reidy v. Small*, 154 Pa. 505, 26 A. 602 (1893); *Rynd v. Baker*, 193 Pa. 486, 44 A. 551 (1899); *Willard v. Integrity Trust Co.*, 273 Pa. 24, 116 A. 513 (1922). But see *Stephens v. Moore*, 298 Mo. 215, 249 S.W. 601 (1923).

For cases where the settlor-beneficiary sought to revoke with the collusion of a creditor, see *First Nat. Bank v. Parker*, 87 N.J. Eq. 595, 101 A. 276 (Ct. Err. & App. 1917); *Kutz v. Nolan*, 224 Pa. 262, 73 A. 555 (1909).

The settlor-beneficiary of an irrevocable trust containing spendthrift provisions could not terminate the trust. The trust provided that the trustees in their discretion could pay principal to one or more of the settlor's descendants during the settlor's lifetime. The spendthrift provisions could not apply to settlor's interest but were severable, and the trust could not be terminated on the grounds that its purposes had been accomplished since the support and education of settlor's descendants remained a continuing purpose.

Fewell v. Republic Nat. Bank of Dallas, 513 S.W.2d 596 (Tex. Civ. App. Eastland 1974), *writ refused n.r.e.*, (Feb. 12, 1975), citing text, § 223.

Dexia Credit Local v. Rogan, 624 F.Supp.2d 970, 976 (N.D. Ill. 2009), applied the law to all of the settlor's possible discretionary distributions and refused to apply the law of the jurisdiction in which the trust was created:

> Under Illinois law, spendthrift trusts are valid except when they have been created or funded by a judgment debtor. See 735 ILCS 5/2–1403. A self-settled spendthrift trust is "void as to existing or future creditors, and they can reach his or her interest under the trust." *In re Marriage of Chapman*, 297 Ill.App.3d 611, 620, 231 Ill. Dec. 811, 697 N.E.2d 365, 371 (1998); see also *Barash v. Morris (In re Morris)*, 151 B.R. 900, 906–07 (C.D. Ill. 1993). This rule reflects the law in most U.S. jurisdictions. *E.g.*, *Restatement (Third) of Trusts* § 58(2); *Restatement (Second) of Trusts* § 156(2). Bahamian law to the contrary would violate Illinois' public policy. Accordingly, this Court will not apply Bahamian law to the construction and operation of the PGR trust. See, *e.g.*, *Scentura Creations, Inc. v. Long*, 325 Ill.App.3d 62, 69, 258 Ill. Dec. 469, 756 N.E.2d 451, 457 (2001) ("a party cannot rely on the protections of foreign law to enforce a contract that is illegal in the forum of the local government.").[2]
>
> [2] Dexia has also cited persuasive authority that under Illinois law it is not bound by the PGR trust's choice of law provision as a third party and that application of the "most significant relationship test" would result in the application of Illinois rather than Bahamian law. See generally Dexia Mot. for Summ. J. at 18–22.
>
> Illinois law permits Dexia to reach Peter Rogan's interest in the PGR trust. Under the terms of that trust, the trustees can provide Peter Rogan with the entire corpus of the trust, as well as all of the trust's income. Indeed, Dexia has submitted evidence, uncontested by the Rogan children, that Peter Rogan has received millions of dollars of distributions from the PGR trust. Because the PGR trust is self-settled and its settlor, Peter Rogan, can receive all of the trust's income as well as its entire corpus, Dexia, as his creditor, is entitled to execute on the assets of the Trust. Accordingly, the Court grants Dexia's motion for summary judgment with respect to its request for turnover of the Rogan children's interests in the PGR trust.[3]
>
> [3] Under the authority cited above, there is no requirement that a creditor prove a trustee never refused to honor a request for a distribution by a settlor in order to execute on the assets of a self-settled spendthrift trust. Thus Dexia was not required to submit any evidence that the PGR trust's trustees had never refused a request by Peter Rogan.

III.B.2.c.ii. GRIT When Code § 2702 Applies

See part III.B.7.d Code § 2702 Overview. If Code § 2702 disregards the value of the grantor's retained interest, the grantor will have made a gift equal to 100% of what the grantor gave to the trust.

If triggering the 100% gift rule of Code § 2702 is desirable, the trust cannot be a wholly incomplete gift. One way to do this is not to give the grantor a power of appointment over where the trust passes at the grantor's death. Instead of precluding such a power entirely, one might preclude it over only a portion of the trust and giving the grantor a power of appointment over the rest. ACTEC Fellow R. Eric Viehman developed this idea in "Using an Enhanced Grantor

Retained Income Trust (E-GRIT) to Preserve the Basic Exclusion Amount," which he presented at an ACTEC meeting and in other venues.[6509] The power of appointment aspect concerns me, as described in part III.B.2.c.iii GRIT When Code § 2702 Does Not Apply. Eric responded:[6510]

> I think the sentence Steve cites from Treas. Reg. 25.2511-2(b) must be interpreted in light of the of the three preceding sentences in that very same regulation. These preceding sentences clearly stand for the following propositions:
>
> 1. A gift is incomplete as to any "part thereof" as to "which the donor has so parted with dominion and control as to leave him no power to change its disposition."
>
> 2. A gift can be "partially complete and partially incomplete."
>
> 3. The determination of whether a gift is partially incomplete depends on all of the facts and circumstances, requiring an examination of the "scope" of any reserved power.
>
> In light of those propositions, the fourth sentence you cite is properly interpreted as applying when the donor's testamentary power of appointment applies to the trust's entire "remainder" and not just a portion thereof. If the cited sentence means that a trust contribution is wholly incomplete even when the donor's testamentary power applies to less than 100% of the trust's remainder, it would directly contradict one or more of the propositions enumerated above. Since the cited sentence is delineated as an example applying those very propositions, it should not (and I would argue cannot) be read to man that a contribution to a trust (such as an E-GRIT) is a wholly incomplete gift when the donor has completely surrendered dominion and control over part of the trust's remainder.

CCA 201208026 discussed the interaction of completed gift concepts and Code § 2702. It is reproduced in part in the completed gift discussion of part III.B.2.c.iii GRIT When Code § 2702 Applies.

III.B.2.c.iii. GRIT When Code § 2702 Does Not Apply

If Code § 2702 does not apply, how can one made a completed gift of principal – or perhaps principal and income – while generating estate inclusion?

Reg. § 25.2511-2(b) provides (highlighting added):

> As to any property, or part thereof or interest therein, of which the donor has so parted with dominion and control as to leave in him no power to change its disposition, whether for his own benefit or for the benefit of another, the gift is complete. But if upon a transfer of property (whether in trust or otherwise) the donor reserves any power over its disposition, the gift may be wholly incomplete, or may be partially complete and partially incomplete, depending upon all the facts in the particular case. Accordingly, in every case of a transfer of property subject to a reserved power, the terms of the power must be examined and its scope determined. For example, if a donor transfers property to another in trust to pay the income to the donor or accumulate it in the discretion of the trustee, and the donor retains a testamentary power to appoint the remainder among his

[6509] The 3/4/2019 version is saved as Thompson Coburn LLP document number 9953565.

[6510] 12/28/2020 email. The reader may not rely on Eric's statements, which I have included merely to rebut from the concerns expressed in fn 6511 part III.B.2.c.iii GRIT When Code § 2702 Does Not Apply.

> descendants, no portion of the transfer is a completed gift. On the other hand, if the donor had not retained the testamentary power of appointment, but instead provided that the remainder should go to X or his heirs, the entire transfer would be a completed gift. However, if the exercise of the trustee's power in favor of the grantor is limited by a fixed or ascertainable standard (see paragraph (g)(2) of § 25.2511-1), enforceable by or on behalf of the grantor, then the gift is incomplete to the extent of the ascertainable value of any rights thus retained by the grantor.

The highlighted sentence makes retaining a power of appointment potentially problematic.[6511] Reg. § 25.2511-2(e) elaborates on when a donor is treated as retaining a power of appointment:

> A donor is considered as himself having a power if it is exercisable by him in conjunction with any person not having a substantial adverse interest in the disposition of the transferred property or the income therefrom. A trustee, as such, is not a person having an adverse interest in the disposition of the trust property or its income.

The corollary is that, if a donor can exercise a power only with the consent of a person not having a substantial adverse interest in the disposition of the transferred property, the donor has made a completed gift. However, such a power does cause estate inclusion, under Reg. § 20.2036-1(b)(3), which provides (highlighting added):

> The phrase "right... to designate the person or persons who shall possess or enjoy the transferred property or the income therefrom" includes a reserved power to designate the person or persons to receive the income from the transferred property, or to possess or enjoy nonincome-producing property, during the decedent's life or during any other period described in paragraph (a) of this section. With respect to such a power, it is immaterial (i) whether the power was exercisable alone or only in conjunction with another person or persons, whether or not having an adverse interest; (ii) in what capacity the power was exercisable by the decedent or by another person or persons in conjunction with the decedent; and (iii) whether the exercise of the power was subject to a contingency beyond the decedent's control which did not occur before his death (*e.g.*, the death of another person during the decedent's lifetime). The phrase, however, does not include a power over the transferred property itself which does not affect the enjoyment of the income received or earned during the decedent's life. (See, however, section 2038 for the inclusion of property in the gross estate on account of such a power.) Nor does the phrase apply to a power held solely by a person other than the decedent. But, for example, if the decedent reserved the unrestricted power to remove or discharge a trustee at any time and appoint himself as trustee, the decedent is considered as having the powers of the trustee.

[6511] The text preceding fn 6510 in part III.B.2.c.ii GRIT When Code § 2702 Applies refers to an article that takes the position that (1) setting aside a pecuniary amount in trust that cannot be distributed in trust to the donor and that the donor cannot appoint (the "undistributable amount"), and (2) giving the donor the power to appoint the rest of the trust, combines to make the gift to the trust partially complete. However, Reg. § 25.2511-2(b) begins with a reference to "any property, or part thereof or interest therein…." Does the regulation require bifurcating the gift, as if it were two gifts made to separate trusts, or does "part thereof or interest therein" refer to a fractional share, and the undistributable amount is not a fractional share, making regulation not apply? I invite the reader to consider these issues in light of Eric's response in the text following fn 6510.

Thus, retaining a power of appointment exercisable only in conjunction with the takers of the takers in default of the exercise would constitute a completed gift but would also cause federal estate tax inclusion.

CCA 201208026 analyzed whether a gift was complete in the following circumstances:

> The Trust states that it is irrevocable, and that the Donors renounce any power to determine or control the beneficial enjoyment of Trust income or principal. However, the Trust provides the Donors with testamentary limited powers of appointment. If the Donors do not exercise their testamentary powers, the property remaining in the Trust at termination will be distributed to Child A and Child B.
>
> The trustee, Child A, has absolute and unreviewable discretion in administering the Trust for the benefit of the Donors' children, other lineal descendants, and their spouses (beneficial term interests). Income and principal may be distributed at any time for a beneficiary's health, education, maintenance, support, wedding costs, purchase of a primary residence or business, or for any other purpose. Income and principal may also be distributed to a charitable organization.

CCA 201208026 cited Reg. § 25.2511-2 and reasoned:

> In *Chanler v. Kelsey*, 205 U.S. 466 (1907), the Supreme Court considered, in part, the legal interest that is subject to a testamentary power of appointment. In that case, a grantor created a trust providing a lifetime income interest for his daughter. The trust also provided the daughter with a testamentary limited power to appoint the trust property. If she failed to exercise the power when she died, the trust property was to be distributed to designated persons. The Court held that, for New York inheritance tax purposes, the daughter's execution of her testamentary power was considered "the source of title" to the remainder. As the holder of a testamentary power of appointment, she controlled the remainder passing at her death. See 205 U.S. at 474.
>
> Though it predates the enactment of the gift tax, the *Chanler* opinion supports the proposition that a testamentary power of appointment relates to the remainder of a trust, not the preceding beneficial term interests. The testamentary power does not (and cannot) affect the trust beneficiaries' rights and interests in the property during the trust term. Rather, a trustee with complete discretion to distribute income and principal to the term beneficiaries may, in exercising his discretion, distribute some or all of the trust property during the trust term. The holder of a testamentary power has no authority to control or alter these distributions because his power relates only to the remainder, i.e., the property that will still be in the trust when the beneficial term interests are terminated. *See* Bowe-Parker, *Page on the Law of Wills* § 45.12 (1962). See also Bittker and Lokken, *Federal Taxation of Income, Estate and Gifts* ¶ 226.6.7 (2011); Howard M. Zaritsky, *Tax Planning for Family Wealth Transfers* (4th ed. 2011 Cum. Supp. No. 2) ¶ 3.03[1].
>
> From the time the gift tax was enacted, taxpayers have contested the issue of when a donor parts with dominion and control so as to make a completed gift. For example, in *Sanford's Estate v. Commissioner*, 308 U.S. 39 (1939), the grantor, in 1913, transferred property to a trust for others. He reserved (i) a revocation power exercisable at any time during his life to retrieve the property and thereby terminate every beneficial interest; and (ii) a modification power exercisable at any time during his life to terminate or change

every beneficial interest. In 1919, the grantor relinquished his revocation power, but he retained his modification power. In 1924, he relinquished his modification power. The Court held that notwithstanding the grantor's creation of the trust and relinquishment of his revocation power, he retained dominion and control over the disposition of the trust property until he renounced his power to modify the trust. Consequently, the grantor made a taxable gift in 1924 when he relinquished his modification power. *See Burnett v. Guggenheim*, 288 U.S. 280 (1933).

Following *Sanford's Estate*, the Supreme Court considered various situations in which a trust instrument purported to divest the respective grantor of all dominion and control over property to the extent that the property could not be returned to the grantor except by reason of contingencies beyond his control. In these cases, the Court noted that the respective grantor lost all economic control upon making the transfer, which he would not regain unless certain contingencies occurred. The Court concluded that the respective gifts were complete except for the value of the retained rights. *Smith v. Shaughnessy*, 318 U.S. 176 (1943); *Robinette v. Helvering*, 318 U.S. 184 (1943); *Estate of Kolb v. Commissioner*, 5 T.C. 588 (1945). See § 25.2511-2(c).

Consistent with *Chanler v. Kelsey*, the Service has maintained in litigation that a power holder's testamentary limited power of appointment relates only to the remainder of the respective trust. See *Poinier v. Commissioner*, 858 F.2d 917 (3d Cir. 1988) (testamentary power holder's renunciation of her power relates to the remainder), *aff'g* 86 T.C. 478 (1986). See also *Robinson v. Commissioner*, 675 F.2d 774 (5th Cir. 1982) (grantor's power to change the beneficiaries who would receive trust property when her lifetime income interest terminated constituted a gift of the remainder), *aff'g* 75 T.C. 346 (1980). See *Smith v. Shaughnessy*, *supra* (right to receive income during the trust term and testamentary power to appoint the remainder are separate and severable interests).

In the case at hand, when each Donor transferred property to the Trust on Date, he or she retained a testamentary limited power to appoint so much of it as would still be in the Trust at his or her death.[1] The Trust emphasizes that the Donors do not retain any powers or rights to affect the beneficial term interests of their children, other issue, and their spouses (and charities) during the Trust term. With respect to those interests, the Donors fully divested themselves of dominion and control of the property when they transferred the property to the Trust on Date. Indeed, during the period extending from the creation of the Trust until the Donors' deaths, the trustee, Child A, has sole and unquestionable discretion to distribute income and principal to the beneficial term interests. He may even terminate the Trust by distributing all of the property.

[1] We note that the Trust has conflicting provisions. In one provision, the Donors emphatically renounce any power to determine or control the beneficial enjoyment of the Trust, but other provisions state that the Donors have testamentary limited powers of appointment. Under State law, generally, if two provisions conflict and cannot be reconciled, the latter provision is considered to indicate the grantor's subsequent intention, and that provision prevails. That is the rule unless the general scope of the trust leads to a contrary conclusion. *Cite 1*. We believe that the highest court of State would conclude that the Donors intended to retain the testamentary limited powers and, thus, did so.

Accordingly, for gift tax purposes, the Donors' transfers to the Trust constituted a completed gift of the beneficial term interests. The Donors' testamentary limited powers

> of appointment relate only to the Trust remainder. Their relinquishment of their testamentary powers during the Trust term would affect only the ultimate disposition of the remainder and, as such, would constitute a transfer of the remainder. Bittker and Lokken, *Federal Taxation of Income, Estates and Gifts* ¶ 126.6.7 (2011).

CCA 201208026 included the following under "Case Development, Hazards and Other Considerations":

> It is our belief that § 2702 applies in valuing the gifts in this case. Section 2702 provides special valuation rules with respect to transfers of interests in trusts. Generally, under § 2702(a)(2), the value of any retained interest which is not a qualified interest shall be treated as being zero. Section 25.2702-2(a)(4) provides that an interest in trust includes a power with respect to a trust if the existence of the power would cause any portion of a transfer to be treated as an incomplete gift. Accordingly, under § 25.2702-2(a)(4), the Donors' retained testamentary powers are interests, and the value of their retained interests is zero. Therefore, the value of the Donors' gift is the full value of the transferred property.

For an in-depth analysis of the CCA's implications, see Zeydel, "When is a Gift to a Trust Complete - Did CCA 201208026 Get it Right? *Journal of Taxation* (9/2012).

III.B.2.c.iv. GRIT Instead of GRAT for Divorced or Otherwise Unrelated Parties

Reg. § 25.2702-1(c)(7) excludes from Code § 2702:

> *Certain property settlements*. A transfer in trust if the transfer of an interest to a spouse is deemed to be for full and adequate consideration by reason of section 2516 (relating to certain property settlements) and the remaining interests in the trust are retained by the other spouse.

Reg. § 25.2702-4(d) explains:

> *Example (5)*. H and W enter into a written agreement relative to their marital and property rights that requires W to transfer property to an irrevocable trust, the terms of which provide that the income of the trust will be paid to H for 10 years. On the expiration of the 10-year term, the trust is to terminate and the trust corpus is to be paid to W. H and W divorce within two years after the agreement is entered into. Pursuant to section 2516, the transfer to H would otherwise be deemed to be for full and adequate consideration. Section 2702 does not apply to the acquisition of the term interest by H because no member of H's family acquired an interest in the property in the same transaction or series of transactions. The result would not be the same if, on the termination of H's interest in the trust, the trust corpus were distributable to the children of H and W rather than W.

The last sentence of the above example points out an important issue: When a divorce decree benefits children beyond the support owed to them, then either the obligor has made a gift to the children or the spouse who gave up rights to create the obligation to the children is making a gift.[6512] Letter Ruling 9235032 would treat the whole transfer in the above Example as a gift if

[6512] Rev. Ruls. 68-379, 79-363.

the children are included as beneficiaries and the spouse did not have a qualified retained interest.

However, suppose spouse A creates a trust to pay income to spouse B for life, remainder to spouse A. If the two divorce within two years after entering a separation agreement that requires the creation of this trust, this transaction will not be subject to Code § 2702; and, if spouse A predeceases spouse B, then the trust will be included in spouse A's estate, minus the value of spouse B's income interest.[6513] If, after the divorce, A gives the remainder interest in the trust to A's and B's children, Code § 2702 will not apply, because B will no longer be married to A.[6514]

Note also that, when former spouses re-arranging their obligations of alimony and child support settled with a lump sum payment, that change was not subject to gift tax.[6515]

III.B.2.c.v. GRIT's Estate Tax Consequences

If the grantor dies while holding the right to income, the trust is included in the grantor's estate for estate tax purposes. See part III.C Code § 2036. Code § 2642(f), the estate tax inclusion period (ETIP) rule, prevents any GST exemption from fixing the trust's inclusion ratio until the grantor dies. See part III.B.1.d.ii Estate Tax Inclusion Period.

The taxable gift will essentially reduce or eliminate the impact of including the GRIT in the grantor's estate for estate tax purposes. For example, if the GRIT is worth $1 million at inception and $1.5 million at the grantor's death, generally the effect would be $1 million of lifetime gift/estate tax exemption used for the gift and another $500,000 ($1.5 million minus $1.0 million) included in the taxable estate, for a total use of $1.5 million gift/estate tax exemption. However, certain anti-abuse regulations may be promulgated to limit the estate tax credit given for this lifetime use of the exemption. For all the ideas described in this paragraph, see part II.H.12.a Taxable Gifts of Property Included in the Donor's Estate.

Suppose Mom wants to create a GRIT where she receives income for life and discretionary principal, followed by trusts for her children (and their descendants). If the anti-abuse rule is not in effect, the GRIT may be a great way to make her comfortable locking in the use of her gift/estate tax exemption without jeopardizing her retirement.

In that example, I would recommend appointing as a trustee (perhaps the sole trustee or a special co-trustee) a nonadverse party who can make distributions to or for the benefit of one or more of Mom and her descendants:

- If that nonadverse trustee decides that Mom no longer needs all of the trust, that trustee could split one or more trusts for one or more of the descendants. Reasons to split off these trusts may include:
    - The trust's value has grown much larger than Mom needs.

6513 Letter Ruling 201707007.
6514 Except for the part about estate inclusion, the example and analysis were by C. McCaffrey & J. McCaffrey, "*Obergefell* and the Authority of the IRS to Challenge Valid Marriages and Divorces," *Steve Leimberg's Estate Planning Email Newsletter*, No. 2345 (9/21/2015).
6515 Letter Ruling 201206005.

- Mom's income needs have decreased.
- Mom's life expectancy has decreased, so how money Mom needs for the rest of her life has become greatly reduced.

- If the anti-abuse rule is in effect and applies to GRITs, perhaps the trustee will terminate Mom's life interest altogether to avoid estate inclusion. If Mom needs a flow of income, the children – not a trust for the children – might pay Mom a life annuity.[6516] If Mom initially retained a mandatory income interest or rights to discretionary distributions that are susceptible to valuation, then beware possible income tax on the full value of whatever Mom receives (in other words, perhaps with no reduction for basis).[6517]

- If Mom releases her income interest, then Code § 2035 will pull back the released power if she dies within three years after the release. However, if the trustee terminates her income interest by distributing the trust to or for the benefit of Mom's descendants, Code § 2035 would not apply.

- Mom may allocate GST exemption before the GST exemption decreases. As described in part III.B.1.d.ii Estate Tax Inclusion Period (ETIP), because of Code § 2036 the initial allocation would not fix the trust's inclusion ratio; however, the trust could later be divided and the inclusion ratio determined with respect to any part no longer subject to an ETIP.

- A GRIT can be paired with a trust that is not included in the grantor's estate (a "Gift Trust"). When the GRIT terminates, its assets pass to the Gift Trust. Because the ETIP rule complicates GST issues, consider having the Gift Trust terminate a couple of years after the grantor's death, so that GST issues can be addressed and appropriate severances done.[6518]

- If the GRIT's assets increase in value above the amount of the original taxable gift, consider moving the excess assets to the Gift Trust. Consider borrowing from a financial institution to fund the transfer, so that the Gift Trust receives cash to invest and low basis assets remain in the GRIT to receive a basis step-up on the grantor's death. One can maximize the GRIT's borrowing potential by securing the loan with not only the GRIT's assets but also secondarily with the reinvested loan proceeds. See part II.H.10 Extracting Equity to Fund Large Gift.

- If promulgated, the anti-abuse regulations may target only the bonus exclusion amount – the amount by which the lifetime gift/estate tax exemption scheduled to expire at the end of 2025 exceeds the permanent amount. If so, consider also moving the bonus exclusion amount used to make the original taxable gift over to the Gift Trust.

So, a GRIT may be a viable strategy even if anti-abuse regulations are issued, but the parties need to be aware of and monitor the threat and be prepared to act if the anti-abuse regulations would apply to the GRIT.

TAM 199935003 argued that a trustee commuting a GRIT, as expressly authorized by the trust agreement, should not be respected because the grantor was terminally ill at the time of the

[6516] See part III.B.1.g Private Annuities.
[6517] See parts II.J.18.d Trust Commutations and II.J.18.f Commutation vs Mere Division.
[6518] See Reg. § 26.2642-6(j), Example (8), which is reproduced in the text accompanying fn 6406 in part III.B.1.d.iv Qualified Severances.

commutation; allegedly they always planned commutation. The IRS argued a Code § 2035 disposition or a gift of the entire amount that would have been included in the grantor's estate. I would strongly resist such an argument, in that the grantor is not releasing the power but rather the trustee is exercising discretion. Furthermore, the Code § 7520 tables overvalued the terminally ill grantor's life estate, so the grantor could not have been making a gift. The IRS viewed the trust agreement contemplating commutation to be a smoking gun. If a trustee has absolute discretion – no ascertainable standards - to distribute to or for the benefit of the grantor and other beneficiaries, the IRS' case would seem much more difficult to make.

III.B.2.c.vi. SPAT – Not a GRIT

Suppose a client wants to make a completed gift without retaining an interest - to assure use of the lifetime gift/estate tax exemption and fix the GST inclusion ratio - but wants the flexibility of being added back as a beneficiary?

This idea may be especially attractive for those living in a state that does not respect self-settled spendthrift trusts.

A special power of appointment trust ("SPAT") was the subject explored by Blattmachr, Gans, and O'Connor, "SPATs: A Flexible Asset Protection Alternative to DAPTs," *Estate Planning Journal* (2/2019):

> This article proposes the use of an irrevocable trust created for beneficiaries other than the grantor, in which one or more individuals (who are not the grantor and are not necessarily a beneficiary) have a lifetime special power of appointment, held in a nonfiduciary capacity, that may be used to direct assets back to or for the benefit of the grantor. The grantor would have no entitlement to benefits or even eligibility to receive benefits in the discretion of the trustee or another fiduciary; but only by the exercise of a special power of appointment held by someone in a nonfiduciary capacity-essentially a non-self-settled trust from which the grantor may benefit. In other words, the grantor would have no more right to benefit from the assets than if they were owned by someone else individually. To be sure, the concept of allowing the grantor to benefit from the trust assets through the exercise of a special power of appointment is not new. But questions about the structure of such an arrangement and its effectiveness need to be considered.

The article compares a SPAT to an ING [footnotes omitted from quote]:

> **An analogy to ING trusts**. For years, practitioners have assisted clients in the creation of incomplete nongrantor trusts, created in asset jurisdictions such as Alaska, Delaware, and Nevada. The purpose of these "ING" trusts generally is to attempt to avoid state income tax on assets held in trust, which otherwise would be taxed to the grantor who lives in a locale with state income tax. There are several analogies that exist between ING trusts and SPATs.
>
> One of the key ingredients to ING trusts is the existence of a "distribution committee," or "power of appointment committee," which is a group consisting of at least two individuals other than the grantor to whom the committee may direct the trustee to make distributions. In these trusts, the trustee has no discretion to distribute income or principal during the grantor's lifetime. Instead, distributions by the trustee are made only at the unanimous direction of the distribution committee or with the grantor and one

other member of the distribution committee. The distribution committee can direct distributions to its own members. The members of the distribution committee act in a nonfiduciary capacity.

Although there is no "special power" or language that the distribution committee cannot appoint to themselves, the predominant theory is that the members of the distribution committee do not possess a general power of appointment, and that the decision to direct the trustee to make distributions was not a gift for federal gift tax purposes by any of them. If a person has a power of appointment that is exercisable only in conjunction with the creator of the power, then that power is not a general power of appointment. Because there is no general power of appointment, there is no gift by a member of the distribution committee incurred by exercising the power of a committee member.

The role of the distribution committee in ING trusts is similar to the role of the special powerholder SPATs. The special powerholder holds the power in a nonfiduciary capacity. The difference is that the distribution committee members can cause distributions to themselves. In contrast, the SPAT powerholder cannot exercise the power in favor of himself or herself.

The ING trust generally is structured as an incomplete gift for federal gift tax purposes. There are two powers of an ING trust that, when combined, give comfort that the gift to the trust is incomplete:

(1) The grantor retains a testamentary special power of appointment.

(2) The lifetime distribution power that is held by the grantor together with a member of the distribution committee.

As discussed above, like an ING trust, the grantor of a SPAT can render the transfer to the trust an incomplete gift by retaining a special testamentary power of appointment. Unlike an ING, in which the grantor, by joining with a member of the distribution committee, can direct distributions, the grantor does not have any ability to affect the special power.

Each of the private letter rulings "approving" ING trusts involved trusts established in DAPT jurisdictions. The reason is that a trust is a grantor trust if the trust assets are subject to the claims of the grantor's creditors. Although, as expressed earlier, a SPAT should not be subject to the claims of the grantor's creditors as it is not a self-settled trust (as no trustee holds the discretionary to make distributions to or for the grantor), it makes sense to consider creating any SPAT in a DAPT jurisdiction.

As to the final point above, if a special power of appointment is exercised in favor of the grantor, generally the grantor is still considered the settlor, so the trust would be consider self-settled. Possible scenarios include:

1. The state in which the trust was created changes its law to respect self-settled spendthrift trusts.

2. The exercise of the power of appointment moves the trust to a state that respects self-settled spendthrift trusts.

3. The grantor has run out of money, and estate inclusion may provide a free basis step-up.

To what extent is this an issue? If the IRS can argue step transaction, Code § 2036 would apply to such a trust, regardless of state law; if the holder of the power of appointment waited until the trust was old-and-cold, presumably the IRS would have difficulty arguing step transaction unless the client or lawyer left a paper trail. Otherwise, generally only the assets that can be distributed to the grantor would be subject to the grantor's creditors, and the power of appointment can create two trusts: (1) a unitrust, where only the unpaid unitrust amount for that year as of date of death is includible; and (2) a discretionary trust, to meet emergency needs, which would be fully includible.

The grantor's possible addition as a beneficiary may complicate analysis under the grantor trust rules, which rules generally are described in part III.B.2 Irrevocable Grantor Trust Planning, Including GRAT vs. Sale to Irrevocable Grantor Trust, especially part III.B.2.h How to Make a Trust a Grantor Trust Taxed to a U.S. Citizen or Resident.

The grantor is not yet a beneficiary, so Code § 677 does not apply. See part III.B.2.h.viii.(a) Code § 677(a) Generally.

The power to add the grantor as a beneficiary means that you need to rely on not violating Code § 674(a), because Reg. § 1.674(d)-2(b) prevents Code § 674(b)(5), (6), and (7), (c), and (d) from helping. See part III.B.2.h.vii.(a) Distribution Provisions Resulting from Control Causing Grantor Trust Treatment. If all of the trustees are beneficiaries, then Code § 674(a) grantor trust status may be avoided, if and to the extent that the trustees are therefore adverse parties.

The other question is what if the power to add the grantor is not currently exercisable, but rather the person holding that power is not in place yet. Then arguably Reg. § 1.674(d)-2(b) does not apply. But we must see whether we must ignore that the person holding that power is not in place yet. The legislative history to Code § 672(d) seems to suggest that we cannot ignore that the person holding that power is not in place yet, but I'm not quite sure. See the language at the end of the introductory portion of part III.B.2.h How to Make a Trust a Grantor Trust Taxed to a U.S. Citizen or Resident.

So I'm not sure the extent to which a SPAT may or must be a grantor trust.

III.B.2.d. Income Tax Effect of Irrevocable Grantor Trust Treatment

III.B.2.d.i. Federal Income Tax and Irrevocable Grantor Trust Treatment

III.B.2.d.i.(a). General Concepts of the Effect of Irrevocable Grantor Trust Treatment on Federal Income Taxation

Both a GRAT and a sale to an irrevocable grantor trust rely on grantor trust treatment.[6519] If a GRAT were not a grantor trust, using property other than cash to satisfy the annuity would constitute a taxable sale.[6520]

If the grantor or another person is treated as the owner of any portion of a trust under the grantor trust rules, that person's taxable income and credits includes those items of income, deductions, and credits against tax of the trust which are attributable to that portion of the trust.[6521] Such an item of income, deduction, or credit is treated as if it had been received or paid directly by the deemed owner.[6522]

Grantor trusts have less favorable treatment for state taxes and miscellaneous itemized deductions than do nongrantor trusts. See part II.J.3.d Who Benefits Most from Deductions.

Furthermore, in estates and nongrantor trusts, generally deductions are netted against income rather than being passed through separately on the K-1s given to beneficiaries. See part II.J.8.f.i.(a) Allocating Deductions to Various Income Items and Reg. §§ 1.67-2T(b)(1) and 1.67-4.

CCA 201343021, issued by policy maker Bradford R. Poston, Senior Counsel, Branch 2, Passthroughs & Special Industries, commented:[6523]

> We believe that Rev. Rul. 85-13 should be read broadly, requiring that a grantor trust not be recognized as a separate taxable entity for federal income tax purposes if someone has such dominion and control over it as to create a single identity of interest between the trust and the owner. As Rev. Rul. 85-13 states, it would be anomalous for the existence of a grantor trust would be ignored for purposes of attribution of income, deduction, and credit, and yet retain its identity as a separate entity capable of entering into a sales transaction with the owner. When a grantor or other person exercises dominion and control over a trust, either by retaining a power over or an interest in the trust by dealing with the trust property for the owner's benefit, the owner has treated the trust property as though it were the owner's property. The Service position of treating the owner of an entire trust as the owner of the trust's assets is consistent with and supported by the rationale for attributing items of income, deduction, and credit to the

[6519] Key rulings include Rev. Ruls. 81-6, 85-13, 2004-64, 2007-13, 2008-22, and 2011-28, as well as Rev. Procs. 2008-45 and 2008-46. Other pronouncements touching upon these rules include Notice 90-1 and Rev. Ruls. 88-103, 90-7 and 2004-86. For more on Rev. Rul. 2004-64, see fns. 6961-6980, found in part III.B.2.j.iv.(a) Grantor Trust Reimbursing for Tax Paid by the Deemed Owner.
[6520] Reg. § 1.661(a)-2(f).
[6521] Code § 671.
[6522] Reg. § 1.671-2(c)
[6523] The CCA's comment associated this footnote refers to Code §§ 267 and 707(b)(1)(A). Code § 267 is reproduced in part II.G.4.l.iii Code § 267 Disallowance of Related-Party Deductions or Losses; within that part, fn 1416 refers back to this footnote. For a description of Code § 707(b), see part II.Q.8.c Related Party Sales of Non-Capital Assets by or to Partnerships; fn 5571 refers back to this footnote.

> owner. Accordingly, we conclude that a trust that is treated as a grantor trust is ignored as a separate entity apart from the owner for all federal income tax purposes, including §§ 267 and 707(b)(1)(A).

The CCA continued:

> [I]t should be noted that there have been a very limited set of circumstances after the publication of Rev. Rul. 85-13 where the Service or the courts have treated a grantor trust and its owner as separate entities for a federal income tax purpose:
>
> (1) *Rothstein* itself has never been overturned, and theoretically is still good law in the Second Circuit. We have found only one case which, in dicta, follows the reasoning in *Rothstein*. In *Zand v. Comm'r*, T.C. Memo 1996-19, the Tax Court found that a grantor was not the owner of a trust under § 675(3), relating to grantor borrowings from the trust, because the loan met the exceptions provided in § 675(3) for borrowings with adequate interest and security made by an independent trustee. The Court continued, however, that even had the grantor been properly treated as the owner, he still would have been able to deduct interest paid to the trust because the grantor trust provisions only relate to income attribution.
>
> (2) Rev. Rul. 85-13 never explicitly revoked or modified Rev. Rul. 74-243, 1974-1 C.B. 106. Rev. Rul. 85-13 cites numerous cases and rulings for its conclusion, but also mentions Rev. Rul. 74-243 as one counter-example. In Rev. Rul. 74-243, a corporate executive accepted a government appointment and transferred property, including a qualified stock option, to a "blind trust" which would have been a grantor trust under §677, although the ruling does not explicitly describe it as a grantor trust. The ruling concludes that the transfer of the option to the trust was a taxable disposition under § 425. Rev. Rul. 74-243 has not been applied or cited approvingly by the Service or a court after 1985, although it arguably still technically reflects the Service's position under the narrow facts of the ruling. Moreover, at least two PLRs (9124019, 9309027) (both issued by CC:TEGE apparently without coordinating with CC:PSI) have allowed similar transfers to grantor trusts without triggering a taxable disposition.
>
> (3) *Textron v. Comm'r*, 117 T.C. 67 (2001) was arguably inconsistent with Rev. Rul. 85-13. In *Textron*, a domestic corporation owned substantially all the stock of a foreign corporation, which it was ordered (initially by the Federal Trade Commission, and later confirmed by a federal district court injunction) to transfer to a voting trust with a court-appointed trustee. It was uncontested that the voting trust was a grantor trust to Textron under § 677. The issue before the Tax Court was whether Textron was taxable on the foreign corporation's subpart F income during the existence of the voting trust; the Court found that the trust, not Textron, was the shareholder for purposes of §§ 951(a) and 958(a), but then ruled in favor of the government on the alternative ground that the trust was taxable as the subsidiary's U.S. shareholder, with the subpart F income then flowing through to Textron. The decision was criticized for its inconsistency with Rev. Rul. 85-13 and other grantor trust authority in Stevens, Matthew A., "A Grantor Trust Visits Subpart F: Ruminations on *Textron v. Commissioner* and other Anomalies", 21 *Va. Tax Rev. 507* (2002).
>
> (4) PLRs 201117042 and 201129045 appear to conflict with Rev. Rul. 85-13. PLRs 201117042 and 201129045 were issued by IRS Employee Plans, and state

> that an individual retirement account (IRA) cannot be transferred to a grantor trust of the IRA owner.[6524] The conflict between these rulings and Rev. Rul. 85-13 was noted in Beers, Deborah M., "IRS Issues Two Seemingly Contradictory Rulings on Effects of Transfer of IRA to Special Needs Grantor Trust," 36 *Tax Mgmt. Est. & Tr. J* 230 (2011) and Jones, Michael J., "The Economy and other Retirement Mysteries," *Trusts & Estates*, January 2012, at 35. Both articles mention prior PLRs issued by the same office appearing to accept that the owner of a grantor trust is the owner of its assets, which may include an IRA. See PLRs 200620025, 200826008, and 201116005.

The deemed owner of a portion of the trust is also deemed to directly own that portion of the trust's property.[6525] Thus, when a person who is deemed to own all of a trust sells assets to that trust, no transaction is deemed to have occurred.[6526] Furthermore, when the grantor trust status is turned off, the sale does not spring into existence merely because a sale had occurred.[6527] When the deemed owner of a trust sells its interest in the trust, the seller is deemed to sell the trust's assets to the buyer, and the buyer becomes the trust's deemed owner.[6528]

[6524] [This is my footnote and not from the CCA:] Reg. § 1.408-4(a)(2) prohibits an individual from assigning the IRA. How does this interact with the fact that grantor trusts generally are disregarded? Choate, ¶ 6.1.06, *Life and Death Planning for Retirement Benefits* (Digital Edition, viewed 6/28/2016), suggests that a transfer to a grantor trust that permitted distributions to anyone other than the individual IRA owner during that individual's life would be a transfer triggering Reg. § 1.408-4(a)(2). Given that Letter Rulings 200620025, 200826008, and 201116005 approved transfers of inherited IRAs to special needs trusts for the benefit of the beneficiary, that suggestion appears consistent with the IRS' approach.

[6525] Notice 90-1 stated, "If the grantor is treated as the owner of all the trust under sections 671 through 677, the grantor is considered to be the owner of the trust assets for federal income tax purposes". Rev. Rul. 2004-86 followed that idea. Rev. Rul. 87-61 points that, under Rev. Rul. 85-13, a grantor who is treated as the owner of a portion of a trust represented by specific trust property is considered to be the owner of that property, and Rev. Rul. 88-103 makes a similar statement. Rev. Rul. 90-7 applied that concept to an exchange of closely-held business stock. This principle was reaffirmed by Rev. Rul. 2007-13, reproduced in fn 4338 in part II.Q.4.b.i Transfer for Value Rule Generally.

[6526] Rev. Rul. 85-13, reasoning, "A transaction cannot be recognized as a sale for federal income tax purposes if the same person is treated as owning the purported consideration both before and after the transaction. See *Dobson v. Commissioner*, 1 B.T.A. 1082 (1925)."

[6527] See Letter Rulings 201436006 and 201436007 in fn. 6035.

[6528] A specialized application of this idea involving multiple grantors is in part II.D.4.a Investment Trusts. For the proposition cited in the text, TAM 200814026 reasoned:

> The transaction is properly characterized as follows: (1) prior to Date 8, X, the seller and grantor, was treated as the owner of Trust 1 under § 677; (2) if a grantor is treated as the owner of the entire trust, the grant or is treated as the owner of the trust's assets for federal income tax purposes, and X's sale of the beneficial ownership interest in Trust 1 to Taxpayer is treated as a sale of X's assets; (3) Taxpayer therefore is treated as purchasing the assets of Trust 1; (4) Taxpayer is treated as forming a new trust; and (5) Taxpayer is treated as contributing the Trust 1 assets to the new trust. Taxpayer thus is treated as a grantor with respect to Trust 1 pursuant to § 1.671-2(e)(1), which provides that the term "grantor" includes a person who makes a non-gratuitous transfer of property to a trust, and as an owner under § 677. As a result, Taxpayer may not properly claim a bad debt deduction to discharge its obligation on the Notes through the redemptions on Dates 11 through 17 because transactions between Taxpayer and Trust 1 are disregarded for federal income tax purposes.

The deemed owner is also treated as an owner of stock under the Code § 318 attribution rules.[6529]

Rev. Rul. 85-13 ignored the existence of a note that its deemed owner owed a trust. This seems analogous to disregarding a debt that one division of a corporation owes another division.[6530]

A gift to a trust occurs for income tax purposes not when the gift is made but rather when the grantor trust powers are turned off.[6531]

Code § 1015(d) provides a basis increase when gift tax is paid on a gift. However, because a transfer to a grantor trust does not exist for income tax purposes, is it a gift under Code § 1015(d), or does Code § 1015(d) merely look to whether a gift was made for gift tax purposes? The latter appears to be the rule.[6532] However, to avoid doubt on the consequence of any gift tax paid when a transfer is made to a trust, consider having the grantor trust status with respect to such a gift arise, through an automatic trigger, at some point after the tax-triggering gift is made.

Generally, converting from a nongrantor trust to a grantor trust is not a realization event,[6533] and the IRS has taken the position that the conversion is not even considered to be a distribution to

---

[6529] See text accompanying fns 4869-4872 in part II.Q.7.a.viii Code § 318 Family Attribution under Subchapter C.

[6530] Rev. Rul. 80-228 involved the following facts:

> X corporation operated its business in two entirely separate divisions ("Division 1" and "Division 2"), keeping a separate bank account and a separate set of books for each division. Each division also maintained an intracompany account in their respective books of account and transactions between the two divisions were recorded therein. For valid business reasons X organized a new corporation, Y. All the assets of Division 2 were transferred by X to Y at net book value in exchange for all of the stock of Y. At the time of the transfer, the intracompany account payable due to Division 1 from Division 2 was 100x dollars. On its opening balance sheet Y listed an account payable to X of 100x dollars and X, conversely, listed an account receivable from Y of 100x dollars. Within one year after the transfer the account payable of Y was paid in full to X.

Disagreeing with the Code § 351(b) analysis of *Wham Construction Company, Inc. v. United States*, Civil No. 72-689 (D.S.C., Feb. 16, 1976), *aff'd* Civil No. 76-2047 (4th Cir. 1979), Rev. Rul. 80-228 held:

> In the instant case the account receivable to X from Y was a note or other evidence of indebtedness received by X in a section 351 transaction and it constituted "other property" for purposes of section 351(b) of the Code. This is due to the fact that the preincorporation intracompany accounts could not have given rise to a debtor-creditor relationship between X and Y because X could not, prior to incorporation of Y, have been liable for a debt to itself. The intracompany accounts were mere bookkeeping entries by X, a single corporation, to show the activities of separate divisions for internal accounting purposes.

For Code § 351(b), see part II.M.2.a Initial Incorporation – Generally.

[6531] Reg. § 1.671-2(e)(2)(i) provides, "A transfer of property to a trust may be considered a gratuitous transfer without regard to whether the transfer is treated as a gift for gift tax purposes."

[6532] Without mentioning why this might be a concern, Letter Ruling 9109027 ruled that gift tax paid on a GRIT that was a wholly owned grantor trust caused a basis increase. For some factual background on the ruling, see fn. 3672 in part II.M.4.c.i When a Gift to a Service Provider Is Compensation and Not a Gift.

[6533] CCA 200923024 made a strong statement to this effect:

> Assuming the transaction in the present case is abusive, asserting that the conversion of a nongrantor trust to a grantor trust results in taxable income to the grantor would have an impact

the grantor.[6534] However, one might exercise caution where the nongrantor trust has debt in excess of basis, in case a rule similar to the converse situation arises: when a trust converts from a grantor trust to a nongrantor trust during the grantor's life, the grantor being relieved of debt in excess of the basis of the trust's assets causes income to be recognized.[6535] See also part III.B.2.j Tax Allocations upon Change of Interest, given that a change in grantor trust status is a change in ownership for income tax purposes.

Starting with a discussion of Letter Ruling 201730017, Ed Morrow comments on converting a nongrantor trust to a grantor trust:[6536]

> While the IRS got the ultimate rulings correct in this PLR, some of their reasoning and interim conclusions to get there are incorrect, overbroad or misleading. This PLR concerned a non-grantor CLT converting to a grantor-CLT and the taxpayer was attempting to get a charitable income tax deduction at the time of conversion similar to

---

> on non-abusive situations. A nongrantor trust may become a grantor trust in several situations: examples include the appointment of a related or subordinate trustee to replace an independent trustee as in the present case (§ 674); a borrowing of the trust corpus under § 675(3) (discussed below in ISSUE 2 with regard to the application of Rev. Rul. 85-13); or the payment of the grantor's legal support obligations under § 677(b). No prior guidance dealing with these events has indicated that they result in taxable income to the deemed transferee (the owner of the grantor trust). Rev. Rul. 85-13 concluded that the grantor became the owner of the trust corpus which he had indirectly borrowed and thus was taxable on the trust's income and, as the deemed owner of the trust assets, could not engage in a transaction with the trust that would be respected for income tax purposes. It did not conclude that the grantor realized the amount of the indirect borrowing or any portion of that amount as income under § 61 or any other section. Therefore, while we agree that this appears to be an abusive transaction, the Service should not take the position that the mere conversion of a nongrantor trust to a grantor trust results in taxable income to the grantor.

The CCA suggesting attacking a transaction that potentially abused the grantor trust rules instead by considering applying the step transaction, the economic substance doctrine or other judicial doctrines. I have been told that Brad Poston wrote the CCA.

[6534] Letter Rulings 201730012, 201730017 and 201730018, all under Brad Poston's name, held:

> Rev. Rul. 77-402 concludes that the lapse of grantor trust status during the grantor-owner's life may have income tax consequences, but does not impose such consequences on a non-grantor trust that becomes a grantor trust. Rev. Rul. 85-13 describes the income tax effects of a non-grantor trust becoming a grantor trust, which effects did not include the realization or recognition of any income by the grantor-owner by reason of the conversion. Given the lack of authority imposing such consequences, we conclude that the conversion of Trust from a non-grantor trust to a grantor trust will not be a transfer of property to Grantor from Trust under any income tax provision.

The grantor had created a nongrantor charitable lead trust and wanted a ruling that the conversion to a grantor charitable lead trust would constitute a distribution to the grantor, followed by a deductible charitable contribution; see Code § 170(f)(2)(B). The IRS may have simply been trying to prevent toggling on grantor trust status from generating a deduction.

[6535] See parts III.B.2.j.i Changing Grantor Trust Status and III.B.2.g Income Tax Concerns When Removing Property from the Estate Tax System, fn. 6591.

[6536] Part ii(k), "Potential Advantage? – Changing Status from Non-Grantor to Grantor Trust: Is Conversion a Termination of Non-Grantor Trust as Taxpayer per IRC §642(h)?" in Morrow, Edwin P., IRC Section 678 and the Beneficiary Deemed Owner Trust (BDOT) (April 19, 2018). Available at SSRN: https://ssrn.com/abstract=3165592 or http://dx.doi.org/10.2139/ssrn.3165592 (last revised 10/6/2022). That ruling and Letter Rulings 20173012 and 201730018 were discussed in Zaritsky, Lane & Danforth, § 7:8. Conversions of Trust Status, *Federal Income Taxation of Estates and Trusts* (WG&L), which as of 9/30/2023 appears to have been updated since Ed wrote his piece.

someone funding a grantor CLAT ab initio. The PLR is correct to cite Rev. Rul. 85-13 and conclude that the conversion was not a sale or exchange or taxable event, but it goes too far when it says that there "will not be a transfer of property to Grantor from Trust under any income tax provision" or that it is "not a transfer of property held by Trust to Grantor as settlor of Trust for income tax purposes." Of course they are transfers, and who else would they be to if not to the grantor? What the IRS should have concluded instead is that conversion is indeed a transfer, just not a sale or disposition under IRC § 1001 that would be a taxable transfer. The reason the settlor should have been denied a new charitable income tax deduction is that the transfer to a grantor CLT has to come from an individual (or trust deemed owned by an individual) to receive the tax deduction under § 170, and this transfer to the grantor CLT came from a non-grantor trust. A non-grantor trust can only receive a charitable deduction under § 642(c), and cannot receive one under § 170 (with exception for S corp/ESBTs after TCJA).[159] The settlor/taxpayer was a transferee upon conversion, not a transferor as the IRS mistakenly refuted. The IRS implies that if conversion were deemed a transfer from the non-grantor trust the settlor/taxpayer would receive a deduction under § 170, but this is incorrect.

[159] IRC §642(c)(1).

Despite all the very favorable authority and guidance on conversions, there are still unanswered questions about how certain tax characteristics would flow through to the newly deemed owner on conversion. The threshold questions, whether a non-grantor trust converts to a standard grantor trust or a BDOT, are whether there is 1) a distribution to the deemed owner for income tax purposes and, trickier, 2) whether the non-grantor trust is considered "terminated" under Subchapter J.[160] In most cases, but not all, it would be advantageous to be considered terminated. A mere distribution will carry out current year DNI, but it would take a termination of the trust to carry out capital gains if they are not otherwise made part of DNI, or to carry out net operating losses (NOLs), capital loss carryforwards and excess deductions under IRC §642(h). Passive loss carryforwards should add to basis on termination.[161]

[160] [Ed quotes Code § 642(h), which is discussed in part II.J.3.i Planning for Excess Losses.]

[161] [Ed quotes Code § 469(j)(12), which is discussed in part II.K.2.d Effect of Death of an Individual or Termination of Trust on Suspended Passive Losses.]

Some tax items, however, such as losses suspended due to at risk rules[162] and certain tax credits or other tax carryovers,[163] may not pass out on termination.[164] If there were substantial amounts in these categories, taxpayers may prefer that a conversion to grantor trust status not be considered a termination of the trust as a separate taxpayer, so that it may convert back to non-grantor trust status at some point to later soak up such tax preferences.

[162] [Ed cite Code § 465, which is discussed in part II.G.4.j At Risk Rules (Including Some Related Discussion of Code § 752 Allocation of Liabilities).]

[163] See, e.g., IRC §27 (foreign tax credit), IRC §53 (alternative tax credit), IRC §611 (depletion carryover), IRC § 163(d) (investment interest carryover). Many business

credits turn into deductions in final year when a taxpayer "dies or ceases to exist", IRC § 196. Does a trust cease to exist on becoming a grantor trust?

[164] Losses in pass through entities that are suspended may also be trapped and not pass out to beneficiaries on termination, see Treas. Reg. § 1.1366-2(a)(6) for S corporations and *Sennett v. Commissioner*, 80 T.C. 825, 831 (1983), *aff'd* 752 F2d 428 (9th Cir. 1985) for partnerships, which may be cause for delaying any outright distribution (or, potentially delaying full conversion to BDOT status). [See parts II.G.4.c Basis Limitations for Deducting Partnership and S Corporation Losses, II.G.4.d Basis Limitation for Shareholders in an S Corporation, II.G.4.e Basis Limitations for Partners in a Partnership, and II.G.4.k Be Sure to Use Suspended Losses as Soon as They Become Available.]

One influential treatise concludes that:

> "a [non-grantor] trust that becomes a grantor trust should be deemed to terminate and to distribute its assets to the grantor, as its beneficiary. Thus, the grantor should be treated as a beneficiary succeeding to the property of the trust, for purposes of Section 642(h), which would allow the grantor to succeed to the unused capital loss carryovers. A capital loss carryover resulting from an asset sale by a grantor trust should be a personal loss of the taxpayer, under Section 671. The grantor should logically continue to be able to deduct the loss carryover even if the trust ceases to be a grantor trust."[165]

[165] Zaritsky, Lane & Danforth, *Federal Income Taxation of Estates and Trusts* (WG&L), ¶ 7.03[5] Capital Loss Carryovers and Change of Grantor Trust Status.

PLR 9220012, discussed previously herein, which permitted beneficiaries to use capital loss carryforwards on conversion from non-grantor trust to BDOT status, is perfectly consistent with this conclusion.[6537] However, PLRs are not citable authority.

Some distinguished experts, however, question whether the conversion from a non-grantor trust to a grantor trust is a termination, and question whether carryovers such as passive losses, capital losses, disallowed investment interest and net operating losses would merely be suspended (and perhaps even expire in the case of NOLs) after changing from non-grantor to grantor trust status.[166] It's certainly an open question.

[166] Carol Cantrell, The Fiduciary's Handbook of Sneaky Post-Mortem Income Tax Issues, page 9-10, 47th Annual Philip E. Heckerling Institute on Estate Planning, January 14-18, 2013. See also *Mysteries of the Blinking Trust*, by Laura Peebles, Trusts and Estates, Sept. 2008.

The IRS and courts may ultimately adopt a middle ground between the above two interpretations. Is the trust terminated as an entity for income tax purposes when it no longer has any income, deductions, credits reported to it as a separate taxpayer? Arguably, yes, the property is now considered the grantor's (or beneficiary deemed owner's) for income tax purposes. But it is not clear, and the regulations are extremely awkward to interpret in the context of grantor trusts. The most recent IRS

[6537] Letter Ruling 9220012 is reproduced in part III.B.2.i.vii.(b) Determining Portion Owned When Trust Is Only a Partial Grantor Trust.

pronouncement did not address this issue.[167] It may not be a simple yes or no answer. The answer should not turn on whether the trust terminates for state law – after all, many trusts, older GPOA marital trusts and §2503(c) trusts in particular, simply grant a beneficiary a right to withdraw the entire corpus at some point (becoming a IRC § 678 trust with income taxed to powerholder) and no one has ever argued that this is not a de facto termination of the trust for IRC §642(h) purposes.[168]

[167] CCA 200923024.

[168] This is in contrast to a non-grantor trust that is winding up, which will still be considered a separate taxpayer during a reasonable wind up period, *e.g. Dominion Trust Co. of Tenn. v. U.S.*, 786 F Supp. 1321 (M.D. Tenn. 1991), but not if termination were unreasonably postponed, at which point it would be taxed to the beneficiary as equitable owner. Treas. Reg. § 1.641(b)-3(d).

The closest analogy might be what happens when an ESBT ceases to be a separate trust. In such case, the carryovers and excess deductions are not suspended until the trust becomes an ESBT again - they pass out to the rest of the trust.[169]

[169] IRC § 641(c)(4).

The regulation discussing trust "termination" is not under the §642(h) regulations as we might expect, but under §641(b) regulations, and does not speak to situations in which the tax status changes.[170] If, as hinted at by this regulation, vesting in the beneficiary is important, converting to a BDOT arguably fits into this definition better than converting to a garden variety IGT, since most grantors have no property interest in an IGT whatsoever and it's hard to argue that property has been distributed to them (unless, of course, we ignore the trust as a taxpayer and consider the distribution to be to the deemed owner). By contrast, a BDOT beneficiary has extensive property rights over the assets. Treas. Reg. § 1.641(b)-3(b) does not fit a conversion scenario well at all though. Once the grantor trust rules apply to a trust, they apply. There is no "wind up" period as described in the regulation.

[170] [quoting Reg. § 1.641(b)-3(b), which is reproduced in the text accompanying fn 2563 in part II.J.3.i Planning for Excess Losses.]

In some conversion scenarios, might we have a "suspension" (this is my term, not a term used in any code or regulations) rather than a "termination"? It's not hard to imagine the IRS arguing that anytime there is a meaningful possibility within the unilateral control of the parties to revert back to non-grantor trust status that there is no termination, merely a temporary suspension of tax status, and therefore IRC §642(h) should not apply, and the losses and other deductions would be suspended until either the grantor dies, the deemed owner dies, or unless and until there is no unilateral ability of the deemed owner (or trustee) to revoke the IRC § 673-678 triggering power.

Referring to losses passing out on a trust's termination (part II.J.3.i Planning for Excess Losses), 819-2d T.M. part XII.F. Toggling Grantor Trust Powers suggests:

The loss of the trust's separate taxable status may not constitute termination for this purpose, though, once again, there is no clear authority, and the conversion to a grantor trust could be treated as the equivalent of a final distribution of the trust assets. In such a case, the grantor trust would appear to be the person succeeding to the property of the nongrantor trust, and thus the grantor would be able to take advantage of those losses.

However, the above did not discuss and argue against Letter Rulings 201730012, 201730017 and 201730018 and CCA 200923024, so it is not a weighty statement. On the other hand, those positions that the IRS has taken are not precedent, and converting from nongrantor trust status to grantor trust status changes the deemed ownership from that of the trust to that of the deemed owner, so what else could be but termination of the trust holding assets and the deemed owner holding the assets; see fn 6525 for the deemed owner holding the assets. Those IRS positions do not squarely address this question and appear to be result-oriented, so they also have questionable weight. For example, Reg. § 1.671-3(a)(1) says that the grantor or other deemed owner "takes into account in computing his income tax liability all items of income, deduction, and credit (including capital gains and losses) to which he would have been entitled had the trust not been in existence during the period he is treated as owner." That sounds like a wholly-owned grantor trust no longer exists and therefore has terminated. Note that this rule does not apply to changes during life in determining whether an S corporation accounting cut-off applies under part III.B.2.j.ii.(c) Transfer of Shareholder's Entire Interest; on the other hand, the stock ownership is treated as having changed under part III.B.2.j.ii.(e) Change in Qualification of Trust to Hold S corporation Stock During Taxable Year, and the only limitation in the tax treatment of changes of ownership appears to be being barred for relief under the accounting cut-off.

An irrevocable grantor trust's assets that are not included in the grantor's estate generally would not receive a new basis at the grantor's death. Rev. Rul. 2023-2 provides that grantor trust status alone does not generate a Code § 1014 basis step-up.[6538] See also part II.H.5 Irrevocable Trust Planning and Basis Issues.

Reg. § 1.108-9, dealing with excluding cancellation of indebtedness income under the insolvency and bankruptcy provisions of Code § 108, would not disregard a grantor trust in all cases.

III.B.2.d.i.(b). Portions of Irrevocable Grantor Trust Deemed Owned for Federal Income Taxation

A person may be the deemed owner of none, part, or all of a trust. The deemed owner includes "those items of income, deduction, and credit against tax attributable to or included in that portion."[6539] For example:

(1) A person who is treated as the owner of an entire trust (corpus as well as ordinary income) takes into account all items of income, deduction, and credit (including capital gains and losses) to which that person would have been entitled had the trust not been in existence during the period that person is treated as owner.[6540]

(2) If the portion treated as owned consists of specific trust property and its income, all items directly related to that property are attributable to the portion, items directly related to trust property not included in the portion treated as owned by the person are taxed under the

[6538] Rev. Rul. 2023-2 is quoted extensively in part III.B.2.a Tax Basis Issues When Using Irrevocable Grantor Trusts.
[6539] Reg. § 1.671-3(a).
[6540] Reg. § 1.671-3(a)(1).

nongrantor trust rules, and items that relate to both portions "must be apportioned in a manner that is reasonable in the light of all the circumstances of each case, including the terms of the governing instrument, local law, and the practice of the trustee if it is reasonable and consistent."[6541]

(3) If the portion of a trust treated as owned by a person consists of an undivided fractional interest in the trust, or of an interest represented by a dollar amount, a pro rata share of each item is normally allocated to the portion.[6542] If a slice of the entire trust is involved, see part III.B.2.i.vii Portion Owned When a Gift Over $5,000 is Made, especially part III.B.2.i.vii.(a) Determining Portion Owned When a Withdrawal Right Does Not Lapse in Full Before Any Income Is Earned. Regarding rights to corpus or income, regulations provide:[6543]

> … where the portion owned consists of an interest in or a right to an amount of corpus only, a fraction of each item (including items allocated to corpus, such as capital gains) is attributed to the portion.

Furthermore:[6544]

> If the grantor or other person is treated as an owner because of his power over or right to a dollar amount of ordinary income, he will first take into account a portion of those items of income and expense entering into the computation of ordinary income under the trust instrument or local law sufficient to produce income of the dollar amount required. There will then be attributable to him a pro rata portion of other items entering into the computation of distributable net income under subparts A through D, such as expenses allocable to corpus, and a pro rata portion of credits of the trust.

If a person is treated as the owner of a portion of a trust, that portion may or may not include both ordinary income and other income allocable to corpus.[6545] For example:

(1) Only ordinary income is included by reason of an interest in or a power over ordinary income alone.[6546]

[6541] Reg. § 1.671-3(a)(2).

[6542] Reg. § 1.671-3(a)(3), which provides:

> If the portion of a trust treated as owned by a grantor or another person consists of an undivided fractional interest in the trust, or of an interest represented by a dollar amount, a pro rata share of each item of income, deduction, and credit is normally allocated to the portion. Thus, where the portion owned consists of an interest in or a right to an amount of corpus only, a fraction of each item (including items allocated to corpus, such as capital gains) is attributed to the portion. The numerator of this fraction is the amount which is subject to the control of the grantor or other person and the denominator is normally the fair market value of the trust corpus at the beginning of the taxable year in question. The share not treated as owned by the grantor or other person is [taxed ignoring the grantor trust rules].

Nuances regarding taxing a beneficiary as an owner are explored in part III.B.2.i.vii.(a) Determining Portion Owned When a Withdrawal Right Does Not Lapse in Full Before Any Income Is Earned.

[6543] Reg. § 1.671-3(a)(3).

[6544] Reg. § 1.671-3(c), incorporated by reference into Reg. § 1.671-3(a)(3).

[6545] Reg. § 1.671-3(b).

[6546] Reg. § 1.671-3(b)(1), which further provides:

(2) Only income allocable to corpus is included by reason of an interest in or a power over corpus alone, if satisfaction of the interest or an exercise of the power will not result in an interest in or the exercise of a power over ordinary income which would itself cause that income to be included.[6547]

(3) Both ordinary income and other income allocable to corpus are included by reason of an interest in or a power over both ordinary income and corpus, or an interest in or a power over corpus alone which does not come within the provisions of subparagraph (2) of this paragraph.[6548]

If only income allocable to corpus is included in computing a deemed owner's tax liability, the deemed owner will take into account in that computation only those items that would not be included under the nongrantor trust rules when computing the current income beneficiaries' tax liability if all distributable net income had actually been distributed to those beneficiaries.[6549]

On the other hand, if a person is treated as an owner solely because of the person's interest in or power over ordinary income alone, the person will take into account in computing the person's tax liability those items which would be included in computing the tax liability of a current income beneficiary, including expenses allocable to corpus which enter into the computation of distributable net income.[6550]

See Reg. § 1.677(a)-1(g) for examples when a grantor has a current or reversionary right to income, illustrating the effect of Reg. § 1.677(a)-1(f), "Accumulation of income," which provides:

Thus, if a grantor is treated under section 673 as an owner by reason of a reversionary interest in ordinary income only, items of income allocable to corpus will not be included in the portion he is treated as owning. Similarly, if a grantor or another person is treated under sections 674-678 as an owner of a portion by reason of a power over ordinary income only, items of income allocable to corpus are not included in that portion. (See paragraph (c) of this section to determine the treatment of deductions and credits when only ordinary income is included in the portion.)

[6547] Reg. § 1.671-3(b)(2), which further provides:

For example, if a grantor has a reversionary interest in a trust which is not such as to require that he be treated as an owner under section 673, he may nevertheless be treated as an owner under section 677(a)(2) since any income allocable to corpus is accumulated for future distribution to him, but items of income included in determining ordinary income are not included in the portion he is treated as owning. Similarly, he may have a power over corpus which is such that he is treated as an owner under section 674 or 676(a), but ordinary income will not be included in the portion he owns, if his power can only affect income received after a period of time such that he would not be treated as an owner of the income if the power were a reversionary interest. (See paragraph (c) of this section to determine the treatment of deductions and credits when only income allocated to corpus is included in the portion.)

[6548] Reg. § 1.671-3(b)(3), which further provides:

For example, if a grantor is treated under section 673 as the owner of a portion of a trust by reason of a reversionary interest in corpus, both ordinary income and other income allocable to corpus are included in the portion. Further, a grantor includes both ordinary income and other income allocable to corpus in the portion he is treated as owning if he is treated under section 674 or 676 as an owner because of a power over corpus which can affect income received within a period such that he would be treated as an owner under section 673 if the power were a reversionary interest. Similarly, a grantor or another person includes both ordinary income and other income allocable to corpus in the portion he is treated as owning if he is treated as an owner under section 675 or 678 because of a power over corpus.

[6549] Reg. § 1.671-3(c).

[6550] Reg. § 1.671-3(c).

> If income is accumulated in any taxable year for future distribution to the grantor (or his spouse in the case of property transferred in trust by the grantor after Oct. 9, 1969), section 677(a)(2) treats the grantor as an owner for that taxable year. The exception set forth in the last sentence of section 677(a) does not apply merely because the grantor (or his spouse in the case of property transferred in trust by the grantor after Oct. 9, 1969) must await the expiration of a period of time before he or she can receive or exercise discretion over previously accumulated income of the trust, even though the period is such that the grantor would not be treated as an owner under section 673 if a reversionary interest were involved. Thus, if income (including capital gains) of a trust is to be accumulated for 10 years and then will be, or at the discretion of the grantor, or his spouse in the case of property transferred in trust after October 9, 1969, or a nonadverse party, may be, distributed to the grantor (or his spouse in the case of property transferred in trust after Oct. 9, 1969), the grantor is treated as the owner of the trust from its inception. If income attributable to transfers after October 9, 1969 is accumulated in any taxable year during the grantor's lifetime for future distribution to his spouse, section 677(a)(2) treats the grantor as an owner for that taxable year even though his spouse may not receive or exercise discretion over such income prior to the grantor's death.

In addition to determining the types of items attributed deemed ownership, one needs to know for what part of the year the grantor is deemed to own those items. Under Code § 675(3),[6551] a grantor-trustee who has both borrowed the entire trust corpus and repaid the borrowed funds plus interest in the same year is treated for federal income tax purposes as the owner of the entire trust for that year, notwithstanding full payment.[6552]

For borrowing all of the income, *Benson v. Commissioner*, 76 T.C. 1040, 1044-1049 (1981), held:

> Section 675 is one of a series of Internal Revenue Code sections collectively known as the grantor trust rules. See secs. 671 through 679. Sections 673 through 677 enumerate the instances in which a trust grantor is treated as owning all or part of a trust. For tax purposes, a grantor is credited with the trust income, deductions, and credits allocable to the trust "portion" he is treated as owning. Sec. 671. The purpose of those grantor trust rules is to tax a trust grantor on trust items over which he has retained substantial

---

[6551] See part III.B.2.h.iv Borrow Power, especially fns. 6644-6646.

[6552] Rev. Rul. 86-82, reasoning:

> In *Mau v. United States*, 355 F.Supp. 909 (D. Hawaii 1973), the taxpayer established five separate trusts, with the taxpayer designated trustee of each. In 1965, the taxpayer borrowed money from each of the trusts. These amounts were not repaid until 1969. The taxpayer argued that section 675(3) of the Code did not cause the taxpayer-grantor to be liable for federal income tax on the trusts' 1965 income because the loans were not outstanding at the beginning of the year. The court rejected this interpretation of the statute, reasoning that section 675(3) was enacted to prevent the shifting of taxable income in situations where a grantor retained control and use of trust properties through borrowing. Therefore, the court held that the borrowing of trust corpus or income by a grantor at any time during a taxable year would result in the grantor being taxed on trust income for that entire year under section 675(3). The court concluded that the taxpayer was taxable on income of the trusts in 1965, the year the borrowing occurred, even though the loans were made after the beginning of the year. If section 675(3) otherwise applies for a given year, its effect is not avoided by making repayment before the year closes. *Mau* therefore stands for the principle that section 675(3) applies for any year during any part of which a loan by a trust to the grantor-trustee is outstanding.

dominion and control, see section 1.671-2(b), Income Tax Regs., and it is with that purpose in mind that we interpret section 675(3) and “portion.”

At the outset, we note that while “portion” is used throughout the Code sections comprising the grantor trust rules, its meaning varies from section to section and from case to case. Sec. 1.671-3, Income Tax Regs.[12] “Portion’s” flexible meaning is necessary to fulfill the purpose of the grantor trust rules—taxation of a grantor only on trust items over which he has retained substantial dominion and control. See sec. 1.671-2(b), Income Tax Regs. Given a myriad of dispositive variables, “portion” must have an adaptable meaning. For example, under section 676, a trust grantor is treated as owning any trust “portion” which he can revoke. If the grantor can revoke the entire trust, then “portion” means the entire trust. However, if the grantor can revoke only the remainder interest and has no power to alter the income interest, “portion” means only the remainder interest, since the grantor has no power over the income interest and should not be taxed on it. See sec. 1.671-3(b)(2), Income Tax Regs.

[12] The regulations recognize six possible meanings of “portion”: the entire trust; the trust accounting income; the trust corpus; a fraction or dollar amount of trust accounting income; a fraction or dollar amount of corpus; or specific trust property. See sec. 1.671-3(a) to (c), Income Tax Regs. See also, Schmolka, “Selected Aspects of the Grantor Trust Rules,” U. Miami 9th Inst. on Estate Planning par. 1400 (1975).

In determining what “portion” of a trust should be treated as being owned by its grantor, most of the grantor trust rules focus on powers set forth in the trust instrument which evidence a grantor’s dominion and control over trust property without regard to whether or not those powers are ever exercised.[13] In most cases, it is fairly simple to tell over what part of a trust a power extends; therefore, the meaning of “portion” is easily decided. For example, if a grantor has the power to distribute the entire trust to his spouse, the entire trust is treated as his even if only part of the trust is actually so distributed. See sec. 677(a)(1). On the other hand, if a grantor has the power to distribute only current income to his spouse, he is treated as owning only the current income interest in the trust. In the latter case, “portion” means only the current income interest, because that is the only trust segment over which the grantor has any power.

[13] See, e.g., secs. 674; 675(1), (2), and (4); 676; 677(a).

Section 675(3) differs from the other provisions which provide rules for determining grantor ownership of a trust, because it requires an affirmative act, borrowing, rather than a mere power, before it applies.[14] Nevertheless, the same theme underlies section 675(3) as underlies the other Code sections which treat a grantor as owning the trust. In both cases, the justification for taxation of the grantor is evidence of substantial grantor dominion and control. Thus, our proper inquiry is not what the grantor has borrowed but what the grantor’s borrowing represents in terms of the grantor’s dominion and control over the trust.

[14] See also sec. 677(b), which applies when trust income is actually used, pursuant to a discretionary power, to support or maintain a beneficiary, other than the grantor’s spouse, whom the grantor is legally obligated to support or maintain. That section clearly limits taxation of the grantor to income actually so applied.

In order fully to understand the implications of grantor borrowing, section 675(3) must be read in conjunction with section 675(2). Section 675(2) treats a grantor as the owner of the trust anytime the grantor, a nonadverse party, or both have the power to loan income or corpus to the grantor without adequate security or without adequate interest, unless a nongrantor trustee may make such loans to any and all persons. Thus, the mere power to loan trust property to the grantor on favorable terms, vested in the grantor or a nonadverse party, evidences enough grantor dominion and control over the trust to justify taxing all the trust income to the grantor.[15] However, if a nongrantor trustee can make unsecured or no-interest loans to anyone, the grantor is seemingly on equal footing with the rest of the world, and the evidence of grantor dominion and control is less.

[15] Of course, if the tainted lending power extends only to a "portion" of the trust, that is, if the grantor could only lend himself corpus, then only that "portion" should be attributed to the grantor. *Cf.* sec. 1.671-3(b)(2), Income Tax Regs.

Section 675(2) can be avoided easily. A trust grantor can install a "friendly" trustee[16] and give that trustee a general power to make unsecured or no-interest loans to anyone. In all probability, the "friendly" trustee would not make such loans to anyone except the grantor; but, nevertheless, section 675(2) would not apply. However, a grantor cannot rely on such an escape from section 675(2) if he contemplates actually borrowing from the trust. When actual borrowing occurs, section 675(3) must be considered.

[16] By referring to a friendly trustee, we mean one who is a related or subordinate party subservient to the grantor. See secs. 675(3) and 672(c).

As previously noted, section 675(3) treats a trust grantor as owning any "portion of a trust in respect of which" he borrows, if the loans are either unsecured or bear no interest or are made by a "friendly" trustee, unless the grantor repays the loans before the beginning of the taxable year. It might seem that section 675(3) serves to tax the grantor only on the part of the trust he actually borrows. But, such an interpretation would read 675(3) as treating the grantor as owning the "portion" he borrowed rather than owning the "portion of [the] trust in respect of which" he borrowed, which is what the statute mandates.[17] Moreover, such a reading would produce an unacceptable result. The power to make unsecured or no-interest loans to a trust grantor causes the grantor to be treated as owner of the entire trust under section 675(2). It would be incongruous if unsecured or no-interest loans actually made to the grantor caused only the part of the trust actually borrowed to be treated as the grantor's under section 675(3). That result would make avoidance of section 675(2) not only easy, but relatively harmless from the grantor's viewpoint—he could still obtain trust property in the form of favorable loans but without having to worry about being treated as owning any substantial part of the trust. Therefore, we refuse to read "portion of [the] trust in respect of which" to mean merely "portion."

[17] In *Holdeen v. Commissioner*, T.C. Memo. 1975-29, the grantor-taxpayer established a complicated series of long-term trusts benefiting his family and various charities. His daughter served as trustee of one of the trusts and expended $80,000 from that trust for mortgage participation certificates on property the grantor-taxpayer owned which was subject to preexisting mortgages. We held that the grantor-taxpayer indirectly borrowed $80,000 from the trust which he repaid when he transferred the mortgaged property to the trust. We held further that the grantor-taxpayer was to be treated under

sec. 675(3) as owner of an $80,000 "portion" of the trust during the years between the loan and the repayment.

It might seem that *Holdeen* stands for the proposition that "portion" means the amount actually borrowed. However, such does not follow from a careful reading of that case. The $80,000 borrowed in *Holdeen* was corpus and we, in effect held that $80,000 of the corpus was the "portion of [the] trust in respect of which" the grantor-taxpayer borrowed. Furthermore, it is unclear whether any more could have been borrowed. See note 19 infra. In summary, Holdeen involved a cash loan from corpus and is thus distinguishable from most cases which involve a noncash corpus, cash loans, direct borrowing, and clearly defined borrowing perimeters. We do not find *Holdeen* necessarily inconsistent with our holding in this case.

Likewise, we reject petitioners' contention that "portion" refers to the amount borrowed in comparison to the entire trust. Petitioner would have us calculate a fraction arrived at by dividing the amount borrowed by the trust corpus, and treat that fraction as the trust "portion" owned by the grantor. If such were the case, a trust grantor could borrow the entire trust income derived from the entire trust corpus but only be treated as owning a fraction of the trust, even though his borrowing evidences dominion and control over the entire trust. We find such a result patently unreasonable and unsupported by the statutory language or any other authority.[18]

[18] Petitioners mistakenly rely on *Holdeen v. Commissioner*, T.C. Memo. 1975-29, as supporting their interpretation of sec. 675(3). See note 17 *supra*.

On the other hand, we need not address respondent's contention that "portion" means the entire trust whenever a grantor has the power to borrow all corpus or income and any trust property is borrowed. See *Mau v. United States*, 355 F.Supp. 909 (D. Hawaii 1973). In this case, petitioner-husband borrowed all the trust income and that income was derived from the entire trust corpus. Thus, it is clear that petitioner-husband should be treated as owner of the entire trust. It does not matter in this case whether we reach that result via respondent's automatic entire trust rule or via calling petitioner-husband owner of the entire trust simply because he actually borrowed "in respect of" the entire trust. The same result is reached either way. It is best to wait for a case clearly presenting the problem to analyze fully respondent's "entire trust" contention.[19]

[19] Such a case would arise if, for example, a trust grantor transferred two separate income-producing stocks to a trust, but only borrowed the income derived from one of those stocks. Respondent would argue that the grantor's borrowing represents not only the grantor's control of the property he has in hand but is indicative of his ability to control all the trust property on similar terms. Just as the mere existence of a power to revoke evidences substantial dominion and control, see sec. 676, so does the mere existence of unsecured or no-interest borrowing or borrowing from a "friendly" trustee. It appears from respondent's brief in this case that, if the grantor-taxpayer could demonstrate that his borrowing does not evidence his ability to borrow the entire trust on sec. 675(3) terms, respondent would not argue that the entire trust should be treated as being owned by that grantor-taxpayer. For example, if the trust terms forbid grantor borrowing of current income, and a grantor only borrowed corpus, then he should be treated as owning only corpus, since his borrowing from corpus evidences no dominion and control over income. In other words, respondent's position would be

that the grantor-taxpayer must show that all the trust could not be borrowed on the same terms that part was borrowed.

Petitioners in this case have made no showing that less than all the trust should be treated as being owned by petitioner-husband. [footnote re burden of proof omitted] As previously noted, he borrowed all the trust income which was in respect of all the trust corpus. His borrowings undoubtedly indicate significant dominion and control over the entire trust. Accordingly, we conclude that petitioner-husband is treated as owning the entire trust during 1974 and 1975.

For borrowing less than all of the income, *Bennett v. Commissioner*, 79 T.C. 470, 484-485 (a reviewed opinion) (1982), held:[6553]

In the instant case, the grantors have borrowed some, but not all of the trust income in previous years[24] and have made no borrowings in the current taxable year. Under these circumstances, we conclude that petitioners should be taxed on that portion of the current year's trust income which the total unpaid loans at the beginning of the taxable year bear to the total trust income of prior years plus the trust income for the taxable year at issue.[25] Such an allocation is consistent with the flexible approach articulated in *Benson v. Commissioner*, *supra* (see note 22 supra).[26]

[24] Both parties have premised their arguments on the basis that all borrowings were from trust income and there is not convincing evidence of record that cash corpus was

[6553] The court reasoned at 483-484:

The 1954 Code introduced the concept of a "portion" of the trust. For example, whatever the result under the Clifford regulations, under the 1954 Code, if the grantor has the power to borrow only ordinary income without adequate interest and security (see sec. 1.671-1(b), Income Tax Regs.), he is taxed only on ordinary income and not on income attributable to corpus. See sec. 675(2); sec. 1.671-3(b)(1), Income Tax Regs. Thus, when the grantor is taxed because of a power, the language of the trust instrument will generally determine over what portion of the trust the power may be exercised and, therefore, the portion of the trust in respect of which the grantor is treated as the owner. However, unlike the other provisions of section 675 which tax the grantor on powers which he has over the trust or portions thereof, section 675(3) taxes the grantor because of events(i.e., borrowings). Therefore, in interpreting the words "portion in respect of which" for purposes of section 675(3), we believe our inquiry should take into account what the grantor actually borrowed.[22] *Cf.* section 1.671-3(c), Income Tax Regs., which recognizes that the grantor is taxed only a part of the trust income if he has a "power over or right to a dollar amount of ordinary income." We reject respondent's contention that the grantor is taxable on all the trust income whenever he borrows any of such income; such an interpretation would give insufficient weight to the word "portion" in section 675(3). Nor should the grantors be taxable on the entire income for 1973 and 1974 merely because their loans outstanding at the beginning of the taxable years ($426,000) were in excess of those years' income ($167,434.43 and $206,494.69). We do not believe that the fact that the grantors have borrowed a portion of prior years' income necessarily means that they have borrowed "in respect of" the entire income of the current year.[23]

[22] *Benson v. Commissioner*, 76 T.C. 1040 (1981), holds that the amount borrowed does not per se determine the portion of the trust on which the grantor is taxable but does not stand for the proposition that the amount borrowed is irrelevant in making such a determination. Indeed, we inferred that, in another case, the amount borrowed might be relevant. See 76 T.C. at 1048.

[23] We emphasize that all of the trust income involved herein constituted "ordinary income," *i.e.*, income not allocable to corpus. We leave to another day the question of the extent to which the latter type of income would enter into the calculation of the "portion in respect of which" the grantor of a trust would be taxable under section 675(3). As a consequence of the foregoing, all references to trust income herein are to "ordinary income" before distributions to beneficiaries.

available. See *Benson v. Commissioner*, 76 T.C. at 1046 n. 17. See also note 23, *supra*.

[25] Such an allocation gives effect, albeit indirectly, to the distributions made to the beneficiaries; such amounts were obviously not borrowed and, therefore, do not enter into the numerator and they also do not reduce the denominator (see note 23 supra). We further note that sec. 675(3) treats unpaid interest as borrowing; in the instant case, interest was in fact fully paid each year.

[26] In *Benson*, we held that, when 100 percent of the current year's income attributable to the entire trust corpus was borrowed, the grantor was taxable on 100 percent of that income. Consistent with that approach, if, in the present case, there had been borrowings in 1973 or 1974, it would appear that the grantors would have been taxed on the portion which the current year's borrowings bear to the current year's income or on the portion which total borrowings bear to total income through the end of the taxable year, whichever is greater. On the other side of the coin, the allocation formula we adopt could produce taxability to grantors of an amount of trust income in excess of the amount remaining after distributions to beneficiaries. But this consequence occurs in respect of other provisions dealing with grantor trusts and seems to be mandated by sec. 675(3), which clearly specifies some taxability where there are unpaid borrowings at the beginning of the taxable year. We also note that, at least under the circumstances of this case where all the income constituted "ordinary income," it would appear to make no difference in the computation of the fractional formula we have adopted whether "trust income" is "gross income" or "taxable income" before distributions to the beneficiaries, since each of the petitioners would be entitled to their pro rata share of the deductions properly charged to the trust income. See sec. 671.

Except for an actual borrowing under Code § 675(3), turning off the grantor trust features generally is effective for the rest of the year.[6554] Reg. § 1.1001-2(c), Example (5)[6555] would deem this transfer to occur on the day the grantor trust powers are turned off; this was followed by *Madorin v. Commissioner*, 84 T.C. 667 (1985). TAM 200010010 cited Reg. § 1.1001-2(c), Example (5), and held:

> Similarly, in the present case, X has created a grantor trust and is treated as the owner of the entire trust and the owner of all the trust property. Thus, although X has nominally transferred a shares of Company stock to Trust 2, X remains the owner of the trust property for federal income tax purposes. Therefore, when Trust 2 terminates and transfers a shares of Company stock to the remainder trusts for C and D, X is considered to have disposed of the Company stock to the remainder trusts, along with the associated liability assumed by the remainder trusts, and X's amount realized includes the amount of liabilities from which X is discharged as a result of the disposition.
>
> X argues that this case is distinguishable from Example 5 in section 1.1001-2(c) because, in that example, T purchased an interest in P and C deducted the distributive share of partnership losses attributable to the partnership interest held by T, while, in the

[6554] See Zaritsky, *Tax Planning for Family Wealth Transfers During Life: Analysis With Forms*, ¶ 3.02[3][j][iii] Turning off grantor trust status, for a complete analysis of this topic.
[6555] Reg. § 1.1001-2(c), Example (5) is reproduced in fn 6591 in part III.B.2.g Income Tax Concerns When Removing Property from the Estate Tax System.

> present case X did not deduct losses attributable to debt incurred by Trust 2. Therefore, X argues that X should not be considered the owner of all the trust property for federal income tax purposes, and X should not be considered to have transferred ownership of the stock, subject to the liability, to the remainder trusts. X argues that instead, Trust 2 should be treated as the owner of the stock, and Trust 2 should be treated as the transferor of the stock, subject to the liability, to the remainder trusts. In addition, X argues that the debt is incurred by reason of Trust 2's acquisition of the stock, and since under Rev. Rul. 85-13, the amount of the debt did not increase Trust 2's basis in the stock, the liability should not be included in Trust 2's amount realized under section 1.1001-2(a)(3).
>
> However, although X did not deduct losses attributable to debt incurred by Trust 2, X received an annuity payment from Trust 2 that was not includible in X's income, and thus, X benefitted from the debt incurred by Trust 2. Therefore, we conclude that the present case is not distinguishable from Example 5 of section 1.1001-2(c). Because X was considered the owner of the stock for federal income tax purposes, the exception in section 1.1001-2(a)(3) does not apply to the present case. X, not Trust 2, is the transferor of the stock on termination of Trust 2 and X did not incur the indebtedness in order to acquire the stock within the meaning of section 1.1001-2(a)(3).
>
> In addition, X argues that the language of section 1.1001-2(a)(3) does not require that the debt be incurred by reason of the transferor's acquisition of the property, but merely be incurred by reason of any acquisition of the property. Therefore, X states that regardless of whether X or Trust 2 is treated as the transferor of the stock to the remainder trusts, the amount of the liability should not be included in X's amount realized because the debt was incurred by reason of Trust 2's acquisition of Company stock. Section 1.1001- 2(a)(3) states that "In the case of a liability incurred by reason of the acquisition of the property, this section does not apply to the extent that such liability was not taken into account in determining the transferor's basis for such property." We believe this language can only be reasonably read to refer to the transferor's acquisition of the property. We believe this case is substantially identical to Example 5 in section 1.1001-2(c).

For the income tax consequences of a gift where the donee assumes liabilities, see part III.B.1.c.i Gifts with Consideration – Bargain Sales**.** For the consequences on the nature of interest expense after a sale of a partnership interest, see *Lipnick v. Commissioner*, 153 T.C. No. 1 (2019), discussed in the text accompanying fns 457-459 in part II.C.3.d Deducting Interest Expense on Debt Incurred by a Partnership.

See also part III.B.2.j.i Changing Grantor Trust Status, which is part of part III.B.2.j Tax Allocations upon Change of Interest in a Business, which explores how such changes affect allocations of K-1 income from partnerships and S corporations. Within the latter discussion, fn. 6853 supports the following surprising result:

> Irrevocable trust holds stock in S corporation. Grantor turns off grantor trust status, effective the end of December 30. The S corporation sells its assets December 31 (or is deemed to do so when the trust sells its stock and elects to treat the stock sale as an asset

sale).[6556] Because the grantor owned the stock for almost all of the year, the grantor is taxed on almost all of the gain, notwithstanding the fact that the trust was not a grantor trust when the stock was sold. If the stock were not sold until the following January 1, the grantor would not be taxed at all.

III.B.2.d.i.(c). Federal Fiduciary Income Tax Reporting of Irrevocable Grantor Trust Treatment

Generally, items of income, deduction, and credit attributable to any portion of a trust that the grantor trust rules treat as owned by the grantor or another person, are not reported by the trust on Form 1041, "U.S. Income Tax Return for Estates and Trusts," but are shown on a separate statement to be attached to that form.[6557] Exceptions apply to certain trusts deemed owned all by one person, widely held fixed investment trusts, and environmental remediation trusts.[6558]

Eligible trusts may report differently. Ineligible trusts include a common trust fund under Code § 584(a), a trust that has its situs or any of its assets located outside the United States, a QSST,[6559] a trust all of which is treated as owned by one grantor or one other person whose taxable year is a fiscal year, a trust all of which is treated as owned by one grantor or one other person who is not a United States person, and a trust all of which is treated as owned by two or more grantors or other persons, one of whom is not a United States person.[6560] Ineligible trusts also include a trust the deemed owner of which is an exempt recipient for information reporting purposes and a trust treated as owned by two or more persons, the latter trust if one or more deemed owners are exempt recipients for information reporting purposes unless not only at least one deemed owner of the trust is a person who is not an exempt recipient for information reporting purposes but also the trustee reports without regard to whether any of the grantors or other persons treated as owners of the trust are exempt recipients for information reporting purposes.[6561]

An eligible trust, all of which is treated as owned by one person, may furnish the deemed owner's name and taxpayer identification number (TIN) and the trust's address to all payors during the taxable year, and comply with certain additional requirements,[6562] and the trustee is not required to file any type of return with the IRS.[6563] The deemed owner must provide to the trustee a complete Form W-9 or acceptable substitute Form W-9 signed under penalties of perjury.[6564] Unless the deemed owner is the trustee or a co-trustee of the trust, the trustee must furnish the deemed owner of the trust with a statement that:[6565]

(1) Shows all items of income, deduction, and credit of the trust for the taxable year;

6556 The election is described in part II.Q.8.e.iii.(f) Code §§ 338(g), 338(h)(10), and 336(e) Exceptions to Lack of Inside Basis Step-Up for Corporations: Election for Deemed Sale of Assets When All Stock Is Sold.
6557 Reg. § 1.671-4(a).
6558 Reg. § 1.671-4(a).
6559 See part III.A.3.e.i QSSTs, found in part III.A.3.e QSSTs and ESBTs.
6560 Reg. § 1.671-4(b)(6).
6561 Reg. § 1.671-4(b)(7).
6562 Reg. § 1.671-4(b)(2)(i)(A).
6563 Reg. § 1.671-4(b)(2)(ii)(B).
6564 Reg. § 1.671-4(b)(7).
6565 Reg. § 1.671-4(b)(2)(ii)(A).

(2) Identifies the payor of each item of income;

(3) Provides the grantor or other person treated as the owner of the trust with the information necessary to take the items into account in computing the grantor's or other person's taxable income; and

(4) Informs the grantor or other person treated as the owner of the trust that the items of income, deduction and credit and other information shown on the statement must be included in computing the taxable income and credits of the grantor or other person on the income tax return of the grantor or other person.

Another alternative method an eligible trust may use is to furnish the trust's name, TIN, and address to all payors during the taxable year.[6566] In that case, the trustee must file with the IRS the appropriate Forms 1099, reporting the income or gross proceeds paid to the trust during the taxable year, and showing the trust as the payor and the deemed owner of the trust as the payee.[6567]

Unless the deemed owner of the trust is the trustee or a co-trustee of the trust, the trustee must also furnish to the deemed owner of the trust a statement that:[6568]

(i) Shows all items of income, deduction, and credit of the trust for the taxable year;

(ii) Provides the grantor or other person treated as the owner of the trust with the information necessary to take the items into account in computing the grantor's or other person's taxable income; and

(iii) Informs the grantor or other person treated as the owner of the trust that the items of income, deduction and credit and other information shown on the statement must be included in computing the taxable income and credits of the grantor or other person on the income tax return of the grantor or other person.

For purposes of all of the above rules in this part III.B.2.d.i.(c), a trust all of which is treated as owned by a married couple filing jointly under Code § 6013 is considered to be owned by one grantor.[6569]

A grantor trust owned by a business in a large multinational enterprise might be required to file Form 8975.[6570]

[6566] Reg. § 1.671-4(b)(2)(i)(B).

[6567] Reg. § 1.671-4(b)(2)(iii)(A), which also provides:

> The trustee has the same obligations for filing the appropriate Forms 1099 as would a payor making reportable payments, except that the trustee must report each type of income in the aggregate, and each item of gross proceeds separately. See paragraph (b)(5) of this section regarding the amounts required to be included on any Forms 1099 filed by the trustee.

[6568] Reg. § 1.671-4(b)(2)(iii)(B)(1). This statement satisfies the trustee's obligation to furnish statements to recipients with respect to the Forms 1099 filed by the trustee. Reg. § 1.671-4(b)(2)(iii)(B)(2).

[6569] Reg. § 1.671-4(b)(1).

[6570] See text accompanying fn. 665 in part II.D.2 Business Entity as Grantor of Tru.

III.B.2.d.i.(d). S corporation Issues Regarding Irrevocable Grantor Trust Treatment

See parts III.A.3.a Wholly Owned Grantor Trusts – How to Qualify, Risks, and Protective Measures, III.A.3.b.i A Trust All of Which Is Treated Under the Grantor Trust Rules as Owned by An Individual Who Is a Citizen or Resident of the United States, and III.A.3.b.ii A Trust That Was a Grantor Trust with Respect to All of Its Assets Immediately Before the Death of The Deemed Owner and Which Continues in Existence After Such Death. See also part III.B.2.j Tax Allocations upon Change of Interest in a Business, especially parts III.B.2.j.i Changing Grantor Trust Status and III.B.2.j.ii Tax Allocations on the Transfer of Stock in an S Corporation.

If S corporation stock is reported under the first alternative method (using the deemed owner's TIN) and the deemed owner actually owns or is deemed to own (using the deemed owner's TIN) stock in the same S corporation, may the S corporation issue one K-1 to the deemed owner instead of a separate K-1 to each actual owner? If the S corporation takes that position, the K-1 should break out each actual owner's portion of the items, not only to respect each trust's separateness but also to facilitate any additional reporting required if the grantor is not the trustee or a co-trustee.[6571] Second, the S corporation must furnish to each person who is a shareholder at any time during such taxable year a copy of such information shown on such return as may be required by regulations.[6572] Reg. § 1.6037-1(a) requires Form 1120S to set forth:

(1) The names and addresses of all persons owning stock in the corporation at any time during the taxable year;

(2) The number of shares of stock owned by each shareholder at all times during the taxable year;

(3) The amount of money and other property distributed by the corporation during the taxable year to each shareholder;

(4) The date of each distribution of money and other property; and

(5) Such other information as is required by the form or by the instructions issued with respect to such form.

Pages 21-22 were the only place in the Instructions for Form 1120S (2016) that I noticed a reference to shareholder identifying information. Although they do not discuss grantor trusts, they refer to a situation that might be analogous:

> If a single-member limited liability company (LLC) owns stock in the corporation, and the LLC is treated as a disregarded entity for federal income tax purposes, enter the owner's identifying number in item D and the owner's name and address in item E.

See also part II.A.2.e.ii Procedure for Making the S Election; Relief for Certain Defects in Making the Election, especially fn. 124.

[6571] Reg. § 1.671-4(b)(2)(iii)(B)(1). This statement satisfies the trustee's obligation to furnish statements to recipients with respect to the Forms 1099 filed by the trustee. Reg. § 1.671-4(b)(2)(iii)(B)(2).
[6572] Code § 6037(b).

III.B.2.d.ii. State Income Tax Effect of Irrevocable Grantor Trust Treatment

Not all states recognize grantor trust status.[6573]

Thus, a transaction that might be ignored for federal income tax purposes might be subjected to state income tax.

III.B.2.d.iii. Effect of State Tax on Logistics Involving S corporations and Partnerships Held in Grantor Trusts

Often states require withholding or similar payments regarding an owner's share of state tax liabilities.

When an irrevocable grantor trust owns an interest in an S corporation or partnership, the business entity might be required to make payments on behalf of the deemed owner. This can be awkward, in that the deemed owner is not the actual owner, and the business entity might not have a legal relationship with the deemed owner.

Consider how the business entity, trust, and deemed owner might contract regarding this flow of cash, so that the deemed owner is not treated as receiving a distribution from the business entity or the trust. When the deemed owner has sold assets to the trust and holds a note from the trust, these arrangements might be made in the form of deemed distributions from the entity to the trust, followed by note payments. When the note is fully repaid or the ownership structure is more complex, one might need to spend more time carefully planning any necessary arrangements and documenting them as burdens on the business entity under by state tax law and not something that is voluntarily arranged for the deemed owner's benefit.

III.B.2.e. Grantor Trust Tax Identification Number During Life and Upon Death

III.B.2.e.i. Grantor Trust Treatment During the Grantor's Life

Subject to certain exceptions,[6574] a grantor trust may use the taxpayer identification number (TIN) of the deemed owner rather than obtaining its own TIN.[6575] Reg. § 301.6109-1(a)(2), "A trust that is treated as owned by one or more persons pursuant to sections 671 through 678," provides:[6576]

> (i) *Obtaining a taxpayer identification number*.
>
> > (A) *General rule*. Unless the exception in paragraph (a)(2)(i)(B) of this Section applies, a trust that is treated as owned by one or more persons under sections 671 through 678 must obtain a taxpayer identification number as provided in paragraph (d)(2) of this section.

[6573] See part II.J.3.e.iii Whether a State Recognizes Grantor Trust Status; Effect of Grantor Trust Status on a Trust's Residence, especially fn. 2533.

[6574] Reg. § 1.671-4(b)(6) lists various exceptions, including requiring that a qualified subchapter S trust not use its beneficiary's social security number.

[6575] Reg. § 1.671-4(b)(2)(i)(A).

[6576] Reg. § 301.6109-1(a)(5), "Persons treated as payors," provides:

> For purposes of paragraphs (a)(2), (3), and (4) of this section, a payor is a person described in § 1.671-4(b)(4) of this chapter.

(B) *Exception for a trust all of which is treated as owned by one grantor or one other person and that reports under § 1.671-4(b)(2)(i)(A) of this chapter*. A trust that is treated as owned by one grantor or one other person under sections 671 through 678 need not obtain a taxpayer identification number, provided the trust reports pursuant to § 1.671-4(b)(2)(i)(A) of this chapter. The trustee must obtain a taxpayer identification number as provided in paragraph (d)(2) of this section for the first taxable year that the trust is no longer owned by one grantor or one other person or for the first taxable year that the trust does not report pursuant to § 1.671-4(b)(2)(i)(A) of this chapter.

(ii) *Obligations of persons who make payments to certain trusts*. Any payor that is required to file an information return with respect to payments of income or proceeds to a trust must show the name and taxpayer identification number that the trustee has furnished to the payor on the return. Regardless of whether the trustee furnishes to the payor the name and taxpayer identification number of the grantor or other person treated as an owner of the trust, or the name and taxpayer identification number of the trust, the payor must furnish a statement to recipients to the trustee of the trust, rather than to the grantor or other person treated as the owner of the trust. Under these circumstances, the payor satisfies the obligation to show the name and taxpayer identification number of the payee on the information return and to furnish a statement to recipients to the person whose taxpayer identification number is required to be shown on the form.

The deemed owner is required to give the trustee a Form W-9 reporting the deemed owner's TIN.[6577] Unless the deemed owner is the trustee or a co-trustee of the trust, the trustee must furnish the deemed owner of the trust with a statement that:[6578]

(1) Shows all items of income, deduction, and credit of the trust for the taxable year;

(2) Identifies the payor of each item of income;

(3) Provides the deemed owner with the information necessary to take the items into account in computing the deemed owner's taxable income; and

(4) Informs the deemed owner that the items of income, deduction and credit and other information shown on the statement must be included in computing the deemed owner's taxable income and credits on the deemed owner's income tax return.

Reg. § 1.671-4(b)(4), "Persons treated as payors," provides:

(i) *In general*. For purposes of this section, the term payor means any person who is required by any provision of the Internal Revenue Code and the regulations thereunder to make any type of information return (including Form 1099 or Schedule K-1) with respect to the trust for the taxable year, including persons who make payments to the trust or who collect (or otherwise act as middlemen with respect to) payments on behalf of the trust.

[6577] Reg. § 1.671-4(b)(1).
[6578] Reg. § 1.671-4(b)(2)(ii)(A).

(ii) *Application to brokers and customers*. For purposes of this section, a broker, within the meaning of section 6045, is considered a payor. A customer, within the meaning of section 6045, is considered a payee.

As a practical matter, usually the trustee simply forwards to the deemed owner all information reporting forms the trustee receives.

If the trust does not use this reporting, then the trustee files fiduciary income tax returns (IRS Form 1041) and attaches a grantor information statement reporting the trust's income, etc. to be included on the deemed owner's return.[6579]

The trustee might want to consider the latter if:

- The grantor trust treatment is uncertain, so that the statute of limitations on the issue of grantor trust status can start running.

- The deemed owner has creditor issues. Although grantor trust status does not change a trust's asset protection features, a financial institution might use the deemed owner's TIN to determine which accounts to turn over to a creditor garnishing accounts held at the financial institution. The deemed owner then expends time and money to correct the financial institution's mistake. I have seen this happen.

If a trust has more than one owner, then generally the trust must report on Form 1041 using the latter procedure.[6580] However, if all of the trust is treated as owned by spouses who file a joint return, the spouses are treated as one owner.[6581] Whose social security number should be used presumably is a moot point for federal income tax purposes; if contributions are unequal, one might use the number of the spouse who contributed more than the other. However, in Missouri (and perhaps some other states), spouses have separate run-ups through the brackets, so one should consider what might be least likely to cause the state income tax return preparer to incorrectly allocate income.

III.B.2.e.ii. Tax ID Issues When the Deemed Owner of a Grantor Trust Dies; Related Effect on Quarterly Payments of Estimated Income Tax

The trust (or portion of a trust) that ceases to be a grantor trust by reason of the deemed owner's death may no longer report under the grantor trust rules.[6582] If all of the trust was treated as owned by the decedent, the trust must obtain a new TIN upon deemed owner's death, if the trust will continue after the deemed owner's death.[6583] Reg. § 301.6109-1(a)(3),

---

[6579] See Reg. § 1.671-4(b)(2)(B).
[6580] Reg. § 1.671-4(b)(3).
[6581] Reg. § 1.671-4(b)(8).
[6582] Reg. § 1.671-4(h)(2). Reg. § 1.671-4(h)(3) explains how to report the trust's income for that year.
[6583] Reg. § 1.671-4(h)(2), which also cross-references Reg. § 301.6109-1(a)(3)(i) for rules regarding obtaining a TIN upon the deemed owner's death. Rev. Rul. 57-51 held that, upon the death of the grantor of a revocable trust that had been filing grantor information returns (and therefore had its own tax ID), "the trust became a separate entity for Federal income tax purposes for the first time and hence a *new* taxpayer…. For tax purposes, the existence of the trust in this case, prior to the time it became irrevocable, is ignored."

"Obtaining a taxpayer identification number for a trust, or portion of a trust, following the death of the individual treated as the owner," provides:[6584]

(i) *In general*.

(A) *A trust all of which was treated as owned by a decedent*. In general, a trust all of which is treated as owned by a decedent under subpart E (section 671 and following), part I, subchapter J, chapter 1 of the Internal Revenue Code as of the date of the decedent's death must obtain a new taxpayer identification number following the death of the decedent if the trust will continue after the death of the decedent.

(B) *Taxpayer identification number of trust with multiple owners*. With respect to a portion of a trust treated as owned under subpart E (section 671 and following), part I, subchapter J, chapter 1 (subpart E) of the Internal Revenue Code by a decedent as of the date of the decedent's death, if, following the death of the decedent, the portion treated as owned by the decedent remains part of the original trust and the other portion (or portions) of the trust continues to be treated as owned under subpart E by a grantor(s) or other person(s), the trust reports under the taxpayer identification number assigned to the trust prior to the decedent's death and the portion of the trust treated as owned by the decedent prior to the decedent's death (assuming the decedent's portion of the trust is not treated as terminating upon the decedent's death) continues to report under the taxpayer identification number used for reporting by the other portion (or portions) of the trust. For example, if a trust, reporting under § 1.671-4(a) of this chapter, is treated as owned by three persons and one of them dies, the trust, including the portion of the trust no longer treated as owned by a grantor or other person, continues to report under the tax identification number assigned to the trust prior to the death of that person. See § 1.671-4(a) of this chapter regarding rules for filing the Form 1041, "U.S. Income Tax Return for Estates and Trusts," where only a portion of the trust is treated as owned by one or more persons under subpart E.

(ii) *Furnishing correct taxpayer identification number to payors following the death of the decedent*. If the trust continues after the death of the decedent and is required to obtain a new taxpayer identification number under paragraph (a)(3)(i)(A) of this section, the trustee must furnish payors with a new Form W-9, "Request for Taxpayer Identification Number and Certification," or an acceptable substitute Form W-9, containing the new taxpayer identification number required under paragraph (a)(3)(i)(A) of this section, the name of the trust, and the address of the trustee.

See the IRS links provided at part II.G.1 How and When to Obtain or Change an Employer Identification Number (EIN).

[6584] Reg. § 301.6109-1(a)(5), "Persons treated as payors," provides:

For purposes of paragraphs (a)(2), (3), and (4) of this section, a payor is a person described in § 1.671-4(b)(4) of this chapter.

Reg. § 1.671-4(b)(4) is found in part III.B.2.e.i Grantor Trust Treatment During the Grantor's Life.

Because the trust income tax return from after the date of death until December 31 will not be a taxable year of 12 months, the trust cannot use the prior year exception for calculating payments of estimated income tax.[6585]

However, payments of estimated income tax are not required, with respect to "any taxable year ending before the date 2 years after the date of the decedent's death," if the taxpayer is either the decedent's estate or a grantor trust wholly owned by the decedent before death, which trust is one "to which the residue of the decedent's estate will pass under his will (or, if no will is admitted to probate, which is the trust primarily responsible for paying debts, taxes, and expenses of administration)."[6586] Although the decedent's (previously) revocable trust generally would qualify, if one has any doubts then one might consider electing to treat the trust as part of the decedent's estate.[6587]

[6585] The last sentence of Code § 6654(d)(1)(B) provides that the prior year exception "shall not apply if the preceding taxable year was not a taxable year of 12 months or if the individual did not file a return for such preceding taxable year."
[6586] Code § 6654(*l*)(2).
[6587] See part II.J.8 Allocating Capital Gain to Distributable Net Income (DNI)

Although the discussion below generally refers to trusts, generally it applies to estates as well. If a trustee has discretion to make an election regarding that trust, the election does not affect the choices available regarding other trusts the trustee manages.

I.A.1.v. Capital Gain Constitutes DNI Unless Excluded

Taxable income is DNI unless expressly excluded.

Code § 643(a)(3) provides:

> *Capital gains and losses*. Gains from the sale or exchange of capital assets shall be excluded to the extent that such gains are allocated to corpus and are not (A) paid, credited, or required to be distributed to any beneficiary during the taxable year, or (B) paid, permanently set aside, or to be used for the purposes specified in section 642(c).

Thus, to be excluded from the income of a domestic trust, the gains must:

- Arise from the sale or exchange of capital assets,
- Be allocated to corpus, and
- Not be actually or deemed to be distributed.

The rest of this part II.J.8.a Capital Gain Constitutes DNI Unless Excluded focuses on the first two prongs.

I.A.1.v.i. Whether the Capital Gain Is from the Sale or Exchange of a Capital Asset

Only gains from the sale of capital assets are ordinarily excluded from DNI.

For example, "property, used in his trade or business, of a character which is subject to the allowance for depreciation provided in section 167, or real property used in his trade or business" is not a capital asset. Therefore, the sale of such property would constitute DNI, although it would not constitute trust accounting income. Whether other real estate is a capital asset depends on various facts.

However, "any recognized gain on the sale or exchange of property used in the trade or business" often receives capital gain treatment to the extent it does not constitute certain depreciation recapture. Goodwill that has not been amortized is a capital asset, but goodwill that is being amortized is not a capital asset. Thus, because such assets are not capital assets, such capital gains generally would be included in DNI.

I.A.1.v.ii. Whether the Gain from the Sale or Exchange of a Capital Asset Is Allocated to Corpus

I am unaware of any authority defining "allocated to corpus" as used in Code § 643(a)(3). Presumably it means receipts by the trust that are allocated to principal.

Does the statute mean that capital gain are automatically included in DNI unless they are affirmatively allocated to principal and certain other conditions exist? Reg. § 1.643(a)-3(a) might overrule that requirement, providing (highlighting added):

> *In general*. Except as provided in § 1.643(a)-6 and paragraph (b) of this section, gains from the sale or exchange of capital assets are ordinarily excluded from distributable net income and are not ordinarily considered as paid, credited, or required to be distributed to any beneficiary.

This regulation essentially has three parts:

- Reg. § 1.643(a)-6 deals with foreign trusts.

- Reg. § 1.643(a)-3(b) explains when capital gains from the sale or exchange of an asset are included in DNI and does not include a requirement that the capital gain be allocated to principal. In fact, one of the prongs discusses the treatment when capital gains are allocated to income.

- Depending on the meaning one gives to "ordinarily," this regulation might dispense with the statutory requirement that capital gains be allocated to corpus. The regulation does not explain when it says "ordinarily" what the exceptions might be, other than Reg. §§ 1.643(a)-6 and 1.643(a)-3(b). There would appear to be substantial authority for saying that an affirmative allocation of capital gains to principal is or is not required.

This issue seems to be most important for the trust's gross income that does not take the form of receipts of cash or other property. For example, a trust might invest in a partnership, S corporation, or other flow-through entity that does not distribute all of its taxable income. How should one treat capital gain from a flow-through entity's sale of a capital asset, when the entity distributes less than all of its taxable income? Should the undistributed capital gain be included in DNI?

- With respect to the accumulated capital gain, the trust has no receipts and therefore is not allocated to corpus. Arguably, the capital gain is not excluded from DNI and therefore constitutes DNI.

- On the other hand, the accumulated capital gain benefits the trust's corpus. Should it be treated as if it had been allocated to corpus? In that case, should it be trapped inside the trust, given that it was accumulated inside the entity and not distributed to the beneficiary?

- Given this uncertainty, would the trustee have discretion to take a different position each year? In Reg. § 1.643(a)-3(b), the Treasury generally agreed that the trustee would not be required to take a consistent position year-by-year, except for capital gain allocated to corpus and treated consistently by the fiduciary on the trust's books, records, and tax returns as part of a distribution to a beneficiary. Given that this gross income was not allocated corpus (because it was never physically received), perhaps the trustee has discretion to vary the treatment from year to year? Another approach might be to say that, because the undistributed capital gain was not allocated to principal, the regulations might presume that the undistributed capital gain is allocated to income and can be included in DNI inconsistently from year to year under Reg. § 1.643(a)-3(b)(1).

If all of a flow-through entity's K-1 items taxable to the trust are included in DNI, then part II.J.8.c Basic Framework for Allocating Capital Gain to DNI If Allocated to Income or Principal might cause ordinary income to be trapped at the trust level if the flow-through entity distributes cash in an amount less than all of these K-1 items; see part II.J.8.f Consequences of Allocating Capital Gain to DNI. In light of the consequences described there, the most taxpayer-favorable reading may be that capital gain is ordinarily excluded from DNI.

I leave it to the reader to decide which approach is "better" or perhaps to make that decision on a trust-by-trust basis.

For more on using flow-through entities, see part II.J.8.e Partnerships and S corporations Carry Out Income and Capital Gain to Beneficiaries.

I.A.1.w. Should Capital Gain Be Allocated to DNI?

Often beneficiaries have income below the thresholds that cause the 3.8% tax and the additional 5% capital gain tax to be incurred, whereas trusts start paying those taxes at relatively modest income levels. Therefore, distributing capital gains to beneficiaries might be beneficial – at least from an income tax viewpoint.

Consider various factors described in part II.J.3 Strategic Fiduciary Income Tax Planning.

I.A.1.x. Basic Framework for Allocating Capital Gain to DNI If Allocated to Income or Principal

Generally, gains from the sale or exchange of capital assets, net of losses, are excluded from distributable net income (DNI). But that statement belies the flexibility we are about to see.

Reg. § 1.643(a)-3(b) provides:

> *Capital gains included in distributable net income*. Gains from the sale or exchange of capital assets are included in distributable net income to the extent they are, pursuant to the terms of the governing instrument and applicable local law, or pursuant to a reasonable and impartial exercise of discretion by the fiduciary (in accordance with a power granted to the fiduciary by applicable local law or by the governing instrument if not prohibited by applicable local law) -
>
> (1) Allocated to income (but if income under the state statute is defined as, or consists of, a unitrust amount, a discretionary power to allocate gains to income must also be exercised consistently and the amount so allocated may not be greater than the excess of the unitrust amount over the amount of distributable net income determined without regard to this subparagraph § 1.643(a)-3(b));
>
> (2) Allocated to corpus but treated consistently by the fiduciary on the trust's books, records, and tax returns as part of a distribution to a beneficiary; or
>
> (3) Allocated to corpus but actually distributed to the beneficiary or utilized by the fiduciary in determining the amount that is distributed or required to be distributed to a beneficiary.

Note the word "or" after paragraph (2) above. That indicates capital gains are included in DNI if and to the extent that any one or more of paragraph (1) (the "Income Rule"), paragraph (2) (the "Consistent Principal Rule"), or paragraph (3) (the "Discretionary Principal Rule") applies. For more on the:

- Income Rule, see part II.J.8.c.i Income Rule: Capital Gain Allocated to Income Under State Law
- Consistent Principal Rule, see part II.J.8.c.ii Consistent Principal Rule: Capital Gain Allocated to Corpus but Treated Consistently as Part of a Distribution to a Beneficiary
- Discretionary Principal Rule, see part II.J.8.c.iii Discretionary Principal Rule: Allocated to Principal but Actually Distributed to the Beneficiary or Used by the Trustee to Determine the Amount Distributed or Required to be Distributed to a Beneficiary.

Before its amendment by T.D. 9102 (12/30/2003), Reg. § 1.643(a)-3 made it more difficult to include capital gain in DNI.

I.A.1.x.i. Income Rule: Capital Gain Allocated to Income Under State Law

Most states have adopted the Uniform Principal and Income Act, which will be referred to at UPIA for the rest of this part II.J.8.c.i, or its replacement, which is described in part II.J.5.b Uniform Fiduciary Income & Principal Act (UFIPA).

Generally, any capital gain included as the distributive share of income from a partnership or S corporation and distributed from the entity to the trust will constitute income under the Act, making the rest of this part II.J.8 Allocating Capital Gain to Distributable Net Income (DNI) be moot.

Generally, the Act allocates capital gains to principal. The main exceptions are the power to adjust, unitrust distributions, and exceptions in the governing instrument; the power to adjust and power to convert to a unitrust followed adoption of the prudent investor rule. Following a discussion of each of these is a discussion of the respect fiduciary income tax law gives them.

I.A.1.x.i.(a). Power to Adjust

Capital gains may be reclassified as income if traditional trust accounting income principles cause insufficient receipts to be classified as income. See parts II.J.5.b.ii.(a) Power to Adjust.

I.A.1.x.i.(b). Possible Allocation to Income of Gain on Sale of Interest in Partnership or S corporation

It is not uncommon for partnerships and S corporations to reinvest part of their annual income; indeed, to facilitate growth or simply a stronger capital structure (which lenders might require), many distribute only enough to pay their owners' income taxes (commonly referred to as a "tax distribution") plus a modest bonus (referred to below as a "bonus distribution").

Taxes on this reinvested income are charged against the income of a trust that owns such an entity. This is the only practical solution to the trust's obligation to pay its taxes, because the taxing authorities' claims against the trustee are much more pressing than the beneficiaries' claims. (Note that the income beneficiary of a Qualified Subchapter S Trust pays this tax – part III.A.3.e QSSTs and ESBTs – which has an effect similar to charging the trust's income.)

The Uniform Principal and Income Act includes a remedy for the income beneficiary that had to pay the tax on the entity's accumulated income that has been inherently baked into principal. Section 506(a)(3) authorizes a fiduciary to "make adjustments between principal and income to offset the shifting of economic interests or tax benefits between income beneficiaries and remainder beneficiaries which arise from … the ownership by an estate or trust of an interest in an entity whose taxable income, whether or not distributed, is includable in the taxable income of the estate, trust, or a beneficiary." This specific provision supplements any power to adjust that might generally apply.

Thus, when an interest in a partnership or an S corporation is sold, the trustee should consider whether to allocate some of the sale proceeds to income. However, it's not at all obvious that the trustee should make an adjustment; consider that:

- The entity made distributions specifically to pay this tax, so the trust or income beneficiary was not really "out of pocket" for this tax.

- If the entity had been a C corporation, the entity would have paid the tax itself. Its dividend would have equaled the bonus distribution, and this issue would never have arisen.

- The true issue is whether the bonus distribution was sufficient. Was the decision to accumulate income fair – a sound exercise of the business judgment of those who run the entity? Did those who control the entity promise a make-up distribution at some point

> because of a special project, or was the accumulation merely part of a solid plan to grow the business, which presumably would result in increased income and increased bonus distributions? Were those who control the entity running it just to benefit themselves (and, if owners, trying to extract more benefits as owners than the inactive owners received)? I have probably left out many other relevant considerations, but hopefully I have communicated why this decision is not easy.

See parts II.J.12 Equitable Adjustments to Reimburse Income Tax Paid or Tax Benefit Received by a Party That Does Not Bear the Burden Under the Trust Accounting Rules and II.J.16 Fiduciary Income Taxation When Selling Interest in a Pass-Through Entity or When the Entity Sells Its Assets.

If the trustee is concerned that the income beneficiary might spend a perceived windfall unwisely, the trustee might consider using the power to adjust to spread distributions over an appropriate period of time. Such a spread over time might be more palatable if, instead of labelling the adjustment to sale proceeds as a tax reimbursement, the trustee labelled it as a make-up for insufficient bonus distributions, taking the position that future distributions to beneficiaries might be loosened because of a prior conservative distribution policy. The bonus distributions might have been sufficient from the viewpoint of what the entity should have distributed but might have been insufficient from the viewpoint of how much income the trustee should have tried to generate. As mentioned in part III.A.4.d.iv Advising Clients about the UPAIA § 505 Change and UFIPA § 506 (discussing conflicts with beneficiaries that might arise when an entity makes tax distributions but little or no bonus distributions), these issues have no easy answer.

See also part II.J.12 Equitable Adjustments to Reimburse Income Tax Paid or Tax Benefit Received by a Party That Does Not Bear the Burden Under the Trust Accounting Rules.

I.A.1.x.i.(c). Unitrust

A unitrust is a trust that distributes fixed amounts, redetermined annually as a fixed percentage of the value of the trust's value, which value is redetermined annually but might be based on an average of values, such as the average value of the trust's assets for the past three years. See parts II.J.5.b.ii.(b) Unitrust and II.J.5.b.ii.(c) Comparing Power to Adjust to a Unitrust.

Reg. § 1.643(a)-3(e) provides the following examples regarding unitrusts:

> *Example (11)*. The applicable state statute provides that a trustee may make an election to pay an income beneficiary an amount equal to four percent of the fair market value of the trust assets, as determined at the beginning of each taxable year, in full satisfaction of that beneficiary's right to income. State statute also provides that this unitrust amount shall be considered paid first from ordinary and tax-exempt income, then from net short-term capital gain, then from net long-term capital gain, and finally from return of principal. Trust's governing instrument provides that A is to receive each year income as defined under state statute. Trustee makes the unitrust election under state statute. At the beginning of the taxable year, Trust assets are valued at $500,000. During the year, Trust receives $5,000 of dividend income and realizes $80,000 of net long-term gain from the sale of capital assets. Trustee distributes to A $20,000 (4% of $500,000) in satisfaction of A's right to income. Net long-term capital gain in the amount of $15,000 is

allocated to income pursuant to the ordering rule of the state statute and is included in distributable net income for the taxable year.

Example (12). The facts are the same as in Example 11, except that neither state statute nor Trust's governing instrument has an ordering rule for the character of the unitrust amount, but leaves such a decision to the discretion of Trustee. Trustee intends to follow a regular practice of treating principal, other than capital gain, as distributed to the beneficiary to the extent that the unitrust amount exceeds Trust's ordinary and tax-exempt income. Trustee evidences this treatment by not including any capital gains in distributable net income on Trust's Federal income tax return so that the entire $80,000 capital gain is taxed to Trust. This treatment of the capital gains is a reasonable exercise of Trustee's discretion. In future years Trustee must consistently follow this treatment of not allocating realized capital gains to income.

Example (13). The facts are the same as in Example 11, except that neither state statutes nor Trust's governing instrument has an ordering rule for the character of the unitrust amount, but leaves such a decision to the discretion of Trustee. Trustee intends to follow a regular practice of treating net capital gains as distributed to the beneficiary to the extent the unitrust amount exceeds Trust's ordinary and tax-exempt income. Trustee evidences this treatment by including $15,000 of the capital gain in distributable net income on Trust's Federal income tax return. This treatment of the capital gains is a reasonable exercise of Trustee's discretion. In future years Trustee must consistently treat realized capital gain, if any, as distributed to the beneficiary to the extent that the unitrust amount exceeds ordinary and tax-exempt income.

A right to income expressed initially solely as a unitrust interest may qualify for the QTIP marital deduction.

I.A.1.x.i.(d). Exceptions in the Governing Instrument

Although the Act provides general rules, it also allows trust agreements to override those rules:

In allocating receipts and disbursements to or between principal and income, and with respect to any matter within the scope of [Articles] 2 and 3, a fiduciary:

(1) shall administer a trust or estate in accordance with the terms of the trust or the will, even if there is a different provision in this [Act];

(2) may administer a trust or estate by the exercise of a discretionary power of administration given to the fiduciary by the terms of the trust or the will, even if the exercise of the power produces a result different from a result required or permitted by this [Act];

(3) shall administer a trust or estate in accordance with this [Act] if the terms of the trust or the will do not contain a different provision or do not give the fiduciary a discretionary power of administration; and

(4) shall add a receipt or charge a disbursement to principal to the extent that the terms of the trust and this [Act] do not provide a rule for allocating the receipt or disbursement to or between principal and income.

I.A.1.x.i.(e). Fiduciary Income Tax Recognition of the Trust Agreement and State Law

Code § 643(b) generally defers to the trust agreement and applicable state law. The Uniform Principal and Income Act ("UPIA") and the Uniform Fiduciary Principal & Income Act ("UFIPA") authorizes the trust agreement to override the Act.

However, Reg. § 1.643(b)-1 does not recognize trust agreements that depart too far from the usual rules:

> Trust provisions that depart fundamentally from traditional principles of income and principal will generally not be recognized. For example, if a trust instrument directs that all the trust income shall be paid to the income beneficiary but defines ordinary dividends and interest as principal, the trust will not be considered one that under its governing instrument is required to distribute all its income currently for purposes of section 642(b) (relating to the personal exemption) and section 651 (relating to simple trusts). Thus, items such as dividends, interest, and rents are generally allocated to income and proceeds from the sale or exchange of trust assets are generally allocated to principal.

Reg. § 1.643(b)-1 respects variations provided under applicable state law:

> However, an allocation of amounts between income and principal pursuant to applicable local law will be respected if local law provides for a reasonable apportionment between the income and remainder beneficiaries of the total return of the trust for the year, including ordinary and tax-exempt income, capital gains, and appreciation. For example, a state statute providing that income is a unitrust amount of no less than 3% and no more than 5% of the fair market value of the trust assets, whether determined annually or averaged on a multiple year basis, is a reasonable apportionment of the total return of the trust. Similarly, a state statute that permits the trustee to make adjustments between income and principal to fulfill the trustee's duty of impartiality between the income and remainder beneficiaries is generally a reasonable apportionment of the total return of the trust. Generally, these adjustments are permitted by state statutes when the trustee invests and manages the trust assets under the state's prudent investor standard, the trust describes the amount that may or must be distributed to a beneficiary by referring to the trust's income, and the trustee after applying the state statutory rules regarding the allocation of receipts and disbursements to income and principal, is unable to administer the trust impartially. Allocations pursuant to methods prescribed by such state statutes for apportioning the total return of a trust between income and principal will be respected regardless of whether the trust provides that the income must be distributed to one or more beneficiaries or may be accumulated in whole or in part, and regardless of which alternate permitted method is actually used, provided the trust complies with all requirements of the state statute for switching methods.

Circling back to the Act's authorizing trust agreements to depart from traditional principles, Reg. § 1.643(b)-1 concludes with:

> In addition, an allocation to income of all or a part of the gains from the sale or exchange of trust assets will generally be respected if the allocation is made either pursuant to the terms of the governing instrument and applicable local law, or pursuant to a reasonable and impartial exercise of a discretionary power granted to the fiduciary by applicable local law or by the governing instrument, if not prohibited by applicable local law.

For the "reasonable and impartial exercise" requirement in the context of the power to adjust, see part II.J.5.b.ii.(a) Power to Adjust.

I often use a clause providing that the trustee has wide discretion but must reasonably and fairly balance the interests of the income and remainder beneficiaries. That language comes from the marital deduction regulations. Generally, the trustee's authority to allocate between income and principal does not trigger grantor trust status, does not constitute a power of appointment, and does not have generation-skipping transfer tax implications. The trustee might want to consider providing accountings or other notices to the beneficiaries that would start running the statute of limitations for making a claim against the trustee so that the beneficiaries could not add up all of their alleged grievances and then pile this one on top of it, which procedure might help minimize any gift tax consequences to failing to make a claim.

How does one draw the line between what departs "fundamentally from traditional principles of income and principal" and what is "a reasonable and impartial exercise of a discretionary power granted to the fiduciary" under Reg. § 1.643(b)-1?

Presumably, the trustee should be on solid ground in allocating to income capital gains such that the total amount of all receipts allocated to income does not exceed 5%, given that the regulations expressly approve unitrusts in the 3%-5% range. The trusts should also be on solid ground in allocating to income capital gains generated by a partnership that the settlor intended to distribute to the income beneficiary.

Beyond that, it's a matter of facts and circumstances and judgment. However, Reg. § 1.643(a)-3(e), Example (4) respected a mandatory allocation of capital gain to income where a trust had $5,000 of dividends and $10,000 of capital gains, and the trustee distributed $17,000 to the beneficiary.

I.A.1.x.i.(f). Conclusion Regarding Allocating Capital Gain to Income

Reg. § 1.643(a)-3(b)(1) requires a consistent practice for unitrusts. Considering that the unitrust recipient is receiving cash and presumably would have the liquidity to pay tax on any capital gains distributed to the beneficiary, in many cases it would be fair to allocate capital gain to DNI to the extent that the unitrust amount exceeds the income that would apply under the Act's general rules. Given that one provides for a unitrust when tension between the income beneficiary and remaindermen might be high, the tension created by this tax issue would be high to the same degree. Consider providing a firm rule in the trust agreement regarding the allocation of capital gain to DNI. If one is concerned that shifting tax rates might create an unfair tax result, consider providing a clause reimbursing the unitrust beneficiary for taxes paid on the unitrust and on the reimbursement; this requires cooperation between the trustee's income tax preparer and the beneficiary's income tax preparer, but the calculation should be relatively mechanical.

For trusts that are not unitrusts, Reg. § 1.643(a)-3(b)(1) provides significant flexibility, allowing the trustee discretion whether to allocate capital gain to income for fiduciary accounting purposes (if the trust agreement and state law permit) and also whether to include in DNI the capital gain that was allocated to income.

Consider the nuances for a mandatory income trust. Distributions must be made no later than 65 days after yearend to include capital gain in DNI in every other situation. In a mandatory income trust, a power to adjust might be able to retroactively include capital gain in income – perhaps as late as when the tax return is prepared. For how mandatory income trusts work, see part II.J.5 Mandatory Income Trusts. For limits on retroactivity, see part II.J.5.a Issues Arising with Mandatory Income Trusts.

I.A.1.x.ii. Consistent Principal Rule: Capital Gain Allocated to Corpus but Treated Consistently as Part of a Distribution to a Beneficiary

Reg. § 1.643(a)-3(e) helps guide our application of Reg. § 1.643(a)-3(b)(2):

> *Example (1)*. Under the terms of Trust's governing instrument, all income is to be paid to A for life. Trustee is given discretionary powers to invade principal for A's benefit and to deem discretionary distributions to be made from capital gains realized during the year. During Trust's first taxable year, Trust has $5,000 of dividend income and $10,000 of capital gain from the sale of securities. Pursuant to the terms of the governing instrument and applicable local law, Trustee allocates the $10,000 capital gain to principal. During the year, Trustee distributes to A $5,000, representing A's right to trust income. In addition, Trustee distributes to A $12,000, pursuant to the discretionary power to distribute principal. Trustee does not exercise the discretionary power to deem the discretionary distributions of principal as being paid from capital gains realized during the year. Therefore, the capital gains realized during the year are not included in distributable net income and the $10,000 of capital gain is taxed to the trust. In future years, Trustee must treat all discretionary distributions as not being made from any realized capital gains.
>
> *Example (2)*. The facts are the same as in Example 1, except that Trustee intends to follow a regular practice of treating discretionary distributions of principal as being paid first from any net capital gains realized by Trust during the year. Trustee evidences this treatment by including the $10,000 capital gain in distributable net income on Trust's federal income tax return so that it is taxed to A. This treatment of the capital gains is a reasonable exercise of Trustee's discretion. In future years Trustee must treat all discretionary distributions as being made first from any realized capital gains.
>
> *Example (3)*. The facts are the same as in Example 1, except that Trustee intends to follow a regular practice of treating discretionary distributions of principal as being paid from any net capital gains realized by Trust during the year from the sale of certain specified assets or a particular class of investments. This treatment of capital gains is a reasonable exercise of Trustee's discretion.

The all-or-nothing approach taken by Examples (1) and (2) is not very attractive, but we need to deal with it. Let's consider some fact patterns:

1. The beneficiary needs regular annual distributions that cannot be made using a power to adjust. Generally, distributions in excess of what can made using a power to adjust would not be sustainable. A power to adjust typically adjusts to a 3%-5% distribution, and most models suggest that distributions in excess of that will lead to a trust being depleted. Thus, a more likely scenario is that a power to adjust is not available, because state law prevents using the power to adjust in particular situations (unless the trust agreement overrides it). In such a case, the beneficiary's federal and state/local income tax bracket for capital gains needs to be compared to the trust's federal and state/local income tax bracket for capital gains. Note that a nonresident trust would have a zero state/local income tax bracket, to the extent that the trust does not have income from a business sourced to the state/local jurisdiction.

2. The beneficiary's need for distributions in excess of income is sporadic. It's difficult to predict how the beneficiary's federal and state/local income tax bracket for capital gains compares to the trust's federal and state/local income tax bracket for capital gains, given that rates will change and the trust's and its beneficiaries' circumstances might change over time. In such a case, consider whether the distribution might be phrased as "allocated to corpus but actually distributed to the beneficiary or utilized by the fiduciary in determining the amount that is distributed or required to be distributed to a beneficiary." If that is likely to be the case, then consider not electing to carry out capital gain automatically under (b)(2) but rather deciding to rely on (b)(3), because (b)(3) is flexible whether to allocate capital gain to income, allowing the decision to made separately each year on a case-by-case basis.

Generally, trustees would not be likely to take advantage of the discretion that Example (3) provides to allocate to income only capital gain from the sale of certain specified assets or a particular class of investments, because such an election requires additional recordkeeping.

Some people point to the word "deem" in Example (1) and emphasize the need for such authority in the trust agreement or applicable state law. Uniform Trust Code § 816 generally authorizes trustees to make tax elections, so the authority to "deem" distributions to be capital gains is inherently authorized in UTC states, as well as any other state where a trustee generally has the authority to make tax elections.

I.A.1.x.iii. Discretionary Principal Rule: Allocated to Principal but Actually Distributed to the Beneficiary or Used by the Trustee to Determine the Amount Distributed or Required to be Distributed to a Beneficiary

Reg. § 1.643(a)-3(b)(3) might seem confusing at first, but it actually has very practical use.

First, let's look at some examples that Reg. § 1.643(a)-3(e) provides:

> Example (5). The facts are the same as in Example 1, except that Trustee decides that discretionary distributions will be made only to the extent Trust has realized capital gains during the year and thus the discretionary distribution to A is $10,000, rather than $12,000. Because Trustee will use the amount of any realized capital gain to determine

the amount of the discretionary distribution to the beneficiary, the $10,000 capital gain is included in Trust's distributable net income for the taxable year.

Example (6). Trust's assets consist of Blackacre and other property. Under the terms of Trust's governing instrument, Trustee is directed to hold Blackacre for ten years and then sell it and distribute all the sales proceeds to A. Because Trustee uses the amount of the sales proceeds that includes any realized capital gain to determine the amount required to be distributed to A, any capital gain realized from the sale of Blackacre is included in Trust's distributable net income for the taxable year.

Although Reg. § 1.643(a)-3(b)(3) is viewed generally as discretionary, note that Example (6) is mandatory: if the trustee is required to distribute sale proceeds to a beneficiary, the capital gain from the sale is included in the DNI that the distribution carries out the beneficiary. Example (7) similarly requires all capital gain recognized in the trust's final taxable year to be included in the DNI that the distribution carries out the beneficiary.

The practical application is based on the ability to count as prior year distributions those distributions made in the first 65 days of the current year. For example, any distribution made on or before March 5, 2020 can be treated as a 2019 or 2020 distribution. This election applies to the greater of accounting income under Reg. § 1.643(b)-1 or DNI under Reg. §§ 1.643(a)-1 through 1.643(a)-7. By completing the line on the trust's income tax return, Form 1041, page 2, Part B, showing amounts (other than income required to be distributed currently) paid, credited, or otherwise required to be distributed and checking the Code § 663(b) box in "Other Information" at the bottom of Form 1041, page 2, the trustee decides how much of a current year distribution is allocated to the prior year; the balance would then be credited to the current year.

The practical application based on the 65-day rule would generally occur during February after the year ends and applies only if the trustee has discretion to distribute corpus. The regulations do not specify any particular trust records regarding the election, so do whatever seems best to evidence the intent. Perhaps the income tax return preparer emails the trustee recommending how much of a distribution be made to distribute income and capital gain under the 65-day rule (erring on the side of distributing too much), then the trustee makes the distribution, and the tax return carries through the intent. As long as the distribution is made timely, the tax return can treat none, part, or all of the distribution as a distribution of the taxable year's income. In a manner similar to Example (5), the trustee has referred to the capital gain itself in determining how much to distribute. Unlike Reg. § 1.643(a)-3(b)(2), Reg. § 1.643(a)-3(b)(3) allows one to carry out discretionary distributions of capital gain inconsistently from one year to another.

If the beneficiary does not require monthly or quarterly cash flow, the trustee can simply each February make a big distribution and apply it to the prior or current year for tax return preparation purposes. If the beneficiary does require monthly cash flow but is willing to accept informal constraints, the trustee makes the big distribution into an investment account that the beneficiary owns, and the account makes monthly transfers to the beneficiary's checking account. Obviously this would not work for a beneficiary who cannot exercise discipline, but there is a good segment of beneficiaries for whom it would work.

An alternative approach is to distribute an asset to a beneficiary before the asset is sold. Generally, the beneficiary will receive a carryover basis and then be taxed on the gain.

As with all tax planning, the strategies described in this part II.J.8.c.iii may be unavailable (based on the trust terms), inadvisable (based on sound financial planning), or stupid (giving money to a drug addict just to save taxes).

I.A.1.x.iv. Netting Capital Losses

Reg. § 1.643(a)-3(d), "Capital losses," provides:

> Losses from the sale or exchange of capital assets shall first be netted at the trust level against any gains from the sale or exchange of capital assets, except for a capital gain that is utilized under paragraph (b)(3) of this section in determining the amount that is distributed or required to be distributed to a particular beneficiary. See § 1.642(h)-1 with respect to capital loss carryovers in the year of final termination of an estate or trust.

Thus, if and to the extent that Reg. § 1.643(a)-3(b)(3) includes capital gains in DNI (see part II.J.8.c.iii Discretionary Principal Rule: Allocated to Principal but Actually Distributed to the Beneficiary or Used by the Trustee to Determine the Amount Distributed or Required to be Distributed to a Beneficiary), capital losses are not netted against such gains. The recipient beneficiaries report all such capital gains, and the capital losses remain in the trust.

However, note that Reg. § 1.643(a)-3(b)(3) has two elements: "actually distributed to the beneficiary," which would tend to require tracing except in the case of trust termination, or "utilized by the fiduciary in determining the amount that is distributed or required to be distributed to a beneficiary," in which case the trustee would have needed to consciously decide to refer to the capital gain when making the distribution.

Unless the trustee traces or decides to refer to the gross capital gain (instead of the net capital gain) when making the distribution, the loss would be offset under Reg. § 1.643(a)-3(b)(3). Alternatively, the trustee might not trace and not refer to capital gain but rather exercise the power to adjust, which would invoke Reg. § 1.643(a)-3(b)(1) (see part II.J.8.c.i Income Rule: Capital Gain Allocated to Income Under State Law) and include an automatic offset.

I.A.1.x.v. Conclusions Regarding the Basic Framework on Allocating Capital Gains to DNI

Often, one cannot predict whether the combination of federal, state, and local income tax rates will be higher inside or outside of the trust.

Quite frankly, I keep changing my mind regarding the best income tax elections as I encounter new situations. If the document is flexible as to distributions and distributions are appropriate, then I would lean toward:

- Flexible language allowing the trustee to allocate capital gains to income, so long as the trustee must reasonably and fairly balance the interests of the income and remainder beneficiaries.

* Using the 65-day-rule to distribute large capital gains to the beneficiary as DNI.

* Electing not to establish a practice of carrying out capital gain to beneficiaries under Reg. § 1.643(a)-3(b)(2) unless it appears that the above two approaches will not suffice to minimize overall income taxes. However, it is not uncommon for me to decide that the above. two approaches will not suffice to minimize overall income taxes. On the other hand, if the situation involves enough money, the trustee can covert capital gain that would otherwise be trapped inside the trust to trust accounting income, using the tool described in part II.J.8.e Partnerships and S corporations Carry Out Income and Capital Gain to Beneficiaries.

Consider adding a withdrawal right of up to 5% of the trust's value. The beneficiary will be deemed to be the owner of the part that the beneficiary can withdraw and perhaps continue to be deemed the owner with respect to the lapsed portion. However, note that withdrawal rights can increase exposure to creditors to the extent of the withdrawal right and perhaps even after a lapse. For details on all of the ideas mentioned in this paragraph, see part III.B.2.i Code § 678 Beneficiary Deemed-Owned Trusts. If one is concerned about the withdrawal right itself becoming a bad idea, consider using a provision along the following the lines:

> In addition to the distributions authorized by the preceding sentence, subject to the following sentence the trustee shall distribute to the beneficiary so much of the principal of the trust as the beneficiary, while at least __ years of age, may request once between February 23 and March 5 of every calendar year, on a noncumulative basis, up to five percent (5%) of the aggregate value, as of the time of such request by the beneficiary, of the principal of the trust. The trustee may, by instrument placed in the trust's records, provide that the preceding sentence shall not apply during any period (including the beneficiary's remaining life), which period shall begin no earlier than the January 1 following the date of the instrument.

This allows the trustee to turn off the withdrawal rights for any future year(s) without impeding the beneficiary's absolute right to withdraw during the current year.

I.A.1.x.vi. Fairness of Taxing Capital Gain to Beneficiaries; Need for Tax Distributions Here and Other Areas

Our income tax system taxes income to whoever receives it, subject to certain exceptions not relevant to this part II.J.8.c.vi. Therefore, it is fair to tax the beneficiaries.

However, when a distribution is made for a particular purpose and the money is spent, the beneficiary will get upset when handed a tax bill for which the beneficiary did not plan. Therefore, one might need to make a supplemental distribution to pay tax on the original distribution. The supplemental distribution would also need to be enough to pay tax on the supplemental distribution itself. This supplemental distribution is often referred to as "grossing up the distribution" to pay taxes.

This issue applies to more than just capital gains. Clients who leave residences in trust often wish to have the trust pay expenses that a life tenant would ordinarily pay. Distributions by the trust for those purposes run into the same problem – the money is spent for the intended purpose and not available to pay taxes. These distributions also need to be grossed up to pay taxes.

I.A.1.y. Distribution in Kind; Specific Bequests

I.A.1.y.i. Distribution in Kind - Generally

Except as provided below and except to the extent that it carries out DNI or constitutes a bequest of income, a distribution is a nontaxable gift (unless the recipient assumes liabilities, in which case it is taxed as a bargain sale).

When a trust distributes property to satisfy a pecuniary distribution (even if the amount is expressly authorized to be satisfied in cash or in kind), the trust recognizes gain on the deemed sale, even if the trust's residue is less than the pecuniary obligation. Such a pecuniary obligation includes an equalizing distribution (presumably unless expressed as a fractional share). This rule includes a pecuniary obligation in the form of an annuity payment to a beneficiary, and the gain recognized in paying the annuity is not included in the beneficiary's distributive net income (DNI) unless the rules for including capital gain in DNI are satisfied. If the trust's residue is less than the pecuniary obligation, the fact that all bequests are protected by Code § 663(a)(1) and therefore no residual beneficiary can pick up income under Code § 662 means that the trust will pay the tax, given that the beneficiaries of the protected bequests will not be picking up that income; note that the trustee will need to reserve for this tax before making distributions to beneficiaries and may have a mismatch for net investment income tax purposes as well. However, when a charity that was the annuity recipient was bequeathed the remainder, the resulting merger of interests and trust termination were not a taxable event. Also, if the bequest is satisfied using date-of-death values, presumably no gain or loss would be realized, but to qualify for the marital or charitable deduction the assets' value relative to date of death values must be "fairly representative of appreciation or depreciation in the value of all property thus available for distribution in satisfaction of such pecuniary bequest or transfer."

If a trust makes a non-pro rata distribution of residue without either the trust instrument or local law authorizing a non-pro rata distribution, each beneficiary may be treated as having received a pro rata distribution and exchanged it with the other beneficiaries. Otherwise, generally the trust does not recognize any gain or loss and the beneficiaries receive the same basis as the trust's; for further analysis of dividing trusts (including on termination), see part II.D.5 Severing Trusts with Multiple Grantors. However, the trust may elect to treat all property distributions during the taxable year as sales, but losses in transactions with beneficiaries and other related parties are disallowed except to the extent that they are from an estate (including a revocable trust electing to be taxed as an estate) satisfying a pecuniary bequest. The loss disallowance applies even if the distribution, taken as a whole, results in a net gain. Thus, gains are recognized and losses generally are not.

The amount deemed distributed is the lesser of the property's basis or fair market value, unless gain was recognized, in which case it is the property's value.

Distributing low basis assets will generate a new basis (often a step-up) when the beneficiary dies. However, distributed assets are subject to the beneficiary's creditors, changes in the beneficiary's estate tax posture (including not only changes in the tax law but also changes in financial situation through the beneficiary's own efforts or through marriage and change in residence to a state that imposes its own estate tax), and changes in the beneficiary's dispositive goals. To get a basis step-up, I would rather add (perhaps by decanting) a formula general power of appointment, as described in part II.H.2.k Taxable Termination vs. General Power of Appointment vs. Delaware Tax Trap.

Distributing an unmarketable partnership interest would carry out DNI without giving the beneficiary cash. However, valuation adjustments might depress the amount of the deemed distributions, and the beneficiary would be entitled to a proportionate share of future distributions from the partnership. However, if the trustee controls the partnership, the trustee can also control the distribution spigot.

I.A.1.y.ii. Specific Bequest

A gift or bequest of a specific sum of money or of specific property, which is required by the specific terms of the will or trust instrument and is properly paid or credited to a beneficiary, is not allowed as a deduction to an estate or trust under Code § 661 and is not included in the gross income of a beneficiary under Code § 662, unless under the terms of the will or trust instrument the gift or bequest is to be paid or credited to the recipient in more than three installments.

I.A.1.y.iii. Distributing a Note to the Obligor

Rev. Rul. 75-68 provides:

> The income of a testamentary trust consisting solely of interest from mortgages on the beneficiary's property was required to be distributed periodically. Although the mortgage notes held by the trust required the periodic payment of interest, it was agreed between the beneficiary and the trustees, that the beneficiary would pay no interest on the mortgages and the trustees would distribute no income from the trust.
>
> *Held*, notwithstanding the foregoing agreement, the interest income due on the mortgages held by the trust is includible in the gross income of the trust, and this same amount, as the distributable income of the trust, is includible in the gross income of the beneficiary. Further, the beneficiary is entitled to a deduction for this interest deemed paid on the mortgages.

Below is authority consistent with this conclusion:

Reg. § 1.643(c)-1(a) treats as a beneficiary "any person with respect to an amount used to discharge or satisfy that person's legal obligation as that term is used in § 1.662(a)-4."
Reg. § 1.661(a)-2(d) provides:

> The terms "income required to be distributed currently" and "any other amounts properly paid or credited or required to be distributed" also include any amount used to discharge or satisfy any person's legal obligation as that term is used in § 1.662(a)-4.

Reg. § 1.662(a)-4, "Amounts used in discharge of a legal obligation," provides:

> Any amount which, pursuant to the terms of a will or trust instrument, is used in full or partial discharge or satisfaction of a legal obligation of any person is included in the gross income of such person under section 662(a)(1) or (2), whichever is applicable, as though directly distributed to him as a beneficiary, except in cases to which section 71 (relating to alimony payments) or section 682 (relating to income of a trust in case of divorce, etc.) applies. The term "legal obligation" includes a legal obligation to support another person if, and only if, the obligation is not affected by the adequacy of the dependent's own resources. For example, a parent has a "legal obligation" within the meaning of the preceding sentence to support his minor child if under local law property or income from property owned by the child cannot be used for his support so long as his parent is able to support him. On the other hand, if under local law a mother may use the resources of a child for the child's support in lieu of supporting him herself, no obligation of support exists within the meaning of this paragraph, whether or not income is actually used for support. Similarly, since under local law a child ordinarily is obligated to support his parent only if the parent's earnings and resources are insufficient for the purpose, no obligation exists whether or not the parent's earnings and resources are sufficient. In any event, the amount of trust income which is included in the gross income of a person obligated to support a dependent is limited by the extent of his legal obligation under local law. In the case of a parent's obligation to support his child, to the extent that the parent's legal obligation of support, including education, is determined under local law by the family's station in life and by the means of the parent, it is to be determined without consideration of the trust income in question.

Reg. § 1.661(a)-2(d) provides:

> The terms "income required to be distributed currently" and "any other amounts properly paid or credited or required to be distributed" also include any amount used to discharge or satisfy any person's legal obligation as that term is used in § 1.662(a)-4.

I.A.1.z. Partnerships and S corporations Carry Out Income and Capital Gain to Beneficiaries

Generally, K-1 income from a passthrough business entity will carry out any income (including capital) distributed to the trust and then to the trust's beneficiaries. This section focuses on nongrantor trusts holding partnerships rather than S corporations, because generally a trust can hold S corporation stock that is not a grantor trust, QSST, or ESBT only during a relatively limited amount of time. (Although the principles in this part II.J.8.e would apply to a net income with make-up charitable remainder unitrust – a NIMCRUT – the IRS has concerns about that application and might shut it down at some point.)

Also, if one elected not to carry out capital gains under Reg. § 1.643(a)-3(b)(2) and later decides that all capital gain should be included in DNI going forward (or does not want to take a risk that the IRS will not respect deviations from general rules of the Uniform Principal and Income Act, consider forming an entity taxed as a partnership. Capital gains earned through a partnership generally constitute trust accounting income.

The Uniform Principal and Income Act provides that, generally, all cash distributions from an entity (including a partnership) are considered trust accounting income. Only the following distributions from an entity are not considered trust accounting income:

- property other than money;
- money received in one distribution or a series of related distributions in exchange for part or all of a trust's interest in the entity;
- money received in total or partial liquidation of the entity; and
- money received from an entity that is a regulated investment company or a real estate investment trust if the money distributed is a capital gain dividend for federal income tax purposes.

Thus, a partnership's capital gains recognized in the ordinary course of managing and re-balancing a portfolio would constitute fiduciary accounting income to the extent distributed from the partnership in cash and therefore would be includible in DNI under (1) above.

To keep control of the partnership, consider having the trust be a 1% general partner and 98% limited partner, and the beneficiary or someone else might contribute 1% as a limited partner. Distributing a limited partnership interest to a beneficiary can carry out income and perhaps capital gain while at the same time not giving the beneficiary cash to spend (but be sure to distribute enough cash so that the beneficiary can pay tax on the distribution). Be careful to avoid the gain on formation that applies when a contributing partner diversifies the partner's holdings by forming the partnership. If the trust holds not only marketable securities but also investments in businesses, consider setting up one partnership for the business investments and another partnership for the marketable securities, which would help facilitate allocating trust assets on termination or any other trust division. Also consider whether a state with jurisdiction over the trust might subject the partnership itself to state income tax.

Complexity might arise if a partnership distributes less than all of its taxable income to a mandatory income trust. It is unclear whether all of the trust's distributive share of capital gain is DNI. Furthermore, interrelated calculations might be required for a mandatory income trust. Generally, we should look to see whether planning under part II.J.8.c.i Income Rule: Capital Gain Allocated to Income Under State Law or II.J.8.c.iii Discretionary Principal Rule: Allocated to Principal but Actually Distributed to the Beneficiary or Used by the Trustee to Determine the Amount Distributed or Required to be Distributed to a Beneficiary is sufficient before recommending a partnership solely to address the issues described in part II.J.8.c.ii Consistent Principal Rule: Capital Gain Allocated to Corpus but Treated Consistently as Part of a Distribution to a Beneficiary.

I.A.1.aa. Consequences of Allocating Capital Gain to DNI

I.A.1.aa.i. General Rules of the Proportion of DNI Constitutes Capital Gain Compared to Other Income (and General Retention of the Character of DNI Distributed to Beneficiaries)

This part II.J.8.f.i first discusses netting deductions against income then discusses allocating that income.

I.A.1.aa.i.(a). Allocating Deductions to Various Income Items

Rules for allocating deductions include:

- All deductible items directly attributable to one class of income are allocated to that class. To the extent that any items of deduction which are directly attributable to a class of income exceed that class of income, they may be allocated to any other class of income (including capital gains) included in distributable net income as described above except that any excess deductions attributable to tax-exempt income may not be offset against any other class of income.

- Deductions not directly attributable to a specific class of income may be allocated to any item of income (including capital gains) included in computing DNI, but Code § 265 requires a portion of such indirect expenses to be allocated to non-taxable income. Such indirect expenses include trustee fees, the rental of safe deposit boxes, and state income and personal property taxes. Once one has allocated expenses to tax-exempt income, how does one choose to which items of taxable income to allocate deductions? One would consider allocating to those income items that are most highly taxed, considering federal and state income tax and the 3.8% tax on net investment income. For example, interest income is taxed at the highest rates, whereas qualified dividends are taxed at long-term capital gain rates. Within interest income, consider whether the interest is from U.S. obligations exempt from state income tax. Although distributions from qualified retirement plans and IRAs are taxed at the highest regular tax rate, they are exempt from the 3.8% tax on net investment income. See part II.I.6 Deductions Against NII (especially the text accompanying fns. 2307-2308).

- If a charitable deduction under Code § 642(c) is involved, any allocations of taxable income between the charitable deduction and the beneficiaries must have substantial economic effect.

- Special rules apply to depreciation deductions.

I.A.1.aa.i.(b). Allocating Income Items Among Those Receiving It

In allocating income between the trust and the beneficiary (or beneficiaries), the amounts of DNI distributed to the beneficiaries:

> shall be treated as consisting of the same proportion of each class of items entering into the computation of distributable net income of the estate or trust as the total of each class bears to the total distributable net income of the estate or trust in the absence of

the allocation of different classes of income under the specific terms of the governing instrument.

However, this proportionate rule is subject to specific provisions in the governing instrument for the allocation of different classes of income or different allocations under local law, subject to tax-exempt income being allocated in a manner that does not allow it to be deducted.

Thus, except for tax-exempt income and allocations between the charitable and noncharitable shares (and any special rules regarding depreciation deductions), it appears that a trust agreement may create ordering provisions between which items of DNI the trust retains and which items of DNI the trust distributes to beneficiaries. However, such a provision might encounter significant resistance from the IRS.

Once one decides which items of DNI the trust distributes to beneficiaries, generally distributions to each beneficiary carry out a pro rata portion of ordinary income and capital gain items allocated to the beneficiaries, and any other characteristic of the income at the trust level retains its status in the beneficiary's hands (which, among other things, is important for net investment income tax purposes). Code § 652(b) provides that amounts included in the beneficiary's income for regular income tax purposes:

> … shall have the same character in the hands of the beneficiary as in the hands of the trust. For this purpose, the amounts shall be treated as consisting of the same proportion of each class of items entering into the computation of distributable net income of the trust as the total of each class bears to the total distributable net income of the trust, unless the terms of the trust specifically allocate different classes of income to different beneficiaries. In the application of the preceding sentence, the items of deduction entering into the computation of distributable net income shall be allocated among the items of distributable net income in accordance with regulations prescribed by the Secretary.

Code § 662(b) provides that amounts included in the beneficiary's income for regular income tax purposes:

> … shall have the same character in the hands of the beneficiary as in the hands of the estate or trust. For this purpose, the amounts shall be treated as consisting of the same proportion of each class of items entering into the computation of distributable net income as the total of each class bears to the total distributable net income of the estate or trust unless the terms of the governing instrument specifically allocate different classes of income to different beneficiaries. In the application of the preceding sentence, the items of deduction entering into the computation of distributable net income (including the deduction allowed under section 642(c)) shall be allocated among the items of distributable net income in accordance with regulations prescribed by the Secretary. In the application of this subsection to the amount determined under paragraph (1) of subsection (a), distributable net income shall be computed without regard to any portion of the deduction under section 642(c) which is not attributable to income of the taxable year.

Reg. § 1.662(b)-1 provides:

> In determining the amount includible in the gross income of a beneficiary, the amounts which are determined under section 662(a) and §§ 1.662(a)-1 through 1.662(a)-4 shall have the same character in the hands of the beneficiary as in the hands of the estate or trust. The amounts are treated as consisting of the same proportion of each class of items entering into the computation of distributable net income as the total of each class bears to the total distributable net income of the estate or trust unless the terms of the governing instrument specifically allocate different classes of income to different beneficiaries, or unless local law requires such an allocation. For this purpose, the principles contained in § 1.652(b)-1 shall apply.

Reg. § 1.652(b)-1 provides:

> In determining the gross income of a beneficiary, the amounts includible under § 1.652(a)-1 have the same character in the hands of the beneficiary as in the hands of the trust. For example, to the extent that the amounts specified in § 1.652(a)-1 consist of income exempt from tax under section 103, such amounts are not included in the beneficiary's gross income. Similarly, dividends distributed to a beneficiary retain their original character in the beneficiary's hands for purposes of determining the availability to the beneficiary of the dividends received credit under section 34 (for dividends received on or before December 31, 1964) and the dividend exclusion under section 116…. Similarly, to the extent such amounts consist of an amount received as a part of a lump sum distribution from a qualified plan and to which the provisions of section 72(n) would apply in the hands of the trust, such amount shall be treated as subject to such section in the hands of the beneficiary except where such amount is deemed under section 666(a) to have been distributed in a preceding taxable year of the trust and the partial tax described in section 668(a)(2) is determined under section 668(b)(1)(B). The tax treatment of amounts determined under § 1.652(a)-1 depends upon the beneficiary's status with respect to them not upon the status of the trust. Thus, if a beneficiary is deemed to have received foreign income of a foreign trust, the includibility of such income in his gross income depends upon his taxable status with respect to that income.

This proportionate requirement applies "unless the terms of the governing instrument specifically allocate different classes of income to different beneficiaries, or unless local law requires such an allocation."

When allocating income among beneficiaries:

> The terms of the trust are considered specifically to allocate different classes of income to different beneficiaries only to the extent that the allocation is required in the trust instrument, and only to the extent that it has an economic effect independent of the income tax consequences of the allocation.

III.B.2.f. Triggering the Statute of Limitations for Grantor Trusts

The tax return for the deemed owner is what determines the statute of limitations for any grantor trust items.[6588] However, that does not expressly address the issue about whether the trustee should have filed a tax return and whether the trust should have been taxable on those items.

I.A.1.aa.ii. How Undistributed Capital Gains Being Allocated to DNI Affects Character of Income Trapped Inside of Trust Compared to Distributed to the Beneficiary

If the amount of DNI is less than the amount distributed to the beneficiary, the issues described in this part II.J.8.f.ii How Undistributed Capital Gains Being Allocated to DNI Affects Character of Income Trapped Inside of Trust Compared to Distributed to the Beneficiary become important.

Some income might be inadvertently trapped in the trust if the allocation rules of part II.J.8.f.i General Rules of the Proportion of DNI Constitutes Capital Gain Compared to Other Income apply without being modified by any special ordering rule in the trust agreement and if all of a pass-through entity's capital gain constitutes DNI under an approach described in part II.J.8.a.ii Whether the Gain from the Sale or Exchange of a Capital Asset Is Allocated to Corpus That's because looking exclusively at those two factors bypasses the analysis of part II.J.5.c.i Basic Framework for Allocating Capital Gain to DNI If Allocated to Income or Principal.

For example, trust has $10,000 of interest income. Trust's distributive share of partnership's income is $20,000 of dividend income and $70,000 of long-term capital gains. If the rules described in the preceding paragraph apply, then 10% of all distributions constitute interest income, 20% constitute dividend income, and 70% constitute long-term capital gains. Trust distributes $50,000 to the beneficiary. Therefore, each of the beneficiary and the trust has $5,000 of interest income, $10,000 of dividend income, and $35,000 of long-term capital gains.

Contrast that to an approach under which the trustee is able to control how much capital gain is included in DNI, under part II.J.5.c.i Basic Framework for Allocating Capital Gain to DNI If Allocated to Income or Principal. On a year-by-year basis, the trustee can selectively include capital gain in DNI to the extent that one or both of part II.J.8.c.ii Consistent Principal Rule: Capital Gain Allocated to Corpus but Treated Consistently as Part of a Distribution to a Beneficiary or part II.J.8.c.iii Discretionary Principal Rule: Allocated to Principal but Actually Distributed to the Beneficiary or Used by the Trustee to Determine the Amount Distributed or Required to be Distributed to a Beneficiary is available. By including in DNI just enough capital gain to cause the DNI to match the cash distributed to the beneficiary, the trustee can ensure that all of the ordinary income is distributed to the beneficiary.

I.A.1.bb. Effectuating Allocation of Capital Gain to DNI

Form 1041 (Schedule D), Part III, column (1) allocates the beneficiaries' shares. Once one separates that, the rest should flow naturally.

.

[6588] *Lardas v. Commissioner*, 99 T.C. 490 (1992) (reviewed decision, with only one judge dissenting). For a quote from *Lardas*, see fn. 1705, found in part II.G.19 IRS Audits.

When the trust turns into a nongrantor trust, the trust's return is the proper one to audit, even if it distributes income to the beneficiary.[6589]

Regarding amended returns generally, *Broadhead v. Commissioner*, TC Memo 1955-328, reasoned and held:

> Faced with proof that petitioner was not aware of the accounting error giving rise to the understatement of lumber sales until after the return was filed, respondent now says that petitioner "willfully and deliberately attempted to evade and defeat his income taxes when he refused to file the amended return after being advised to do so by his accountant."
>
> The respondent had the burden of proof under the issue. He established no more than the cause of the understatement; lack of knowledge by petitioner of the bookkeeping error until after the return was filed; the preparation of an amended return by the accountant of petitioner, and that petitioner never filed the amended return, even though advised to do so by his accountant. Petitioner was not required by statute to file an amended return, and if one had been tendered for filing, respondent could have declined to accept it. *Ira Goldring*, 20 T.C. 79, 83. If the return was false and fraudulent with intent to evade tax, as respondent alleged in his answer raising the issue, the filing of an amended return would not have cured the fraud. *George M. Still, Inc.*, 19 T.C. 1072, *affd.* 218 F.2d 639.

Badaracco v. Commissioner, 464 U.S. 386 (1984), discussed fraudulent returns, but its comments on amended returns may be more important:

> Petitioners Badaracco concede that they filed initial returns that were "false or fraudulent with the intent to evade tax." Petitioner Deleet, for present purposes, upon this review of its motion for summary judgment, is deemed to have filed false or fraudulent returns with the intent to evade tax. Section 6501(c)(1), with its unqualified language, then allows the tax to be assessed "at any time." Nothing is present in the statute that can be construed to suspend its operation in the light of a fraudulent filer's subsequent repentant conduct.[7] Neither is there anything in the wording of § 6501(a) that itself enables a taxpayer to reinstate the section's general three-year limitations period by filing an amended return. Indeed, as this Court recently has noted, *Hillsboro National Bank v. Commissioner*, __ U.S. __, __, n. 10 (1983) (slip op. 8), the Internal Revenue Code does not explicitly provide either for a taxpayer's filing, or for the Commissioner's acceptance, of an amended return; instead, an amended return is a creature of administrative origin and grace. Thus, when Congress provided for assessment at any time in the case of a false or fraudulent "return," it plainly included by this language a false or fraudulent original return. In this connection, we note that until the decision of the Tenth Circuit in *Dowell v. Commissioner*, 614 F.2d 1263 (1980), cert. pending, No. 82-1873, courts consistently had held that the operation of § 6501 and its predecessors turned on the nature of the taxpayer's original, and not his amended return.[8]
>
> > [7] Under every general income tax statute since 1918, the filing of a false or fraudulent return has indefinitely extended the period of limitations for assessment of tax. See Revenue Act of 1918, §250(d), 40 Stat. 1083; Revenue Act of 1921, §250(d), 42 Stat. 265; Revenue Act of 1924, §278(a), 43 Stat. 299; Revenue Act of 1926, §278(a), 44

[6589] *Fendell v. Commissioner*, 906 F.2d 362 (8th Cir. 1990), *rev'g* 92 T.C. 708 (1989).

Stat., pt. 2, p. 59; Revenue Act of 1928, §276(a), 4 Stat 857; Revenue Act of 1932, §276(a), 47 Stat. 238; Revenue Act of 1934, §276(a), 48 Stat. 745; Revenue Act of 1936, §276(a), 49 Stat. 1726; Revenue Act of 1938, §276(a), 52 Stat. 540 Internal Revenue Code of 1939, §276(a).

[8] The significance of the original, and not the amended, return has been stressed in other, but related, contexts. It thus has been held consistently that the filing of an amended return in a nonfraudulent situation does not serve to extend the period within which the Commissioner may assess a deficiency. See *e.g. Zeilerbach Paper Co. v. Helvering*, 293 U.S. 172 (1934); *National Paper Products Co. v. Helvering*, 293 U.S. 183 (1934); *National Refining Co. v. Commissioner*, 1 B.T.A. 236 (1924). It also has been held that the filing of an amended return does not serve to reduce the period within which the Commissioner may assess taxes where the original return omitted enough income to trigger the operation of the extended limitations period provided by § 6501(e) or its predecessors. See. *e.g., Houston v. Commissioner*, 38 T.C. 486 (1962); *Goldring v. Commissioner*, 20 T.C. 79 (1953). And the period of limitations for filing a refund claim under the predecessor of § 6511(a) begins to run on the filing of the original, not the amended, return. *Kaltreider Construction, Inc. v. United States*, 303 F.2d 366, 368 (CA3), *cert. denied*, 371 U.S. 877 (1962).

III.B.2.g. Income Tax Concerns When Removing Property from the Estate Tax System

Note that gifts of properties subject to liabilities in excess of basis (sometimes referred to as "negative basis" assets,[6590] which is a technically incorrect description that gets the point across) will trigger gain recognition. Even if one uses an irrevocable grantor trust as the donee, one must consider any income tax consequences when grantor trust status terminates,

---

[6590] There is no such thing as a negative basis. Negative basis asset is just a shorthand description for a certain situation:

1. The basis of the partnership interest is zero, before considering liabilities.
2. The partner's basis in liabilities allocated to the partner is less than the face amount of those liabilities.

Under Code § 752, the allocation of liabilities is considered a contribution that creates basis and a reduction in liabilities is considered a distribution that, under Code § 731, reduces basis or creates gain. A so-called negative basis asset occurs when a partner has used not only the basis in item 1 but also has taken losses against his item 2 share of liabilities. The partner's basis in liabilities is zero or a positive number; it's just that the deemed distribution when liabilities are relieved exceeds the partner's basis in the liabilities that are relieved.

For example, ignoring all other partners: a partner contributes $100 to a partnership that borrows $50 and buys equipment for $150. The partnership writes off the full value of the equipment through depreciation deductions over time. The partner's capital account is negative $50 ($100 contribution minus $150 depreciation deductions). The partner's basis is zero: $100 actual contribution, plus $50 liabilities that constitute a deemed contribution, minus $150 in losses. If the partner were suddenly relieved of the $100 of liabilities, he would have no basis to absorb the $50 deemed distribution and would have to recognize income. The transfer of the partnership interest would cause that deemed distribution to occur. Having gain without receiving any cash is phantom income by reason of disposing of a negative basis asset, that really has a zero basis; this result is fair, because the partner already deducted $50 more than the cash he contributed ($150 deductions minus $100 cash contribution).

For the basis of the property that the trust is deemed to have received, see part III.B.2.a Tax Basis Issues, including fn. 6469.

For reporting of "negative basis," see text accompanying and preceding fn 502 in part II.C.7 Maintaining Capital Accounts.

including the controversy as to whether the grantor's death is a deemed bargain sale. If a grantor trust terminates during life in a manner that results in the grantor being relieved of liabilities, gain is recognized under Rev. Rul. 77-402 (reduction in allocation of liabilities with respect to a partnership interest); Reg. § 1.1001-2(c), Example (5);[6591] *Madorin v. Commissioner*, 84 T.C. 667 (1985); see also fn. 6482 for installment sale issues. Regarding dispositions of partnership interests to which liabilities had been allocated, see Rev. Rul. 74-40, quoted in full in fn. 5365, found in part II.Q.8.b.i.(a) Code § 731: General Rule for Distributions, and Rev. Rul. 75-194 (deemed bargain sale of partnership interest contributed to charity), discussed in part II.Q.6.b Possible Deemed Sale or Reduced Deduction When Contributing Partnership Interest to Charity. For the consequences on the nature of interest expense after such a transaction, see *Lipnick v. Commissioner*, 153 T.C. No. 1 (2019), discussed in the text accompanying fns 457-459 in part II.C.3.d Deducting Interest Expense on Debt Incurred by a Partnership.

For grantor trust status generally and the effect of turning on grantor trust status, see part III.B.2.d Income Tax Effect of Irrevocable Grantor Trust Treatment, especially part III.B.2.d.i Federal Income Tax and Irrevocable Grantor Trust Treatment, especially fn. 6533. See also part III.B.1.c.i Gifts with Consideration – Bargain Sales.

Blattmachr, Gans & Jacobson, Income Tax Effects of Termination of Grantor Trust Status by Reason of the Grantor's Death, 96 *J. of Taxation* 149 (Sept. 2002), asserts that gain is not recognized at death. CCA 200923024 appears to have accepted their arguments; relying on Rev. Rul. 85-13, the IRS lawyer said that turning on grantor trust status was not a taxable event. An excerpt from CCA 200923024 is in fn. 6533 in part III.B.2.d.i.(a) General Concepts of the Effect of Irrevocable Grantor Trust Treatment on Federal Income Taxation, but here is another excerpt:[6592]

> The authorities cited only discuss the application of § 1001 to the party who is considered to have transferred ownership (the "transferor") of trust assets. Regulation 1.1001-2(c), Example 5, *Madorin*, and Rev. Rul. 77-402 are silent regarding the income tax

---

[6591] Example (5) provides:

> In 1975 C, an individual, creates T, an irrevocable trust. Due to certain powers expressly retained by C, T is a "grantor trust" for purposes of subpart E of part 1 of subchapter J of the Code and therefore C is treated as the owner of the entire trust. T purchases an interest in P, a partnership. C, as owner of T, deducts the distributive share of partnership losses attributable to the partnership interest held by T. In 1978, when the adjusted basis of the partnership interest held by T is $1,200, C renounces the powers previously and expressly retained that initially resulted in T being classified as a grantor trust. Consequently, T ceases to be a grantor trust and C is no longer considered to be the owner of the trust. At the time of the renunciation all of P's liabilities are liabilities on which none of the partners have assumed any personal liability and the proportionate share of which of the interest held by T is $11,000. Since prior to the renunciation C was the owner of the entire trust, C was considered the owner of all the trust property for Federal income tax purposes, including the partnership interest. Since C was considered to be the owner of the partnership interest, C not T, was considered to be the partner in P during the time T was a "grantor trust". However, at the time C renounced the powers that gave rise to T's classification as a grantor trust, T no longer qualified as a grantor trust with the result that C was no longer considered to be the owner of the trust and trust property for Federal income tax purposes. Consequently, at that time, C is considered to have transferred ownership of the interest in P to T, now a separate taxable entity, independent of its grantor C. On the transfer, C's share of partnership liabilities ($11,000) is treated as money received. Accordingly, C's amount realized is $11,000 and C's gain realized is $9,800 ($11,000 − $1,200).

[6592] Reg. § 1.1001-2(c), Example (5) is reproduced in fn 6591 in part III.B.2.g Income Tax Concerns When Removing Property from the Estate Tax System.

> consequences to the party who receives trust assets (the "transferee"), which in these examples was the nongrantor trust. We would also note that the rule set forth in these authorities is narrow, insofar as it only affects inter vivos lapses of grantor trust status, not that caused by the death of the owner which is generally not treated as an income tax event.

Estate of Steve K. Backemeyer v. Commissioner, 147 T.C. 526 (2016), informs the discussion a little. The Official Tax Court Syllabus describes the case:

> Ps were husband and wife. H was a sole proprietor farmer. H purchased certain farm inputs in 2010 intending to use them to cultivate crops the following year. H, a cash-method taxpayer, deducted his expenditures on the inputs under I.R.C. sec. 162 for that same tax year. H died in March 2011 not having used any of the purchased farm inputs. They were subsequently transferred to W, who began her own farming business as sole proprietor upon H's death. W used all the farm inputs in 2011 to grow crops that were then sold in 2011 and 2012. W deducted for tax year 2011 an amount equal to the value of the farm inputs inherited from H.
>
> *Held*: The tax benefit rule does not require the recapture upon H's death in 2011 of deductions he claimed for 2010 for his expenditures on the farm inputs.
>
> *Held*, further, the I.R.C. sec. 6662 accuracy-related penalty for a substantial understatement of income tax does not apply, since Ps' deductions of the inputs under I.R.C. sec. 162 were appropriate, and the sole denied deduction conceded by Ps was not large enough to merit imposition of the penalty.

In evaluating the tax benefit rule (see part II.G.4.m.iii Tax Benefit Rule), the court considered the four-part test applying the tax benefit rule developed in *Frederick v. Commissioner*, 101 T.C. 35, 41 (1993). Applying that test, the court stated (highlighting added):

> Having established the inapplicability of the third *Frederick* criterion in this case, we now turn to the fourth criterion, which mandates that a nonrecognition provision of the Code not prevent the inclusion of the tax benefit in gross income. This requirement is not met here, since nonrecognition on death is among the strongest principles inherent in the income tax. See, *e.g.*, *Willging v. United States*, 474 F.2d 12, 13 (9th Cir. 1973) (stating that a cash basis farmer owning appreciated assets is not taxable on the unrealized appreciation, nor is his spouse, because of the section 1014 basis step-up). When an individual dies, his assets are not taxed under the income tax but rather under the estate tax. Upon the assets' distribution to the decedent's heirs, section 102(a) explicitly provides that the heirs' "[g]ross income does not include the value of property acquired by gift, bequest, devise, or inheritance."[4] And, as discussed above, section 1014 operates to provide a step-up in basis of the inherited property in the hands of the decedent's heirs; if an heir subsequently disposes of the property, gain is realized only to the extent the proceeds exceed the stepped-up basis. Sec. 1001(a).

> [4] Secs. 102(b) and 691, which govern the includability of income from a decedent's property and income in respect of decedents, do not apply in this case, since the farm inputs are property and not income from property.[6593]
>
> In approaching the fourth Frederick criterion, we also accept the Supreme Court's observation on the effect of sections 1245(b)(2) and 1250(d)(2), which exempt transfers at death from the application of the general depreciation rules, and from which the transfer in *Bliss Dairy*, 460 U.S. at 386 n.20, was not exempted. Section 1245(a) provides that in the case of a disposition of certain depreciable property, the lesser of the allowed depreciation deductions or realized gain should be taxed as ordinary income. Section 1250(a) establishes depreciation recapture rules for depreciable real property otherwise excluded from the operation of section 1245. Sections 1245 and 1250, along with section 111, codify the tax benefit rule as applied in certain situations. See, *e.g.*, *Estate of Munter v. Commissioner*, 63 T.C. 663, 671 (1975) ("While the rule is judicial in origin, it is applied to specific situations by certain Code provisions. See, for example, secs. 111, 1245, and 1250. Where not codified, the judicial rule continues.").
>
> It is telling that the depreciation recapture rules, which, we are reminded, are "a partial codification of the tax benefit rule," *Bliss Dairy*, 460 U.S. at 386 n.20, do not extend to transfers at death. The regulations bespeak this by omitting from the list of nonrecognition Code sections overridden by the depreciation recapture provisions of sections 1245 and 1250 those sections governing the treatment of a decedent's property. See secs. 1.1245-6(b), 1.1250-1(c)(2), Income Tax Regs. In *Bliss Dairy*, 460 U.S. at 398, the Supreme Court observed that depreciation recapture under sections 1245 and 1250 was an important exception to the nonrecognition statute at issue there. This is not the case with transfers at death, to which the depreciation recapture rules do not apply. Since sections 1245 and 1250 codify the tax benefit rule as it relates to depreciated property and expressly exclude transfers at death from the rule's scope, see *id.* at 386 n.20 ("[Sections] 1245(b)(1), (2), and 1250(d)(1), (2)
>
>> … are a partial codification of the tax benefit rule … [and] exempt dispositions by gift and transfers at death from the operation of the general depreciation recapture rules."), it follows that the uncodified remainder of the common law tax benefit rule, with which we are concerned in this case, operates in a similar fashion, *cf. Segel v. Commissioner*, 89 T.C. 816, 841 (1987) ("Even though the [tax benefit] rule originated in the Courts, it has the implicit approval of Congress[.]").

The language highlighted at the beginning of the above long quote seems to indicate that a Code § 1014 basis step-up may preclude recognition at death. However, Rev. Rul. 2023-2 provides that grantor trust status alone does not generate a Code § 1014 basis step-up,[6594] so the issue of possible recognition at death is not yet totally settled. Furthermore, the highlighted quote overstates its own strength, citing dictum from *Willging*, which is not quite so supportive; *Willging* is reproduced in part II.H.2.e IRD Assets Not Eligible for a Basis Step-Up.

[6593] [my footnote:] For Code § 691 income in respect of a decedent issues in a similar situation, see text accompanying fns 4434-4437in part II.Q.4.e.i Life Insurance Basis Adjustment on the Death of an Owner Who Is Not the Insured.

[6594] Rev. Rul. 2023-2 is quoted extensively in part III.B.2.a Tax Basis Issues When Using Irrevocable Grantor Trusts.

Because no case has addressed this issue squarely, notwithstanding emphatic comments made by one of the co-authors of the cited article, the reader might consider advising clients that this tax treatment is a risk. I believe that this risk might also be a benefit – if gain is recognized, then the trust has a higher basis; since the trust is typically a GST-exempt entity and the income tax on the sale will likely be paid with assets that are not GST-exempt (as well as the income tax perhaps being a debt of the estate that reduces the amount subject to estate tax), paying the tax might be beneficial in the long run. Furthermore, if and to the extent that one is able to secure capital gain treatment on the sale and then depreciate the stepped-up basis, one might find this tax risk to be quite beneficial. See part II.H Income Tax vs. Estate and Gift Tax (Particularly for Depreciable Property). Some take the position that, even without this sale treatment, the assets receive a basis adjustment when the grantor dies, because the assets were deemed owned by the grantor immediately before death; CCA 200937028 (which should have little weight because it was a rather cursory discussion of the issue and was not approved using IRS National Office procedures) disputes that position.

To avoid a deemed gift on death, consider a sale to a spousal grantor trust.[6595] One might consider the grantor retaining an interest in the partnership and assuming liabilities in a side agreement,[6596] so that the grantor's estate and not the irrevocable grantor trust is allocated the liabilities in excess of basis, which would then be cleansed.[6597] This shifting should have no income tax consequences during life, since the client and the irrevocable grantor trust are deemed to be the same person. This shifting might or might be available, depending on the nature of the loan and the partners' respective legal liabilities, in which case other shifting opportunities might be available at the partnership level; one should coordinate carefully with the partnership's income tax return preparer.

Rev. Rul. 72-406 provides that the basis for the property deemed sold is based on the grantor's original basis.

For why one might not want to move low basis assets outside of the estate tax system and how to cleanse a "negative basis" situation, see part II.H Income Tax vs. Estate and Gift Tax (Particularly for Depreciable Property), especially part II.H.5 Irrevocable Trust Planning and Basis Issues.

If one does recognize gain on the termination of a grantor trust,[6598] generally the gain would be the extent that the amount realized by the grantor exceeds the grantor's adjusted basis in the property as described in part III.B.1.c.i Gifts with Consideration – Bargain Sales:

- Beware of any nonrecourse debt, because the basis against which the nonrecourse debt is allocated would be limited to the property securing the nonrecourse debt. One might consider placing that that property in a partnership that has more assets against which the debt can be allocated.[6599]

[6595] See part III.B.2.i.xv Sale to Trust Created by Spouse: An Alternative Way to Have a Trust Benefitting Client.

[6596] For opportunities and limitations on this idea, see part II.C.3 Allocating Liabilities (Including Debt). Code § 752 analysis can interact with the Code § 465 at-risk rules; see part II.G.4.j At Risk Rules, especially CCA 201606027, including key excerpts in fns. 1282-1285.

[6597] See part II.H.2 Basis Step-Up Issues.

[6598] See fn. 6591.

[6599] ACTEC Fellow George P. Mair noticed this issue and planning opportunity. See fn. 6596 regarding the grantor expressly assuming the liability when contributing the property to the partnership.

- However, no loss is sustained on such a transfer if the amount realized is less than the adjusted basis.[6600] For the basis of the property that the trust is deemed to have received, see part III.B.2.a Tax Basis Issues, including fn. 6469.

For example, suppose one sold property with a fair market value of $1 million to an irrevocable grantor trust in exchange for a $1 million note, and the grantor trust powers are turned off when the note has a $500,000 face amount:

- Assuming the note had interest of at least the AFR, the note's remaining principal of $500,000 is the sale price when the grantor trust power is turned off. The $500,000 needs to be compared to the basis of the trust's assets.

- If the trust's assets have an aggregate basis of at least $500,000, then the basis does not change,[6601] and there is no gain or loss on sale under the bargain sale rules.

- If and to the extent that $500,000 exceeds the aggregate basis of the trust's assets, that excess is gain, to be recognized under the installment method unless the grantor reports the whole gain. As a result of the gain, the trust's assets have a new basis of $500,000.[6602]

The Code § 453 installment sale rules apply to any gain recognized.[6603]

The above discussion focuses on domestic trusts. Reg. § 1.684-2(e), "Deemed transfers when foreign trust no longer treated as owned by a U.S. person," provides:

(1) *In general*. If any portion of a foreign trust is treated as owned by a U.S. person under subpart E of part I of subchapter J, chapter 1 of the Internal Revenue Code, and such portion ceases to be treated as owned by that person under such subpart (other than by reason of an actual transfer of property from the trust to which § 1.684-2(d) applies), the U.S. person shall be treated as having transferred, immediately before (but on the same date that) the trust is no longer treated as owned by that U.S. person, the assets of such portion to a foreign trust.

(2) *Examples*. The following examples illustrate the rules of this paragraph (e). In all examples, A is a U.S. citizen and FT is a foreign trust. The examples are as follows:

Example (1). *Loss of U.S. beneficiary*.

(i) On January 1, 2001, A transfers property, which has a fair market value of 1000X and an adjusted basis of 400X, to FT. At the time of the transfer, FT has a U.S. beneficiary within the meaning of § 1.679-2, and A is treated as owning FT under section 679. Under § 1.684-3(a), § 1.684-1 does not cause A to recognize gain at the time of the transfer.

(ii) On July 1, 2003, FT ceases to have a U.S. beneficiary as defined in § 1.679-2(c) and as of that date neither A nor any other person is treated as owning any portion of FT. Pursuant to § 1.679-2(c)(2), if FT ceases to be treated as having a U.S. beneficiary,

[6600] Reg. §§ 1.1001-1(e)(1), 1.1011-2.
[6601] See Reg. § 1.1015-4(b), Example (1).
[6602] See Reg. § 1.1015-4(b), Example (2).
[6603] Reg. § 1.1001-1(d); Code § 453(a). See part II.G.15 Limitations on the Use of Installment Sales.

A will cease to be treated as owner of FT beginning on the first day of the first taxable year following the last taxable year in which there was a U.S. beneficiary. Thus, on January 1, 2004, A ceases to be treated as owner of FT. On that date, the fair market value of the property is 1200X and the adjusted basis is 350X. Under paragraph (e)(1) of this section, A is treated as having transferred the property to FT on January 1, 2004, and must recognize 850X of gain at that time under § 1.684-1.

Example (2). *Death of grantor*.

(i) The initial facts are the same as in paragraph (i) of Example 1.

(ii) On July 1, 2003, A dies, and as of that date no other person is treated as the owner of FT. On that date, the fair market value of the property is 1200X, and its adjusted basis equals 350X. Under paragraph (e)(1) of this section, A is treated as having transferred the property to FT immediately before his death, and generally is required to recognize 850X of gain at that time under § 1.684-1. However, an exception may apply under § 1.684-3(c).

Example (3). *Release of a power*.

(i) On January 1, 2001, A transfers property that has a fair market value of 500X and an adjusted basis of 200X to FT. At the time of the transfer, FT does not have a U.S. beneficiary within the meaning of § 1.679-2. However, A retains the power to revoke the trust. A is treated as the owner of the trust under section 676 and, therefore, under § 1.684-3(a), A is not required to recognize gain under § 1.684-1 at the time of the transfer.

(ii) On January 1, 2007, A releases the power to revoke the trust and, as of that date, neither A nor any other person is treated as owning any portion of FT. On that date, the fair market value of the property is 900X, and its adjusted basis is 200X. Under paragraph (e)(1) of this section, A is treated as having transferred the property to FT on January 1, 2007, and must recognize 700X of gain at that time.

III.B.2.h. How to Make a Trust a Grantor Trust Taxed to a U.S. Citizen or Resident

For policy concerns, see ACTEC submits a Report on Grantor Trusts (June 24, 2021).

Generally, the rules in this part III.B.2.h apply “only to the extent such application results in an amount (if any) being currently taken into account (directly or through 1 or more entities) under this chapter in computing the income of a citizen or resident of the United States or a domestic corporation.”[6604] The most common application is a revocable trust – a mere probate avoidance tool – which Code § 676 treats as owned by the grantor with the power to revoke. However, this part III.B.2 focuses on irrevocable trusts.

To protect one’s clients from depleting their estates to the point of jeopardizing their standard of living, the ideal power is one that the grantor can turn off completely. Powers may treat the grantor as deemed owner of only a portion of the trust; for details, see part III.B.2.d.i.(b) Portions of Irrevocable Grantor Trust Deemed Owned for Federal Income Taxation.

[6604] Code § 672(f)(1).

Rev. Proc. 2020-3, § 3.01(92), "Trust Income, Deductions, and Credits Attributable to Grantors and Others as Substantial Owners," provides that the IRS will not rule on:[6605]

> Whether the grantor will be considered the owner of any portion of a trust when (i) substantially all of the trust corpus consists or will consist of insurance policies on the life of the grantor or the grantor's spouse, (ii) the trustee or any other person has a power to apply the trust's income or corpus to the payment of premiums on policies of insurance on the life of the grantor or the grantor's spouse, (iii) the trustee or any other person has a power to use the trust's assets to make loans to the grantor's estate or to purchase assets from the grantor's estate, and (iv) there is a right or power in any person that would cause the grantor to be treated as the owner of all or a portion of the trust under §§ 673 to 677.

When considering the powers described in various portions of this part III.B.2.h, consider Reg. § 1.675-1(c):

> *Authority of trustee*. The mere fact that a power exercisable by a trustee is described in broad language does not indicate that the trustee is authorized to purchase, exchange, or otherwise deal with or dispose of the trust property or income for less than an adequate and full consideration in money or money's worth, or is authorized to lend the trust property or income to the grantor without adequate interest. On the other hand, such authority may be indicated by the actual administration of the trust.

If a power is not exercisable currently but is subject to other actions that must occur first, can one disregard that power until those conditions are satisfied? Code § 672(d), "Rule where power is subject to condition precedent," provides:

> A person shall be considered to have a power described in this subpart even though the exercise of the power is subject to a precedent giving of notice or takes effect only on the expiration of a certain period after the exercise of the power.

Reg. § 1.672(d)-1, "Power subject to condition precedent," elaborates, but keep in mind that it was promulgated in 1956 and does not reflect changes since then:

> Section 672(d) provides that a person is considered to have a power described in subpart E (section 671 and following), part I, subchapter J, chapter 1 of the Code, even though the exercise of the power is subject to a precedent giving of notice or takes effect only after the expiration of a certain period of time. However, although a person may be considered to have such a power, the grantor will nevertheless not be treated as an owner by reason of the power if its exercise can only affect beneficial enjoyment of income received after the expiration of a period of time such that, if the power were a reversionary interest, he would not be treated as an owner under section 673. See sections 674(b)(2), 676(b), and the last sentence of section 677(a). Thus, for example, if a grantor creates a trust for the benefit of his son and retains a power to revoke which takes effect only after the expiration of 2 years from the date of exercise, he is treated as an owner from the inception of the trust. However, if the grantor retains a power to revoke, exercisable at any time, which can only affect the beneficial enjoyment of the

[6605] Rev. Proc. 2020-3, § 3.01(93), relating to distribution committees used in creating an incomplete gift nongrantor trust ("ING"), is reproduced in fn 2517 in part II.J.3.e.i Strategic State & Local Tax Issues re: Residence.

> ordinary income of a trust received after the expiration of 10 years commencing with the date of the transfer in trust, or after the death of the income beneficiary, the power does not cause him to be treated as an owner with respect to ordinary income during the first 10 years of the trust or during the income beneficiary's life, as the case may be. See section 676(b).

The regulations focus on the passage of time and only briefly refer to a "precedent giving of notice." Does this phrase refer to a ministerial notice or a substantive action? Let's look at the legislative history to Code § 672(d). HR Rep. 1337, 83d Cong., 2d Sess. A213 (1954) explains:

> Subsection (d) contains the rule that a person shall be considered to have a power even though the exercise is subject to the precedent giving of notice or takes effect only on the expiration of a certain period of time after the exercise of the power. This provision, which is designed to prevent avoidance through the use of contingent powers, corresponds to the similar provision in section 39.22(a)-21(d) of the regulations. The fact that a power is held in the capacity of trustee is not material except where expressly or impliedly stated, as in sections 674(d) and 675(4).

In a similar vein, S. Rep. 1662, 83d Cong., 2d Sess. 366 (1954) provides:

> Subsection (d) contains the rule that a person shall be considered to have a power even though the exercise is subject to the precedent giving of notice or takes effect only on the expiration of a certain period of time after the exercise of the power. This provision, which is designed to prevent avoidance through the use of contingent powers, corresponds to the similar provision in section 39.22(a)-21(d) of the regulations. The fact that a power is held in the capacity of trustee is not material except where expressly or impliedly stated, as in sections 674(d) and 675(4).

III.B.2.h.i. Who Is the Grantor

A grantor includes any person to the extent such person directly or indirectly[6606] makes a gratuitous transfer of property to a trust; although a person may be the nominal grantor of a trust, that person cannot be the deemed owner unless that person actually makes a gratuitous

---

[6606] Reg. § 1.671-2(e)(6), Example (3), provides:

> A, an attorney, creates a foreign trust, FT, on behalf of A's client, B, and transfers $100 to FT out of A's funds. A is reimbursed by B for the $100 transferred to FT. The trust instrument states that the trustee has discretion to distribute the income or corpus of FT to B and B's children. Both A and B are treated as grantors of FT under paragraph (e)(1) of this section. In addition, B is treated as the owner of the entire trust under section 677. Because A is reimbursed for the $100 transferred to FT on behalf of B, A is not treated as transferring any property to FT. Therefore, A is not an owner of any portion of FT under sections 671 through 677 regardless of whether A retained any power over or interest in FT described in sections 673 through 677. Furthermore, A is not treated as an owner of any portion of FT under section 679. Both A and B are responsible parties for purposes of the requirements in section 6048.

transfer to the trust.[6607] If more than one person makes a gratuitous transfer, each is a grantor.[6608]

A gratuitous transfer is any transfer other than a transfer for fair market value, without regard to whether the transfer is treated as a gift for gift tax purposes.[6609] For that purpose, a transfer is for fair market value only to the extent of the value of property received from the trust, services rendered by the trust, or the right to use property of the trust;[6610] thus, buying property from a

---

[6607] Reg. § 1.671-2(e)(1) provides:

> For purposes of part I of subchapter J, chapter 1 of the Internal Revenue Code, a grantor includes any person to the extent such person either creates a trust, or directly or indirectly makes a gratuitous transfer (within the meaning of paragraph (e)(2) of this section) of property to a trust. For purposes of this section, the term property includes cash. If a person creates or funds a trust on behalf of another person, both persons are treated as grantors of the trust. (See section 6048 for reporting requirements that apply to grantors of foreign trusts.) However, a person who creates a trust but makes no gratuitous transfers to the trust is not treated as an owner of any portion of the trust under sections 671 through 677 or 679. Also, a person who funds a trust with an amount that is directly reimbursed to such person within a reasonable period of time and who makes no other transfers to the trust that constitute gratuitous transfers is not treated as an owner of any portion of the trust under sections 671 through 677 or 679. See also § 1.672(f)-5(a).

[6608] Reg. § 1.671-2(e)(1); Reg. § 1.671-2(e)(6), Example (1).

[6609] Reg. § 1.671-2(e)(2)(i).

[6610] Reg. § 1.671-2(e)(2)(ii), which further provides:

> For example, rents, royalties, interest, and compensation paid to a trust are transfers for fair market value only to the extent that the payments reflect an arm's length price for the use of the property of, or for the services rendered by, the trust. For purposes of this determination, an interest in the trust is not property received from the trust. In addition, a person will not be treated as making a transfer for fair market value merely because the transferor recognizes gain on the transaction. See, for example, section 684 regarding the recognition of gain on certain transfers to foreign trusts.

As to the payment of interest on a loan, Reg. § 1.671-2(e)(6), Example (6) provides:

> A borrows cash from T, a trust. A has not made any gratuitous transfers to T. Arm's length interest payments by A to T will not be treated as gratuitous transfers under paragraph (e)(2)(ii) of this section. Therefore, under paragraph (e)(1) of this section, A is not a grantor of T with respect to the interest payments.

Reg. § 1.671-2(e)(2)(iii) provides:

> For purposes of this paragraph (e), a gratuitous transfer does not include a distribution to a trust with respect to an interest held by such trust in either a trust described in paragraph (e)(3) of this section or an entity other than a trust. For example, a distribution to a trust by a corporation with respect to its stock described in section 301 is not a gratuitous transfer.

Regarding the latter, see parts II.D.2 Business Entity as Grantor of Tru and II.Q.7.a.iv Dividends; Avoiding Dividend Treatment Using Redemptions under Code §§ 302 and 303 (discussing Code § 301).

Reg. § 1.671-2(e)(3) provides:

> A grantor includes any person who acquires an interest in a trust from a grantor of the trust if the interest acquired is an interest in certain investment trusts described in § 301.7701-4(c) of this chapter, liquidating trusts described in § 301.7701-4(d) of this chapter, or environmental remediation trusts described in § 301.7701-4(e) of this chapter.

See part II.D.4 Disregarding Multiple Owner Trust for Income Tax Purposes, which discusses each of these trusts.

trust for more than its value is a gratuitous transfer to the trust.[6611] Receiving an interest in the trust is not considered receiving fair market value under this test.[6612]

Reg. § 1.671-2(e)(6), Example (1), provides:

> A creates and funds a trust, T, for the benefit of her children. B subsequently makes a gratuitous transfer to T. Under paragraph (e)(1) of this section, both A and B are grantors of T.

Reg. § 1.671-2(e)(6), Example (7), illustrates how to treat a trust that has more than one grantor:[6613]

> A, B's brother, creates a trust, T, for B's benefit and transfers $50,000 to T. The trustee invests the $50,000 in stock of Company X. C, B's uncle, purportedly sells property with a fair market value of $1,000,000 to T in exchange for the stock when it has appreciated to a fair market value of $100,000. Under paragraph (e)(2)(ii) of this section, the $900,000 excess value is a gratuitous transfer by C. Therefore, under paragraph (e)(1) of this section, A is a grantor with respect to the portion of the trust valued at $100,000, and C is a grantor of T with respect to the portion of the trust valued at $900,000. In addition, A or C or both will be treated as the owners of the respective portions of the trust of which each person is a grantor if A or C or both retain powers over or interests in such portions under sections 673 through 677.

Reg. § 1.671-2(e)(6), Example (8), addresses who is the grantor after a grantor dies:

> G creates and funds a trust, T1, for the benefit of G's children and grandchildren. After G's death, under authority granted to the trustees in the trust instrument, the trustees of

[6611] Reg. § 1.671-2(e)(6), Example (7) provides:

> A, B's brother, creates a trust, T, for B's benefit and transfers $50,000 to T. The trustee invests the $50,000 in stock of Company X. C, B's uncle, purportedly sells property with a fair market value of $1,000,000 to T in exchange for the stock when it has appreciated to a fair market value of $100,000. Under paragraph (e)(2)(ii) of this section, the $900,000 excess value is a gratuitous transfer by C. Therefore, under paragraph (e)(1) of this section, A is a grantor with respect to the portion of the trust valued at $100,000, and C is a grantor of T with respect to the portion of the trust valued at $900,000. In addition, A or C or both will be treated as the owners of the respective portions of the trust of which each person is a grantor if A or C or both retain powers over or interests in such portions under sections 673 through 677.

[6612] Reg. § 1.671-2(e)(6), Example (5) provides:

> A transfers cash to a trust, T, through a broker, in exchange for units in T. The units in T are not property for purposes of determining whether A has received fair market value under paragraph (e)(2)(ii) of this section. Therefore, A has made a gratuitous transfer to T, and, under paragraph (e)(1) of this section, A is a grantor of T.

[6613] The Example cites Reg. § 1.671-2(e)(2)(ii), which provides:

> For purposes of this paragraph (e), a transfer is for fair market value only to the extent of the value of property received from the trust, services rendered by the trust, or the right to use property of the trust. For example, rents, royalties, interest, and compensation paid to a trust are transfers for fair market value only to the extent that the payments reflect an arm's length price for the use of the property of, or for the services rendered by, the trust. For purposes of this determination, an interest in the trust is not property received from the trust. In addition, a person will not be treated as making a transfer for fair market value merely because the transferor recognizes gain on the transaction. See, for example, section 684 regarding the recognition of gain on certain transfers to foreign trusts.

T1 transfer a portion of the assets of T1 to another trust, T2, and retain a power to revoke T2 and revest the assets of T2 in T1. Under paragraphs (e)(1) and (5) of this section, G is the grantor of T1 and T2. In addition, because the trustees of T1 have retained a power to revest the assets of T2 in T1, T1 is treated as the owner of T2 under section 678(a).

The next-to-the-last sentence of Example (8) confirms that G's status as a grantor does not terminate upon G's death. G's estate does not succeed to G's status as a grantor.[6614]

Although, as described above, Reg. § 1.671-2(e) is very clear that one is the grantor of only the portion the person gave to the trust, curiously Reg. § 1.671-2(e)(1) provides that person is the grantor if that person creates or funds the trust.[6615] To explain that, let's look at the preamble to the final regulations. T.D. 8831 (7/23/1999) explains:

> Under the original proposed regulations, a grantor was defined to include any person to the extent such person either (i) creates a trust or (ii) directly or indirectly makes a gratuitous transfer to a trust. Commenters questioned why a nominal creator who has made no transfer to a trust should be treated as a grantor and asked for an explanation of the tax significance of such treatment.
>
> Treating a nominal creator as a grantor ensures that someone will be responsible for reporting the creation of a foreign trust by a U.S. person even if the trust is not immediately funded. See section 6048(a)(3)(A)(i) and (a)(4)(A). At the same time, Treasury and the IRS believe that an accommodation grantor, such as an attorney who creates a trust on behalf of a client, (although a grantor) should not be treated as an owner of the trust. Accordingly, the temporary regulations provide that a person who either creates a trust, or funds a trust with an amount that is directly repaid to such person within a reasonable period of time, but who makes no other transfers to the trust that constitute gratuitous transfers, will not be treated as an owner of any portion of the trust under sections 671 through 677 or 679.

[6614] When an estate succeeded to its decedent's reversionary interest, Rev. Rul. 75-267 held:

> … the grantor, during his lifetime, was the owner of the trust corpus under section 677 of the Code because of his reversionary interest in such corpus including any accumulated capital gain. Therefore, in accordance with section 671, the grantor was required to include in computing his taxable income, for each of his taxable years during which he was alive, any capital gain or loss realized by the trust as if the trust had not been in existence.
>
> Furthermore, the estate's acquisition of the reversionary interest in the trust after the grantor's death did not cause it to be treated as the owner of the trust. Thus, since the estate is a taxable person separate from the grantor, it is not treated as a grantor described in sections 673 through 677 of the Code, and since the executor of the estate has no power to vest the corpus or income of the trust in the estate, it is not a person having a power under section 678. Therefore, in the instant case any capital gain or loss realized by the trust after the grantor's death is not taxable to the estate but is includible in computing the trust's taxable income subject to the rules contained in subparts A, B, C, and D, part I, subchapter J, chapter 1 of the Internal Revenue Code of 1954 (sections 641 to 669 inclusive).

[6615] See fn 6607, which includes:

> … a grantor includes any person to the extent such person either creates a trust, or directly or indirectly makes a gratuitous transfer …. If a person creates or funds a trust on behalf of another person, both persons are treated as grantors of the trust….

Thus, referring to the "creator" is intended merely to ensure that certain reporting is done; it is not intended to change the idea that a person who in substance funds a trust is treated as the grantor.

The preamble to the proposed regulations, [REG-252487-96], RIN 1545-AU90, also focuses on the substance of the funding:

> If a person creates … any portion of a trust primarily as an accommodation for another person, the other person will be treated as a grantor with respect to such portion of the trust. See, *e.g.*, *Stern v. Commissioner*, 77 T.C. 614 (1981), *rev'd on other grounds*, 747 F.2d 555 (9th Cir. 1984).

Let's take a step back to confirm the use of "gratuitous." Reg. § 1.671-2(e)(2)(i) provides:

> A gratuitous transfer is any transfer other than a transfer for fair value. A transfer of property to a trust may be considered a gratuitous transfer without regard to whether the transfer is treated as a gift for gift tax purposes.

Thus, any transfer that is not a "transfer for fair market value" is a "gratuitous transfer" – even a transfer passing by reason of the transferor's death. Treating more than one person as grantors is consistent with Reg. § 1.671-2(e)(6), Example (1), which provides:

> A creates and funds a trust, T, for the benefit of her children. B subsequently makes a gratuitous transfer to T. Under paragraph (e)(1) of this section, both A and B are grantors of T.

Reg. § 1.671-2(e)(6), Example (7), illustrates how to treat a trust that has more than one grantor:[6616]

> A, B's brother, creates a trust, T, for B's benefit and transfers $50,000 to T. The trustee invests the $50,000 in stock of Company X. C, B's uncle, purportedly sells property with a fair [child]et value of $1,000,000 to T in exchange for the stock when it has appreciated to a fair [child]et value of $100,000. Under paragraph (e)(2)(ii) of this section, the $900,000 excess value is a gratuitous transfer by C. Therefore, under paragraph (e)(1) of this section, A is a grantor with respect to the portion of the trust valued at $100,000, and C is a grantor of T with respect to the portion of the trust valued at $900,000. In addition, A or C or both will be treated as the owners of the respective portions of the trust of which each person is a grantor if A or C or both retain powers over or interests in such portions under sections 673 through 677.

[6616] The Example cites Reg. § 1.671-2(e)(2)(ii), which provides:

> For purposes of this paragraph (e), a transfer is for fair market value only to the extent of the value of property received from the trust, services rendered by the trust, or the right to use property of the trust. For example, rents, royalties, interest, and compensation paid to a trust are transfers for fair market value only to the extent that the payments reflect an arm's length price for the use of the property of, or for the services rendered by, the trust. For purposes of this determination, an interest in the trust is not property received from the trust. In addition, a person will not be treated as making a transfer for fair market value merely because the transferor recognizes gain on the transaction. See, for example, section 684 regarding the recognition of gain on certain transfers to foreign trusts.

With more than one grantor, each person is grantor with respect to the portions that person funded, and all tax items relating to those portions are allocated to each portion.[6617]

Reg. § 1.671-2(e)(6), Example (8), addresses who is the grantor after a grantor dies:

> G creates and funds a trust, T1, for the benefit of G's children and grandchildren. After G's death, under authority granted to the trustees in the trust instrument, the trustees of T1 transfer a portion of the assets of T1 to another trust, T2, and retain a power to revoke T2 and revest the assets of T2 in T1. Under paragraphs (e)(1) and (5) of this section, G is the grantor of T1 and T2. In addition, because the trustees of T1 have retained a power to revest the assets of T2 in T1, T1 is treated as the owner of T2 under section 678(a).

The next-to-the-last sentence of Example (8) confirms that G's status as a grantor does not terminate upon G's death.

Letter Ruling 9304017 glossed over this distinction for a married couple (C and D) that together were grantors of a separate trust for each child, holding:

> In addition, because C and D are treated as the owners of all of the income and corpus of the Trusts, we conclude that Trust A and Trust B may be shareholders of an S corporation under section 1361(C)(2)(A)(i) of the Code. Accordingly, X's S corporation status will not terminate as a result of the transfer of X stock to Trust A and Trust B.
>
> After the deaths of C and D, Trust A, Trust B, and any separate share trust created thereunder will be considered a qualified subchapter S trust under section 1361(d)(3) of the Code, provided that each beneficiary is a citizen or resident of the United States and that a valid election is made by or on the behalf of the respective beneficiary under section 1361(d)(2).

What would happen if only one of C or D died? Letter Ruling 9304017 did not expressly address that time period and failed to mention Reg. § 1.671-2(e)(5). However, the ruling seems intended to approve the trust during all time periods before and after the deaths of C and D, so the taxpayer in that ruling is likely protected. On the other hand, the ruling's failure to address Reg. § 1.671-2(e)(5) makes it unwise for taxpayers to rely on Letter Ruling 9304017, and any suggestion that a trust deemed owned by more than one grantor is treated as owned 100% by the surviving grantor when one of the grantor's dies[6618] is wrong because it contradicts Example (8), which continues a person's status as the grantor after that person dies.

[6617] Reg. § 1.671-3(a)(2). For how much each person is treated as owning, see part III.B.2.i.vii.(b) Determining Portion Owned When Trust Is Only a Partial Grantor Trust.

[6618] Montgomery and Montgomery, "The Joint and Survivor Grantor Trust and the S Election," *Tax Notes Federal*, Vol. 174 (3/28/2022), starting at 1818, makes this error. In a letter dated April 15, 2022 Blattmachr, Boyle, and Zaritsky called out this error in a Letter to the Editor, *Tax Notes Federal*, Vol. 175 (4/25/2022), starting at 1818, but the authors rejected that letter's conclusion in a Response, *Tax Notes Federal*, Vol. 175 (5/2/2022), starting at 751. Of course, Blattmachr, Boyle, and Zaritsky were correct, but they might have been more persuasive had they mentioned how Examples (7) and (8) work together. Readers rely on the article at their peril. That being said, in a joint revocable trust where the surviving spouse has the unequivocal right to withdraw the entire the trust, Code § 678(a)(1) treats the surviving spouse as the deemed owner of the deceased spouse's portion of the trust, making the surviving spouse the deemed owner of all of the trust (half under Code §676 and half under Code § 678), so joint trusts with that feature will qualify while either or both spouses are living.

Letter Ruling 9729025 held that a community property revocable trust qualified during marriage and upon divorce, because each spouse owned a substantially separate and independent share.[6619]

"If a trust makes a gratuitous transfer of property to another trust, the grantor of the transferor trust generally will be treated as the grantor of the transferee trust."[6620]

Exercising - not merely holding[6621] - a general power of appointment makes the person exercising the power the grantor to the extent of the exercise,[6622] even if the trust was a grantor trust deemed owned by the settlor before the exercise.[6623] For more on general powers of appointment, see parts II.H.2.k Taxable Termination vs. General Power of Appointment vs. Delaware Tax Trap and II.H.5.d Using Grantor's Parent's Exemption for Basis Step-Up.

III.B.2.h.ii. Code § 672(e) Spousal Attribution

Code § 672(e), "Grantor treated as holding any power or interest of grantor's spouse," provides:

> (1) *In general*. For purposes of this subpart, a grantor shall be treated as holding any power or interest held by -
>
> > (A) any individual who was the spouse of the grantor at the time of the creation of such power or interest, or

---

[6619] See fn 5857 in part III.A.3.a.i Qualifying as a Wholly Owned Grantor Trust.

[6620] Reg. § 1.671-2(e)(5), which provides:

> If a trust makes a gratuitous transfer of property to another trust, the grantor of the transferor trust generally will be treated as the grantor of the transferee trust. However, if a person with a general power of appointment over the transferor trust exercises that power in favor of another trust, then such person will be treated as the grantor of the transferee trust, even if the grantor of the transferor trust is treated as the owner of the transferor trust under subpart E of part I, subchapter J, chapter 1 of the Internal Revenue Code.

As to the first sentence of the regulation, see part II.D.3 Trust as Grantor or Deemed Owner of Another Trust.

[6621] Reg. § 1.671-2(e)(6), Example (4) provides:

> A creates and funds a trust, T. A does not retain any power or interest in T that would cause A to be treated as an owner of any portion of the trust under sections 671 through 677. B holds an unrestricted power, exercisable solely by B, to withdraw certain amounts contributed to the trust before the end of the calendar year and to vest those amounts in B. B is treated as an owner of the portion of T that is subject to the withdrawal power under section 678(a)(1). However, B is not a grantor of T under paragraph (e)(1) of this section because B neither created T nor made a gratuitous transfer to T.

See generally part III.B.2.i Code § 678 Beneficiary Deemed-Owned Trusts.

[6622] Reg. § 1.671-2(e)(6), Example (9) provides:

> G creates and funds a trust, T1, for the benefit of B. G retains a power to revest the assets of T1 in G within the meaning of section 676. Under the trust agreement, B is given a general power of appointment over the assets of T1. B exercises the general power of appointment with respect to one-half of the corpus of T1 in favor of a trust, T2, that is for the benefit of C, B's child. Under paragraph (e)(1) of this section, G is the grantor of T1, and under paragraphs (e)(1) and (5) of this section, B is the grantor of T2.

See generally part III.B.2.i Code § 678 Beneficiary Deemed-Owned Trusts.

[6623] Reg. § 1.671-2(e)(5), which is reproduced in fn 6620 in part III.B.2.h.i Who Is the Grantor.

(B) any individual who became the spouse of the grantor after the creation of such power or interest, but only with respect to periods after such individual became the spouse of the grantor.

(2) *Marital status*. For purposes of paragraph (1)(A), an individual legally separated from his spouse under a decree of divorce or of separate maintenance shall not be considered as married.

The Senate Report (PL 100-647, 11/10/88) explains:

> **Present Law.**
>
> The grantor of a trust is treated as the owner of the trust's assets if he retains certain powers or interests over all or a portion of the trust (sec. 671-678). In that situation, the income and deductions of the portion are taxed directly to the grantor. The grantor is not, however, treated as the owner by virtue of certain powers exercisable by trustees, none of whom is the grantor and not more than half of whom are related or subordinate parties who are subservient to the wishes of the grantor. The grantor also is treated as the owner of a trust if the trust makes certain loans to him.
>
> The grantor is treated as holding all powers and interests of the grantor's spouse if the grantor's spouse is living with the grantor when such interests and powers are created.
>
> **Explanation of Provisions.**
>
> The bill provides that the grantor will be treated as holding any power or interest that was held by an individual either (1) who was the grantor's spouse at the time that the power or interest was created or (2) who became the grantor's spouse subsequent to the creation of that power or interest. For this purpose, individuals are not considered married if they are legally separated under a decree of divorce or of separate maintenance.
>
> In addition, the grantor is treated as owner of a trust by virtue of certain powers exercisable by trustees if the grantor's spouse is a trustee or more than half of the trustees are related or subordinate parties subservient to the wishes of the spouse. The grantor also is treated as the owner where the trust makes certain loans to the grantor's spouse.

Absent Code § 672(e), spousal attribution does not exist. *Laganas v. Commissioner*, 281 F.2d 731, 735 (1st Cir. 1960), held:

> Is the commissioner to investigate the existing rapport, or lack of it, between a particular taxpayer and his wife before determining the incidence of the tax? We believe that a single rule must be adopted, and that the preferable one is to assume that each wife stands on her own feet. C*ommissioner v. Katz*, 7 Cir., 1943, 139 F.2d 107, 110; *Phipps v. Commissioner*, 2 Cir., 1943, 137 F.2d 141, 144.

Code § 672(e)(1) looks to whether a person "was the grantor's spouse at the time that the power or interest was created," which status does not appear to be terminated by divorce.

Before 2018, its effect was somewhat mitigated by part III.B.2.h.ix Code § 682 Limitations on Grantor Trust Treatment (Repealed for Post-2018 Divorces). Code § 672(e) does not seem to coordinate with Code § 682. However, Reg. § 1.1361-1(k) was promulgated after Code § 672(e) was enacted, so Reg. § 1.1361-1(k)(1), Example (10),[6624] may clarify somewhat the scope of Code § 672(e), in that it requires a QSST election when the grantor of an inter vivos QTIP trust divorces the spousal beneficiary.

When Congress repealed Code § 682, it gave no clue as to its views on how the repeal affected Code § 672(e). ACTEC requested guidance:

- ACTEC Comments to Joint Committee on Taxation, House Ways and Means, and Senate Finance Committee re Repeal of I.R.C. Section 682 (July 5, 2018) (asking to limit the repeal's effect to trusts that were created after repeal).

- ACTEC Comments on guidance in connection with the Repeal of Section 682 (Notice 2018-37) (July 2, 2018) (asking the Treasury and IRS for guidance on how the repeal affected Code § 672(e)).

The latter explores various nuances how Code § 672(e) works. Rather than reproduce it, I recommend clicking on the link.

III.B.2.h.iii. Swap Power

Code § 675(4), a provision commonly relied upon in drafting irrevocable grantor trusts, treats a grantor of a trust as the owner if:

> A power of administration is exercisable in a nonfiduciary capacity by any person without the approval or consent of any person in a fiduciary capacity. For purposes of this paragraph, the term "power of administration" means any one or more of the following powers… (C) a power to reacquire the trust corpus by substituting other property of an equivalent value.

The trust agreement should specify that the grantor does not hold this power in a fiduciary capacity and preferably that, if the grantor is a trustee, some other trustee (preferably one who is not a related or subordinate party as described in Code § 672(c))[6625] has the fiduciary power to review the grantor's exercise. These principles come from two sources:

1. The income tax statute quoted above requires the power to be exercisable in a nonfiduciary capacity.[6626] Reg. § 1.675-1(b)(4)(iii) provides:

   > If a power is exercisable by a person as trustee, it is presumed that the power is exercisable in a fiduciary capacity primarily in the interests of the beneficiaries. This presumption may be rebutted only by clear and convincing proof that the power is not

[6624] Reproduced in fn 5973 in part III.A.3.e.i.(a) QSSTs Generally.
[6625] Rev. Rul. 95-58 and related private letter rulings in fn 6713 in part III.B.2.i Code § 678 Beneficiary Deemed-Owned Trusts.
[6626] Letter Ruling 9037011 included the following caveat with the trust agreement expressly stated that the trustee's exercise of the power would be in a nonfiduciary capacity: "Provided that the circumstances surrounding the administration of the power held by [the nongrantor trustee] to substitute property of equal value for the trust corpus do not indicate that the power is held in a fiduciary capacity…." In that Letter Ruling, a co-trustee was available to review the exercise.

exercisable primarily in the interests of the beneficiaries. If a power is not exercisable by a person as trustee, the determination of whether the power is exercisable in a fiduciary or a nonfiduciary capacity depends on all the terms of the trust and the circumstances surrounding its creation and administration.

2. From an estate tax perspective Rev. Rul. 2008-22 provides:

> [T]he trustee [must have] a fiduciary obligation (under local law or the trust instrument) to ensure the grantor's compliance with the terms of this power by satisfying itself that the properties acquired and substituted by the grantor are in fact of equivalent value, and further provided that the substitution power cannot be exercised in a manner that can shift benefits among the trust beneficiaries. A substitution power cannot be exercised in a manner that can shift benefits if: (a) the trustee has both the power (under local law or the trust instrument) to reinvest the trust corpus and a duty of impartiality with respect to the trust beneficiaries; or (b) the nature of the trust's investments or the level of income produced by any or all of the trust's investments does not impact the respective interests of the beneficiaries, such as when the trust is administered as a unitrust (under local law or the trust instrument) or when distributions from the trust are limited to discretionary distributions of principal and income.

Rev. Rul. 2008-22 held that, if it complies with the estate tax standard above,[6627] "a grantor's retained power, exercisable in a nonfiduciary capacity, to acquire property held in trust by substituting property of equivalent value will not, by itself, cause the value of the trust corpus to be includible in the grantor's gross estate under § 2036 or 2038." Rev. Rul. 2011-28 extends Rev. Rul. 2008-22 to Code § 2042, so that this swap power can apply to life insurance as well.

Some view uncertainty as to whether Rev. Rul. 2008-22 protects voting stock in a closely-held corporation from Code § 2036 inclusion. I believe it does protect voting stock, because Rev. Rul. 2008-22 applies to Code § 2036, not just Code § 2036(a). However, the ruling's analysis focuses on Code § 2036(a), and the lack of any reference in the ruling to Code § 2036(b) makes others nervous. However, I tend not to recommend gifts of voting stock in trust anyway; see part II.A.2.i.i.(b) Why Nonvoting Shares Are Needed for Estate Planning.

Relying on Rev. Rul. 85-13, Letter Rulings 200846001 and 200842007 ruled that exercise of a swap power over grantor trusts were not taxable; however, they did not rely on the swap powers themselves to make the trusts grantor trusts.

A clause I tend to use (which may be used only by a qualified lawyer using his or her independent judgment) is:

> POWER TO EXCHANGE ASSETS. I, acting alone in my individual capacity and not in any fiduciary capacity, shall have the power, with respect to any trust created under this Agreement, to reacquire the trust corpus by substituting other property of an equivalent value.[6628] The power described in this Section may be exercised by me or by an agent of mine appointed under a durable power of attorney or through any other means, whose actions shall be conclusive and binding.[6629] Neither the consent of the trustee nor the

[6627] Most practitioners do not believe that prior documents need to be fixed.
[6628] This language is intended to track the statute. The grantor is not required to hold this power; the grantor is listed to provide flexibility as described below in the annotation to this clause.
[6629] To leave no doubt that the grantor's incapacity does not extinguish the power.

> consent of any other person shall be required. Upon exercise of this power, the person exercising it (the "Exchanger") shall notify the trustee; if the Exchanger is the trustee, the Exchanger shall notify the person designated in [the provision designating trustees] to succeed the Exchanger as trustee, ignoring any exercise by the Exchanger of powers under [the provision for changing the designation of trustees], and such designated successor shall serve as special trustee for purposes of this Section; and, if there is a total vacancy, then the Exchanger shall appoint a special trustee.[6630] The trustee or this special trustee, as the case may be, shall comply with Rev. Rul. 2008-22 or Rev. Rul. 2011-28, as applicable, including satisfying himself, herself, or itself that the properties acquired and substituted pursuant to this Section are in fact of equivalent value and that the proposed substitution will not have the effect of shifting beneficial interests among trust beneficiaries.[6631] The power described in this Section may be released by a written statement executed by me or by an agent appointed under a durable power of attorney or through any other means (whose actions shall be conclusive and binding), and delivered to the trustee.[6632]

Although the trustee cannot resist the swap if the swap is for equivalent value, at least one court has held that the trustee can refuse the swap if the trustee determines that the value the grantor offers to pay is insufficient.[6633] Hood, "Snap, Crackle, Swap: The Substitution Power Under the Microscope," *Estate Planning Journal* (4/2020), describes this and other litigation when grantors have exercised swap powers and trustees resisted. The cases he described uses clauses similar to what I described above, and the courts differed as to whether the trustee had the right to stop the swap by arguing lack of equivalent value. Because these cases demonstrate uncertainty, the author asserts that the failure to be more specific about the process of exercising the swap power constitutes negligence by the drafter, because not being specific has led to litigation. Although I share his concern about what my clause means in terms of how to execute the swap power, this uncertainty leads to the opposite conclusion regarding drafting:

- If we are more specific in our drafting and the IRS asserts that our specific procedures do not accomplish what the statute and regulations say, then we would have unnecessarily subjected the trust to income tax litigation. Generally, we use this clause to give the grantor

---

[6630] The swap power cannot be subjected to fiduciary constraints, so the person holding the power should not be acting as a fiduciary with respect to the swap power. See Reg. § 1.675-1(b)(4)(iii) above.

[6631] This tracks standards within Rev. Rul. 2008-22. I include this language to be very clear about tracking the ruling; however, a trustee's fiduciary duties generally would include these standards, so that trusts that do not have such a clause tend to be likely to comply with the ruling anyway.

[6632] I tend to rely on swap powers to give the grantor control over grantor trust status. This sentence is intended to clearly authorize turning off that status.

[6633] *In re Dino Rigoni Intentional Grantor Trust for Benefit of Rajzer*, 2015 WL 4255417 (Court of Appeals of Michigan 7/14/2015), held:

> Once Rigoni has tendered property of equivalent value, the trustee lacks the discretion to deny the substitution. The trustee, however, still possessed the power and duty to determine whether the attempted substitution complied with the requirements of the substitution clause. See 3 *Restatement Trusts, 3d* (2007), p. 55, comment d (The primary duty of the trustee in regard to such a power is to ascertain whether an attempted exercise is within the terms of the power and to refuse to comply if it is not.). The trial court did not err in giving effect to every word of the substitution clause. *Kostin*, 278 Mich. App at 53. In fact, Rigoni's argument would substantially rewrite the substitution clause by essentially causing it to read, I may substitute any property for trust assets; if the trustee determines that the value of the property substituted was not equivalent, it may seek additional value afterwards. We decline to rewrite the unambiguous language of the substitution clause in such a fashion. See *Ourlian v. Major*, 333 Mich. 491, 496; 53 NW2d 346 (1952).

control over whether the trust is a grantor trust, not to give the grantor the power to shove a transaction down the trustee's throat. Therefore, I will stick with my clause and live with the uncertainty as to how to administer it so that the trust can have avoid the uncertain tax results that including such details may generate.

- If a lawyer decides to use the more specific clause because the lawyer prefers a specific procedure notwithstanding the income tax risk it generates, consider taking extra tax precautions. First, instead of using the grantor's social security number, consider using a separate tax ID and filing annual fiduciary income tax returns with grantor information statements to run the statute of limitations on the trustee's tax filing obligations.[6634] Also, generally I recommend that an irrevocable grantor trust that holds stock in an S corporation file an ESBT election to protect the S election in case the IRS determines that the trust is not a 100% grantor trust;[6635] that recommendation becomes even more important if one takes more risks whether the swap power achieves grantor trust treatment.

I also tend to fund irrevocable grantor trusts with *nonvoting* stock when closely-held businesses are involved. The "Law and Analysis" portion of Rev. Rul. 2008-22 that discussed Code § 2036 cited Code § 2036(a), and the provision regarding closely-held businesses is in Code § 2036(b). Because the literal holding of Rev. Rul. 2008-22 addressed all of Code § 2036, a swap power itself probably will not trigger Code § 2036 inclusion of closely-held business stock. However, if the grantor is capable of providing input to the trustee on how to vote stock, concerns other than the swap power also strongly suggest not initially funding the trust with voting stock.[6636] It's possible that other concerns[6637] might suggest later exchanging the nonvoting stock for voting stock[6638] after the trust is no longer a grantor trust, but to avoid a step-transaction argument I do not discuss this idea with clients until the grantor trust status is about to be turned off.

Guidance on the use of this power can also be found in the charitable area. Rev. Proc. 2008-45[6639] contains annotated sample declarations of trust and alternate provisions that meet the requirements for an inter vivos charitable lead unitrust (CLUT) providing for unitrust payments payable to one or more charitable beneficiaries for the unitrust period followed by the distribution of trust assets to one or more noncharitable remaindermen. Of particular interest is Section 8.09:[6640]

[6634] See parts III.B.2.e Grantor Trust Tax Identification Number During Life and Upon Death and III.B.2.f Triggering the Statute of Limitations for Grantor Trusts.
[6635] See part III.A.3.a Wholly Owned Grantor Trusts – How to Qualify, Risks, and Protective Measures. If this issue does not raise serious concerns with you, within part III.A.3.a you might start with part III.A.3.a.iv Why to Be Extraordinarily Sensitive to Protecting the S Election.
[6636] See II.A.2.i.i.(b) Why Nonvoting Shares Are Needed for Estate Planning through II.A.2.i.i.(d) Reallocations between Voting and Nonvoting Stock.
[6637] See part II.K.2.b Participation by an Estate or Nongrantor Trust.
[6638] Such a swap would not be an income taxable event. Code § 1036. One might want to use a formula swap, such as the number of nonvoting shares of value equal to the traded voting shares, to try to protect the swap from being considered a gift. See part II.A.2.i.i.(e) Example of Recapitalizing Voting and Nonvoting.
[6639] Its companion pronouncement, Rev. Proc. 2008-46, issued forms for testamentary CLUTs.
[6640] Note that the statute does not say who must hold the swap power to make it a grantor trust. Is it a big leap to treat the trust as a grantor trust when a person **other than** the grantor holds the swap power, as Section 8.09 does? No, since Reg. § 1.675-1(b)(4) (emphasis added) provides, The existence of certain powers of administration exercisable in a nonfiduciary capacity by **any nonadverse party** without the approval or consent of any person in a fiduciary capacity will cause the grantor to be treated as the owner. For more details on Code § 675(4)(C), see 819 T.M. XII.C.

(1) *Power to substitute trust assets*. The donor to a CLUT may claim an income tax charitable deduction under § 170(a) if the donor is treated as the owner of the entire CLUT under the provisions of subpart E, part I, subchapter J, chapter 1, subtitle A of the Code. Paragraph 11, Retained Powers and Interests, of the sample trust in section 7 creates a grantor CLUT through the use of a power to substitute trust assets under § 675(4) that is held by a person other than the donor, the trustee, or a disqualified person as defined in § 4946(a)(1), and is exercisable only in a nonfiduciary capacity. The circumstances surrounding the administration of a CLUT will determine whether a § 675(4) substitution power is exercised in a fiduciary or nonfiduciary capacity. This is a question of fact. Note, that the exercise of a § 675(4) power may result in an act of self-dealing under § 4941.

(2) *Other powers or provisions to create a grantor trust*. As noted above, the sample trust in section 7 includes a § 675(4) power that is held by someone other than donor, the trustee, or a disqualified person as defined in § 4946(a)(1), and that may be exercised only in a nonfiduciary capacity. The CLUT instrument may instead incorporate a power or provision, other than the one provided in the sample trust in section 7, that will cause the donor to be treated as the owner of the entire CLUT under the provisions of subpart E, part I, subchapter J, chapter 1, subtitle A of the Code. See § 671 et seq. However, practitioners should exercise caution when choosing a particular power or provision because certain methods of creating a grantor trust may have unforeseen tax consequences.

Letter Ruling 200944002 ruled that a transfer to a self-settled spendthrift trust was a completed gift. It also ruled that the trust's assets would not be included in the grantor's estate, but "we are specifically not ruling on whether Trustee's discretion to distribute income and principal of Trust to Grantor combined with other facts (such as, but not limited to, an understanding or pre-existing arrangement between Grantor and trustee regarding the exercise of this discretion) may cause inclusion of Trust's assets in Grantor's gross estate for federal estate tax purposes under § 2036." Letter Ruling 200944002 provides a good roadmap for obtaining a private letter ruling when creating such a trust in light of Rev. Rul. 2008-22, which requires certain procedural safeguards when a grantor exercises a swap power (the right to substitute assets of equivalent value).[6641]

If a grantor turns off this power but would like to reactivate it, consider forming an identical trust with a swap power and then the trustee of the nongrantor trust merges the nongrantor trust into the grantor trust.

III.B.2.h.iv. Borrow Power

Another way to make a trust a grantor trust is:[6642]

A power exercisable by the grantor or a nonadverse party, or both, enables the grantor to borrow the corpus or income, directly or indirectly, without adequate interest or without

[6641] Conversations with the IRS seem to indicate that the IRS will tend to avoid issuing private letter rulings on sales to irrevocable grantor trusts, so be sure to have an informal pre-submission conference before putting together a formal ruling request.
[6642] Code § 675(2).

> adequate security except where a trustee (other than the grantor) is authorized under a general lending power to make loans to any person without regard to interest or security.

Because the IRS would probably attack the use of inadequate interest as beneficial enjoyment, when using this power I tend to require that the loan must be one that will not make the loan be characterized as a "below-market loan" under Code § 7872(e)(1) and that, instead, the loan may have inadequate security. The framework of Code § 7872 and related regulations governing the use of the AFR to determine the interest rate do not take creditworthiness into account so long as the loan is reasonably expected to be repaid; see part III.B.1.a.ii.(a) Gift Tax Issues Involving Loan Guarantees.

Although I am not concerned whether such a power has Code § 2036 implications, to be extra careful one might give a nonadverse party the authority to give the right to borrow, rather than simply giving the grantor the right to borrow.[6643]

An actual borrowing by the grantor or the grantor's spouse also makes the grantor taxable on the trust's income in part or in whole of the loan is not adequately secured or the trustee is not independent,[6644] and borrowing for any part of the year makes the grantor taxable for the whole year.[6645] If the trust loans to a business entity owned by the grantor, does that count as a loan to the grantor? Yes, if it's a partnership; no if it's a C corporation.[6646]

Zand v. Commissioner, T.C. Memo. 1996-19, held:[6647]

> Section 675(3) provides that the grantor shall be treated as the owner of any portion of a trust in respect of which the grantor has directly or indirectly borrowed the corpus or

[6643] From Interactive Legal Solutions, which Jonathan Blattmachr kindly shared with me:

> During the Grantor's lifetime, the Loan Director shall have the power, exercisable at any time and from time to time in a non-fiduciary capacity (within the meaning of Code Sec. 675) without the approval or consent of any person in a fiduciary capacity within the meaning of that section, to compel the Trustee to loan some or all of the trust property to the Grantor without adequate security within the meaning of Code Sec. 675(2) although with adequate interest within the meaning of that section.

[6644] Code § 675(3); Reg. § 1.675-1(a)(3); Rev. Rul. 85-13 (grantor borrowed all assets so 100% grantor trust). For more details, see Zaritsky, Lane & Danforth, *Federal Income Taxation of Estates and Trusts* (WG&L), ¶11.04. Actual Borrowing from the Trust. Code § 675(3) provides that the grantor shall be treated as the owner of any portion of a trust in respect of which:

> The grantor has directly or indirectly borrowed the corpus or income and has not completely repaid the loan, including any interest, before the beginning of the taxable year. The preceding sentence shall not apply to a loan which provides for adequate interest and adequate security, if such loan is made by a trustee other than the grantor and other than a related or subordinate trustee subservient to the grantor. For periods during which an individual is the spouse of the grantor (within the meaning of section 672(e)(2)), any reference in this paragraph to the grantor shall be treated as including a reference to such individual.

[6645] See part III.B.2.d.i.(b) Portions of Irrevocable Grantor Trust Deemed Owned for Federal Income Taxation, fn. 6552.

[6646] *Bennett v. Commissioner*, 79 T.C. 470 (1982).

[6647] The court continued:

> Respondent relies on *Benson v. Commissioner*, 76 T.C. 1040 (1981); *Bixby v. Commissioner*, 58 T.C. 757 (1972); and *Bennett v. Commissioner*, 79 T.C. 470 (1982). Such reliance is misplaced. Those cases are distinguishable. In *Benson* the loan was unsecured, and the grantor's spouse was the sole trustee. In *Bixby* the settlors were held not to be the true grantors

income and has not completely repaid the loan, including the interest, before the beginning of the taxable year. However, the section also provides that this requirement does not apply to a loan which provides for adequate interest and security and if the loan is made by a trustee other than the grantor and other than a related or subordinate trustee subservient to the grantor. Here these three conditions are met: (1) The loans bore adequate interest; (2) the loans were adequately secured; and (3) the majority of the trustees (the two attorneys) were not related, subordinate, or subservient to the grantor. Lawyers are not proscribed by section 672(c) and thus may qualify as independent. See Bittker & Lokken, Federal Taxation of Income, Estates and Gifts, par. 80.1.4, at 18-19 (2d ed. 1991); 452-2nd T.M. Grantor Trusts: Sections 671-679, A-14. See also *Estate of Goodwyn v. Commissioner*, T.C. Memo. 1976-238. Moreover, even if section 675(3) did apply, its effect by its terms is to tax all or a portion of the trust income to petitioner. It does not provide for the disallowance of the interest expenses claimed by him. Indeed, the net result to the grantor may be no increase in tax because the trusts' interest income taxed to the grantor may be offset by a deduction for interest on the loans. See Bittker & Lokken, *Federal Taxation of Income, Estates and Gifts*, par. 80.7 at 64.

III.B.2.h.v. Life Insurance

Subject to certain exceptions, Code § 677(a)(3) taxes to the grantor income that is or may be applied to the payment of premiums on policies insuring the grantor's or grantor's spouse's life.

The "better" view is that the grantor is taxed only to the extent that the trust actually pays premiums, but the answer is uncertain.[6648]

The transfer of life insurance might trigger immediate income tax, might make the death benefit partly or wholly taxable, or both.[6649] To avoid those consequences and the uncertainty of Code § 677(a)(3), I generally use a swap power in my trusts holding life insurance.[6650] A swap power over a trust holding life insurance does not trigger Code § 2042 incidents of ownership in the grantor-insured.[6651]

Suppose one has a nongrantor trust that wishes to hold insurance on the grantor's life. If the grantor wishes to limit taxation on the trust's income and is not comfortable with the uncertainty of the "better" view, consider dividing the trust so that only what is needed to pay premiums is in the portion that hold life insurance. That portion might invest in tax-exempt bonds, annuities

---

for purposes of the grantor trust rules. Rather, the subsequent transferors were the actual grantors. There was no discussion of section 675(3) in the *Bixby* case. In *Bennett* the grantors were the trustees, and the loan was unsecured.

[6648] Zaritsky & Aucutt, ¶ 12.02[5][c][v] Power to pay life insurance premiums, *Structuring Estate Freezes: Analysis With Forms* (WG&L). Internal doc. no. 6207986 is a thorough analysis of the issue espousing the better view, but the author asked me not to share it with anyone, so I would need to spend several hours going through the materials to provide a fully researched analysis or would merely refer the person asking to contact the author. See also *Corning v. Commissioner*, 104 F.2d 329 (6th Cir. 1939), and *Weil v. Commissioner*, 3 T.C. 579 (1944), acq. 1944 C.B. 29.

[6649] See part II.Q.4.a Funding the Buy-Sell, especially fns. 4330-4342.

[6650] See part III.B.2.h.i Who Is the Grantor.

[6651] Rev. Rul. 2011-28.

(which would generate income tax on distributions from the annuities to pay premiums),[6652] or cash-value-rich life insurance. If the trustee of one trust pays premiums on life insurance on the grantor's life owned by another trust, then the grantor is the Code § 677(a) deemed owner "of the amount of the trust income which is used to pay the premiums on these policies of insurance on her life."[6653]

III.B.2.h.vi. Protecting the Grantor

The grantor's payment of income tax under the grantor trust rules is not a gift.[6654]

When using one or both of the swap or borrow powers to establish grantor trust powers, I generally provide that the powers may be exercised or released by the grantor's agent.

One might protect the grantor simply by encouraging the grantor not to transfer all of the grantor's interest in the entity being transferred. For example, if the grantor transfers half and keeps half, then the grantor might be able to use the half the grantor retained to pay tax on the taxable income generated by both halves. For the reasons described in part III.B.2.j.iv.(a) Grantor Trust Reimbursing for Tax Paid by the Deemed Owner, I hesitate to use income tax reimbursement clauses, but I tend to include in GRATs the option or requirement to make a distribution to the grantor to the extent that income tax on the GRAT's income exceeds the annuity payment.[6655]

The end of part III.B.2.d.i.(b) Portions of Irrevocable Grantor Trust Deemed Owned for Federal Income Taxation discusses whether the release of grantor trust powers changes deemed ownership for the taxable year prospectively - or perhaps not at all! For an example of how bad timing could be disastrous when an S corporation is involved, see the indented text accompanying fn. 6556 in that part III.B.2.d.i.(b).

One might be concerned whether a power of appointment, a power to decant, a power to merge, or some other power might cause the grantor to be taxed as the owner after the grantor turns off those powers. If one is concerned about this, consider including a savings clause that says that, under no event may the trustee's actions or any such power cause the trust to be a grantor trust, determined as if the swap or borrow power (that is being used to make the trust a grantor trust) does not exist. If the grantor's spouse is a beneficiary, one would generally need to make this savings clause apply only after the spouse's death[6656] or divorce.[6657]

[6652] Although Code § 72(u) states that a taxpayer that is not a natural person cannot defer tax on annuities, various private letters ruling, citing favorable legislative history, do not apply this prohibition to most trusts.
[6653] Rev. Rul. 66-313.
[6654] Rev. Rul. 2004-64, which is discussed further in fns. 6961-6980, found in part III.B.2.j.iv.(a) Grantor Trust Reimbursing for Tax Paid by the Deemed Owner.
[6655] See part III.B.2.h.viii.(b) GRATs as Grantor Trusts.
[6656] See Code §§ 677, 672(e).
[6657] See fn. 5973.

III.B.2.h.vii. Distribution Provisions Might Prevent Turning Off Grantor Trust Status

III.B.2.h.vii.(a). Distribution Provisions Resulting from Control Causing Grantor Trust Treatment

If the grantor (or current to former spouse)[6658] or a nonadverse party, or both, can make distributions without the approval or consent of any adverse party, the trust might be a grantor trust under Code § 674(a). "Adverse party" means any person having a substantial beneficial interest in the trust which would be adversely affected by making or not making the distribution.[6659] Because a beneficiary's interest might not be totally adverse to distributions being made,[6660] I hesitate to rely on a person being an adverse party.

Below are some situations in which Code § 674(a) does not apply to the power to make distributions, so long as no person, other than a person substituting other beneficiaries to succeed to his or her interest in the trust, has a power to add to the beneficiary or beneficiaries or to a class of beneficiaries (other than providing for after-born or after-adopted children) to whom distributions may be made:[6661]

- A power over income is solely exercisable (without the approval or consent of any other person) by a trustee or trustees, none of whom is the grantor or a current or former spouse of the grantor,[6662] and is limited by an ascertainable standard.[6663]

- A power over income, principal, or both, is solely exercisable (without the approval or consent of any other person) by a trustee or trustees, none of whom is the grantor or a current or former spouse of the grantor,[6664] and no more than half of whom are related or

---

[6658] Code § 672(e)(1) provides that a grantor shall be treated as holding any power or interest held by any individual who either was the spouse of the grantor at the time of the creation of such power or interest or became the spouse of the grantor after the creation of such power or interest; the latter applies only with respect to periods after such individual became the spouse of the grantor.
[6659] Code § 672(a). For a distribution committee qualifying as an "adverse party," see text accompanying fns 2514-2516 in part II.J.3.e.i Strategic State & Local Tax Issues re: Residence, briefly mentioning the idea of an incomplete gift nongrantor (ING) trust.
[6660] Reg. § 1.672(a)-1 provides various limitations. However, Letter Ruling 201310002 viewed as adverse to the grantor a distribution committee consisting of the grantor and four sons, when all of the grantor's descendants were eligible to receive discretionary distributions.
[6661] Reg. § 1.674(d)-2(b), discussed further below.
[6662] Code § 674(d) says, spouse living with the grantor. However, see fn. 6658 regarding spousal attribution under Code § 672(e), which, when Congress enacted it, Congress did not appear to try to reconcile with the living with the grantor condition of Code § 674(d). To avoid any argument, one might exclude any current or former spouse from being a trustee if one wants to rely on this exception.
[6663] Code § 674(d).
[6664] For the reference to current or former spouse, see fn. 6658.

subordinate parties[6665] who are subservient to the wishes of the grantor.[6666] Note that an ascertainable standard is not required to qualify for this exclusion. Note also that the power must be exercisable by a trustee or trustees, so the exception would not apply to the holder of a power of appointment.

- A power to distribute principal under an ascertainable standard.[6667]

- A power to distribute income to any current income beneficiary (or accumulate that income), if any accumulated income must ultimately be payable to the beneficiary, the beneficiary's estate, or the beneficiary's appointees under the broadest possible nongeneral power of appointment.[6668] Note that an ascertainable standard is not required to qualify for this exclusion and also does not help qualify for this exclusion; the only time an ascertainable standard helps is above where neither the grantor nor the grantor's spouse is a trustee.[6669] Consider the following language to qualify for the first sentence of this bullet point:

  > The trustee is authorized to distribute to any one or more of the primary beneficiary and the primary beneficiary's spouse and descendants as shall be living from time to time during the term of the trust, to provide for their support, any part or all of the income, principal or both of the trust; however, during my life, any distributions of income may be made only to the primary beneficiary, and any income that the trustee could have distributed that is added to principal may be distributed only to the primary beneficiary (as used in this Section, such undistributed income is the "Designated Principal"), and (1) any distributions of principal to the beneficiary under this Section shall be allocated first to the Designated Principal, and (2) any exercise of the beneficiary's powers under subsection (b) shall reduce the Designated Principal. After my death and subject to the above limitations regarding the Designated Principal, the trustee also is authorized to distribute to one or more of the beneficiary's spouse and descendants as shall be living from time to time during the term of the trust to provide for their reasonable support and comfort, any part or all of the income, principal or both. Any distributions under this subsection need not be equal, and the trustee shall have the right, within the limits of such standards, to pay all of such income, principal or both to any one or more of such persons to the complete exclusion of any other. Any such distribution shall be charged against the trust as a whole and not against the ultimate distributive share of any person.

[6665] Code § 672(c) provides that:

> the term related or subordinate party means any nonadverse party who is-
> (1) the grantor's spouse if living with the grantor;
> (2) any one of the following: The grantor's father, mother, issue, brother or sister; an employee of the grantor; a corporation or any employee of a corporation in which the stock holdings of the grantor and the trust are significant from the viewpoint of voting control; a subordinate employee of a corporation in which the grantor is an executive.
>
> For purposes of [Code § 674], a related or subordinate party shall be presumed to be subservient to the grantor in respect of the exercise or nonexercise of the powers conferred on him unless such party is shown not to be subservient by a preponderance of the evidence.

[6666] Code § 674(c).

[6667] Code § 674(b)(5)(A).

[6668] Code § 674(b)(6)(A); see fn. 6679 for the relevant regulation and the paragraph accompanying it for related issues.

[6669] See text accompanying fns 6662-6663.

That language targets income earned while the grantor is living and restricts its use during the primary beneficiary's life; tracking the accumulated income as Designated Principal is intended to prevent it from being lumped together with other principal under the typical language of any undistributed income being added to principal. Upon death, the primary beneficiary would still need the broad power of appointment described in the first sentence; if the primary beneficiary does not have such a power (for example, when the grantor wants to limit the power of appointment to include only the grantor's descendants), then the primary beneficiary needs to have that broad power over the Designated Principal remaining at the primary beneficiary's death.

These exceptions are not intended to be exhaustive; they are simply the ones to which I most frequently look.

Reg. § 1.674(b)-1(b)(5), "Powers to distribute corpus," explains the Code § 674(b)(5) exception for powers to distribute corpus:[6670]

(i) If the power is limited by a reasonably definite standard which is set forth in the trust instrument, it may extend to corpus distributions to any beneficiary or beneficiaries or class of beneficiaries (whether income beneficiaries or remaindermen) without causing the grantor to be treated as an owner under section 674. See section 674(b)(5)(A). It is not required that the standard consist of the needs and circumstances of the beneficiary. A clearly measurable standard under which the holder of a power is legally accountable is deemed a reasonably definite standard for this purpose. For instance, a power to distribute corpus for the education, support, maintenance, or health of the beneficiary; for his reasonable support and comfort; or to enable him to maintain his accustomed standard of living; or to meet an emergency, would be limited by a reasonably definite standard. However, a power to distribute corpus for the pleasure, desire, or happiness of a beneficiary is not limited by a reasonably definite standard. The entire context of a provision of a trust instrument granting a power must be considered in determining whether the power is limited by a reasonably definite standard. For example, if a trust instrument provides that the determination of the trustee shall be conclusive with respect to the exercise or nonexercise of a power, the power is not limited by a reasonably definite standard. However, the fact that the governing instrument is phrased in discretionary terms is not in itself an indication that no reasonably definite standard exists.

(ii) If the power is not limited by a reasonably definite standard set forth in the trust instrument, the exception applies only if distributions of corpus may be made solely in favor of current income beneficiaries, and any corpus distribution to the current income beneficiary must be chargeable against the proportionate part of corpus held in trust for payment of income to that beneficiary as if it constituted a separate trust (whether or not physically segregated). See section 674(b)(5)(B).

(iii) This subparagraph may be illustrated by the following examples:

Example (1). A trust instrument provides for payment of the income to the grantor's two brothers for life, and for payment of the corpus to the grantor's nephews in equal shares. The grantor reserves the power to distribute corpus to pay medical

[6670] For an ascertainable standard for gift tax purposes, see the text accompanying fn 2485 in part II.J.2.b Trust Provisions Authorizing Distributions.

expenses that may be incurred by his brothers or nephews. The grantor is not treated as an owner by reason of this power because section 674(b)(5)(A) excepts a power, exercisable by any person, to invade corpus for any beneficiary, including a remainderman, if the power is limited by a reasonably definite standard which is set forth in the trust instrument. However, if the power were also exercisable in favor of a person (for example, a sister) who was not otherwise a beneficiary of the trust, section 674(b)(5)(A) would not be applicable.

Example (2). The facts are the same as in example (1) except that the grantor reserves the power to distribute any part of the corpus to his brothers or to his nephews for their happiness. The grantor is treated as the owner of the trust. Paragraph (5)(A) of section 674(b) is inapplicable because the power is not limited by a reasonably definite standard. Paragraph (5)(B) is inapplicable because the power to distribute corpus permits a distribution of corpus to persons other than current income beneficiaries.

Example (3). A trust instrument provides for payment of the income to the grantor's two adult sons in equal shares for 10 years, after which the corpus is to be distributed to his grandchildren in equal shares. The grantor reserves the power to pay over to each son up to one-half of the corpus during the 10-year period, but any such payment shall proportionately reduce subsequent income and corpus payments made to the son receiving the corpus. Thus, if one-half of the corpus is paid to one son, all the income from the remaining half is thereafter payable to the other son. The grantor is not treated as an owner under section 674(a) by reason of this power because it qualifies under the exception of section 674(b)(5)(B).

The grantor being the trustee (or dominating the trustee)[6671] prevents one from looking to Code § 674(c) or (d) for relief and might risk estate inclusion. Using (and abiding by)[6672] ascertainable standards should avoid estate inclusion[6673] and would suffice for avoiding grantor trust status as to principal,[6674] but further steps would be required as to income.[6675]

Reg. § 1.674(d)-2(b) provides:

Power to add beneficiaries. The exceptions described in section 674(b)(5), (6), and (7), (c), and (d) are not applicable if any person has a power to add to the beneficiary or beneficiaries or to a class of beneficiaries designated to receive the income or corpus, except where the action is to provide for after-born or after-adopted children. This limitation does not apply to a power held by a beneficiary to substitute other beneficiaries to succeed to his interest in the trust (so that he would be an adverse party as to the exercise or nonexercise of that power). For example, the limitation does not apply to a power in a beneficiary of a nonspendthrift trust to assign his interest. Nor does the

[6671] See *Wyly*, described in fn 6713 in part III.B.2.i Code § 678 Beneficiary Deemed-Owned Trusts. For additional precedent in the Code § 678 area, see fn. 6672.

[6672] For Code § 678 income tax cases where an ascertainable standard was ignored by the parties and therefore also ignored by the court, see fns 6746-6747 and the accompanying text in part III.B.2.i.iii Can a Trust Without a Withdrawal Right Be a Code § 678 Trust?.

[6673] See Rev. Rul. 73-143 re Code § 2038 and Reg. § 20.2036-1(b)(3) re: looking to Code § 2038 when applying Code § 2036.

[6674] See fn. 6667.

[6675] See text accompanying fn. 6668.

> limitation apply to a power held by any person which would qualify as an exception under section 674(b)(3) (relating to testamentary powers).

Neither the regulation nor the relevant statutes provide whether "after-born or after-adopted children" refer to children of the grantor or of anyone. For some context, see fn. 6459 in part III.B.1.i Transfers with Contingencies Based on Acts of Independent Significance.

Letter Ruling 9710006 held that the following power to add charities prevented an exception to Code § 674 from applying:[6676]

> Under the terms of TR, during A's lifetime, TT may pay to and among A's descendants and their spouses, A's father, and 4, a charitable organization, such amounts of the income and principal as the TT, in its sole discretion, determines from time to time. In addition, TT may add additional charitable or educational organizations to the class of named beneficiaries to which TR may currently make distributions of income and principal.

Letter Ruling 9304017 held that the following trustee's power to add descendants prevented an exception to Code § 674 from applying:[6677]

> X is a corporation that has elected to be treated as a small business corporation under subchapter S of the Code. A is the beneficiary of Trust A and B is the beneficiary of Trust B. C and D are the parents of A and B. A, B, C, and D are all citizens of the United States. C owns a majority interest in X. C and D are the Grantors of Trust A and Trust B (the Trusts). E is the Trustee of the Trusts. It is represented that E has no direct or indirect interest in the Trusts. It is further represented that the Trusts' principal will consist mainly of X stock.
>
> Section 3.1 of the Trusts' trust agreements (the "Trust Agreements") provides that at any time prior to the death of the last surviving Grantor, the Trustee in his sole discretion may add as a beneficiary any one or more of the Grantors' living descendants. At any time prior to the death of the last surviving Grantor, the Trustee in his sole discretion may remove any beneficiary previously added. Any beneficiary so removed shall have no further interest in the trust estate unless subsequently added as a beneficiary as provided above. The Trustee may at any time irrevocably renounce in writing the power to add or remove beneficiaries, which renunciation will be binding on all successor Trustees.

Suppose the grantor is not a beneficiary of a trust, but someone holding a testamentary power of appointment can make the grantor a beneficiary. Does that trigger Code § 677, if the power holder does not have a beneficial interest adverse to its exercise? Yes, if the power may be exercised only to benefit the grantor.[6678] No, for the broadest possible nongeneral power of

---

[6676] Letter Ruling 9709001 appears to be a companion ruling.

[6677] For more analysis of Letter Ruling 9304017, see fn 6618 in part III.B.2.h.i Who Is the Grantor.

[6678] Reg. § 1.672(a)-1(c) provides:

> The interest of an ordinary income beneficiary of a trust may or may not be adverse with respect to the exercise of a power over corpus. Thus, if the income of a trust is payable to A for life, with a power (which is not a general power of appointment) in A to appoint the corpus to the grantor either during his life or by will, A's interest is adverse to the return of the corpus to the grantor during A's life, but is not adverse to a return of the corpus after A's death. In other words, A's

appointment where the power holder is the sole beneficiary to whom distributions may be made currently.[6679] Consider whether the latter should be narrowly construed, in light of Code § 676[6680] or one case decided before the regulations cited in fn. 6679 were promulgated.[6681] In any event, consider whether allowing a power of appointment to be

---

> interest is adverse as to ordinary income but is not adverse as to income allocable to corpus. Therefore, assuming no other relevant facts exist, the grantor would not be taxable on the ordinary income of the trust under section 674, 676, or 677, but would be taxable under section 677 on income allocable to corpus (such as capital gains), since it may in the discretion of a nonadverse party be accumulated for future distribution to the grantor. Similarly, the interest of a contingent income beneficiary is adverse to a return of corpus to the grantor before the termination of his interest but not to a return of corpus after the termination of his interest.

[6679] Reg. § 1.674(b)-1(b)(6)(i). First, some context, elaborating on fn. 6668: Reg. § 1.674(b)-1(b)(6)(i) provides:

> Section 674(b)(6) excepts a power which, in general, enables the holder merely to effect a postponement in the time when the ordinary income is enjoyed by a current income beneficiary. Specifically, there is excepted a power to distribute or apply ordinary income to or for a current income beneficiary or to accumulate the income, if the accumulated income must ultimately be payable either:
>
> (a) To the beneficiary from whom it was withheld, his estate, or his appointees (or persons designated by name, as a class, or otherwise as alternate takers in default of appointment) under a power of appointment held by the beneficiary which does not exclude from the class of possible appointees any person other than the beneficiary, his estate, his creditors, or the creditors of his estate (section 674(b)(6)(A))…

Reg. § 1.674(b)-1(b)(6)(i)(c) includes the following in parentheses:

> [I]f a trust otherwise qualifies for the exception in (a) of this subdivision the trust income will not be considered to be taxable to the grantor under section 677 by reason of the existence of the power of appointment referred to in (a) of this subdivision.

Thus, even though the beneficiary might appoint to the grantor under Reg. § 1.674(b)-1(b)(6)(i)(a), Code § 677(a) does not apply. Note that the parenthetical applies to when the trust has only one income beneficiary. Was the parenthetical merely an aside, or did it intend to create an exception to applying Code § 677? I view it as the former but leave it up to the reader to decide for himself or herself.

[6680] Code § 676(a) treats the grantor as the owner of any portion of a trust, whether or not he is treated as such owner under any other provision of this part, where at any time the power to revest in the grantor title to such portion is exercisable by the grantor or a nonadverse party, or both. However, Code § 676(b) provides:

> Subsection (a) shall not apply to a power the exercise of which can only affect the beneficial enjoyment of the income for a period commencing after the occurrence of an event such that a grantor would not be treated as the owner under section 673 if the power were a reversionary interest. But the grantor may be treated as the owner after the occurrence of such event unless the power is relinquished.

Generally, I do not believe that Code § 676 is intended to apply to the broadest possible testamentary power of appointment that might be exercised in favor of the grantor, given that the Code § 674(b)(6)(A) safe harbor for grantor trust treatment, which is described more fully in fns. 6668 and 6679 and was enacted at the same time as Code §676, would be rendered meaningless by that reading.

Note also that Code § 676 was not listed among the grounds for treating the grantor as owner of corpus under Reg. § 1.672(a)-1(c) – see fn. 6678. However, it was among the provisions listed as not causing grantor trust treatment regarding income in that regulation.

[6681] A very prolific and knowledgeable lawyer said that, when grantor trust status is being prevented, he has always prohibited any power of appointment from being exercised in favor of the grantor, the grantor's spouse, any creditor of either, or the estate or the creditor of the estate of either. That lawyer cited broad language *Kaplan v. Commissioner*, 66 F.2d 401 (1st Cir. 1933):

exercised in a way that might benefit the grantor is important enough to risk not being able to turn off grantor trust status. For some trusts, the point might be moot; for example, a trust for the benefit of the grantor's spouse might always be a grantor trust so long as they are married, although one would then need to consider what if they are no longer married.

Relying on a beneficiary being adverse is not as easy as it might appear:

- A beneficiary is adverse to the extent that the beneficiary has "a substantial beneficial interest in a trust which would be adversely affected by the exercise or nonexercise of a power which he possesses respecting the trust."[6682] Merely being a trustee does not constitute a beneficial interest, but holding a general power of appointment does.[6683] A beneficial interest is substantial "if its value in relation to the total value of the property subject to the power is not insignificant."[6684]

- Even if a beneficiary is an adverse party, the beneficiary may be an adverse party only as to part of the income or principal, depending on the beneficial interest.[6685] Thus, if A, B, C, and

---

> We think the statute means that if under any circumstances or contingencies any part of the accumulated income might inure to the benefit of the grantor such portion of the income is taxable to him.

However, *Kaplan* involved a reversion, not merely a possibility that a beneficiary might exercise a power of appointment to the grantor:

> Kaplan made a written declaration of trust and transferred to himself as trustee under it certain personal property. By the terms of the instrument, the income of the trust property was to be paid to Kaplan's wife for her life, with a reversion of the beneficial interest to him if he outlived her, and if he did not, then on her death to his children. The declaration also permitted the trustee to accumulate a reasonable portion of the income, the accumulation to be payable at the discretion of the trustee to the person or persons who at the time of payment were entitled to the income of the trust.

The broad language should be read in context of the whole paragraph, under which he served as trustee in this pre-1954 Code case:

> The first point made for the petitioner is that the Kaplan trust is not within the terms of the statute. This depends on whether the expression in the statute may, in the discretion of the grantor of the trust *** be held or accumulated for future distribution to him refers to the accumulation of income which, under certain contingencies, may in the future be paid to the grantor, or to the accumulation of income which must in the future come to the grantor. This provision was intended, as its legislative history clearly shows, as a protection to the government against evasion of income taxes, especially surtaxes, by means of trusts whereby the grantor, although parting with the legal control of the trust property, reserved a practical control over the income of it which could, in point of fact, be exercised for his own benefit. As Kaplan named himself trustee, the large discretion given in the trust instrument to the trustee as to the accumulation and payment of income is attributable to him personally. By the terms of the trust that discretion can be exercised for his own possible benefit, within wide limits. We see no occasion for refinement of construction against the government. We think the statute means that if under any circumstances or contingencies any part of the accumulated income might inure to the benefit of the grantor such portion of the income is taxable to him.

When reading the broad language in the context of the whole paragraph, I do not see that holding as extending to the possibility that a beneficiary might one day make the grantor a beneficiary. Rather, that case involved a grantor who was a remainderman. Ultimately, however, you the reader need to decide yourself whether the broad language troubles you.

[6682] Reg. § 1.672(a)-1(a).
[6683] Reg. § 1.672(a)-1(a).
[6684] Reg. § 1.672(a)-1(a).
[6685] Reg. § 1.672(a)-1(b).

D are equal income beneficiaries of a trust and the grantor can revoke with A's consent, the grantor is treated as the owner of three-fourths of the trust.[6686] Similarly, a beneficiary with only a mandatory income interest is not adverse as to principal passing at his or her death.[6687] Furthermore, a remainderman's interest is adverse to the exercise of any power over the trust's corpus, but not to the exercise of a power over any income interest preceding the remainder.[6688]

- A remote contingent remainder interest is not a substantial adverse interest.[6689]

[6686] Reg. § 1.672(a)-1(b).

[6687] See fn. 6678.

[6688] Reg. § 1.672(a)-1(d). The last sentence of the regulation should be read in light of a 5% interest in Code § 673 replacing the 10-year period referenced in that sentence.

[6689] In *Barker v. Commissioner*, 25 T.C. 1230, 1234 (1956), the taxpayer's parents took only if he died before age 35 leaving no wife or descendants:

> The facts show that the actuarial probability that the trust would be terminated by death of petitioner is negligible - the probability of a male aged 21 attaining the age of 35 being a minimum of 96.85 per cent and a maximum of 97.3968 per cent. Further, petitioner's parents could take down no accumulated income unless petitioner died before reaching the age of 35 and left neither wife nor issue to survive him. He has both a wife and a child. On the facts we hold that petitioner's father and mother had no substantial adverse interest in the trust income.

Similarly, *Chase National Bank v. Commissioner*, 225 F.2d 621 (8th Cir. 1955) said:

> Concerning the contingent interest, it must be borne in mind that during the first taxable year Lenore was over 54 years old, Delos was 29 and Nedra 18. Both children were married. Delos had a child and Nedra had a child the following year. Thus the possibility of either of the beneficiaries and his issue dying before reaching age 35, when the corpus was to be distributed, was somewhat remote. Where the possibility that contingent remaindermen will ever get anything is as remote as it is here, it cannot be considered a benefit amounting to a substantial adverse interest. See *Cushman v. Commissioner*, 2 Cir., 1946, 153 F.2d 510, 513-514; *Joseloff v. Commissioner*, 1947, 8 T.C. 213.

The court continued further below:

> The estate contends that the ruling in the case of *Commissioner of Internal Revenue v. Katz*, 7 Cir., 1943, 139 F.2d 107 necessitates a holding adverse to the respondent. In that case, Meyer Katz created three trusts to provide independent wealth for his children. The trusts could be terminated only by writing of the grantor and his wife, or the child beneficiary after he reached 21 years of age. In the event of the death of a child prior to the termination of the trust, the income was to be distributed to the issue of such child; but in case such child died without issue, the income was to be distributed in equal shares to the grantor's wife and children surviving. Under these facts, it was determined that Mrs. Katz had a substantial adverse interest. In our opinion, the *Katz* case is as close to the nebulous line of demarcation between adverse interests which are substantial and those which are insubstantial as is the case at bar; but on the opposite side of the line. For Lenore to recover a portion of the trust res, either Delos or Nedra, plus his or her child, must have predeceased her; and do it within 6 years or 17 years respectively. Mrs. Katz needed only to survive any one of her children, none of them having issue during the taxable year. Lenore's possibility of benefitting from the trust was far more remote than that of Mrs. Katz. See also *Joseloff v. Commissioner*, *supra*. The *Katz* case is distinguished on the facts.

Of course, all of the above were under the Internal Revenue of 1939. *Holt v. U.S.*, 669 F.Supp. 751 (D. Va. 1987), the grantor of a trust, who had four children, argued that her parents were:

> "adverse parties" within the meaning of the Code because of the provision in Article IX of the trust agreement that the corpus be distributed to them should none of her grandchildren or great-grandchildren survive the termination of the trust at the death of her last child. The question in this case, though, is only whether the income from the trust is taxable to Plaintiffs. The only possible incentive of the Trustees to withhold disbursements of income would be to enhance the

- Does all of this mean that one must measure the likelihood of a person receiving a distribution from the trust (even if eligible), or just the likelihood that a person will become eligible for current distributions (whether or not that eligibility will ever result in a distribution)? If the former, consider that beneficiaries who exercise inter vivos powers of appointment or fail to contest actions changing beneficial interests or diverting trust assets (certain decantings)[6690] often take the position that they never received distributions and that the value of their beneficial interests was zero or approached zero.[6691] The latter might very well be the case, based on fns 2514-2516 in part II.J.3.e.i Strategic State & Local Tax Issues re: Residence, briefly mentioning the idea of an incomplete gift nongrantor (ING) trust; however, I remain uncomfortable relying on that approach absent a private letter ruling issued to the taxpayer taking that position.

Thus, generally one is adverse only if and to the extent that a distribution to another beneficiary would reduce future distributions to that adverse party. The IRS would assert that an adverse party would be making a gift if and to the extent of the present value of those forgone distributions, except to the extent that the distributions to the spouse are pursuant to an ascertainable standard.[6692]

III.B.2.h.vii.(b). Distribution Provisions Benefitting Grantor Causing Grantor Trust Treatment

Generally, the grantor is treated as the owner of any portion of a trust, whose income without the approval or consent of any adverse party is, or, in the discretion of the grantor or a nonadverse party, or both, may be distributed to the grantor or the grantor's spouse, held or accumulated for future distribution to the grantor or the grantor's spouse, or applied to the payment of premiums on policies of insurance on the life of the grantor or the grantor's spouse (with certain exceptions regarding charitable life insurance).[6693]

Income is not be considered taxable to the grantor merely because such income in the discretion of another person, the trustee, or the grantor acting as trustee or co-trustee, may be applied or distributed for the support or maintenance of a beneficiary (other than the grantor's spouse) whom the grantor is legally obligated to support or maintain, except to the extent that such income is so applied or distributed.[6694] That rule applies even though it might have been applied or distributed for other purposes.[6695]

If amounts so applied or distributed toward support obligations are paid out of corpus or out of other than income for the taxable year, such amounts are considered to be distributions to the grantor in the same way as distributions to any other beneficiary.[6696]

---

size of the corpus in which they have an extremely remote contingent interest. This purported interest in the trust income is, in my view, highly questionable and certainly does not constitute a "substantial interest" that would be adversely affected by exercise of the Trustees' power to distribute the income to the beneficiaries, particularly where family members are involved.

[6690] See part II.J.18 Trust Divisions, Mergers, and Commutations; Decanting.

[6692] See Reg. § 25.2511-1(g) in the text accompanying fn 2485 in part II.J.2.b **Trust** Provisions Authorizing Distributions.

[6693] Code § 677(a). See part III.B.2.h.viii.(a) Code § 677(a) Generally.

[6694] Code § 677(b).

[6695] Reg. § 1.677(b)-1(a).

[6696] Code § 677(b).

For a custodial account that may be used to discharge the grantor's legal obligation of support, the amount of such income includible in the gross income of a person obligated to support or maintain a minor is limited by the extent of his legal obligations under local law.[6697] To the extent that the account's income is not so includible in the gross income of the person obligated to support or maintain the minor (donee), that income is taxable to the minor.[6698]

III.B.2.h.viii. Code § 677(a) and GRATs

III.B.2.h.viii.(a). Code § 677(a) Generally

Code § 677(a) provides:

> The grantor shall be treated as the owner of any portion of a trust, whether or not he is treated as such owner under section 674, whose income without the approval or consent of any adverse party is, or, in the discretion of the grantor or a nonadverse party, or both, may be -
>
> (1) distributed to the grantor or the grantor's spouse;
>
> (2) held or accumulated for future distribution to the grantor or the grantor's spouse; or
>
> (3) applied to the payment of premiums on policies of insurance on the life of the grantor or the grantor's spouse (except policies of insurance irrevocably payable for a purpose specified in section 170(c) (relating to definition of charitable contributions)).
>
> This subsection shall not apply to a power the exercise of which can only affect the beneficial enjoyment of the income for a period commencing after the occurrence of an event such that the grantor would not be treated as the owner under section 673 if the power were a reversionary interest; but the grantor may be treated as the owner after the occurrence of the event unless the power is relinquished.

Reg. § 1.677(a)-1(b)(2) modifies "without the approval or consent of any adverse party" by instead saying "without the approval or consent of any adverse party other than the grantor's spouse." Therefore, a spouse is not an "adverse party."[6699]

[6697] Rev. Rul. 56-484. For possible estate tax issues, see *Exchange Bank & Trust Co. of Fla. v. United States*, 694 F2d 1261 (Fed. Cir. 1982) (which I've been told applied the reciprocal trust doctrine).

[6698] Rev. Rul. 56-484.

[6699] Referring to the 1969 addition of the spouse to Code § 677, *Amabile v. Commissioner*, T.C. Memo. 1986-180 held:

> By that amendment, Congress effectively ruled out the possibility of a spouse being treated as an adverse party when a provision in the trust allows for the income to be used for that spouse's benefit. *Vercio v. Commissioner*, 73 T.C. 1246, 1258 (1980). Section 1.677(a)-1(b)(2), Income Tax Regs., supports this conclusion.

Other than a special rule related to child support,[6700] Code § 677(a) applies if and to the extent that the trust may discharge the grantor's legal obligation.[6701]

For more on Code § 677(a)(3), see part III.B.2.h.v Life Insurance.

The interaction of former Code § 682 (when a spouse becomes separated or divorced), with Code § 677 was somewhat complex.[6702] Reg. § 1.677(a)-1(b)(2) concludes with:

> With respect to the treatment of a grantor as the owner of a portion of a trust solely because its income is, or may be, distributed or held or accumulated for future distributions to a beneficiary who is his spouse or applied to the payment of premiums for insurance on the spouse's life, section 677(a) applies to the income of a trust solely during the period of the marriage of the grantor to a beneficiary. In the case of divorce or separation, see sections 71 and 682 and the regulations thereunder.

Reg. § 1.682(a)-1(a)(1)(i) is quite clear that Code § 682 shifted only so much of the income as is paid, credited, or required to be distributed to the ex-spouse beneficiary. Therefore, the cross-reference to Code § 682 might lead one to believe that Code § 677(a) would apply to the extent that distributions are not made to the ex-spouse, consistent with certain legislation history to the Tax Reform Act of 1969:

> Both versions of the bill provide that in the case of a trust created by a taxpayer for the benefit of his spouse, the trust income which may be used for the benefit of the spouse is to be taxed to the creator of the trust as it is earned. However, this provision is not to apply where another provision of the Code requires the wife to include in her gross income the income from a trust.

However, Reg. § 1.1361-1(k)(1), Example (10), paragraph (ii),[6703] indicates that the more expansive reading of the next-to-the last-sentence of Reg. § 1.677(a)-1(b)(2) applies, so that Code § 677(a) will never tax the grantor on distributions that are accumulated for possible future distribution to the ex-spouse. Note, however, that the next-to-the last-sentence of Reg. § 1.677(a)-1(b)(2) does not apply to a spouse who is separated, so the more limited rules of Reg. § 1.682(a)-1(a)(1)(i) would have applied.

[6700] Code § 677(b), "Obligations of support," provides:

> Income of a trust shall not be considered taxable to the grantor under subsection (a) or any other provision of this chapter merely because such income in the discretion of another person, the trustee, or the grantor acting as trustee or co-trustee, may be applied or distributed for the support or maintenance of a beneficiary (other than the grantor's spouse) whom the grantor is legally obligated to support or maintain, except to the extent that such income is so applied or distributed. In cases where the amounts so applied or distributed are paid out of corpus or out of other than income for the taxable year, such amounts shall be considered to be an amount paid or credited within the meaning of paragraph (2) of section 661(a) and shall be taxed to the grantor under section 662.

III.B.2.h.viii.(b). GRATs as Grantor Trusts

GRATs are described in parts III.B.2.b General Description of GRAT vs. Sale to Irrevocable Grantor Trust and III.B.7.d Code § 2702 Overview.

The very significant annuity payments the grantor receives makes a GRAT a grantor trust under Code § 677(a)(1) in whole or in part, depending on how the payments relate to the GRAT's taxable income. To try to nail down grantor trust treatment, I tend to use the powers described in one or both of parts III.B.2.h.iii Swap Power or III.B.2.h.iv Borrow Power. Nailing down grantor trust treatment also eliminates any uncertainty as to whether satisfying the annuity in kind, during the grace period after the date for final payment, is a taxable event. It also helps protect the GRAT's eligibility to hold stock in an S corporation, although I prefer also making an ESBT election, all as described in part III.A.3.a Wholly Owned Grantor Trusts – How to Qualify, Risks, and Protective Measures.

Because the grantor cannot turn off grantor trust treatment during the annuity term, consider whether the grantor should be a mandatory or discretionary distributee of income in excess of the annuity amount.[6704]

Letter Ruling 9449013[6705] recognized as a grantor trust seven GRATs without any back-up grantor trust clauses. The only clause upon which it relied provided that "the payment of the annuity installment shall be made from the income and, to the extent that income is not sufficient, the principal of the trust" and directed the trustee to "accumulate any net income not so paid and add it to the principal of the trust." (Contrary to the latter, I prefer to direct the trustee not to accumulated any unpaid income and not to add it to principal until after the final annuity payment has been satisfied.) It concluded:

> The grantor is the owner of the trust under section 677(a) because article I(B) provides that the annuity installment is to be paid from income and, to the extent income is not sufficient, from principal. Therefore, the grantor will be considered the owner of the entire trust for purposes of section 671 until the earlier of the grantor's death or the termination of the trust….
>
> In accordance with the principle set forth in Rev. Rul. 85-13, we conclude that neither the grantors nor the trusts will recognize any gain or loss as a result of the grantor's transfer of shares of Company stock to fund the trusts, or as the result of the transfer from a trust to a grantor in payment of an annuity, or as the result of the substitution by the grantor of cash or other property for shares of stock.

Letter Ruling 9504021 also recognized as a grantor trust a GRAT without any back-up grantor trust clauses.

Letter Ruling 9451056 treated a GRAT as a grantor trust under Code § 677 "because the income of each trust may be distributed to the respective trust grantor during the annuity period." However, in addition to annuity payments:[6706]

[6704] See part III.B.2.h.vi Protecting the Grantor, especially fn. 6655.

[6705] Letter Rulings 9449012 and 9448018 contained similar terms, the latter also ruling that the trust qualified as an S corporation shareholder as a wholly-owned grantor trust.

[6706] The trust also included a swap power, but the ruling did not mention that when concluding that the trust was a grantor trust.

> For any year in which the grantor is considered the owner of the trust for federal income tax purposes, the trustees shall distribute to the grantor, in addition to the annuity amount, an amount equal to the excess of the grantor's personal income tax liability (as owner of the trust) over the grantor's personal income tax liability computed as if the grantor were not treated as the owner of the trust.

Letter Rulings 200001013 and 200001015 treated the following GRAT as grantor trusts:

> Under the terms of the Trust, Taxpayer will receive an annuity payable first from income, and to the extent accumulated income is insufficient, from principal. In addition, during the Trust term, the trustee (a nonadverse party) will have the sole discretion to pay the Taxpayer all of the Trust's net income (if there is any remaining after payment of the annuity). Therefore, under section 677, Taxpayer will be treated as the owner of the income portion of the Trust during the Trust term. Additionally, capital gains are accumulated and added to corpus and Taxpayer has a general testamentary power exercisable only by will to appoint the accumulated amounts. Therefore, under section 674(a), Taxpayer will be treated as the owner of the corpus portion of the Trust during the Trust term. Accordingly, Taxpayer will be treated as the owner of the Trust for purposes of section 671 during the Trust term.

III.B.2.h.ix. Code § 682 Limitations on Grantor Trust Treatment (Repealed for Post-2018 Divorces)

Code § 682 overrides grantor trust treatment to the extent that distributions are made or are required to be made to a divorced or legally separated spouse and treats that recipient as a beneficiary. Except to the extent that distributions constitute Code § 71 alimony, distributions are taxed under the usual rules governing distributions to beneficiaries under part II.J.1 Trust's Income Less Deductions and Exemptions Is Split Between Trust and Beneficiaries.[6707]

Code § 682 has been repealed effective for divorces after December 31, 2018. See Notice 2018-37.

[6707] Reg. § 1.682(a)-1(a)(2) provides:

> If section 71 applies, it requires inclusion in the wife's income of the full amount of periodic payments received attributable to property in trust (whether or not out of trust income), while, if section 71 does not apply, section 682(a) requires amounts paid, credited, or required to be distributed to her to be included only to the extent they are includible in the taxable income of a trust beneficiary under subparts A through D (section 641 and following), part I, subchapter J, chapter 1 of the Code.

Letter Ruling 9235032 applies these rules to determining whether the recipient is taxed on capital gains, pointing to the rules described in part II.J.8 Allocating Capital Gain to Distributable Net Income (DNI):

> In this case, the trustee is required under the governing instrument to allocate net capital gains to income when paying the annual annuity amount to A. That allocation is permitted under local law….
>
> The taxable income of the trust and of A will be determined in accordance with subchapter J of the Code, including, in particular, sections 682 and 662 of the Code, relating to amounts includible in the gross income of A and of the trust, and section 661, relating to the trust's deduction of amounts distributed to A as an annuity interest, limited by the trust's distributable net income. For purposes of section 661, the trust's distributable net income, determined under section 643, will include net capital gains to the extent required to be distributed to satisfy the annuity amount.

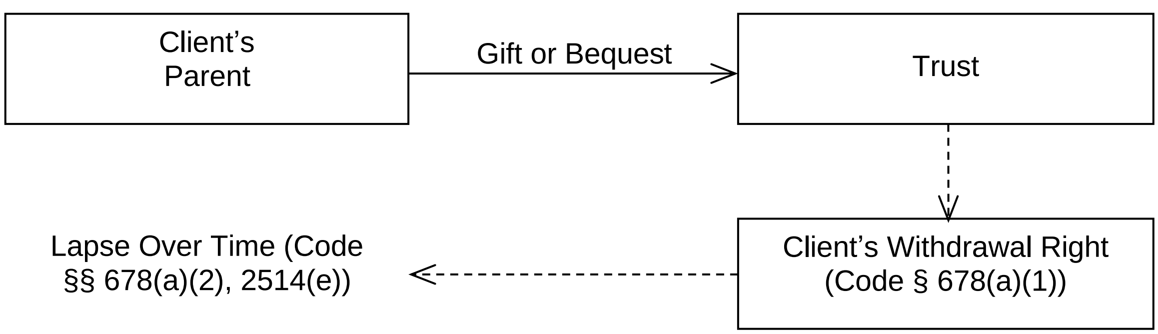
Note, however, that grantor trust provisions other than Code § 677 may trigger grantor trust treatment; see Letter Ruling 200408015 (swap power caused grantor trust treatment regarding capital gains that were not distributed to the ex-spouse).[6708]

III.B.2.i. Code § 678 Beneficiary Deemed-Owned Trusts

For a one-hour oral presentation of various issues in this part III.B.2.i, go to my CPA Academy instructor page and find the most recent version of "Beneficiary Deemed-Owned Trusts." For related applications of the planning described in this part III.B.2.i, see Morrow, "IRC Section 678 and the Beneficiary Deemed Owner Trust (BDOT)" (5/6/2018, last revised 4/22/2021), available at https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3165592.

Under certain circumstances, Code § 678 treats a beneficiary as the owner of part or all of a trust for income tax purposes to the extent that the grantor is not treated as the deemed owner. As to the latter, see part III.B.2.h.i Who Is the Grantor. Treating the beneficiary as the owner of all of a trust for income tax purposes not only allows the beneficiary to bypass high fiduciary income tax rates but also to sell assets to the trust. For more details about fiduciary income tax rates and the effect of the trust being deemed owned by a beneficiary, see parts II.J.3 Strategic Fiduciary Income Tax Planning and III.B.2.d Income Tax Effect of Irrevocable Grantor Trust Treatment, the latter which includes the fact that not all states recognize federal grantor trust rules.

In most cases, the beneficiary needs to have a withdrawal right. See part III.B.2.i.iii Can a Trust Without a Withdrawal Right Be a Code § 678 Trust? If the goal is to have part or all of the trust excluded from the beneficiary's estate for estate tax purposes, the trust is often structured as set forth below:



While the beneficiary holds a withdrawal right, Code § 678(a)(1) treats the beneficiary as the owner of whatever the beneficiary can withdraw.

Code § 678(a)(2) is somewhat more challenging. It treats the beneficiary as the owner if "such person has previously partially released or otherwise modified such a power and after the release or modification retains such control as would, within the principles of sections 671 to 677, inclusive, subject a grantor of a trust to treatment as the owner thereof." Whether the lapse of a withdrawal right constitutes a partial release or other modification is unclear; however, numerous private letter rulings have said it does. One way to fit within its literal language is in part III.B.2.i.x Letter Ruling 200949012. Because the IRS generally has stopped issuing private

[6708] Letter Ruling 200408015 is discussed further in fn. 7398, found in part III.B.7.d Code § 2702 Overview.

letter rulings on Code § 678(a)(2), I recommend that the trust obtain its own taxpayer ID and file annual fiduciary income tax returns with grantor information statements. See part III.B.2.i.xii Dealing with Code § 678(a)(2) Uncertainty.

If the beneficiary allows a withdrawal right to lapse, the beneficiary has made a gift to the extent of the greater of $5,000 or 5% of the value of the assets out of which the withdrawal right could have been satisfied; see part II.J.4.f Making Trust a Partial Grantor Trust as to a Beneficiary. The most straightforward way to create a trust deemed 100% owned by a beneficiary where the withdrawal right's lapse keeps the whole trust out of the beneficiary's estate is for the grantor give up to $5,000, which the trusts places in a non-interest-bearing account for perhaps 30 days, then the withdrawal right lapses in full; see part III.B.2.i.i Designing Trust Wholly Owned by Beneficiary from Inception. As described in part III.B.2.i.vi Funding the Trust with Small Gifts: Ideally, the trust would invest in a business that does not require much capital or borrow at the AFR (most likely from a related party) to invest in that business. If the grantor is the beneficiary's parent, that parent might bequeath to an identical larger (even if not huge) trust for the beneficiary that could then guarantee loans made to the small trust, because the trustee has a fiduciary duty to promote transactions that build assets in an identical fiduciary arrangement.

Once the original trust grows or has a companion trust guarantor, the beneficiary might sell the beneficiary's S corporation or partnership (LLC) to the original trust in exchange for a note. See parts III.B.2.b General Description of GRAT vs. Sale to Irrevocable Grantor Trust and III.B.2.i.v Sale to a Beneficiary Deemed-Owned Trust – When a Traditional Sale to an Irrevocable Grantor Trust Does Not Meet the Client's Objectives. The most vocal proponent of a sale calls it a Beneficiary Defective Inheritor's Trust (BDIT), but he tends to use thinly-funded trusts and relies on guarantees motivated by guarantee fees, which I sometimes do, but only when I am not given enough time to plan it the way described above. Nevertheless, our trust designs are very similar, and here is mine: the beneficiary is the trustee, can distribute to himself using ascertainable standards, and has the broadest possible nongeneral inter vivos and testamentary powers of appointment; and an independent person may make distributions for the beneficiary's welfare. The latter is important not only for flexibility but also to pay the beneficiary's income tax because, after the grantor dies, the beneficiary cannot turn off the beneficiary's deemed ownership of the trust for income tax purposes. See part III.B.2.i.i Designing Trust Wholly Owned by Beneficiary from Inception.

Although BDOT would be the most logical name for a beneficiary deemed-owned trust, most people use BDOT to describe when the beneficiary has the right to withdraw the taxable income. Part II.J.4.f Making Trust a Partial Grantor Trust as to a Beneficiary:

- Describes how a trustee can use distribution authority to "credit" a distribution to a beneficiary, which is treated as making a distribution for that year and setting up BDOT status for future years to the extent that the beneficiary does not withdraw the credited amount.

- Includes language creating a BDOT, which may either be included when drafting the trust or integrated through a trustee's distribution authority or by a trust modification.

If a trust can withdraw from another trust, see part II.D.3 Trust as Grantor or Deemed Owner of Another Trust.

When the beneficiary has the right to withdraw the entire trust funding, which is no more than $5,000, and that withdrawal right lapses before the trust funding is able to grow (generally around 30 days, plus or minus), the trust is often referred to as a BDIT, a term coined by its most ardent proponent[6709] (although not one I would have chosen personally).[6710]

If the beneficiary has the right to withdraw all of a significantly larger initial gift, consider part III.B.2.i.viii Funding the Trust with a Large Initial Gift or Bequest.

If one wants to make the beneficiary the deemed owner of the entire trust at all times and the trust is not a BDIT, please study part III.B.2.i.vii Portion Owned When a Gift Over $5,000 is Made, especially part III.B.2.i.vii.(a) Determining Portion Owned When a Withdrawal Right Does Not Lapse in Full Before Any Income Is Earned.

One may easily make a trust be entirely owned by a beneficiary without using withdrawal rights, but planning up front for distribution to more than one remainderman upon termination may require more complexity than at first imagined; see part III.B.2.i.xiv QSST as an Alternative Form of Beneficiary Deemed-Owned trust.

III.B.2.i.i. Designing Trust Wholly Owned by Beneficiary from Inception

Structure described in this part:

Beneficiary's powers:

- Trustee – may distribute for own support and support of descendants; may invest in any manner that does not trigger estate tax issues (insurance on the trustee's life being an example); may totally re-write who serves as trustee. However, if the beneficiary lives in (or might move to) a creditor-friendly state, then the beneficiary should not serve as trustee or have the right to remove and replace the trustee.[6711]

[6709] "The Beneficiary Defective Inheritor's Trust (BDIT): Finessing the Pipe Dream," www.oshins.com/images/BDIT_article.pdf. See Blattmachr and Zaritsky, "Is the BDIT Ready for Primetime?" *Probate Practice Reporter* (University of South Carolina School of Law, ISBN 1044-7423), Sept. 2012.

[6710] In using this term, I am acceding to popular use. Generally I would avoid naming an estate planning tool after a Michael Jackson song: https://www.youtube.com/watch?v=kOn-HdEg6AQ.

[6711] Part III.B.2.i.ix Creditor and Gift/Estate Tax Issues Regarding Withdrawal Rights, Whether Currently Exercisable or Lapsed, points out that not all states clearly protect from creditors a beneficiary who allowed a withdrawal right to lapse. Conflict of laws issues might arise if the trust is established in a state that provides such protection and the trustee or trust's assets are in a state that does not. If a court in a creditor-friendly state cannot obtain jurisdiction over the trustee or over the trust's assets, then the rules of the protective state would tend to prevail. *Hanson v. Denckla*, 357 U.S. 235 (1958); see part III.B.2.i.xLetter Ruling 200949012 in part III.B.2.i Code § 678 Beneficiary Deemed-Owned Trusts. Suppose, however, that a court in a creditor-friendly state obtains jurisdiction over the trustee or trust's assets and wants to apply that state's laws. New York has done so in a conflict-of-laws situation and allowed the creditor to reach the assets.

- Power to restructure who serves as independent trustee should a vacancy in that position occur;[6712] may not name a person who is a related or subordinate party with respect to the beneficiary.[6713]

[6712] Consider the possibility that a court might order a beneficiary to remove the independent trustee and replace it with one that would be likely to distribute assets or that is subject to the court's jurisdiction. The latter might threaten the trust's spendthrift status. See note 6711. Limiting the beneficiary's power to one of replacement rather than removal-and-replacement might avoid that problem. Another feature might be to grant the power to remove the independent trustee to a person who lives (and will always live) in a protective state who can remove the independent trustee, triggering the beneficiary's right to replace the independent trustee; if a court in a creditor-friendly state never obtains jurisdiction over this person, this power should not be problematic.

[6713] Reg. § 20.2041-1(b)(1) provides:

> A power in a donee to remove or discharge a trustee and appoint himself may be a power of appointment. For example, if under the terms of a trust instrument, the trustee or his successor has the power to appoint the principal of the trust for the benefit of individuals including himself, and the decedent has the unrestricted power to remove or discharge the trustee at any time and appoint any other person including himself, the decedent is considered as having a power of appointment. However, the decedent is not considered to have a power of appointment if he only had the power to appoint a successor, including himself, under limited conditions which did not exist at the time of his death, without an accompanying unrestricted power of removal.

Do the restrictions of Rev. Rul. 95-58 suffice to prevent the power to appoint a trustee from being a general power of appointment under the above regulation? The following Letter Rulings applied Rev. Rul. 95-58 and held that certain rights did not cause inclusion as a general power of appointment under Code § 2041: 9607008 (right to remove a corporate trustee and replace it with a corporate trustee that was not a related or subordinate party), 200229013 (beneficiaries were not imputed powers of family trust company where beneficiaries renounced their right, directly or indirectly, to participate as a trustee, or in any other capacity, in any decisions regarding discretionary distribution and members of distributions committee could not include any related or subordinate party), 200533008 (right to remove a corporate trustee and replace it with a corporate trustee that was not a related or subordinate party), 200734010 (right to replace a resigned corporate trustee with a corporate trustee that was not a related or subordinate party), 201207001 (power to remove distribution trustee and replace with a party that is not a related or subordinate party), 201209003 (power to fill vacancy with beneficiary's spouse's business partners who were not related or subordinate to beneficiary), 201345004 (power to remove distribution trustee and replace with a person that is not a related or subordinate party did not implicate Code § 2041 or 2514), the apparently related 201345026, 201345027, 201345028, 201432005, and 201433006 (same), 201434004 (same), 201434005, 201436003 (same), 201634016, 201634017, 201641020 (power to fill vacancy with a person that is not a related or subordinate party is not the equivalent of the power referred to in the examples in Reg. §§ 20.2041-1(b)(1) and 25.2514-1(b)(1) where an individual may remove a trustee and appoint himself), 201647001 (power to remove and replace the trustee with person that is not a related or subordinate party did not implicate Code § 2036, 2038, 2041 or 2514), 201702016, 201702017 and 201702018 (power to remove and replace the trustee with person that is not a related or subordinate party did not implicate Code § 2041 or 2514 or have any GST implications), and 202152006 (inserting protective language to avoid a general power of appointment and make a reverse QTIP election; see fn 2007 in part II.H.2.a Free Basis Step-Up When First Spouse Dies). I have been told (but have not verified) that Letter Rulings 9735023, 9746007, 200031008, and 200533010 had a similar result. However, an asset protection case, *SEC v. Wyly*, 2014 WL 4792229 (S.D.N.Y. 9/25/2014), held that the grantors' control over the independent trustees was so powerful that they essentially held the distribution powers themselves, undermining Code § 674(c) (and perhaps the estate tax premise of these Letter Rulings). Also, for Code § 678 income tax cases where an ascertainable standard was ignored by the parties and therefore also ignored by the court, see fns 6746-6747 and the accompanying text in part III.B.2.i.iii Can a Trust Without a Withdrawal Right Be a Code § 678 Trust?.

- Broad inter vivos limited power of appointment.
- Broad testamentary limited power of appointment.
- However, generally I do not grant the beneficiary a power of appointment over 10%-100% to avoid a sale being an incomplete gift, and one might consider a gift to that nonappointive portion that applies regardless of audit. See part III.B.4 Adequate Disclosure on Gift Tax Returns, especially text accompanying fns 7061-7061.

Independent Trustee:

- May distribute for welfare.[6714]
- Holds any other tax-sensitive powers.

If and to the extent anyone other the primary beneficiary may receive distributions during the grantor's life, be careful to avoid inadvertently making the grantor the deemed owner under Code § 674,[6715] because the grantor as deemed owner supersedes the beneficiary as the deemed owner.[6716]

The independent trustee holds any insurance on the beneficiary's life if life insurance is purchased and has sole authority over any tax-sensitive powers. Furthermore, the beneficiary has the power to remove the independent trustee and appoint an individual or corporate successor trustee that is not related or subordinate to the beneficiary (within the meaning of section Code § 672(c)). I do not necessarily grant the power to remove the independent trustee, because the authority upon which this is based does not expressly extend to general powers of appointment and holding life insurance; however, one might very well be able to obtain a private letter ruling that extends to general powers of appointment and holding life insurance or decide that one is sufficiently comfortable with prior letter rulings as nonprecedential technical authority.[6717]

In *First National Bank of Denver v. United States*, 648 F.2d 1286 (10th Cir. 1981), the parties assumed that the beneficiary's right to remove and replace a corporate trustee, that could make distributions beyond an ascertainable standard, with another corporate trustee did not constitute a general power of appointment. The only argument was whether the beneficiary was required to appoint another corporate trustee, which the taxpayer proved to be the case. *Estate of Wilson v. Commissioner*, T.C. Memo. 1992-479, citing the above case favorably, found that a surviving spouse had a general power of appointment when she was authorized to appoint herself as sole trustee and terminate the trust, thereby qualifying the trust as a general power of appointment marital deduction trust.

[6714] Because the beneficiary will always be the deemed owner with no possibility of turning off that deemed ownership, authorizing distributions to reimburse taxes (or using a broader standard) is quite important. See Rev. Rul. 2004-64, which is discussed further in fns. 6961-6980, found in part III.B.2.j.iv.(a) Grantor Trust Reimbursing for Tax Paid by the Deemed Owner. The first sentence in this footnote exaggerates a little – if the grantor is living, the trust could be turned into being deemed owned by the grantor, terminating beneficiary deemed ownership, and then later the grantor trust powers might be toggled off.

[6715] See part III.B.2.h.vii Distribution Provisions Might Prevent Turning Off Grantor Trust Status.

[6716] Code § 678(b).

[6717] The right to remove and replace a trustee with such a trustee was discussed in Rev. Rul. 95-58. See part III.C.3 Safe Harbor re Right to Change Trustee - Rev. Rul. 95-58.

III.B.2.i.ii. Building Up Trust Wholly Owned by Beneficiary from Inception

An irrevocable trust treated as owned by the beneficiary for income tax purposes but not for estate tax purposes – can be a very useful tool. For example, your client owns a business that is expanding. Her mother creates a beneficiary deemed-owned trust, making a $5,000 gift. The trust forms a limited liability company (LLC). The LLC makes a deal with the business – the LLC builds the building, and the business will rent the building from the LLC. The LLC takes the lease to a lender and obtains financing for the purchase of land and construction of the building. Over time, the LLC uses the rental income to pay down the mortgage, acquiring equity in the building. When the mortgage is retired, the trust continues receiving rental income and gaining equity. The annual income taxes the beneficiary pays reduces the beneficiary's estate. Eventually the beneficiary might get to the point where her other assets are depleted, so that her estate is reduced to the estate tax applicable exclusion amount. She can then live off the trust comfortably, without having a conflict between having plenty of retirement income and avoiding estate tax, because her primary source of income – the trust – is outside of the estate tax system.

Generally, beneficiary deemed-owned trusts are formed as follows: the grantor establishes an irrevocable trust for the benefit of one of the grantor's children ("the beneficiary"). The grantor is the client's parent or another person who is not in a business relationship with the beneficiary[6718] sets up a beneficiary deemed-owned trust. The beneficiary has a withdrawal right over gifts to the trust, which withdrawal right lapses to the greatest extent allowable without the lapse constituting a gift.[6719] The trust is irrevocable and is structured so that the only assets included in the beneficiary's estate are unlapsed withdrawal rights. The grantor allocates GST exemption to the trust. The trust can then pass from generation to generation outside of the estate tax system.

I strongly recommend not depositing the gift into an interest-bearing account and not entering into any transactions with the trust between the date of funding and the date of the lapse. For my reasons, see part III.B.2.i.vii.(a) Determining Portion Owned When a Withdrawal Right Does Not Lapse in Full Before Any Income Is Earned.

The beneficiary is taxed as the owner[6720] of the portion that beneficiary can withdraw.[6721] As described further below, the trust is drafted so that the grantor is not taxed as the owner for

[6718] If a business associate of the beneficiary sets up the trust, the transfer to trust might be deemed a payment to the beneficiary, followed by a gift from the beneficiary to the trust. See, *e.g.*, Reg. §§ 1.61-22(c)(2)(ii), 1.83-6(d)(1).

[6719] Code § 2514(e) provides that the lapse of a withdrawal right does not constitute a gift to the extent that the lapse does not exceed the greater of $5,000 or 5% of the trust's assets. Because the $5,000 limit applies to all lapses during the year with respect to the holder of the withdrawal right, and coordination between irrevocable trusts often is cumbersome or impractical, when drafting it's usually best when describing the lapse to refer either to Code § 2514 or a lapse of 5% without mentioning the $5,000 amount. For more details on calculating the 5% lapse, see part II.J.4.f Making Trust a Partial Grantor Trust as to a Beneficiary.

[6720] However, Beneficiary is not treated as the grantor for income tax purposes. Reg. § 1.671-2(e)(6), Example (4). This rule is necessary for Code § 678(b) work.

[6721] Code § 678(a)(1) provides, "A person other than the grantor shall be treated as the owner of any portion of a trust with respect to which such person has a power exercisable solely by himself to vest the corpus or the income therefrom in himself." This includes an unlimited withdrawal rights, Rev. Rul. 85-45 (Code § 121 exclusion for gain on sale of residence applied to beneficiary), and applies even to a income tax purposes[6722] and so that, if the beneficiary had been the settlor, the beneficiary would have been taxed as the owner for income tax purposes.[6723] Thus, the beneficiary is treated as the owner of the trust for income tax purposes - many private letter rulings have held that Code § 678(a)(2) taxes the beneficiary after a withdrawal right lapses, even though the statute requires that the beneficiary "partially released or otherwise modified" the withdrawal right.[6724] The deemed owner is treated as the owner of the income for tax purposes, whether that income is allocated to trust accounting income or principal (such as capital gain).[6725]

This withdrawal right must apply to all property transferred to the trust. Otherwise, only the portion subject to the initial withdrawal right will be taxed to the beneficiary.[6726] Partial withdrawal rights generate partial deemed ownership,[6727] so that any future sale to the trust will

---

beneficiary who lacks legal capacity to exercise the power, Rev. Rul. 81-6. In *Campbell v. Commissioner*, T.C. Memo. 1979-495, the right to withdraw capital gains taxed the beneficiary on the trust's capital gains, even though the beneficiary did not exercise the withdrawal right.

[6722] See text following fn 6733.

[6723] Code § 678(a)(2) provides, A person other than the grantor shall be treated as the owner of any portion of a trust with respect to which… person has previously partially released or otherwise modified such a power and after the release or modification retains such control as would, within the principles of sections 671 to 677, inclusive, subject a grantor of a trust to treatment as the owner thereof.

[6724] In The Year in Review: An Estate Planner's Perspective on Recent Tax Developments, *TM Estates, Gifts and Trusts Journal* (BNA) (1/13/2011), Howard Zaritsky commented [dates of PLRs excised below]:

> The IRS never explains this, but always treats the lapse of the withdrawal right as a modification or partial release. See PLRs 201039010; 200747002; 200147044; 200104005; 200022035; 200011058, 200011054–200011056; 199942037; 199935046–199935047; 9812006; 9810006–9810008; 9810004; 9809005–9809008; 9745010; 9739026; 9625031; 9535047; 9504024; 9450014; 9448018; 9320018; 9311021; 9226037; 9140047; 9034004; 9009010; 8936031; 8827023; 8805032; 8701007; 8613054; 8521060; 8342088. See also Blattmachr, Gans & Lo, A Beneficiary as Trust Owner: Decoding § 678, 35 *ACTEC J.* 106, 114–117 (Fall 2009).

[6725] Reg. § 1.671-3(b)(3).

[6726] Reg. § 1.671-3(a)(3). For more on Reg. § 1.671-3(a)(3), see part III.B.2.i.vii.(a) Determining Portion Owned When a Withdrawal Right Does Not Lapse in Full Before Any Income Is Earned.

[6727] Letter Ruling 9034004 involved a trust in which the beneficiary, A, received mandatory income distributions and had the noncumulative annual right to withdraw the greater of $5,000 or 5% of the trust's principal at the end of the year. For 11 years, A never exercised her withdrawal right, but the trustee did exercise his discretionary power to the trust corpus. The trustee made substantial discretionary distributions of corpus to A over the years, depleting the trust to the point that only a single piece of real estate remained. That asset was sold at a gain, and the trustee requested a ruling concerning the portion of any gain that A must report as a result of a series of lapses of her withdrawal right. Based on Reg. § 1.671-3(a)(3) and Rev. Rul. 67-241, the IRS ruled that, when A failed to exercise her withdrawal right, she would be treated as if she partially released a power to withdraw a portion of the trust corpus under Code § 678(a)(2). Because the income of that portion will be paid to A, she would be treated as the owner of that portion of the trust under Code §§ 677 and 678. During each succeeding year in which A failed to exercise her power, A was treated as the owner of an increasing portion of corpus of T. Each year, she was treated as owning an additional portion of corpus, multiplying the amount which she could withdraw by a fraction, the numerator of which is the portion of trust corpus which she is not already treated as owning, and the denominator of which is the total of trust corpus from which the withdrawal could be made. Discretionary distributions made by the trustee from corpus would be treated as coming from both the portion of corpus which A is treated as owning and from the portion which she is not treated as owning, in the same ratio as the fraction mentioned above.

For more on Reg. § 1.671-3(a)(3), see part III.B.2.i.vii.(a) Determining Portion Owned When a Withdrawal Right Does Not Lapse in Full Before Any Income Is Earned.

Letter Rulings 200022035 and 200104005 had similar facts and the same result.

be recognized to the extent of the part that is not deemed to be owned by the beneficiary. At least one commentator is concerned that, under the literal language of certain regulations, a lapse of the entire withdrawal right might not suffice and that those who do not obtain a private letter ruling on this issue do so at their own risk.[6728]

As mentioned above, the trust is drafted so that, if the beneficiary had been the settlor, the beneficiary would have been taxed as the owner for income tax purposes. The primary approach I use relies on Code § 678(a)(2) with Code § 677(a); combined, these sections

---

Letter Rulings 8035067, 8308033 and 8326074 mentioned Reg. § 1.671-3(a)(3) and Rev. Rul. 67-241 in connection with withdrawal rights but not say how to apply them.
Letter Ruling 8142061 involved a trust in which the beneficiary, N, had the right to withdraw the first $6,000 of gifts made to a trust each year. N would eventually receive all of the trust's assets by the time he attained age 35. Using language similar to (but mote explicit than) Letter Ruling 7852042, the IRS said (emphasis added), Therefore, until his power is exercised, released or allowed to lapse, N will be treated as the owner of **each item of income**, deduction and credit (including ordinary income items and items allocable to corpus, such as capital gains) **which is attributable to any new property which is transferred by gift to the trust** (subject to the $6,000 limitation contained in the trust agreement). Furthermore, the IRS pointed out that, if N fails to his withdrawal right over a gift to the trust, it will become a permanent part of the corpus of the trust. Because the income of that portion may be distributed to N or accumulated for future distribution to N, N will be treated as the owner of that portion of the trust (subject to the $6,000 limitation contained in the trust agreement), citing Code § 677.
LaFargue, notes 6729-6730, applied Reg. § 1.671-3(a)(3) to tax a grantor (who the trust did not designate as a beneficiary) on the trust's income to the extent that the grantor received annuity payments, so that case does not shed any light.
In *Scheft v. Commissioner*, 59 T.C. 428 (1972), the grantor was deemed to own all of the trust but tried to use a fiscal year vs. calendar year argument to say that Reg. § 1.671-3(a)(3) caused some ambiguity in calculations, but the court held that this argument did not change the fact that all of the trust's income and principal could be accumulated for the grantor's benefit. *Garvey v. Commissioner*, T.C. Memo. 1986-200, rejected the need for Reg. § 1.671-3(a)(3) for similar reasons and taxed the whole trust to the grantor.
Letter Ruling 201038004 is one of the most recent rulings about trusts deemed partially owned by beneficiaries. Thus, it does not help in the area of sales to irrevocable grantor trusts, although it helps focus on some issues. The IRS ruled that a beneficiary with the right to withdraw income would be taxable on the income under Code § 678. Any undistributed income, which was not yet added to principal, would be includible in the beneficiary's estate as a general power of appointment. Any income that had been added to principal and constituted a lapse in excess of the greater of $5,000 or 5% of the trust's assets would be includible in the beneficiary's estate under Code § 2036, since the beneficiary was deemed to have transferred that part of the accumulated income and also retained the right to the income in that transferred property. The ruling did not address whether any capital gains later realized on the principal that constituted accumulated income would be taxable to the beneficiary under Code § 678(a)(2). The ruling did not address the gift tax consequences of the lapse, which presumably would be an incomplete gift because of the beneficiary's retained general power of appointment.
Consider instead giving the beneficiary a hanging power so that the power can lapse in a way that does not make any of the lapsed income includible in the beneficiary's estate. That might help not only for estate tax purposes but also for protection from future creditors. This structure has the advantage of allowing the trust's income to be accumulated income tax-free (to the trust, since the beneficiary is taxable personally on the income), with only the excess income, if any, being included in the beneficiary's estate. Given that income yields tend to be significantly lower than 5%, perhaps none of the accumulated income will ever be included in the beneficiary's estate. On the other hand, significant income tax benefits might be lost to the family as a whole. Trustee fees would be fully deductible if this were a nongrantor trust. Trustee fees attributable to the grantor trust portion would be deductible, if at all, as miscellaneous itemized deductions subject to the 2% floor and also disallowed for purposes of the alternative minimum tax.
[6728] See Zaritsky, ¶ 4.08[3][l][i] Beneficiary ownership of the trust, *Tax Planning for Family Wealth Transfers: Analysis With Forms (*WG&L).

provide that the beneficiary shall be treated as the owner of any portion of a trust, whose income without the approval or consent of any adverse party is, or, in the discretion of the beneficiary or a nonadverse party, or both, may be distributed to the beneficiary or held or accumulated for future distribution to the beneficiary. It has been suggested that a line of cases limits the application of Code § 677.[6729] I disagree with this suggestion[6730] but recommend that those who plan sales to beneficiary deemed-owned trusts consider these cases not only for that issue but also to get a flavor for how courts might respond to such sales. Also consider granting the beneficiary the power to borrow from the trust at the AFR but without adequate security, which will make the beneficiary and not the grantor the owner under a combination of Code § 678(a)(2) and 675(2).

The beneficiary can be the only beneficiary of the trust, which provides more financial security (but perhaps more risk if a creditor with a claim sympathetic to a judge brings a case against the trust), but it also precludes using the trust to help the beneficiary's descendants, so whether to authorize distributions to the beneficiary's descendants depends on the circumstances. Making the beneficiary the sole person to whom distributions can be made simplifies testing under the grantor trust rules, particularly when the beneficiary has an inter vivos power of appointment.[6731]

Many letter rulings requested that the beneficiary be treated as the sole owner of the trust under the grantor trust rules so that the trust could qualify as a shareholder in an S corporation.[6732]

To create instantly a large trust to buy a married beneficiary's business, see part III.B.2.i.xv Sale to Trust Created by Spouse: An Alternative Way to Have a Trust Benefitting Client.

[6729] *Lazarus v. Commissioner*, 58 T.C. 854 (1972), *acq*. 1973-2 C.B. 1, *aff'd*, 513 F.2d 824 (9th Cir. 1975); *LaFargue v. Commissioner*, 73 T.C. 40 (1979), *aff'd in part, rev'd and rem'd in part*, 689 F.2d 845 (9th Cir. 1982), *on remand*, T.C. Memo. 1985-90, *aff'd*, 800 F.2d 936 (9th Cir. 1986); and *Stern v. Commissioner*, 77 T.C. 614 (1981), *rev'd and rem'd*, 747 F.2d 555 (9th Cir. 1984).

[6730] In *Lazarus* and *LaFargue*, fn. 6729, the grantor was not a named beneficiary of the trust. The Tax Court taxed the grantor on the income of retained annuities because it treated the grantor as the settlor and the annuity payments were all that the grantor could receive. The court expected that the grantor would be fully taxed on all of the income as the grantor received it from the trust; presumably the court thought it was fairer to tax the grantor each year when the grantor received the annuity to better match cash received with income reported. I don't view those cases as limiting the application of Code § 677. In *Stern*, however, the person who sold property to the trust in exchange for an annuity was a beneficiary of the trust. The Tax Court held that he was the settlor (because the sale for the annuity was really a transfer with a retained interest) and that the income was fully taxable to him under Code § 677. The Ninth Circuit reversed, respecting the sale for the annuity. The settlor of each trust involved was either a business associate (who received no benefit other than the prospect of future business) or a family member; the seller was not the settlor (except allegedly with respect to the annuity sale, which the Ninth Circuit rejected). Implicitly, Code § 677 could not apply because the seller, who was also the beneficiary, was not the grantor.

[6731] A power to add beneficiaries can cause Code § 674 to apply – by preventing the exceptions to Code § 674(a) from applying. However, when the sole beneficiary can add beneficiaries, that power does not prevent the exceptions to Code § 674(a) from applying. Reg. § 1.674(d)-2(b).

[6732] Code § 1361(c)(2)(A)(i) authorizes as a shareholder of an S corporation a trust all of which is treated under the grantor trust rules as owned by an individual who is a United States citizen or resident. Code § 1361(c)(2)(A)(ii) authorizes such a trust to continue to hold S corporation stock for the 2-year period beginning on the day of the deemed owner's death. For a discussion of rulings treating trusts as grantor trusts so that they can hold S corporation stock, see Christian & Grant, ¶ 8.02[2] Grantor Trusts, *Subchapter S Taxation* (WG&L).

The trust must be drafted so that the grantor is not taxed as the owner for income tax purposes.[6733] If the grantor is taxed as the owner under other provisions of the grantor trust rules, then the beneficiary is not taxed as the owner to the extent provided in Code § 678(b). Even if the beneficiary is the deemed owner of the trust under Code § 678, the settlor continues to be the grantor for income tax purposes until the beneficiary exercises the beneficiary's withdrawal right.[6734] Among possible grantor trust rules that might apply, one would consider at least avoiding the grantor being treated as owner under part III.B.2.h.vii Distribution Provisions Might Prevent Turning Off Grantor Trust Status.

Although Code § 678(b) appears limited in scope, most commentators believe, and numerous recent Letter Rulings hold, that any conflict in whether the grantor or a beneficiary of the trust is treated as the owner for income purposes is resolved in favor of the grantor being treated as such an owner. Thus, for example, a swap power under Code § 675(4)(C) (see part III.B.2.h.iii Swap Power) might not work, if both Grantor and Beneficiary would be deemed owners, and Code § 678(b) would make Grantor the trust's deemed owner. However, when the beneficiary was the holder of the swap power, Letter Rulings 9311021 and 201216034 held that the trust was deemed owned by only the beneficiary, not by the grantor; the law behind this is questioned by several top lawyers I know, so I remain very reluctant to include a swap power during the settlor's life. The rulings might be focused on the fact that the beneficiary is an adverse party as to the grantor; see Reg. § 1.675-1(b)(4), which is discussed in fn. 6640, found in part III.B.2.h.i Who Is the Grantor.

Furthermore, suppose a trust would be a beneficiary grantor trust, but for Code § 678(b) causing the settlor's grantor trust powers to trump the beneficiary's. Suppose further that the settlor dies or otherwise turns off his or her grantor trust powers. Does the beneficiary become the deemed owner, since the Code § 678(b) suppression of the beneficiary's grantor trust powers no longer applies? No, said the IRS in Letter Ruling 9321050, inexplicably reversing its position in Letter Ruling 9026036. The beneficiary would need a new withdrawal right over all of the trust's assets once the settlor's powers are turned off, and then have those new withdrawal rights lapse over time. Blattmachr, Gans and Lo, A Beneficiary as Trust Owner: Decoding Section 678, *ACTEC Journal* (Fall 2009), found this change in position puzzling (as do I). Given that the IRS did not explain why it changed its position, either position would appear to have

---

[6733] Code § 678(b), "Exception where grantor is taxable," provides:

> Subsection (a) shall not apply with respect to a power over income, as originally granted or thereafter modified, if the grantor of the trust or a transferor (to whom section 679 applies) is otherwise treated as the owner under the provisions of this subpart other than this section.

Reg. § 1.678(b)-1 does not add any nuances.

Zaritsky, ¶ 4.08. Crummey Trusts, *Tax Planning for Family Wealth Transfers During Life: Analysis With Forms* (WG&L), states (footnotes omitted):

> The IRS has repeatedly ruled (and continues to rule) privately that a Crummey power does not render the power holder the deemed owner of any portion of a trust that is also a grantor trust, under Sections 671 through 679. In most of these rulings, the IRS restates the rule of Section 678(b), and then flatly concludes that, if the grantor owns the trust under Section 671, the grantor is deemed to own the entire trust, notwithstanding the Crummey powers held by the beneficiaries. A few of the rulings expressly rely on the application of Regulations Section 1.671-2(b), which states that the word "income" refers to taxable income, and does not distinguish between capital gains and ordinary income of the trust. It does not refer to trust accounting income, which is the key to the IRS analysis. The IRS also has stated that a right over corpus can affect income, so that a right over either corpus or income is covered by Section 678(b).

[6734] See Reg. §§ 1.672-1(e)(5) and 1.672-1(e)(6), Ex. (4).

substantial authority; however, when planning, one would consider that presumably on audit the IRS would assert its most recent position.

III.B.2.i.iii. Can a Trust Without a Withdrawal Right Be a Code § 678 Trust?

In making a trust without a withdrawal right taxable to its beneficiary as the deemed owner, a direct, clear approach that can be very effective but has significant limitations on practicality in the long run is in part III.B.2.i.xiv QSST as an Alternative Form of Beneficiary Deemed-Owned trust.

A trust without a withdrawal right might be converted to a partial beneficiary deemed-owned trust over time if the trustee credits distributions to the beneficiary and then the beneficiary lets his or her right to take those distributions lapse.[6735]

A more fundamental question is what is the threshold for beneficiary control over a trust to activate Code § 678(a)(1), which requires that the beneficiary have "a power exercisable solely by himself to vest the corpus or the income therefrom in himself."[6736] Certainly a withdrawal

---

[6735] See fn. 2610 in part II.I.7 Interaction of NII Tax with Fiduciary Income Tax Principles.

[6736] *Trust No. 3 v. Commissioner*, 33 T.C. 734 (1960) held as follows when a trust tried to invoke Code § 678 to avoid taxation:

> An examination of the legislative history of section 678 discloses that it was the intention of Congress to incorporate the rule of *Edward Mallinckrodt, Jr.*, 2 T.C. 1128, *affd*. (C.A. 8) 146 F. 2d 1, *certiorari denied* 324 U.S. 871, which had been set forth in section 39.22(a)-22 of Regulations 118. See H. Rept. No. 1337, 83d Cong., 2d Sess., p. 63, and S. Rept. No. 1622, 83d Cong., 2d Sess., p. 87. In the latter committee report it is stated that a person other than a grantor may be treated as the substantial owner of the trust if he has an unrestricted power to take the trust principal or income. The *Mallinckrodt* case involved an adult beneficiary who had the right to terminate the trust. It was held that currently and without any restriction whatever the taxpayer could take as his own the income of the trust. In the *Mallinckrodt* case, we relied in part upon *Corliss v. Bowers*, 281 U.S. 376, in which the Supreme Court stated, But taxation is not so much concerned with the refinement of title as it is with actual command over the property taxed—the actual benefit for which the tax is paid. *** The income that is subject to a man's unfettered command and that he is free to enjoy at his own option may be taxed to him as his income, whether he sees fit to enjoy it or not.
>
> Read in the light of the legislative history of the section, we think section 678 should not be held to apply in the situation here presented. It cannot be said that these beneficiaries were currently entitled to the income of the trust or that their command over the corpus or income was unfettered. Indeed, the trust provisions in question would seem to have been intended by the grantors of the trust to restrict, in accordance with the law of Illinois, the command hereof the minor beneficiaries over the property and income of the trust, particularly since the grantors did not proceed to have guardians appointed. Otherwise, the grantors would have made provision for themselves or others to exercise the power for the beneficiaries or would have proceeded to have guardians appointed for the beneficiaries. We conclude that the income in question was that of the petitioner under section 641.

The Seventh Circuit reversed, 285 F.2d 102 (1960), holding that a guardian need not be appointed to give effect to a withdrawal right, which result the IRS reached in fn. 6737. This case is mentioned above simply because of the Tax Court's view of the legislative history, which the appellate court did not controvert when it held that a minor's withdrawal right is not really encumbered by the need to appoint a guardian:

> We believe that, for several reasons, the Commissioner's argument lacks substance. It is not denied by him that the beneficiaries were given a right to terminate the trust and to take possession of the trust property, but he considers that their minority bars them because (he says)

right will do the trick.[6737] On the other hand, subjecting the withdrawal right to an ascertainable standard does not work.[6738] However, when a trust authorized "the trustees to invade corpus, at their sole discretion, to provide for [the beneficiary's] support, welfare and maintenance, so long as the total net income and corpus paid to [the beneficiary] do not exceed $100,000 in any accounting year," the first $100,000 of annual income was taxable to the beneficiary while serving as sole trustee;[6739] on the other hand, "support, maintenance, comfort and enjoyment" was sufficiently ascertainable to avoid taxation in a pre-1954 case,[6740] as was "needs,

---

> they could not assert that right except through a guardian duly appointed. This distinction is unconvincing in view of the fact that the appointment of a guardian for a minor under a state law is a matter of routine in which the federal government has no concern. To effectuate a termination of the trust as to any child and a delivery of its share of the accumulated income or corpus to the child, customarily there would be delivered to the trustees a properly authenticated copy of letters of guardianship and a receipt for the assets and monies delivered. However, we think the necessity of such routine steps would have no bearing upon the fundamental question of the legal right of the beneficiaries to terminate the trust. We should not deny an undisputed right because the conventional methods of exercising it have not been described in the instrument creating the right.

[6737] Rev. Rul. 67-241 (power to require distribution on request caused Code § 678(a)(1) to apply); *Trust No. 3 v. Commissioner*, 285 F.2d 102 (7th Cir. 1960), and Rev. Rul. 81-6, which applied even though the beneficiary was a minor and could not actually exercise the withdrawal right until a court appointed a representative.

[6738] *Funk v. Commissioner*, 185 F.2d 127 (3rd Cir. 1950), decided under pre-Code § 678 case law, involved a beneficiary who as trustee was authorized in her discretion to pay all or a part of the net income annually … to herself, in accordance with [her] needs, of which she shall be the sole judge. In distinguishing it from other cases:

> Here, the trustee had no a fortiori right to the income, nor did the absence of any needs on the part of either her co-beneficiary or herself confer such right upon her. What was not needed was directed by the settlor to be accumulated and added to principal, and the trustee's discretionary power to distribute conclusively terminated. She did not even have the authority to invade the principal in the event the income proved inadequate.

Letter Ruling 9227037 (trustee shall also pay … for the proper health, support and maintenance of Spouse, after considering any income or resources of Spouse outside the trust and reasonably available for such purposes).

[6739] Letter Ruling 8211057. Compare that to *Townsend v. Commissioner*, 5 T.C. 1380 (1945), in which a state court had ruled that the beneficiary was entitled to $30,000 per year for maintenance and support unless the parties returned to court to determine a different amount; the Tax Court held that the beneficiary was taxable on the $30,000 each year whether or not she withdrew it. Blattmachr, Gans and Lo, A Beneficiary as Trust Owner: Decoding Section 678, *ACTEC Journal* (Fall 2009), argues that *Townsend* should not be relied upon and that the Letter Ruling used welfare and therefore was not an ascertainable standard.

[6740] *Smither v. U.S.*, 108 F.Supp 772 (S.D. Tex. 1952), *aff'd* 205 F.2d 518 (5th Cir. 1953) (adopting by reference the trial court's opinion). See also *Stavroudis v. Commissioner*, 27 T.C. 583 (1956), in which the beneficiary was not trustee and the court rejected the suggestion that she could control distributions:

> Respondent appears to contend that since under paragraph Fifth of the trust instrument, the trustees are given power, in their sole discretion, to invade the corpus of the trust in the event of financial need, they, in effect, have unlimited discretion to distribute trust corpus to petitioner in accordance with her desires. Petitioner, however, is not a trustee of the trust in question and possessed no power, under the terms of the trust instrument, arbitrarily to direct the trustees to make disbursements to her from either principal or income, beyond the amounts specified as her guaranteed annual income.... The trust instrument therefore creates a standard limiting the power of the trustees to invade the corpus of the trust on behalf of petitioner, thus restricting the rights of petitioner in the trust principal to the extent that she cannot be held to be the substantial owner thereof. *Eva V. Townsend*, 5 T.C. 1380; *Lewis Hunt Mills*, 39 B.T.A. 798; *Funk v. Commissioner*, *supra*.

maintenance and comfort" in a Code § 678 case[6741] or "support and maintenance" in Letter Ruling 8939012. Granting a beneficiary "the right to use so much thereof, either of the corpus or the income or both, as may be required by her for her personal support and maintenance, the reasonableness thereof to be determined by her" was enough to make her the deemed owner when it was a bequest in addition to her life estate;[6742] this case affirmed the trial court's finding that the beneficiary was taxable, but for context note that the trial court had gone further and stated that a trust was never intended to be created at all and that instead the beneficiary was the true owner, so one needs to place this case in the context of a very broad interpretation of the language that was used.[6743]

[6741] *U.S. v. De Bonchamps*, 278 F.2d 127 (9th Cir. 1960). Similarly, support, comfort, health and service were sufficiently ascertainable to avoid taxation of capital gain to the life tenant in the pre-Code § 678 case of *Security-First Nat. Bank v. U.S.*, 181 F.Supp 911 (S.D. Ca. 1960).

[6742] *Koffman v. U.S.*, 300 F.2d 176 (6th Cir. 1962).

[6743] *Koffman v. U.S.*, 193 F.Supp 946 (E.D. Mich. 1961), held:

> Construing the language of the above quoted paragraph SECOND, plaintiff, Fannie Koffman, simply received a life estate in all her deceased husband's estate together with the right to do as she saw fit with the corpus or income or both. Therefore, any income accruing to this life interest belonged to plaintiff and was taxable to her.
>
> I am convinced that a trust was *not* intended, *nor* one created in fact. The instrument did not provide for separation of any legal or equitable titles to the property. The executor here did not hold the legal title to the property. There was no trustee. The executor was merely given limited managerial rights for a specific period (which period in truth, had expired under the partnership arrangement apparently.) But even liberally viewing the over-all language of the instrument's provisions as trust provisions, the plaintiff would still have sufficient power over the property as a beneficiary to be considered the owner of all the distributable income for tax purposes.
>
> Section 678, 1954 Internal Revenue Code, deals with such situations. It provides in pertinent part:
>
>> (a) General Rule.—A person other than the grantor shall be treated as the owner of any portion of a trust with respect to which: (1) such person has a power exercisable solely by himself to vest the corpus or the income therefrom in himself ***
>
> In the instant case, plaintiff was solely able to determine what would actually be distributed to her from the available income, but fact remains that all such property was distributable to her. The amount that she would consider reasonable was her business and hers alone. There was no one with the available right to check her discretion in this matter.
>
> See *Emery v. Commissioner of Internal Revenue*, 156 F.2d 728 - quoting from *Corliss v. Bowers*, 281 U.S. 376, at 378 -
>
>> The income that is subject to a man's unfettered command and that he is free to enjoy at his own option may be taxed to him as his income, whether he sees fit to enjoy it or not.
>
> The *Emery* case likened the principles and logic of the Corliss case where it was the settlor of the trust who had broad powers to a situation where a beneficiary receives and retains such powers (as could be said here about plaintiff beneficiary's powers.) The fact that plaintiff beneficiary did not exercise these powers in her own favor during taxable years does not make the income any less taxable to her. It is not necessary to collect income which is attributable to person for purposes of income taxation. *Helvering v. Stuart*, 317 U.S. 154. A beneficiary is not taxed on what he receives, but his share of the distributable net income. See Sections 652(a) and 662(a), Internal Revenue Code of 1954. Plaintiff in this case was entitled to the whole share.
>
> While we were impressed by plaintiff's theory that the widow beneficiary would be bound by reasonableness in the amount she needed for expenses and costs of living, nevertheless the words the reasonableness thereof to be determined by her made an impression upon this court and we sought to learn how those words or words of similar import had been interpreted by the Federal Court and the Supreme Court of the State of Michigan. In this connection we found that when the contract provides that something be done to the satisfaction of the purchasing party the courts have held time and time again that while the product or work might be satisfactory to

In light of this uncertainty, if the settlor wants to make a trust a grantor trust as to the beneficiary while placing restrictions on the beneficiary's withdrawal rights then the settlor might consider providing only a temporary unrestricted withdrawal right and then lapsing it or subjecting it to restrictions after the lapse. Note that, to avoid a gift, the lapsed power to withdraw, to the extent that the lapse exceeds the 5-and-5 amount provided in Code § 2514(e), could be retained and subjected to the consent of a nonadverse party, allowing the withdrawal right to retain its status as a general power of appointment[6744] while providing some assurance of a check on its exercise; alternatively, if the power of appointment is no longer a general power of appointment, holding a present beneficial interest and a testamentary power of appointment should cause the gift to be incomplete.[6745]

However, *Goldsby v. Commissioner*, T.C. Memo. 2006-274, held:

> We look to State law to examine the nature of rights and interests in a trust. *Estate of Nicholson v. Commissioner*, 94 T.C. 666, 672-673 (1990). Arkansas courts consider the four corners of the governing instrument to ascertain the intention of the settlor regarding the nature of interests in a trust. *Estate of Whiting v. Commissioner*, T.C. Memo. 2004-68 (citing *Aycock Pontiac, Inc. v. Aycock*, 983 S.W.2d 915, 919-920 (Ark. 1998)); *Gregory v. Moose*, 590 S.W.2d 665, 667-668 (Ark. Ct. App. 1979).
>
> We look to the provisions of the trust agreement to determine whether petitioner is treated as the owner of any portion of the trust under section 678. We find that petitioner is treated as the owner of the income portion of the trust under section 678. Petitioner has significant powers with respect to the trust income on account of his dual role as trustee and sole income beneficiary. He was able to, was required to, and did vest the income of the trust in himself. Petitioner as trustee was required to cause the trust periodically to pay him (as income beneficiary) the entire net income of the trust. Petitioner, as trustee, owed fiduciary duties with respect to the income only to himself, the sole income beneficiary.
>
> Accordingly, we conclude that petitioner has the sole power to vest the trust's in come in himself and is treated as the owner of the income portion of the trust.[4]
>
> [4] The unique circumstances require a finding that petitioner should be treated as the owner of the trust's income portion. We note, and petitioners acknowledge on brief, that this finding does not apply in every situation involving a simple trust.

---

everybody else, and the refusal of the purchasing party to accept the work or the product might even be very frivolous, yet if not done to his satisfaction he or she was not obliged to accept or pay for it. *Silsby Manuf'g Co. v. Town of Chico*, 24 F. 893, 894; *Patterson v. Alabama Vermiculite Corp.*, 149 F.Supp. 548. Michigan takes a very serious view of this provision. *Wood Machine Co. v. Smith*, 50 Mich. 565; *Schmand v. Jandorf*, 175 Mich. 88, 140 N.W. 996; *Graham v. City of Grand Rapids*, 141 Mich. 612, 104 N.W. 983; *Plano Manuf'g Co. v. Ellis*, 68 Mich. 101, 35 N.W. 841; *Gibson v. Cranage*, 39 Mich. 49, 50.

In the case at bar the last word was given to the widow to decide how much she wanted. Some of her expenses might be frivolous; might be considered absolute waste by some but it was up to her to decide and because of that power placed in her we believe puts an entirely different aspect upon the taxing power of the United States.

[6744] Code § 2514(c)(3)(B).

[6745] Letter Ruling 201525002 describes various nuances to making an incomplete gift, including dealing with the beneficiary's incapacity.

The context is that the taxpayer was claiming a deduction for a trust's donation of a conservation easement, asserting that the trust was a grantor trust. After finding above that the taxpayer was the deemed owner of the income, the court held that the donation was made out of corpus, over which the taxpayer was not the deemed owner. In some ways, however, the Code § 678(a) holding might be considered dictum, in that the court ultimately held that Code § 678 did not apply to the contribution and the taxpayer lost the case.

In an ERISA case using income tax ownership for attributing control, beneficiaries who had a withdrawal right as individuals that was limited by ascertainable standards were Code § 678 owners because they routinely made withdrawals ignoring those standards.[6746] A reviewed case, *Flato. v. Commissioner*, 14 T.C. 1241 (1950),[6747] under the 1939 Code, held:

[6746] *United Food and Commercial Workers Unions and Participating Employers Pension Fund v. Magruder Holdings, Inc.*, 2019 WL 1409725 (D. Md. 2019) (slip opinion), holding:

> Defendants counter that the HEMS limitation on the distribution of principal or income necessarily precludes the application of the Grantor Trust Rule, as it prevents the siblings from having a power exercisable solely by themselves to vest the corpus or the income therefrom in themselves. But Defendants introduce no evidence that the HEMS limitation was dutifully followed. To the contrary, Mr. Flinchum explained that HEMS was not taken into consideration when payments were distributed to the Siblings. ECF No. 49-7 at 40. He also stated that none of the siblings had ever discussed with him whether a payment complied with HEMS requirements. ECF No. 53-3 at 6-7. The Siblings either could not recall having ever consulted with anyone regarding HEMS requirements, ECF Nos. 53-4 at 9, 53-5 at 6-7, or admitted that they had never declined a payment because of the HEMS requirements, ECF No. 53-6 at 5-6. Regardless of whether, as Defendants suggest, a dutifully followed HEMS provision nullifies the application of the Grantor Trust Rule as a matter of law, a HEMS provision that exists only on paper cannot be said to restrict the power exercisable by the Siblings as to the Family Trust. Therefore, the Grantor Trust Rule applies, and the Family Trust's 49% ownership of F&S will be attributed evenly to the Siblings.[4]
>
> [4] Because the Court resolves the question of ownership using the Grantor Trust Rule, it need not determine how to calculate the Siblings' actuarial interest in F&S.

[6747] *Aff'd* 195 F.2d 580 (5th Cir. 1952), which reasoned:

> It is well established, of course, that where income is subject to one's unfettered command and he is free to enjoy it at his own option, he may be taxed on such income whether he elects to enjoy it or not. *Corliss v. Bowers*, 281 U.S. 376, 50 S.Ct. 336, 74 L.Ed. 916. This principle is not limited to the grantor of a trust, but is equally applicable to the beneficiary of a trust. *Bunting v. Commissioner of Internal Revenue*, 6 Cir., 164 F.2d 443; *Grant v. Commissioner of Internal Revenue*, 5 Cir., 174 F.2d 891. The incidence of taxation may not be avoided by mere "legal paraphernalia which inventive genius may construct", *Helvering v. Clifford*, 309 U.S. 331, 60 S.Ct. 554, 556, 84 L.Ed. 788, but the Court must look to the "whole nexus of relations between the settlor, the trustee and the beneficiary", *Helvering v. Elias*, 2 Cir., 122 F.2d 171, 172, and if it concludes that in spite of the form resorted to in effecting a transaction, the results thereof give the beneficiary command over the distribution of the income of a trust, such income is taxable to the beneficiary.
>
> Petitioners rely on *Plimpton v. Commissioner of Internal Revenue*, 1 Cir., 135 F.2d 482, to support their contention that the form and not the substance of a trust is determinative of the incidence of taxation and that no judicial inquiry into the conduct of the parties or the actual operation of the trust should be made. Respondent seeks to distinguish that ruling. We do not think it should be applied to the facts of this case. The rule expressed in *Commissioner of Internal Revenue v. Tower*, 327 U.S. 280, 291, 66 S.Ct. 532, 538, 90 L.Ed. 670, "By the simple expedient of drawing up papers, single tax earnings cannot be divided into two tax units and surtaxes cannot be thus avoided", evidences an intention that the results achieved is the criteria for determining the incidence of taxation rather than the "legal paraphernalia" employed to attain

> We believe that it is fair to infer from the facts of this case that although the distributions of trust income were to be made at the "discretion" of the trustees, the intention of the grantors was that the beneficiaries could have what they wanted of the trust income and that the discretionary provision was more in the nature of a safeguard to be withheld unless family considerations dictated its enforcement. Albeit there is no evidence of any collusion by the trustee-beneficiaries, on the other hand, there is no evidence of any substantial discretion exercised. The evidence indicates that the beneficiaries requested and got such amounts of trust income as they desired. The fair inference is that they got what they wanted. In our opinion the evidence is sufficient to cause this trust income to be taxed to the beneficiaries. *Edward Mallinckrodt, Jr.*, 2 T. C. 1128; *affd.*, 146 Fed.(2d) 1. *Edgar R. Stix*, 4 T.C. 1140; *affd.*, 152 Fed.(2d) 562.

I tend to prefer that otherwise nongrantor mandatory income trusts be treated as nongrantor trusts, to get better deductions. See part III.B.2.d.i.(a) General Concepts of the Effect of Irrevocable Grantor Trust Treatment on Federal Income Taxation.

III.B.2.i.iv. Benefits of Beneficiary Deemed-Owned Trusts Other Than Leveraged Transactions or Estate Reduction

Some grantor trusts are created with the thought of the income tax liability reducing the grantor's estate or engaging in leveraged transactions.

However, beneficiary deemed-owned trusts can be very important in planning for the family without a taxable estate, which comprises 99.9% of the population when the estate tax exemption is over $5 million. Trusts are taxed at the highest income tax rates after reaching a relatively low taxable income threshold.[6748] Once informed of this issue, families who wish to use trusts to meet nontax objectives would like to avoid those high rates.

This part III.B.2.i Code § 678 Beneficiary Deemed-Owned Trusts describes how to make a trust a beneficiary deemed-owned trust and discusses various issues in doing so.

In addition to those tools, one might build in some simple ideas into trusts that one commonly uses, which might make the trust a beneficiary deemed-owned trust with respect to a part. For example, one might grant the beneficiary an annually exercisable 5% withdrawal right. If one is concerned about the beneficiary's creditors using this withdrawal right to obtain funds, one might appoint an independent trustee who could temporarily grant or suspend this withdrawal right. If a trust does not include a withdrawal right, consider the trustee determining that a particular amount (up to 5% if the trust) is appropriate to distribute and, instead of distributing it, makes it available to the beneficiary to draw upon.[6749]

> such results. The Tax Court was justified in considering the results achieved rather than limiting its consideration to the language of the trust agreements. In support of its conclusion, the Tax Court could properly consider the family relationship of all the parties; the parents' desire to divest themselves of their interest in the partnerships; the manner of creation and number of the trusts; that the father admittedly wanted his three sons to carry on the business; that the two elder sons did manage it; even if not tacitly admitted, the inference, at least, that the gifts of cash to each son were applied to the purchase of the partnership interest which was transferred to the trusts created for each son's benefit; and that notes given for the balance were paid from partnership profits; in short, the entire background of the transactions and business which earned the income.

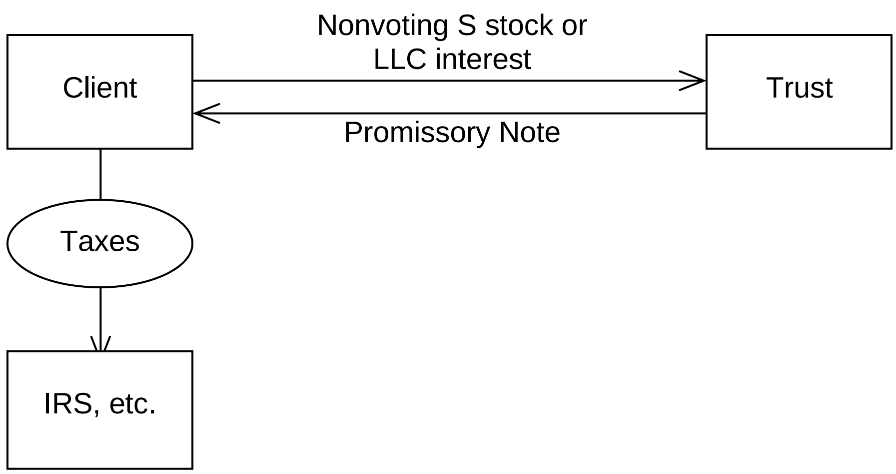
[6748] For a general discussion of trust income tax issues, see part II.J Fiduciary Income Taxation.

[6749] See part II.J.4.f Making Trust a Partial Grantor Trust as to a Beneficiary.

For more information, see parts II.I.7 Interaction of NII Tax with Fiduciary Income Tax Principles and III.B.2.i.vii Portion Owned When a Gift Over $5,000 is Made.

III.B.2.i.v. Sale to a Beneficiary Deemed-Owned Trust – When a Traditional Sale to an Irrevocable Grantor Trust Does Not Meet the Client's Objectives

A sale to a beneficiary deemed-owned trust can be a useful alternative to a traditional sale to an irrevocable grantor trust. In a typical sale to an irrevocable grantor trust, the senior family member sells an interest in a partnership or S corporation to a trust for the benefit of descendants or other family members. The sale is structured to be effective for transfer tax purposes but ignored for income tax purposes.



The sale is not subject to income tax, because for income tax purposes all the beneficiary has done is sold assets to himself or herself.[6750] Now, the business interest is outside of the estate tax system, yet the beneficiary has access to the trust's assets, so the beneficiary is more comfortable with the transfer than with selling to a traditional irrevocable grantor trust.

Furthermore, if the beneficiary has a power of appointment[6751] and the IRS asserts that the sale price was inadequate, any resulting gift is an incomplete gift[6752] and therefore is not subject to gift tax.[6753] This might be less susceptible to IRS attempts to impose gift tax than a defined value clause. For gift tax disclosure issues, see fns 7059-7061 in part III.B.4 Adequate Disclosure on Gift Tax Returns, which suggest that one might consider providing an upfront

[6750] See Rev. Rul. 85-13. See also part III.B.2.i.viii.(d) Large Gift with Subsequent Large Power to Withdraw.
[6751] That is not a general power of appointment under Code § 2041(b)(1), since the goal is avoiding inclusion in Beneficiary's estate.
[6752] Reg. § 25.2511-2(b).
[6753] In Letter Ruling 200949012, the Distribution Trustee could distribute the entire trust to Beneficiary. Thus, after an IRS audit, the incomplete gift portion could be transferred back to Beneficiary to engage in future sales to the trust.

completed gift to a portion of the trust over which the beneficiary does not have a power of appointment;[6754] for example:[6755]

> The Sale Price shall be the sum of (a) the “Estimated Fair Market Value” (defined below) of the Transferred Units, plus (b) Ninety Percent (90%) of the “Excess Value” (defined below), if any. The Excess Value shall equal the excess, if any, of the “Final Fair Market Value” (defined below) of the Transferred Units over the Estimated Fair Market Value of the Transferred Units. If the Final Fair Market Value of the Transferred Units is equal to or less than the Estimated Fair Market Value, the Excess Value shall be zero (0). The Transferred Units with a value equal to Ten Percent (10%) of the Excess Value, if any (the “Gift Units”), shall be held in a new trust that Buyer hereby creates called the _____ Gift Trust, which shall be governed by the same terms and conditions of the Trust Agreement Establishing the ____ Legacy Trust dated ____ (the “Trust Agreement”) which govern Buyer, except that [Beneficiary] shall not hold a power of appointment under Section ___ or Section ___ of the Trust Agreement. The number of the Gift Units described in the preceding sentence shall be based on the fair market value of the Gift Units as finally determined for federal gift tax purposes as of the date first written above, in accordance with the valuation principles set forth in Regulation section 25.2512-1 as promulgated by the United States Treasury under section 2512 of the Internal Revenue Code of 1986, as amended The trustee agrees that the _____ Gift Trust is a new trust that the trustee holds as nominee pursuant to Section ____ [commingling clause] of the Trust Agreement, which authorizes the trustee to make joint investments for any separate trust thereunder of which the trustee is trustee or co-trustee and to hold such joint investments as a common fund for purposes of administration, dividing the net income therefrom in the same proportions as the respective interests of such trusts herein.

Why might the client not want to do a traditional sale to an irrevocable grantor trust?

- The client is concerned about preserving income for retirement or emergencies. The client might not feel comfortable reducing his or her estate to the amount of estate tax exemption.

- The client might not want to give that amount of wealth to his or her children too soon, as doing so might destroy work ethic.

- The client might want to control where the assets pass on the client’s death.

- As an entrepreneur, the client likes to feel that he or she has a stake in the business’ success. If the assets belong to a trust for the children, the client might feel as if he or she lost this emotional investment in the business.

A sale to a beneficiary deemed-owned trust might be a palatable alternative that the client would do, rather than doing nothing.

[6754] If a bargain element is finally determined for gift tax purposes and the provisions for remaindermen become unacceptable, the independent trustee could decant the trust using that trustee’s authority for make distributions to or for the benefit of the beneficiary. To avoid estate inclusion, the independent trustee might decant the entire bargain element.

[6755] This clause may also help in a sale to an irrevocable trust the beneficiary’s spouse created for the beneficiary. See part III.B.2.i.xv Sale to Trust Created by Spouse: An Alternative Way to Have a Trust Benefitting Client.

III.B.2.i.vi. Funding the Trust with Small Gifts

III.B.2.i.vi.(a). General Concept of Funding with Small Gifts

In the BDIT structure, the trust is funded with a gift of up to $5,000, which the beneficiary has the right to withdraw. When a withdrawal right lapses, the beneficiary is deemed to have made a gift to the trust only if and to the extent the lapse exceeds the greater of $5,000 or 5% of the trust's assets (a "5&5 power").[6756] If and to the extent that a lapse exceeds a 5&5 power, and the beneficiary holds some power over the lapsed property, then a portion of the trust will be included in the beneficiary's estate, either because of strings under Code § 2036 or 2038 or because the lapse constitutes an incomplete gift. To avoid these issues, a BDIT is funded with an amount that does not exceed $5,000. The beneficiary should not hold withdrawal rights over any other trust that lapse before the lapse of the withdrawal right over the beneficiary deemed-owned trust; otherwise, the lapse might exceed the limits of a 5&5 power.

However, $5,000 is rather thin capitalization to support the trust's purchase of the beneficiary's partnership (LLC) interest or S corporation stock. Therefore, the trustee will find someone other than the beneficiary to guarantee a portion of the sale. The trustee will compensate that person for the risk by paying a guarantee fee.[6757] The guarantee fee will constitute income to the recipient but might not be deductible by the trust.[6758] If the guarantee fee is more money than the trust currently has, finding another motivation other than the guarantee fee might be advisable. For example, a trust with similar beneficiaries might guarantee a loan to a trust that benefits those beneficiaries, because the trustee would have a duty to try to get more assets to any fiduciary arrangement with the same or very similar terms. The grantor of the small trust – often the beneficiary's parent – might bequeath funds to an identical trust for the same beneficiary, which then might guarantee loans to the small trust. Or, instead of borrowing from the beneficiary to fund the sale, the trust might borrow from another trust – perhaps an irrevocable trust created by the beneficiary.

[6756] Code § 2514(e). This statement oversimplifies the rule, in that these provisions might need to be coordinated with other lapses with respect to other trusts. For more details on calculating the 5% lapse, see fn 6125 in part III.A.3.e.vi.(b) Disadvantages of QSSTs Relative to Other Beneficiary Deemed-Owned Trusts (Whether or Not a Sale Is Made).

[6757] The guarantee fee is not a tax law requirement, but it might be advisable – see part III.B.1.a.ii Loan Guarantees, especially part III.B.1.a.ii.(a) Gift Tax Issues and fn. 6269. Because the sale is a transaction between related parties, it receives a higher level of scrutiny. Thus, it is advisable to show the IRS and the courts the business motivation of each party to the transaction, including the guarantor, which a guarantee fee might do. One might consider using a formula to determine the fee –a market rate that is the greater of the rate needed to avoid a gift for gift tax purposes or the rate needed to avoid treatment as grantor under Reg. §1.671-2(e).

[6758] See, *e.g., A. A. and E. B. Jones Co. v. Commissioner*, T.C. Memo 1960-284 (approving deduction for fees for personal guarantees charged to obtain surety bonds); *Olton Feed Yard, Inc. v. U.S.*, 592 F.2d 272 (5th Cir. 1979) (guarantee fees were a nondeductible disguised dividend); *Tulia Feedlot, Inc. v U.S.*, 52 A.F.T.R.2d 83-5702, 3 Cl. Ct. 364 (1983) (approving a corporation's deduction of 3% guarantee fees paid to shareholders); *Fong v. Commissioner*, T.C. Memo 1984-402 (guarantee fees were not an ordinary and necessary business expense); *Seminole Thriftway Inc. v. U.S.*, 82 A.F.T.R.2d 98-7497, 42 Fed. Cl. 584 (1999) (guarantee fees were a nondeductible disguised dividend); *Container Corporation v. Commissioner*, 134 T.C. 122 (2010) (addressing withholding rules in international transactions; did not address deductibility). It's difficult to glean much from these cases, because generally the argument was really about disguised dividends to avoid C corporation double taxation.

Consider setting up to take advantage of business opportunities,[6759] without its only future significant activity being a sale to the beneficiary deemed-owned trust. For example, the client asks his or her parent to fund a beneficiary deemed-owned trust for one of the following situations:

- The client's business is expanding and needs another facility in which to operate. The trust forms an LLC to hold the real estate. The operating company agrees to a long-term lease with LLC. The lender might allow the LLC to be relatively thinly capitalized if it views the lease obligation to be solid. The use of beneficiary deemed-owned trusts to hold real estate and later participate in an S corporation buy-sell agreement was the subject matter of the trusts used in my Life Insurance LLC private letter ruling;[6760] Be careful to make sure that the rent paid to the LLC is not excessive, lest the IRS argue that the owners of the tenant made a gift to the owners of the LLC; and a gift to the trust that owns the LLC might change the trust's income tax posture. Alternatively, consider the beneficiary setting up the highly leveraged LLC with the lease in place and then selling it to the trust, which would avoid issues with the initial lease; although this issue might pop up when it's time to renew the lease, the trust might be very well capitalized by then (due to success during the intervening period), minimizing the risk associated with this idea.

- The client is establishing a new line of business that does not require much in the way of start-up costs. This is especially an issue if the existing business is inside of a corporation, which is not as flexible or income tax-advantageous when the business is later sold,[6761] splits up,[6762] or passes to beneficiaries.[6763]

One does not need to use a thinly funded trust to make this structure work. Here are some examples of other ways to do it:

- Instead of setting up one trust for all descendants to receive annual exclusion gifts, do one trust for each child. Don't do it with the idea of doing a sale soon – do it with the idea of building a war chest over time that eventually can be used to invest in business assets. As with any *Crummey* trust, withdrawal rights tend to accumulate in the early years and lapse as the trust's investments grow. There are drawbacks to this idea. First, a *Crummey* trust for all descendants has a larger corpus from which a 5% withdrawal right can be satisfied, so the separate trust for each child has the disadvantage of much, much slower lapses. Second, a *Crummey* trust for all descendants is a simpler vehicle for the grantor to use for planning, such as holding a policy on the grantor's life or buying assets for the grantor. Finally, the beneficiary deemed-owned trust is not a grantor trust as to the grantor, so it loses the tremendous power of depleting the grantor's estate.[6764] One might recommend

[6759] See generally part III.B.1.a Business Opportunities.
[6760] See text after footnote 4619, including the chart shown as Appendix C to that portion of these materials. I had not informed the clients of the sale to beneficiary grantor trust concept when we established the trusts – I simply told them that it would be nice for the real estate trusts to be able to hold S corporation stock for future flexibility since the operating business is an S corporation.
[6761] See part II.Q.1.a Contrasting Ordinary Income and Capital Gain Scenarios on Value in Excess of Basis.
[6762] See part II.Q.7.f Corporate Division.
[6763] See part II.H.2 Basis Step-Up Issues.
[6764] See n. 6722 for why a beneficiary grantor trust should not be structured as deemed owned by the settlor at any time. Presumably, this problem could be cured if, after the settlor's grantor trust powers are turned off, the beneficiary is given the right to withdraw the entire trust, but I am unaware of any rulings on point.

that a client use some of each strategy. For example, the parent contributes $5,000 per year to a separate trust for each child and uses the balance of his or her annual exclusion for children and grandchildren for a gift to a trust for all descendants. The $5,000 gift should be done as early as possible in the year, so that other lapses during the year do not eat into the $5,000 amount.

- Perhaps the client with the business interests has parents who don't feel that they can afford to give the client money because they need it for their own retirement. They can create a BDIT now and then bequeath the child's share to an otherwise identical trust (a companion trust) that would later guarantee loans to the BDIT. Also, if the client is using up all of the client's lifetime gift/estate tax and GST exemptions, consider that the client might later want to create a trust that has different terms but would lack the exemptions; if the client's parent establishes a BDIT for the client, the client can enter into transactions with the BDIT with the support of the companion trust or perhaps with loans from one or more irrevocable trusts created by the client.

- If the client has children who already have substantial estates of their own, consider setting up a BDIT for each child and a companion trust with the same idea as the preceding bullet point.

III.B.2.i.vi.(b). Contingency Plan for Trust Funded with Small Gifts

What if a transaction that the trust directly or indirectly enters into winds up being recharacterized as a bargain sale or similar transaction? Especially given the trust's initial small trust funding, this indirect gift might be very significant and might change the trust's income tax characteristics.

Consider providing that, after the initial funding, any future direct or indirect gift will be accounted for as a separate share, which share the beneficiary may withdraw at any time. For this share, one might then use the planning described in part III.B.2.i.viii Funding the Trust with a Large Initial Gift or Bequest. For example, the portion of the withdrawal right of the separate share that annually lapsed might be added back to the main trust, using the principles of Letter Ruling 9009010.[6765]

III.B.2.i.vii. Portion Owned When a Gift Over $5,000 is Made

III.B.2.i.vii.(a). Determining Portion Owned When a Withdrawal Right Does Not Lapse in Full Before Any Income Is Earned

Before delving into the details below, see part III.B.2.d.i.(b) Portions of Irrevocable Grantor Trust Deemed Owned for Federal Income Taxation. As a withdrawal right over the trust's gross income, see the sample clause in the text accompanying fn 2628 in part II.J.4.f Making Trust a

---

[6765] Letter Ruling 9009010 is described in depth in part III.B.2.i.viii.(b) Large Gift for Multiple Beneficiaries. The strategy proposed here is different from the Letter Ruling's facts, but the principle is similar. A disadvantage of the idea of moving the lapsed portion from the separate share to the main trust is that the amount out of which the withdrawal right could be satisfied might be considered smaller, resulting in smaller annual lapses.

Partial Grantor Trust as to a Beneficiary, but the clause that is drafted actually makes the trust a grantor trust over all of the withdrawable gross income.

Reg. § 1.671-3(a)(3) provides:[6766]

> If the portion of a trust treated as owned by a grantor or another person consists of an undivided fractional interest in the trust, or of an interest represented by a dollar amount, a pro rata share of each item of income, deduction, and credit is normally allocated to the portion. Thus, where the portion owned consists of an interest in or a right to an amount of corpus only, a fraction of each item (including items allocated to corpus, such as capital gains) is attributed to the portion. The numerator of this fraction is the amount which is subject to the control of the grantor or other person and the denominator is normally the fair market value of the trust corpus at the beginning of the taxable year in question. The share not treated as owned by the grantor or other person is [taxed ignoring the grantor trust rules].

Concern has been expressed about calculating this fraction in the example above. If this regulation were interpreted narrowly in cases when the withdrawal right extends over a particular dollar amount rather than a fractional share determined with reference to the gift creating the withdrawal right, then when calculating the fraction above one would mechanically calculate a lower portion owned by the beneficiary each year.

Let's apply this concern to the example in part III.B.2.i.viii.(a) Large Gift for One Beneficiary. After seven years, withdrawal rights are only $650K, with a trust value of $1.4M, so that only 46% ($650K divided by $1.4M) is deemed owned by the beneficiary. Thus, the second sale to the trust could generate substantial income tax.

This approach does not give the beneficiary credit for the fruits of the portion deemed owned by the beneficiary. Logically, when the trust is created, the beneficiary owns 100%. All income earned in the first year would be taxable to the beneficiary. However, those who would narrowly construe this Regulation would compute the fraction the next year ignoring the fact that, by allowing the income to be reinvested, the beneficiary has, in effect, contributed this deemed income to the trust. With that view, they certainly would not view any unrealized gains or other gain in equity as contributed by the beneficiary, either.

The IRS has issued numerous letter rulings without expressing this view.[6767] Thus, I would feel confident in submitting a ruling request (if available). Nevertheless, if one does not obtain his or

[6766] Letter Ruling 5809125370A elaborated on this:

> Where the portion of a trust owned by a grantor consists of an interest in or a right to an amount of corpus only, a fraction of each item of income is attributed to the portion. The numerator of this fraction is the amount which is subject to the control of the grantor and the denominator is normally the value of the trust corpus at the beginning of the taxable year in question. See section 1.671-3(a)(3) of the regulations. Accordingly, you would be taxed also on the fraction of each item of ordinary income of the trust attributable to the portion of trust corpus which ... you would be treated as owning.

[6767] The following Letter Rulings held that a trust was eligible to hold stock in an S corporation because the beneficiary who had withdrawal rights was deemed to own all of the trust when the withdrawal rights applied to all gifts to the trust and the power lapsed in full, rather than hanging and lapsing over time: Letter Rulings 200147044, 200011058, 200011054, 200011055, 200011056, 199942037, 199935046, 199935047, 9812006, 9810006, 9810007, 9810008, 9810004, 9810006, 9809005, 9809006, 9809007, her own private letter ruling, one risks the IRS changing its approach, so one might consider an alternative approach.

If one is concerned about the IRS suddenly taking a narrow view of Reg. § 1.671-3(a)(3), one might design a trust with respect to which the beneficiary can withdraw all of the trust's assets - not just an amount equal to the initial gift. The withdrawal right lapses each year to the extent of 5&5.

What does one do with the lapsed portion? Perhaps one might require the trustee to transfer it to a separate trust, somewhat along the lines of the single trust in Letter Ruling 9009010, described in part III.B.2.i.viii.(b) Large Gift for Multiple Beneficiaries. That separate trust invests in any new business opportunity or buys business interests from the beneficiary. That way, none of these leveraged uses of the lapsed amounts are included in the beneficiary's estate.

9809008, 9745010, 9739026, 9625031, 9535047, 9504024, 9448018, 9320018, 9226037, 9140047 (included passing reference to, but no analysis of, Reg. § 1.671-3), 9009010, 8936031, 8827023 (included passing reference to, but no analysis of, Reg. § 1.671-3), 8805032 (included passing reference to, but no analysis of, Reg. § 1.671-3), 8701007 (included passing reference to, but no analysis of, Reg. § 1.671-3), 8809043 (included passing reference to, but no analysis of, Reg. § 1.671-3), 8613054 (included passing reference to, but no analysis of, Reg. § 1.671-3), 8521060, and 8342088 (included passing reference to, but no analysis of, Reg. § 1.671-3). A typical ruling in the late 1990s or later held:

> Because contributions to Trust will be subject to D's withdrawal power, D will be treated as having a power to vest each corpus contribution in D within the meaning of section 678(a)(1). For purposes of sections 678(a)(2) and 677(a), if D fails to exercise the withdrawal power, D will be treated as having released the power while retaining a right to have all trust income distributed to D or accumulated for later distribution. Therefore D will be treated as the owner of Trust under section 678(a).

However, Letter Ruling 9311021 included hanging powers. Without citing Reg § 1.671-3(a)(3) or mentioning any issues along those lines, the IRS ruled:

> The primary beneficiary is treated as the owner of that portion of the trust in which his withdraw right has not yet lapsed under section 678(a)(1) of the Code, because of his ability to withdraw any additions to the trust. in addition, upon the lapse of the withdrawal power the primary beneficiary still has a section 675(4)(C) power over the trust property because he may, at his option, exercisable in a non-fiduciary capacity, acquire all or any part of the property of the trust by exchanging for it property of equal value. Thus, under section 678(a)(2), the primary beneficiary is also treated as the owner of the trust property for which his withdrawal power has lapsed.

See part III.B.2.h.iii Swap Power.

Similarly, Letter Ruling 201216034 ignored this issue with the following:

> Under the Trust instrument of Trust, Grantor may contribute, at any time and from time to time, to the principal of the Trust corpus. Primary Beneficiary has the power, following any such contribution to Trust by Grantor during Grantor's life, to withdraw the entire value of the contribution. Primary Beneficiary's power of withdrawal is cumulative. On D2 of each year, the total amount Primary Beneficiary may withdraw with respect to all preceding calendar years is reduced by the amount of $5,000.00, or 5 percent of the value of the Trust principal on D2 of that year, whichever is the greater amount and to that extent Primary Beneficiary's power of withdrawal shall lapse.

Perhaps contrary to the above rulings are Letter Rulings 7943152 and 7943153. The surviving spouse had an unlimited withdrawal right in a marital trust. Her release prevented her from being taxed on the trust's corpus - because she no longer had any interest in the trust's principal, her release was a **complete** release, not **a partial release or modification**. This can be distinguished from the rulings above in that those rulings still included a power to distribute principal for the beneficiary after the lapse. For other Letter Rulings, see fn 6727 in part III.B.2.i.ii Building Up Trust.

Suppose only a single small gift funds the trust, and that gift lapses shortly after the gift. To be safe, make sure that the amount that the beneficiary can withdraw is the full amount of the gift, including any increases in the trust's value between date of gift and date of lapse. For example:

1. Don't deposit the gift into an interest-bearing account.

2. Don't enter into any transactions with the trust between the date of funding and the date of the lapse. (Usually one wants to wait anyway to reduce the chance of a step-transaction argument.)

I have similar concerns over a so-called BDOT, which is an abbreviation for beneficiary deemed-owned grantor trusts. That abbreviation would appropriately apply to all trusts in this part III.B.2.i Code § 678 Beneficiary Deemed-Owned Trusts, but instead it's use colloquially to apply to a trust (the "BDOT"), all of the taxable items of income of which may be withdrawn by another trust. The first paragraph in this part III.B.2.i.vii.(a) describes how to draft such a withdrawal right. Code § 678(a)(1) would apply to make the beneficiary trust the deemed owner of the BDOT regarding those items that could have been withdrawn. Consider, however how Code § 678(a)(2) might apply under the portion rules described above regarding any income earning after the withdrawal right lapses (if the withdrawal right is not renewed). Also consider any gift, estate, and GST consequences of the lapse of the beneficiary trust's right to withdraw from the BDOT.

III.B.2.i.vii.(b). Determining Portion Owned When Trust Is Only a Partial Grantor Trust

For each year a beneficiary fails to exercise a withdrawal right, the beneficiary will be treated as the owner of an increasing portion of the corpus of the trust. The annual increase of the portion of the corpus of the trust that the beneficiary will be treated as the owner is the product of the amount which the beneficiary could withdraw multiplied by a fraction, the numerator of which is the portion of the trust corpus that he is not already treated as owning, and the denominator of which is the total trust corpus from which the withdrawal could be made.[6768]

Letter Ruling 9220012 involved the following facts:

> The taxpayers have represented that on x, M and F, as trustors, executed the documents creating the Trusts (Trusts A, B, C, D, and E) which are the subject of this ruling. Each instrument created an irrevocable Trust for the benefit of one of the children of M and F. One of the children, A, was to serve as trustee of each Trust. The Trusts were created and are administered under the law of State S. State S has adopted the Uniform Principal and Income Act. The Trusts were substantially similar in their dispositive provisions.
>
> Each Trust called for current distributions (not less frequently than quarterly) of the net income of each Trust to its beneficiary. Upon the death of the current income beneficiary, the remaining corpus was to be divided into separate trusts for each of the beneficiary's living lawful descendants. If the beneficiary died without issue or the last of his descendants died, then any remaining portion of trust property was to be divided into equal shares among the surviving children of the grantors and held in separate trusts for each. Should none of the grantors' children be living at that time, then the property was

[6768] Letter Rulings 9034004, 200022035, 200104005.

to be distributed in accordance with a general power of appointment exercisable by the last surviving child or the last surviving lawful descendant of the named beneficiary.

The named beneficiary of each respective Trust had the right to withdraw any or all corpus from each Trust after they reached the age of forty (40). There was a restriction on the right of the beneficiary to withdraw corpus which consisted of property related to X (the "X property"). The Trusts also provided that the trustee could make discretionary distributions of corpus to the beneficiaries if the trustee deemed the net income to be insufficient for the property support, maintenance, education, health and recreation of the beneficiary entitled to receive income from that particular Trust.

A resigned as trustee during y. The grantors and beneficiaries agreed to name Y as trustee, and Y accepted the appointment. y is an independent trustee, unrelated to the grantors. Soon thereafter the Trusts sold certain securities at a loss resulting in short term capital losses which the Trusts carried forward. When A and B turned 40, they claimed the losses on their personal returns.

In Z, each named beneficiary of a child's Trust executed a Petition for Instructions to Trustee asking the appropriate court to instruct the trustee to enter into an agreement to modify the Trusts to eliminate the beneficiaries' powers to invade the corpus. A and B had reached the age of forty by the time of the petitions but had not withdrawn any assets from their respective Trusts. C, D, and E had not yet reached the age of 40. On XX, the court granted the petition. On yy, the grantors and the trustee entered into an agreement modifying each Trust.

Letter Ruling 9220012 reasoned and ruled:

(1) The modification of the Trusts will not affect the manner in which the income, gain, loss, deduction, and credits of the Trusts whose beneficiaries had not yet turned forty at the time of the modification (Trusts C, D, and E) are to be reported by those Trusts and their beneficiaries. Those beneficiaries who had not yet reached the age of 40 at the time of the modification of the Trusts to remove the power of withdrawal (C, D, and E) never held such a power and therefore cannot be treated as owners of any part of their respective Trusts under section 678 of the Code.

(2) The beneficiaries (A and B) who had turned forty prior to the modification of the Trusts (Trusts A and B) have partially released a power to vest corpus in themselves within the meaning of section 678(a) while retaining a right to the income of their Trusts. Thus, under sections 678(a) and 677 those beneficiaries are to be treated as owners of both the corpus portion and the income portion of their Trusts during the period they possessed their power to withdraw corpus and right to income and as owners of only the ordinary income portion after the release of the power over corpus. Capital gains and losses allocable to corpus under the Uniform Principal and Income Act are to be reported by beneficiaries during the period when they held the power over corpus. After the release of the power over corpus, capital gains and losses allocable to corpus under the Uniform Principal and Income Act are to be reported by the Trust unless paid, credited, or required to be distributed to the beneficiaries as defined under section 643 of the Code and the regulations thereunder. We express no opinion concerning whether or not A and B ever had a section 678(a)(1) withdrawal power with respect to the X property.

(3) Subsequent to the modifications of the Trusts, the capital gains and losses of Trusts C, D, and E will continue to be reported by the Trust in accordance with sections 641 and 643 and the law of State S.

To the extent they remain available, the short-term capital losses of Trusts A and B, which became items of deduction under section 671 reportable on the beneficiaries' returns when they turned forty, may be used by A and B to offset their capital gains, including capital gains actually distributed by Trusts A and B.

III.B.2.i.vii.(c). Reporting Portion Owned When Only a Partial Grantor Trust

The partial owner is treated as owning those items of income, deduction, and credit against tax attributable to or included in that portion. These items are shown on a separate statement to be attached to IRS Form 1041. The portions of trust corpus considered so owned are not subject to the provisions of Code §§ 661(a)(2) and 662(a)(2) when distributed to the deemed owner.[6769]

III.B.2.i.viii. Funding the Trust with a Large Initial Gift or Bequest

Below are two examples of way to make large gifts. In either case, consider having any lapsed withdrawal right transferred to a separate trust deemed owned 100% by the beneficiary before it acquires any S corporation stock.

An alternative to these methods is part III.B.2.i.xiv QSST as an Alternative Form of Beneficiary Deemed-Owned trust.

III.B.2.i.viii.(a). Large Gift for One Beneficiary

Suppose the settlor gives or bequeaths $1M to a beneficiary deemed-owned trust, allocates GST exemption to the gift or bequest, and provides that the beneficiary can withdraw the entire amount of the initial gift. Each year, 5% of the withdrawal rights lapse, subject to coordination with other trusts with respect to which the beneficiary has withdrawal rights.[6770]

With $1M funding, many more investment opportunities are available than with $5K initial funding, and the trust would be useful and significant, even if no sale ever occurred.

Let's ignore investment return for a moment and suppose two years pass. Each year, $50K (5% of $1M) has lapsed, so that a total of $100K of withdrawal rights have lapsed ($50K times two). The trust's assets consist of $900K, over which the beneficiary has withdrawal rights, and $100K, over which the beneficiary does not have a withdrawal right.

[6769] Rev. Rul. 67-241; for the grantor trust effect, see parts III.B.2.i.ii Building Up Trust, especially fn. 6727, and III.B.2.i.iii Can a Trust Without a Withdrawal Right Be a Code § 678 Trust?, especially fn. 6737

[6770] For example, The total amount that may be withdrawn by the Primary Beneficiary under this Section after December 31 of a calendar year with respect to Transfers that occurred at any time (including in a prior year) before December of such calendar year shall be reduced by the maximum amount that the Primary Beneficiary could fail to withdraw on such date without such failure constituting a release of a general power of appointment under Code section 2514. This provides a lapse of 31 days and makes sure that other lapses that occur during the year are taken into account, without ruining what the other trusts were trying to accomplish.

The beneficiary then sells $400K of nonvoting S corporation stock to the trust, in exchange for a promissory note of $400K. My target would be 20% equity in the deal, calculated by dividing $100K unlapsed withdrawal rights by $500K assets ($100K unlapsed withdrawal rights plus $400K nonvoting S corporation stock) subject to the deal. I did not count the assets subject to withdrawal rights as part of the deal, because they are reserved for any future exercise of the beneficiary's withdrawal rights. The trust uses the S corporation's earnings and earnings on the trust's other investments to repay the note over the next five years.[6771]

So, after seven years, the withdrawal right has lapsed at least $50K per year, for a total lapse in excess of $350K.[6772] The trust now consists of $650K of the original gift over which the beneficiary has withdrawal rights, $350K of the original gift in which the beneficiary no longer has withdrawal rights, and $400K of nonvoting S corporation stock.[6773]

With $750K of equity ($350K original gift in which the beneficiary no longer has withdrawal rights plus $400K of nonvoting S corporation stock), the beneficiary sells another $3M of nonvoting S corporation stock, using the same ideas as the first sale.

Let's further suppose that the second note is repaid in another five years:

- Lapses have occurred at a rate of $70K per year,[6774] for a total lapse of $350K during this five-year period. Add that to $350K of prior lapses, and total lapses equal $700K.

- The trust is now worth $4.4M, which consists of $300K ($1M minus $700K of lapses) of the original gift over which the beneficiary has withdrawal rights, $700K of the original gift in which the beneficiary no longer has withdrawal rights, and $3.4M of nonvoting S corporation stock.

- Note that future lapses will be at the rate of $220K per year.[6775] Thus, in two more years, the $300K remaining withdrawal rights will be gone.

Thus, after 14 years, all of the withdrawal rights have lapsed, and the trust has a net worth of $4.4M.

Future leveraged sales can be done, each time increasing the trust's equity significantly, just like traditional sales to irrevocable grantor trusts, but the beneficiary has access to the assets he or she sold to the trust.

[6771] I would tend to use a note with annual payments of only interest required, with principal payable in just under nine years to allow use of the mid-term applicable federal rate. The trust would prepay the note as investment earnings become available. Five years is just a realistic assumption; the actual time might vary significant. However, based on traditional valuation principles, it should easily be repaid within nine years.

[6772] For simplicity sake, this example ignores lapses to the extent of 5% of the increasing equity in the stock (through growth and principal repayments of the note) and any investment earnings.

[6773] Assuming no change in the stock's value.

[6774] $1M initial gift plus $400K nonvoting stock equals $1.4M. 5% of $1.4M is $70K. Again, this example ignores lapses to the extent of 5% of the increasing equity in the stock (through growth and principal repayments of the note) and any investment earnings.

[6775] $1M original gift plus $3.4M nonvoting stock equals $4.4M. 5% of $4.4M is $220K. Again, this example ignores lapses to the extent of 5% of the increasing equity in the stock (through growth and principal repayments of the note) and any investment earnings.

This approach is slower than the traditional sale to a BDIT, but it has more substance and does not rely on finding a third party guarantor to whom to pay possibly nondeductible guarantee fees.

III.B.2.i.viii.(b). Large Gift for Multiple Beneficiaries

Letter Ruling 9009010 is an example of using one large trust to fund gifts to many beneficiaries:

- The grantor established seven trusts (trusts A-H), each for the primary benefit of a different child), each of which was funded by two annual gifts of less than $5K with respect to which the primary beneficiary had a withdrawal right that lapsed on December 31 of the year in which the gift was made. The IRS ruled that the primary beneficiary was deemed the owner of the entire trust.[6776]

- Later, the grantor established a single trust (Trust Q), with a gift of under $20K per beneficiary, with each beneficiary having a pro-rata withdrawal right. When the withdrawal rights lapsed in 20 days, the trustee was required to distribute the shares attributable to a beneficiary's separate trust (one of trusts A-H). The IRS ruled that each of the original trusts retained its character as being deemed owned solely by its primary beneficiary. Transferring the lapsed portion to the separate trust should help avoid confusion over which part of the trust the beneficiary owns.[6777]

- These gifts were of S corporation stock. In ruling that the beneficiaries were deemed to own all trust Q's assets,[6778] the IRS did not mention the fact that each grantor trust holding S corporation stock must have a sole owner.[6779] I would not risk transferring S corporation stock to such a trust, absent a ruling that each beneficiary had a separate share,[6780] unless an electing small business trust election were in place.[6781]

III.B.2.i.viii.(c). Comparison

Having a combined trust that then divides as in Letter Ruling 9009010 can provide a bigger pot that will create greater lapses. On the other hand, if only one beneficiary is to receive a trust in this arrangement, then this splitting-off of the withdrawal right can be detrimental. Any lapses in the trust that received the initial gift will be limited to what remains in that trust; the lapse would not consider the assets of the recipient trust. In the example above with one large trust in which only one beneficiary had withdrawal rights, I posited that the last two years of lapses would be $220K each because the trust had $4.4M equity; if we had split-off the withdrawal portion and sold the nonvoting stock to a recipient trust, none of the recipient trust's assets would be considered in calculating the lapse, and the lapse would have been $50K or less (5% of $1M, increased by investment earnings but depleted by assets transferred to the recipient trust).

[6779] Code § 1361(c)(2)(A)(i).
[6780] See fns. 5856-5857 in part III.A.3.a.i Qualifying as a Wholly Owned Grantor Trust.
[6781] See part III.A.3.a.iii Steps an S Corporation Might Take to Avoid a Trust Falling Short of Being a Wholly-Owned Grantor Trust.

III.B.2.i.viii.(d). Large Gift with Subsequent Large Power to Withdraw

In Letter Ruling 202022002,[6782] the beneficiary had the right to withdraw all assets but did not have the right to withdraw a certain LLC that the trust owned.[6783] However, the beneficiary had the right to withdraw proceeds from the sale of the LLC.

After citing Rev. Rul. 85-13, the IRS ruled that the trust's sale of the LLC to the beneficiary would not be recognized for federal income tax purposes.[6784]

III.B.2.i.ix. Creditor and Gift/Estate Tax Issues Regarding Withdrawal Rights, Whether Currently Exercisable or Lapsed

When a beneficiary holds a withdrawal right, in many states the beneficiary's creditors can force that beneficiary to exercise the withdrawal right.[6785] If all of the withdrawal rights lapse within a

---

[6782] Obtained by ACTEC Fellow Jonathan Rikoon.

[6783] The facts were:

> According to the representations submitted, Grantors created Trust 1, an irrevocable trust for the benefit of Grantors' children and grandchildren. Grantors transferred Shares to Trust 1. Pursuant to the Trust 1 indenture dated Date 1, Trust 1 was divided into separate trusts for each of Grantors' children and grandchildren.
>
> The Trust 1 indenture prohibits a distribution of the Shares, but allows for distribution of the proceeds from the sale of the Shares. On Date 2, Trust 1 contributed all of its Shares to LLC, a newly formed entity classified as a partnership for federal tax purposes, in exchange for membership interests in LLC. Trust 1 represents that the same restriction placed on the distribution of Shares also restricts the distribution of the LLC interests. Effective Date 3, Trust 1 transferred a portion of its LLC interests to Subtrust LLC's assets include cash and the Shares. A is the sole beneficiary of Subtrust.
>
> Trust 1 represents that A has the authority to withdraw all of Subtrust's assets when A reaches age 40 except the LLC interests. Pursuant to her withdrawal right, on Date 4, A withdrew all of Subtrust's assets except the LLC interests.
>
> On Date 5, the trustees of Subtrust agreed to sell a portion of the LLC interests held in Subtrust to Trust 2 in exchange for \$a cash and a \$b promissory note. Trust 1 represents that Trust 2 is a grantor trust with respect to A under subpart E of part I of subchapter J of the Code. Trust 1 further represents that A has the authority to withdraw the cash and promissory note from Subtrust after the proposed sale.

[6784] The IRS concluded:

> Based solely on the facts submitted and representations made, we conclude that because A has a power exercisable by herself to vest the proceeds from the sale of Subtrust's LLC interests in herself and that those proceeds are Subtrust's only asset, A will be treated as the owner of Subtrust under § 678. Consequently, the transfer of the LLC interests to Trust 2 is not recognized as a sale for federal income tax purposes because Trust 2 and Subtrust are both wholly owned by A.
>
> Except as specifically set forth above, no opinion is expressed or implied concerning the federal tax consequences of the transaction described above under any other provision of the Code. Specifically, this ruling is conditioned upon Trust 2 being a grantor trust as to A and A having the authority to withdraw the promissory note from Subtrust. If these facts are not as represented by Trust 1, then this ruling is null and void.

[6785] See, *e.g.*, Uniform Trust Code § 505(b)(1) and Uniform Powers of Appointment Act § 502(a)(1), which are RSMo §§ 456.505.6(1) and 456.985.2(6). However, some states do not subject the beneficiary's withdrawal right to creditors. See, *e.g.*, 12 Del. C. § 3536(d)(2) (Delaware); NRS § 163.417.1(a) (Nevada) (in addition, it has been suggested that NRS §§ 163.4157 and 21.090(1)(cc)(3) exempt withdrawal rights from execution, because withdrawal rights are powers of appointment), North Carolina General Statutes § 36c-5-505(b)(1).

short amount of time after they are created, this should not be a significant problem, since the duration of exposure is small. So, a gift that is solely within the 5-and-5 power is not very concerning. If, however, a trust is funded with a large gift or bequest that lapses only gradually over time, then more is put at risk to the beneficiary's creditors and estate tax inclusion. Also, an allocation of the grantor's GST exemption might turn out to be wasted to a certain extent.

From an estate tax viewpoint, a withdrawal right is itself a general power of appointment that is includible in the beneficiary's estate, whether or not it is subject to the beneficiary's creditors.[6786] This is not troublesome while the withdrawal right is exercisable, because we expect that result. However, as described below, the beneficiary's creditors might be able to reach part or all of the trust's assets after a lapse, in which case the beneficiary's interest in that portion of the trust's assets are included in the beneficiary's estate, making the beneficiary deemed-owned trust strategy not work.

If the trust has a typical spendthrift clause in it, one might think that the beneficiary's creditors cannot reach the trust's assets. However, the spendthrift clause will not be valid if and to the extent the beneficiary is considered to be the settlor of the trust and either applicable state law does not respect self-settled spendthrift trusts or the trust does not comply with any limitations applicable state law places upon self-settled spendthrift trusts. Would state creditor law consider a beneficiary whose withdrawal rights lapsed to have, in substance, made a gift to the trust, so that it becomes a self-settled trust for creditor protection purposes?

The drafters of the Uniform Trust Code ("UTC")[6787] recognized and fixed this issue by providing that that, "upon the lapse, release, or waiver of the power, the holder is treated as the settlor of the trust only to the extent the value of the property affected by the lapse, release, or waiver exceeds the greater of the amount specified in Section 2041(b)(2) or 2514(e) of the Internal Revenue Code of 1986, or Section 2503(b) of the Internal Revenue Code of 1986…."[6788] Section 503(b) of the Uniform Powers of Appointment Act follows the UTC's lead.[6789]

Thus, any state that has adopted UTC § 505(b)(2) or a similar statute or has case law along those lines should be a safe jurisdiction (regarding protecting the beneficiary's interest from creditors) for a beneficiary deemed-owned trust. These states include Alabama, Alaska, Arizona, Arkansas, Colorado, Delaware, D.C., Florida, Idaho, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maryland, 6790, Missouri, Nebraska, Nevada, New Hampshire, New Jersey, North Carolina, Ohio, Oregon, Pennsylvania, Tennessee, Texas, Utah, Vermont, Virginia, Washington and Wisconsin.[6790] This is just a partial listing received from a list-serve

[6790] See, e.g., **Alabama** Code § 19-3B-505(c)(2) (follows UTC); ARS § 14-10505(B)(2) (**Arizona** - protection applies to lapsed withdrawal rights, without any limitations whatsoever); [ULA cites **Arkansas** as having no variation in this language]; **D.C.** Code § 19-1305.05(b)(2) (protection applies to lapses to the extent of the greater of annual exclusion or 5&5); **Florida** Statutes section 736.0505(2) (protection applies to the greater of 5&5 or the annual exclusion (double if the donor is married)); 12 Del. C. § 3536(c)(1) (**Delaware** - protection applies to lapsed annual exclusion gift, even if above 5&5); **Idaho** Statutes § 15-7-502(5)(b) (protection applies to the greater of 5&5 or the annual exclusion and in certain other situations); 760 ILCS 5/16.2 (**Illinois** - protection applies to lapsed annual exclusion gift, even if above 5&5); KSA § 58a-505(b)(2) (**Kansas** - protection applies to lapsed annual exclusion gift, even if above 5&5);

KRS § 386B.5-040(2)(b) (**Kentucky** protection applies without regard to the lapse's size); **Louisiana** Revised Statutes Title 9, Section 2004(2) (protecting any lapsed withdrawal right, without limit); **Maryland** Trust Code §§ 14.5-103(p) (defining power of withdrawal to be the greater of 5&5 or the annual exclusion – the latter doubled if the donor is married), 14.502 (a)(2), (e)(2), and 14.5-508(b); MCL § 700.7506 (**Michigan** – protection provided without limit); RSMo § 456.5-505.6 (**Missouri** - protection applies to lapses to the extent of the greater of annual exclusion or 5&5); [ULA reproduces **Nebraska** language referring to the greater of amounts in Code § 2041(b)(2), 2514(e) or 2503(b)]; NRS § 163.5559 (**Nevada** - protection applies to lapsed annual exclusion gift, even if above 5&5); [ULA cites **New Hampshire** as having no variation in this language]; NJS.3B:31-39.b(2) (effective 180 days after 1/19/2016) (**New Jersey** - protection applies to lapses to the extent of the greater of annual exclusion or 5&5); **North Carolina General Statutes** § 36c-5-505(b)(2) (protection provided even in excess of 5&5); **Ohio** Trust Code § 5805.06(B)(2) (protection applies to lapsed annual exclusion gift, even if above 5&5); [ULA reproduces **Oregon** language referring to the greater of amounts in Code § 2041(b)(2), 2514(e) or 2503(b)]; 20 **Pa.** C.S.A. §§ 7703 (defining withdraw power of withdrawal as excess over the greater of amounts in Code § 2041(b)(2), 2503(b) or 2514(e); presumably may in definition is same as shall), 7748 (power of withdrawal reachable by creditor whether or not lapsed; potentially problematic for hanging withdrawal rights above the annual exclusion that lapse within 5&5); **Tenn.** Code § 35-15-505(b) (protection applies to lapsed annual exclusion gift, even if above 5&5); **Texas** Property Code section 112.035(e); [ULA seems to cite **Utah** and **Vermont** as having no variation in this language]; **Va.** Code § 64.2-747(B) (protection applies to the greater of 5&5 or the annual exclusion (double if the donor is married)); RCW § 11.95.160 (**Washington** lapse protected without limits); **Wisconsin** statutes section 701.06(6)(b) (protection applies to lapsed annual exclusion gift, even if above 5&5). Some states apply double the annual exclusion amount if the donor is married at the time of the gift.

One Alaska lawyer stated to me that **Alaska** law infers that the lapse does not deem the beneficiary to be a settlor. The lawyer pointed to AS 34.40.115, which allows a beneficiary to hold an inter vivos (or testamentary) general power of appointment exercisable to the beneficiary, without the creditor being able to execute on an unexercised power.

University National Bank v. Rhoadarmer, 827 P.2d 561 (**Colo.** App. 1991), *cert. den.* (3/3/1992), prevented a creditor from requiring the current exercise of an annual 5&5 withdrawal right and from attaching trust property with respect to which the withdrawal power had lapsed.

Irwin Union Bank & Trust Co. v. Long, 312 N.E.2d 908 (**Ind.** App. 1st Dist. 1974) protected a lapsed gift, but its holding did not provide protection when the beneficiary had an ongoing withdrawal right over the entire trust, *Lincoln Nat. Bank and Trust Co. v. Figel*, 427 N.E.2d 5 (Ind. App. 4th Dist. 1981).

In New York, EPTL sections 10-7.1 and 10-7.2 provide that creditors can reach a general but not a limited inter vivos power of appointment; see *EM Ltd. v. Republic of Argentina*, regarding self-spendthrift trusts (citing *Vanderbilt Credit Corp. v. Chase Manhattan Bank, NA*, 100 A.D.2d 544, 546 (2d Dep't 1984); *Vanderbilt* has been suggested to me as commentators' favored reading of New York law).

Section 5205(c)(1) of the New York Civil Practice Law and Rules authorizes spendthrift protection for beneficiaries if the trust was not created by and has not proceeded from the beneficiary. Whether a lapse of a general power of appointment makes the trust created by or proceeded from the beneficiary is an issue that does not appear to have been addressed.

The California Probate Code subjects an unlimited withdrawal right to the claims of the holder's creditors. Probate Code §§ 611(a)(generally referring to a withdrawal right as a general power of appointment), 682(a). If and to the extent that the withdrawal right lapses upon the holder's death, it is subject to the creditors of the holder's estate. Probate Code § 682(b). California's statutes do not appear to address the effect of a lapse during life. If and to the extent that the lapse made the beneficiary treated as the settlor, the beneficiary's creditors of the settlor may reach the maximum amount that the trustee could pay to or for the benefit of the beneficiary, not exceeding the amount of the beneficiary's deemed proportionate contribution to the trust. Probate Code § 15304.

In his blog, professor Charles E. Rounds, Jr. made the following comment about **Massachusetts**:

> Section §505(b)(2) (or a provision comparable) is lacking in the version of the UTC that was enacted in Massachusetts. The commentary that accompanies the MUTC, specifically that accompanies Mass. Gen, Laws ch. 190B, § 505(a), confirms that the omission was intentional, but does little else: The Committee deleted subsection (b), which would have changed current

inquiry and additional citations I have come across; I have not reviewed Uniform Trust Code states not listed above and have not researched the law of any other state.[6791]

Suppose the goal is to tax the beneficiary as the owner for income tax purposes, protect the property from the beneficiary's creditors, but not worry about protecting the entire trust from being includible in the beneficiary's estate? It may be possible to use a hanging withdrawal right that is protected from the beneficiary's creditors. This is one scenario addressed in part III.B.2.i.xvi Includible Beneficiary Deemed-Owned Trusts.[6792]

If the trust's governing law and the law of the state in which the beneficiary resides do not both affirmatively protect the beneficiary's interest in the trust from the beneficiary's creditors, then one must consider whether the trust might be includible in the beneficiary's estate and determine whether other techniques might be more appropriate.

III.B.2.i.x. Letter Ruling 200949012

The ruling describes the subject trust, where the beneficiary was deemed the owner under the grantor trust rules, as follows:[6793]

> …Grantor proposes to create a trust ("Trust") for the benefit of Beneficiary. Under the terms of Trust, Beneficiary will serve as the Investment Trustee of Trust, A will serve as the Distribution Trustee of Trust and Company will serve as the Administrative Trustee of Trust (collectively, "Trustees"). A will have no beneficial interest in Trust. The Distribution Trustee will be authorized, but not required, to distribute income or corpus of Trust to Beneficiary. Beneficiary will have the power, during his lifetime, to direct the net income and/or principal of the Trust to be paid over or applied for Beneficiary's benefit, but only to the extent necessary for Beneficiary's health, education, maintenance or support. This power will not lapse.
>
> Additionally, Beneficiary will have the power to withdraw any property assigned, transferred or delivered, to the extent constituting a direct or indirect transfer for federal gift tax purposes, by Grantor to the Trustees. This power will lapse each calendar year in an amount equal to the greater of $z or y% of the value of the corpus of the Trust.
>
> Upon Beneficiary's death, all of the income and principal of Trust will be distributed either outright or in trust to such person or persons (other than Beneficiary, Grantor, their estates, their creditors and the creditors or their estates) and/or qualified charitable organizations as Beneficiary may appoint by Beneficiary's will. If Beneficiary does not

---

Massachusetts law relating to creditor rights against property subject to powers of withdrawal and with respect to lapsing [sic], released or waived powers of withdrawal. No explanation of what that current law might be and how that law might have been changed by the enactment of UTC § 505(b) is supplied.

[6791] For a complete list, see Morrow, Edwin P., "IRC Section 678 and the Beneficiary Deemed Owner Trust (BDOT)" (April 19, 2018), available at SSRN: https://ssrn.com/abstract=3165592 or http://dx.doi.org/10.2139/ssrn.3165592, particularly Ed's appendix titled, "Creditor Protection for Assets Subject to Presently Exercisable General Powers of Appointment (Including Crummey, "Five and Five" or Other Withdrawal Powers) Pre and Post Lapse in Trust."

[6792] See text accompanying fns 6820-6823.

[6793] Even though a BDIT has many of the same features that were included in this letter ruling, the lawyer who obtained the ruling stated that it was not a BDIT.

exercise this power, the Distribution Trustee shall select one or more qualified charitable organizations for the distribution of the income and principal of Trust.

Grantor is not a beneficiary under the Trust, and has no interest under the Trust. Trust provides that no income or principal of Trust may be paid or appointed for the benefit of Grantor or Grantor's spouse, or to pay premiums on insurance policies on the life of Grantor and/or Grantor's spouse. Trust further provides that neither Grantor nor Grantor's spouse may act as a Trustee of Trust and that no more than one-half of Trustees of Trust may be related or subordinate parties to Grantor, within the meaning of § 672(c).

Trust further provides that Grantor does not intend to be treated under subpart E of Part I of subchapter J as the owner of Trust. Trust further provides that neither *Grantor* nor any other "nonadverse party" as that term is defined in § 672(b) shall have the power to (1) purchase, exchange or otherwise deal with or dispose of Trust's principal or income for less than adequate consideration or (2) borrow any of Trust's principal or income without adequate interest or security.

Trust further provides that no person, other than a United States person, shall have the authority to control any substantial decision (within the meaning of § 7701(a)(30)(E) of any trust created and held under Trust. No court, other than a court *within* the United States, shall exercise primary supervision over the administration of any trust created and held under Trust. Grantor and Beneficiary represent that Trust will be a domestic trust within the meaning of § 301.7701-7 of the Procedure and Administration Regulations.

The IRS ruled that Beneficiary, not Grantor, would be treated as owning the trust for income tax purposes.

Some of the trust's key features are noteworthy:

1. Beneficiary had the right to withdraw whatever Beneficiary decided (s)he needed for living expenses. Beneficiary's right to withdraw the entire initial gift to the trust had partially lapsed into a right to withdraw for living expenses.[6794]

2. The Distribution Trustee could distribute part or all of the trust to Beneficiary. This might also facilitate decanting (distributing to a new trust created by the trustee) if administrative provisions need to be changed in the future.[6795]

3. The references at the end to various foreign trust provisions are to avoid the grantor trust treatment that would have been imposed on Grantor if the trust had been a foreign trust.[6796]

The state's spendthrift statute:

prevents a creditor existing when the trust is created or a person who subsequently becomes a creditor, from satisfying a claim out of the beneficiary's interest in the trust unless, (1) the trust provides that the settlor may revoke or terminate all or part of the trust without the consent of a person who has a substantial beneficial interest in the trust

[6794] This feature is more fully discussed in III.B.2.i.xii Dealing with Code § 678(a)(2) Uncertainty.
[6795] See part II.J.18 Trust Divisions, Mergers, and Commutations; Decanting.
[6796] Code § 679.

> and the interest would be adversely affected by the exercise of the power held by the settlor to revoke or terminate all or part of the trust; (2) the settlor intends to defraud a creditor by transferring the assets to the trust; (3) the settlor is currently in default of a child support obligation by more than 30 days; or (4) the trust requires that all or a part of the trust's income or principal, or both, must be distributed to the settlor.

The IRS ruled that the gift was a completed gift and that the trust would not be included in the settlor's estate for estate tax purposes. However, the IRS declined to rule "whether Trustee's discretion to distribute income and principal of Trust to Grantor combined with other facts (such as, but not limited to, an understanding or pre-existing arrangement between Grantor and trustee regarding the exercise of this discretion) may cause inclusion of Trust's assets in Grantor's gross estate for federal estate tax purposes under § 2036." This caveat is not surprising, given the parameters of Rev. Rul. 2004-64.[6797] Generally, the trustee should avoid making distributions to the settlor to the extent possible to minimize the possibility that the IRS would raise Code § 2036 on audit. Taxpayers probably will not be able to replicate this ruling.[6798]

Readers might want to consider integrating into their planning beneficiary deemed-owned trusts with some or all of the features set forth in Letter Ruling 200949012. However, I personally would not grant the beneficiary the continuing right to withdraw under ascertainable standards unless we could be sure that such a right to withdraw could not be reached by the beneficiary's creditors. Most states do not provide protection over the portion that a beneficiary could withdraw at the time the creditor attacks the trust and therefore would not be suitable for the structure of Letter Ruling 200949012; the trust in that ruling was formed under Alaska law, which does provide such protection. Several states protect a beneficiary's limited power of appointment from creditors, but the very logic that underlies Letter Ruling 200949012 might also be fodder for creditors: if the ongoing limited power of appointment is merely a partial continuation of the absolute withdrawal right, then might creditors also say that the statutes that protect limited powers do so only when they are not a mere partial continuation of a general power?[6799]

III.B.2.i.xi. My Suggestion for Distribution Trustee – A Variation of Letter Ruling 201039010

The structure provided in Letter Ruling 200949012 is very sound from a Code § 678(a)(2) perspective, but it presents some challenges. For example, suppose someone established an Alaska trust that had those provisions, but the beneficiary lived in a state that did not provide the same level of protection as Alaska at the time the creditor makes the attack. Would that state be required under the Full Faith and Credit clause of the U.S. Constitution to defer to Alaska law, or would that state's public policy be so compelling as to override that deference? If the assets are subject to the jurisdiction of a state that does not provide that level of protection, they might very well be subject to creditors. However, if a court in a creditor-friendly state cannot obtain jurisdiction over the trustee or over the trust's assets, then the rules of the protective state would tend to prevail. See part III.B.2.c.i Completed Gift to Self-Settled Trust.

[6797] See fns. 6961-6980, found in part III.B.2.j.iv.(a) Grantor Trust Reimbursing for Tax Paid by the .

[6798] See Rev. Proc. 2013-3 § 4.01(48), (52), (55), and (63).

[6799] For example, New York protects limited powers, but only if the trust was not created by and has not proceeded from the beneficiary. See fn 6790.

I suggest a middle ground. For example, in Letter Ruling 200747002 (which I obtained), the grantor set up an irrevocable trust for Child. Child was trustee and could make distributions under an ascertainable standard to Child and Child's descendants. Child also had the power to appoint at Brother's death to anyone except to Child, Child's creditors, Child's estate or the creditors of Child's estate. The IRS ruled that the trust was taxable to Child (and will qualify to hold stock in an S corporation).

Alternatively, in Letter Ruling 201039010, the beneficiary had the power to withdraw each gift, but the amount that can be withdrawn by the primary beneficiary in any one calendar year is limited to the maximum amount as to which the power of withdrawal can lapse without the lapse constituting the release of a general power of appointment under Code §§ 2041(b)(2) and 2514(e). The independent trustee had absolute discretion to distribute part or all of the net income as the trustee deems appropriate to any one or more then living of the beneficiaries, in amounts and proportions as the trustee determines. The IRS ruled that the trust will be taxable to the beneficiary (and will qualify to hold stock in an S corporation) if all gifts will be subject to this withdrawal power.

After analyzing Letter Ruling 201039010, I have very significant concern in having a pattern of the independent trustee making distributions each year, once the note is repaid and the beneficiary can no longer afford to pay the trust's taxes.[6800] Therefore, my future structure in light of this ruling will be to name the beneficiary as trustee to make distributions under an ascertainable standard and to name an independent trustee authorized to make distributions in excess of that. I would rather see the beneficiary take distributions for support, if necessary, since that does not cause estate tax inclusion problems; it still might get to the point that the independent trustee makes distributions to pay taxes, but that is less likely under my suggested structure. However, if the trust's governing law and the law of the state in which the beneficiary resides do not both affirmatively protect the beneficiary's interest in the trust from the beneficiary's creditors when the beneficiary serves as trustee, my preferred structure might have risk; fortunately, the Uniform Trust Code protects beneficiaries who serve as trustees.[6801]

[6800] Rev. Rul. 2004-64 held that, if the trust's governing instrument or applicable local law granted the trustee the discretion to reimburse the grantor of a grantor trust for the grantor's income tax liability with respect to trust income, the existence of that discretion, by itself (whether or not exercised) will not cause the value of the trust's assets to be includible in the grantor's gross estate; see fns. 6961-6980, found in part III.B.2.j.iv.(a) Grantor Trust Reimbursing for Tax Paid by the .. However, Situation 3 of the ruling included some important caveats. The ruling assumed no understanding, express or implied, between the grantor and the trustee regarding the trustee's exercise of discretion. It also said that inclusion might apply if the discretion to make distributions is combined with other facts, including without limitation an understanding or pre-existing arrangement between the grantor and the trustee regarding the trustee's exercise of this discretion, a power retained by the grantor to remove the trustee and name the grantor as successor trustee, or applicable local law subjecting the trust assets to the claims of the grantor's creditors.

[6801] Uniform Trust Code § 504(e) provides, If the trustee's or cotrustee's discretion to make distributions for the trustee's or cotrustee's own benefit is limited by an ascertainable standard, a creditor may not reach or compel distribution of the beneficial interest except to the extent the interest would be subject to the creditor's claim were the beneficiary not acting as trustee or cotrustee. North Carolina General Statutes § 36C-5-504(f). The Comments to Uniform Trust Code § 504 provide a helpful discussion of this issue. For a review of Uniform Trust code states, see Kingma, A Beneficiary Serving as Trustee May Affect Asset Protection, *Estate Planning Journal* (4/2011). Some states provide this level of protection even if an ascertainable standard is not used. Indiana (IC 30-4-2.1-14 through 30-4-2.1-17), Missouri (RSMo § 456.5-504.1), Nevada (NRS §§ 163.41731(d) and 163.4177.10), and Alaska (AS 34.40.110(g), providing that a beneficiary who is not the settlor does not lose spendthrift protection by serving as

If applicable state law is favorable in this area and the concern is over where the beneficiary might later move, I would still strongly consider my preferred structure, because a pattern of distributions by an independent trustee concerns me greatly;[6802] to address the concern over where the beneficiary might later move, perhaps the independent trustee could be given the power to eliminate the beneficiary's right to serve as trustee for distributions.

III.B.2.i.xii. Dealing with Code § 678(a)(2) Uncertainty

The person who obtained Letter Ruling 200949012 has suggested that the right to withdraw should not completely lapse, because Code § 678(a)(2) requires that the beneficiary "has previously partially released or otherwise modified" the withdrawal right, and a complete lapse would inconsistent with a "partial release." I asked whether the IRS agreed with his reading of Code § 678(a)(2), and he said, "The IRS did not express any such concern when I obtained Letter Ruling 200949012." The subsequent issuance of Letter Rulings 201038004 and 201216034 implicitly confirms that the IRS does not agree with his reading of Code § 678(a)(2).

Although private letter rulings tend to indicate the IRS' position at the time the ruling was issued, they do not bind the IRS with respect to other taxpayers. Furthermore, the IRS will not rule whether a person will be treated as the owner of any portion of a trust over which that person has a power to withdraw the trust property (or had such power prior to a release or modification, but retains other powers which would cause that person to be the owner of the trust under Code § 671 if the person were the grantor), other than a power which would constitute a general power of appointment within the meaning of Code § 2041, if the trust purchases the property from that person with a note and the value of the assets with which the trust was funded by the grantor is nominal compared to the value of the property purchased.[6803] Thus, obtaining a private letter ruling to avoid this uncertainty might not be possible.

Absent a ruling, consider whether the following extra caution might be desirable: Instead of using the beneficiary's social security number as the trust's tax ID, obtain a separate tax ID for the trust. The trust files annual Form 1041, reporting its status as a grantor trust. This will get the statute of limitations running with respect to this issue. Although private letter rulings are not

---

trustee) might be the only states where a beneficiary can be a trustee, have sole and absolute discretion as trustee to distribute the entire trust to himself or herself, and still have the trust's assets protected from his or her own creditors. I have been told that Hasseler, Trustee-Beneficiaries, Creditors, and New York's EPTL: The Surprises That Result and How the UTC Solves Them, 69 Albany Law Review 1169 (2006), is a good summary of New York law in this area; Hessler posits that New York law provides that a beneficiary who is a trustee is protected from creditors even if the trustee/beneficiary may distribute all of the trust's assets without any standards (assuming the beneficiary is not also a settlor).

[6802] What if the beneficiary has the right to remove and replace the trustee and applicable state law imputes the trustee's powers to the beneficiary? Presumably, a pattern of distributions following the beneficiary's desires would increase the risk of such an imputation. Note that Uniform Trust Code § 504(e) requires the beneficiary's discretion as trustee to be pursuant to a standard. If the beneficiary is imputed the trustee's power, and the trustee's power exceeds what is protected under Uniform Trust Code § 504(e) or other comparable applicable state law, then perhaps the beneficiary's creditors could reach the trust's assets. This line of reasoning makes me want to allow the beneficiary to serve as a trustee who can make distributions for his or own support and therefore rarely requests that the independent trustee make discretionary distributions; this mechanism would tend to avoid a pattern of distributions by the independent trustee. Indiana has done a great job of anticipating and refuting the creditor attacks about which this footnote expresses concerns; see IC 30-4-2.1-15.

[6803] Rev. Proc. 2013-5, Section 4.01(39).

precedent, they constitute authority on which one can rely to avoid penalties,[6804] and the large number of letter rulings – all reaching the same conclusion – should constitute substantial authority.[6805]

III.B.2.i.xiii. Protecting Against Excessive Income Tax Estate Burn-Off

Consider that the beneficiary's income tax liability continuing forever might deplete the beneficiary's estate to uncomfortably low levels (estate burn-off). The beneficiary can sell assets to obtain funds to pay taxes, but eventually the beneficiary might run out of assets.

Arguably, recurring income tax payments are an ordinary part of a person's living expenses. Perhaps distributions to pay the beneficiary's taxes might be considered part of the beneficiary's support? If not, consider the mechanisms below.

Giving the beneficiary the power to borrow at the AFR without adequate security certainly gives the beneficiary a safety valve. However, a loan that the beneficiary will not be able to repay might be considered a distribution, if there is no intent to repay, and giving the beneficiary what might be tantamount to an unlimited withdrawal right could create exposure to creditors and estate tax. So, the safety valve of borrowing might be considered a temporary solution.

The BDIT and other models might give an independent trustee the right to distribute as much as the independent trustee deems advisable, without any limit. As mentioned above, a pattern of making distributions whenever the beneficiary asks for money might be troublesome. Consider, however, having two separate independent trustees for such distributions.

1. Tax Distributions. One independent trustee (the "tax distribution trustee"), who the beneficiary can remove and replace, makes distributions to pay income taxes, but the distributions might start many years down the road, when the estate burn-off threatens to become excessive. The trustee might just pay the taxes directly, preventing the creditors from attaching the money when it gets in the beneficiary's hands. Even if a creditor might somehow be able to attach these distributions, the creditor would have to fight the taxing authorities.

2. Other Distributions. The other independent trustee would be more difficult to remove and generally would not decide to make distributions. An exception might be if a gift tax audit finds that the beneficiary did not receive adequate and full consideration. The lack of adequate and full consideration might cause the beneficiary to be deemed the grantor of that portion of the trust. That portion of the trust would be an incomplete gift, as described further above, and therefore would be includible in the beneficiary's estate. The independent trustee might then distribute this portion to the beneficiary to try to cleanse the trust. This event would happen in the first several years of the trust, so estate burn-off would eventually cleanse the beneficiary's estate of these assets as well.

How much of the trust's income and gains are truly needed to support the beneficiary? Suppose a trust had $1 billion of assets and the beneficiary spent only $1 million per year?

[6804] Reg. § 1.6662-4(d)(3)(iii).
[6805] Rulings more than ten years old are generally accorded little weight. Reg. § 1.6662-4(d)(3)(ii). However, combined with recent rulings, they do demonstrate a consistent position.

Some part of the trust would not be needed for the beneficiary's support. Consider the following approaches:

1. Release Power. The independent trustees release their power to make distributions beyond certain limits. The assets beyond those limits are not available for distribution, other than for the beneficiary's support. Therefore, not all of the assets are available for distribution to the beneficiary. This limits the amount of income and gains accumulated for the beneficiary's future use. The excess income would not be taxable to the beneficiary.[6806] One might consider special drafting to authorize the trustee to impose these limits without violating a duty to the beneficiary.

2. Split Trust. The beneficiary could exercise the beneficiary's power of appointment by appointing to a new trust such portion as is not needed to provide for the beneficiary's support. The beneficiary would not be a beneficiary of the new trust; or, alternatively, an adverse party would be appointed trustee to make Code § 677 not apply. Although this might constitute a taxable gift, the value of the taxable gift might be zero, if this splitting of the trust does not cause the beneficiary's distributions to decrease. The splitting of the new trust might be done in conjunction with a net gift agreement, in case any gift taxes are imposed.

III.B.2.i.xiv. QSST as an Alternative Form of Beneficiary Deemed-Owned trust

If the income beneficiary elects to have a trust holding S corporation stock as a "qualified subchapter S trust" (QSST),[6807] the beneficiary is treated as the Code § 678(a) owner of that portion of the trust that consists of the stock of the S corporation for which the QSST election was made.[6808]

How does a QSST compare to other beneficiary deemed-owned trusts? Other beneficiary deemed-owned trusts will always be taxed to the beneficiary. With those other trusts, generally the beneficiary needs to rely on an independent trustee to distribute enough to pay tax, once the tax burn-off has reduced the beneficiary's estate to the beneficiary's target level. With a QSST, all of the trust's income must be distributed to the beneficiary, so an agreement that the S corporation make tax distributions would suffice to get income to the beneficiary to pay taxes. On the other hand, distributing the income to the beneficiary means that tax burn-off is not occurring, and generally distributions from the S corporation are being distributed to the beneficiary rather than being accumulated in the trust. Thus:

- If tax burn-off to deplete the beneficiary's other assets is a key goal, then either use a beneficiary deemed-owned trust other than a QSST or use a QSST with an S corporation that does not distribute enough to pay its owner's taxes (the latter being unusual).

- If the goal is simply to facilitate a sale to trust to get the asset's appreciation outside of the estate tax system and the ability to toggle off grantor trust status is important, use a QSST. See part III.A.3.e.iv Flexible Trust Design.

[6806] See *Townsend v. Commissioner*, 5 T.C. 1380 (1945).
[6807] See part III.A.3.e.i QSSTs for QSSTs generally and part III.A.3.e QSSTs and ESBTs generally for a comparison of the two types of trusts most commonly used when the grantor is no longer living or does not want to pay the trust's taxes.
[6808] Reg. § 1.1361-1(j)(8).

For a description of the advantages and disadvantages of using a QSST in this manner, see part III.A.3.e.vi QSST as a Grantor Trust; Sales to QSSTs, especially part III.A.3.e.vi.(b) Disadvantages of QSSTs Relative to Other Beneficiary Deemed-Owned Trusts and III.A.3.e.vi.(c) Required Structure for a Sale to a QSST (which also discusses how the asset's base value is not moved outside of the estate tax system).

III.B.2.i.xv. Sale to Trust Created by Spouse: An Alternative Way to Have a Trust Benefitting Client

Consider having the client's spouse establish an irrevocable trust for the client. The trust would be a grantor trust, taxable to the spouse under Code § 677 (with perhaps a swap power included). The client might then sell assets to the trust. Consider limiting the beneficiary's power of appointment over any bargain sale element.[6809]

Whereas beneficiary deemed-owned trusts tend to be thinly funded, with no more than $5,000 initially,[6810] a spousal irrevocable grantor trust can be well-funded. However, when making gifts to the trust (to seed it or otherwise), the donor spouse should avoid using property that the beneficiary spouse gifted to the donor.[6811]

Just as a sale to a beneficiary deemed-owned trust, the beneficiary could be a trustee authorized to make distributions for his or her support. A trustee not appointed by the beneficiary or an independent trustee appointed by the trustee should be able to make distributions for the beneficiary's welfare, which the beneficiary might use to pay the grantor-spouse's income taxes. These concerns parallel those described in part III.B.2.i Code § 678 Beneficiary Deemed-Owned Trusts. However, in this case, the beneficiary's spouse, not the beneficiary, is subject to income tax. And, with the repeal of Code § 682, the spousal grantor has no way to turn off the Code § 677 power that may apply via Code § 672(e) spousal attribution, even after divorce; see part III.B.2.h.ix Code § 682 Limitations on Grantor Trust Treatment (Repealed for Post-2018 Divorces). Thus, a grantor tax-reimbursement provision may be much more important to consider; see parts III.B.2.j.iv.(a) Grantor Trust Reimbursing for Tax Paid by the Deemed Owner and III.B.2.h.vi Protecting the Grantor.

It is much less likely that a sale to an irrevocable grantor trust taxable to seller that the deemed owner's death is a taxable event.[6812] However, a disadvantage is that I tend to recommend that the beneficiary not have a power of appointment in 10% of the remainder, to get the gift tax statute of limitations running.[6813] Also, the interest deduction might not fully offset the interest income.[6814]

[6809] See text accompanying fn 6755 in part III.B.2.i.v Sale to a Beneficiary Deemed-Owned Trust – When a Traditional Sale to an Irrevocable Grantor Trust Does Not Meet the Client's Objectives.
[6810] Compare part III.B.2.i.vi Funding the Trust with Small Gifts with parts III.B.2.i.vii Portion Owned When a Gift Over $5,000 is Made and III.B.2.i.viii Funding the Trust with a Large Initial Gift or Bequest.
[6811] See fn 7481 in part III.D Code § 2038.
[6812] See fn 6591 in part III.B.2.g Income Tax Concerns When Removing Property from the Estate Tax System, which describes uncertainty in that area. I very much agree that the note has full basis in the sale to spousal grantor trust, as described below in this part III.B.2.i.xv.
[6813] See part III.B.4 Adequate Disclosure on Gift Tax Returns.
[6814] See text accompanying fn 6818.

The most comprehensive article on the subject is Culp, Hattenhauer, and Mellen, "The Tax and Practical Aspects of the Installment Sale to a Spousal Grantor Trust," 44 *ACTEC Law Journal* No. 1 (Mar. 2019), pages 63-127.[6815] The authors conclude:

> In conclusion, the authors believe the following tax consequences flow from a sale of property to a spousal grantor trust. In each case it is assumed that there has been a bona fide sale of property by the selling spouse to the spousal grantor trust and a valid and enforceable note was received in exchange for the property sold.
>
> 1. The selling spouse should not recognize gain on the sale of property to a spousal grantor trust under Section 1041, even if the grantor spouse dies while the note is outstanding.
>
> 2. If the selling spouse sells property to the spousal grantor trust for full and adequate consideration, the selling spouse should not be treated as making a taxable gift to the spousal grantor trust and the assets of the spousal grantor trust should not be included in the selling spouse's estate for estate tax purposes.
>
> 3. Prior to the selling spouse's death, payments received by the selling spouse should be received income-tax-free, although interest payments will be taxable to the selling spouse and may be deductible by the grantor spouse.
>
> 4. If the grantor spouse dies while the note is outstanding the selling spouse should continue to receive installment payments on the note tax free.
>
> In addition, the authors recommend that the sale to a spousal grantor trust structure should include the following:
>
> 1. The parties should obtain an appraisal of the property sold.
>
> 2. Practitioners should consider using a formula clause for gift and estate tax purposes.
>
> 3. Practitioners should consider designing the spousal grantor trust to give the selling spouse an interest or powers that would cause any potential taxable gift on the sale to the trust to be incomplete for gift tax purposes.
>
> 4. For gift tax purposes, a gift tax return adequately disclosing a completed non-gift transaction should be considered to begin the running of the gift tax statute of limitations and provide a discreet period of time to determine the extent, if any, that the transfer is treated as a gift (whether complete or incomplete) by the selling spouse.
>
> 5. The terms of the trust should allow or authorize an independent trustee or trust protector to decant trust assets to a new trust or otherwise terminate any retained interests or powers of the selling spouse that may cause inclusion in the selling spouse's gross estate for estate tax purposes.

[6815] Saved as Thompson Coburn LLP doc. no. 7430010; see 67th-131st pages of PDF. Briani Mellen is now Briani Bennett, with the same law firm at https://www.ceclaw.com/attorneys/briani-bennett-mellen.

6. The terms of the trust should set forth the intent and purpose for the trust to be wholly grantor to the grantor spouse during his or her lifetime.

As to recommendation 2, see part III.B.3 Defined Value Clauses in Sale or Gift Agreements or in Disclaimers. As to recommendations 3 and 4, see part III.B.4 Adequate Disclosure on Gift Tax Returns. As to recommendation 6, see parts III.B.2.d Income Tax Effect of Irrevocable Grantor Trust Treatment, III.B.2.e Grantor Trust Tax Identification Number During Life and Upon Death, III.B.2.f Triggering the Statute of Limitations for Grantor Trusts (expressing concern that the statute of limitations might not run on a sale to an incomplete gift trust and recommending that the beneficiary not have a power of appointment over 10% of the remainder), III.B.2.g Income Tax Concerns When Removing Property from the Estate Tax System, III.B.2.h How to Make a Trust a Grantor Trust Taxed to a U.S. Citizen or Resident, III.B.2.i.xiii Protecting Against Excessive Income Tax Estate Burn-Off, and III.B.2.j.i Changing Grantor Trust Status (the latter within part III.B.2.j Tax Allocations upon Change of Interest in a Business).

When the client sells assets to the trust, the client would be deemed to have sold the assets to the client's spouse, and Code § 1041 would cause nonrecognition of the gain on sale.[6816] The interest income and expense would be recognized for income tax purposes as if Code § 1041 did not exist.[6817] Although presumably the interest expense would be deductible by the spouse against the spouse's S corporation income, note that various phase-outs of deductions and exemptions work from adjusted gross income, so the inclusion of income would have a slightly adverse income tax effect.[6818] Also, an adverse tax consequence could occur if wife did not receive adequate and full consideration for the stock she transferred to the trust. Although the Code § 7872 below-market interest loan rules do not apply to transactions between spouses, I would charge interest to avoid a gift.[6819] In "Beyond the Binary: Choosing Between Grantor and Non-Grantor Status," 2020 Heckerling Institute on Estate Planning, part I.D.3.c.(2), "Issue a term loan providing payments with a present value equal to the amount of the loan," McCaffrey and Bramwell describe how to avoid charging stated interest and a gift; I would like to see the idea further developed to discuss how to treat prepayment and any risk of the IRS disrespecting a note when annual payments are not scheduled to be made. In that same presentation, part I.D.3.d, "Basis in the Note Issued by the Spousal Grantor Trust," discusses:

(1) Why basis could matter. When the spousal grantor trust issues a note for the purchase price, so long as the spouse is alive, the payments made by the spousal grantor trust to the taxpayer will be protected from tax by Section 1041 regardless of the basis of the notes in the hands of the taxpayer.[36]

> [36] PLR 9235026 (May 29, 1992); PLR 9123053 (March 13, 1991).

Basis does matter under the following circumstances:

(a) Possible deemed modification on death of grantor spouse. The significant modification of a debt instrument is treated as an exchange of the original debt instrument for the modified instrument.[37] A change in the identity of the obligor

[6819] See fns. 7254 and 7260 in part III.B.6.d Divorce as an Opportunity to Transfer.

on a recourse debt instrument is treated under the regulations as a significant modification unless certain requirements are met.[38] If a modification causes an exchange to occur, the holder of the note recognizes gain equal to the excess of the fair market value of the note after the modification over the taxpayer's basis in the note.

[37] *Cottage Savings Assoc. v. Comm'r*, 499 U.S. 554 (1991); Treas. Reg. Section 1.1001-3.

[38] Treas. Reg. § 1.1001-3(e)(4).

When the spouse who created a spousal grantor trust dies, the trust will become a new taxpayer, a non-grantor trust.[39] The IRS could take the position that the change in the tax identity of the obligor is a modification for purposes of the regulation. If the taxpayer's basis in the note is less than face, this treatment would cause the taxpayer to recognize gain.

[39] The issue raised in this paragraph could occur if grantor trust status ended for any other reason.

[My comment – see part II.G.31.a Debt Modifications.]

(b) Note issued by spousal grantor trust should be treated as nonrecourse. A change in the identity of the obligor is a significant modification only if the debt is a recourse debt instrument. Although the regulations do not provide definitions of recourse and nonrecourse debts, it is generally understood that a recourse debt is a debt that holds the borrower personally liable. All other debts are considered nonrecourse. The creditor under a nonrecourse debt instrument is limited to the collateral provided by the borrower to secure the loan.[40] Using this definition while the spouse is alive, the debt of the spousal grantor trust seems clearly to be nonrecourse debt as to the spouse. The spouse has no personal liability for the debt. The taxpayer can look only to the assets of the spousal grantor trust for the payment of the note issued by the trust.

[40] IRS Publication 5182, Cancellation of Debt, p. 6 (2014).

Although the spousal trust shares a tax identity with the spouse during the spouse's life, the shared identity has no significance outside of the world of the income tax. It has, for example, no bearing on the legal rights of the taxpayer under the note and no impact on the collectability of the note. As a result, the technical change of the identity of the obligor for income tax purposes should not be treated as a modification of the note for purposes of Treas. Reg. § 1.1001-3(b).

(c) Payments made on the note after death of grantor spouse. As discussed above, when the spouse dies, the spousal grantor trust will no longer share a tax identity with the taxpayer's spouse. As a result, the IRS could take the position that payments made on the note after the spouse's death are not protected by Section 1041. If the basis of the note in the hands of the taxpayer is less than face, the satisfaction of the note by the non-grantor trust might be a tax recognition event. If so, the taxpayer would recognize gain equal to the principal amount of the note.

(d) **Terms of note actually modified**. The taxpayer and the trustee of the spousal grantor trust could agree to modify the terms of the note. If the modification occurs while the spouse is alive, the deemed exchange caused by the application of Treas. Reg. § 1.1001-3 should be protected from tax by Section 1041 regardless of the basis of the note in the hands of the taxpayer. If the modification occurs after the spouse's death, the IRS could take the position that the modification causes gain recognition to the extent of the fair market value of the note after the modification over the taxpayer's basis in the note.

(e) **Sale of note to third party**. If the transferor spouse sells the note to a third party, the taxpayer will recognize gain equal to the excess of the price received over the sales price of the note.

(2) **What is the taxpayer's basis in note issued by a spousal grantor trust in exchange for a transfer of property?** If the taxpayer's basis in the note issued by the spousal grantor trust is equal to the face value of the note, the issues listed above largely disappear. So long as the value of the note and the taxpayer's basis in the note are equal at the time of an actual or deemed debt modification, the modification would not cause recognition of gain. Similarly, there would be no gain recognition when the taxpayer sold the note to a third party or when the trust, after the spouse's death, satisfies the note.

There is uncertainty as to a taxpayer's basis in a note issued by the trustees of a spousal grantor trust in a Section 1041 exchange. Because the taxpayer received the note in an exchange treated as a gift for income tax purposes, if the issuance of the note is treated as a transfer of property, the taxpayer's basis in the note could be deemed to be the same as the trustees' basis in the note, which should be the same as the spouse's basis in the note.

(a) **Self-made notes**. There is no direct authority that explains how a taxpayer's basis in his or her own obligation (a "selfmade note") should be determined. There is some guidance in the partnership and corporate tax context that suggests that a taxpayer's basis in a self-made note contributed to a partnership or corporation is zero and does not increase his or her basis in either type of entity.[41] Other cases, however, have rejected this conclusion.[42]

[41] *E.g., Seggerman Farms, Inc. v. Comm'r*, 308 F.3d 803 (7th Cir. 2002); *Gemini Twin Fund III*, TCM 1991-315, *aff'd without pub. opn.* 8 F.3d 26 (9th Cir. 1993); *Alderman v. Comm'r*, 55 TC 662 (1971); Rev. Rul. 68-629 1968-2 C.B. 154.

[42] *Lessinger v. Comm'r*, 872 F.2d 519 (2d Cir. 1989) *rev'g* 85 TC 824 (1985); *Peracchi v. Comm'r*, 143 F.3d 487 (9th Cir. 1998) *rev'g* TCM 1996-191. For one tax advisor's discussion as to why the IRS position in the zero basis cases is flawed, see Kenneth P. Brewer, "The Zero Basis Hoax," Tax Notes April 28, 1994.

Perhaps more important, the focus of these cases was on the taxpayer, not on the entity to which the self-made note had been contributed. The cases finding against the taxpayers held that the taxpayer had a zero basis in the self-made notes because he or she incurred no cost in making the note.[43] There was no discussion of the tax consequences to the entity, when the debt was paid or if it sold the self-made note to a third party. In a 1995 Field Service Advice, Assistant Chief Counsel (Field Service) Daniel J. Wiles advised that treating the basis of the self-made note in the hands of the entity as zero would result in the entity recognizing income when the taxpayer paid the debt, and that the litigating hazards of advancing such position would be overwhelming.[44]

[43] *Alderman v. Comm'r*, 55 TC 662, 665 (1971).

[44] 1995 FSA LEXIS 160.

In the case of the note issued to a taxpayer by a spousal grantor trust, the concern is with the taxpayer's basis in the note, not with his or her basis in the trust. We should not be concerned with the basis of the grantor spouse or the spousal grantor trust in the note. In fact, it is misleading to even suggest that the question of the trust's or the spouse's basis in note is a meaningful one. Assets have basis; obligations in the hands of the obligor, do not.

(b) Note should have basis. The question of the taxpayer's basis in the note should be answered with reference to the policy behind Section 1041. Congress intended that property transfers between spouses be free of income tax including those transfers that are to be paid for over time. There is no good policy reason for placing a selling taxpayer in a worse position because the spouse cannot afford to make immediate payment for the transferred property.

There are at least two ways of achieving this result.

(i) Note has basis when issued. First, the note issued by the spousal grantor trust could be treated as having a basis equal to the face amount when issued. This treatment seems most consistent with the objectives of Section 1041. It would result in equal treatment between those taxpayers whose spouses are able to make current payment for transferred property and those who are not. The taxpayer who receives a note would be able to sell it to a third party and would be able to receive payments on the note after the death of the spouse without adverse tax consequences. This approach was suggested by the America Institute of Certified Public Accountants in the 1998 testimony of its representative before the House Committee on Ways and Means.[45]

[45] Available on Tax Notes web site.

(ii) Extension of section 1041 treatment. The second approach is to conclude that the taxpayer's basis in the note is irrelevant and to treat payments, whenever made, as an integral part of the same transaction that caused the issuance of the note. Under the principal set forth by the Supreme Court in *Arrowsmith v. Comm'r*, 344 U.S. 6 (1952), this treatment should extend the tax-free treatment of the issuance of the note to payments under the note.

> The issuance of the note was treated as a gift for income tax payments; payments under the note should be treated as gifts as well.

I agree with their conclusion that the holder should have basis in a note issued by a trust deemed owned by the holder's spouse. For more details, see Dana, "Till Death Do Us Part: The Riddle of Note Basis in a Sale to a Spouse's Grantor Trust," 114 Journal of Taxation 340 (6/2011).

A disadvantage of this technique relative to a sale to a beneficiary deemed-owned trust is that the grantor spouse could not be a beneficiary upon the client's death unless the trust is created in a jurisdiction that recognizes self-settled spendthrift trusts and the spouse is able to rebut any Code § 2036 or 2038 arguments.

III.B.2.i.xvi. Includible Beneficiary Deemed-Owned Trusts

The preceding discussion within this part III.B.2.i tends to focus on how to create a trust that is not includible in the beneficiary's estate for estate tax purposes.

Suppose, however, that the beneficiary's estate tax posture is not a concern, but rather the donor wants the beneficiary be treated as owning the property for income tax purposes but is concerned about protecting the property and finds unattractive the planning described in part III.B.2.i.xiv QSST as an Alternative Form of Beneficiary Deemed-Owned trust. Consider using a large gift with a withdrawal right that lapses each year only to the extent of 5% of the property that can be withdrawn, but after 30 days (or some other relatively short period) the consent of a nonadverse party is required.

For estate and gift tax purposes, requiring the consent of a nonadverse party (who may be a trustee) does not prevent the withdrawal right from being a general power of appointment,[6820] so the general power of appointment will not be treating as lapsing. For example, Reg. § 25.2514-3(b)(2) provides:

> Such power is not considered as a general power of appointment if it is not exercisable by the possessor except with the consent or joinder of a person having a substantial interest in the property subject to the power which is adverse to the exercise of the power in favor of the possessor, his estate, his creditors, or the creditors of his estate. An interest adverse to the exercise of a power is considered as substantial if its value in relation to the total value of the property subject to the power is not insignificant. For this purpose, the interest is to be valued in accordance with the actuarial principles set forth in § 25.2512-5 or, if it is not susceptible to valuation under those provisions, in accordance with the general principles set forth in § 25.2512-1. A taker in default of appointment under a power has an interest which is adverse to an exercise of the power. A coholder of the power has no adverse interest merely because of his joint possession of the power nor merely because he is a permissible appointee under a power. However, a coholder of a power is considered as having an adverse interest where he may possess the power after the possessor's death and may exercise it at that time in favor of himself, his estate, his creditors, or the creditors of his estate. Thus, for example, if X, Y, and Z held a power jointly to appoint among a group of persons which

[6820] Code §§ 2041(b)(1)(C)(ii), 2514(c)(3)(B); Reg. §§ 20.2041-3(c), 25.2514-3(b)(2). For a detailed discussion, including a reproduction of Reg. § 20.2041-3(c), see part II.H.2.k Taxable Termination vs. General Power of Appointment vs. Delaware Tax Trap.

> includes themselves and if on the death of X the power will pass to Y and Z jointly, then Y and Z are considered to have interests adverse to the exercise of the power in favor of X. Similarly, if on Y's death the power will pass to Z. Z is considered to have an interest adverse to the exercise of the power in favor of Y. The application of this subparagraph may be further illustrated by the following examples in each of which it is assumed that the value of the interest in question is substantial:
>
> *Example (1)*. The taxpayer and R are trustees of a trust under which the income is to be paid to the taxpayer for life and then to M for life, and R is remainderman. The trustees have power to distribute corpus to the taxpayer. Since R's interest is substantially adverse to an exercise of the power in favor of the taxpayer, the latter does not have a general power of appointment. If M and the taxpayer were trustees, M's interest would likewise be adverse.
>
> *Example (2)*. The taxpayer and L are trustees of a trust under which the income is to be paid to L for life and then to M for life, and the taxpayer is remainderman. The trustees have power to distribute corpus to the taxpayer during L's life. Since L's interest is adverse to an exercise of the power in favor of the taxpayer, the taxpayer does not have a general power of appointment. If the taxpayer and M were trustees, M's interest would likewise be adverse.
>
> *Example (3)*. The taxpayer and L are trustees of a trust under which the income is to be paid to L for life. The trustees can designate whether corpus is to be distributed to the taxpayer or to A after L's death. L's interest is not adverse to an exercise of the power in favor of the taxpayer, and the taxpayer therefore has a general power of appointment.

Reg. §§ 20.2041-3(c), 25.2514-3(b)(2) treat a co-holder of a power of appointment as an adverse party only if the co-holder would be a taker in default of the exercise or has some other interest as a beneficiary.

For a detailed discussion about why a trustee's concerns about fiduciary duties do not make the trustee "adverse" when the trustee has no beneficial interest in the trust, see part II.H.2.k Taxable Termination vs. General Power of Appointment vs. Delaware Tax Trap.

For state law purposes, requiring the consent of a nonadverse trustee or other party may cause the power not to be treated as a withdrawal right.[6821]

[6821] For example, referring to a 5&5 power and the gift tax annual exclusion, Uniform Trust Code § 505(b)(2) provides:

> upon the lapse, release, or waiver of the power, the holder is treated as the settlor of the trust only to the extent the value of the property affected by the lapse, release, or waiver exceeds the greater of the amount specified in Section 2041(b)(2) or 2514(e) of the Internal Revenue Code of 1986, or Section 2503(b) of the Internal Revenue Code of 1986 ….

R.S.Mo. § 456.5-505.6(2) provides that, for purposes of creditors attacking a beneficial interest:

> Upon the lapse, release, or waiver of the power, the holder is treated as the settlor of the trust only to the extent the value of the property affected by the lapse, release, or waiver exceeds the greater of the amount specified in Sections 2041(b)(2), 2514(e) or 2503(b) of the Internal Revenue Code.

However, the lapse of a withdrawal right for state law purposes may subject the lapsed portion to the beneficiary's creditors.[6822] However, some states provide that lapses do not subject the lapsed portion to the beneficiary's creditors, even if the beneficiary could have withdrawn the entire trust. See part III.B.2.i.ix Creditor and Gift/Estate Tax Issues Regarding Withdrawal Rights, Whether Currently Exercisable or Lapsed.[6823]

A release of a general power of appointment is a gift,[6824] even if it is done by not suing a trustee for reducing the property subject to a testamentary general power.[6825]

Suppose the grantor cares only about making the beneficiary the owner for income tax purposes[6826] and creates the trust for control (to avoid outright ownership that might harm the beneficiary) and did not mind the property being included in the beneficiary's estate for estate tax purposes (which may even be desirable to attain a basis step-up)[6827] or even perhaps subjecting the property to the beneficiary's creditors (if one cannot use a favorable state in light of fn 6823). Consider using a trust along the lines of one that qualifies for the Code § 2642(c)(2) GST annual exclusion.[6828] The beneficiary would have the right to withdraw the gift (and any income on it)[6829] for only a limited period of time (such as 30 days), after which the withdrawal right would lapse in full (or, if one wants to go for creditor protection, the withdrawal right would continue but could be exercised only with the consent of a nonadverse party; see the text accompanying fn 6823).

[6822] For example, Uniform Trust Code § 103(11) provides:

> "Power of withdrawal" means a presently exercisable general power of appointment other than a power: (A) exercisable by a trustee and limited by an ascertainable standard; or (B) exercisable by another person only upon consent of the trustee or a person holding an adverse interest.

R.S.Mo. § 456.1-103(17) provides:

> "Power of withdrawal", a presently exercisable power of a beneficiary to withdraw assets from the trust without the consent of the trustee or any other person….

[6823] Especially the text accompanying fns 6790-6791.

[6824] Reg. § 25.2514-3(c)(4), reproduced in part II.J.4.f Making Trust a Partial Grantor Trust as to a Beneficiary.

[6825] Rev. Rul. 86-39, reproduced in part II.J.4.f Making Trust a Partial Grantor Trust as to a Beneficiary.

[6826] But note part III.B.2.i.xii Dealing with Code § 678(a)(2) Uncertainty.

[6827] See part II.H Income Tax vs. Estate and Gift Tax (Particularly for Depreciable Property).

[6828] Code § 2642(c), "Treatment of certain direct skips which are nontaxable gifts," provides:

> (1) *In general*. In the case of a direct skip which is a nontaxable gift, the inclusion ratio shall be zero.
>
> (2) *Exception for certain transfers in trust*. Paragraph (1) shall not apply to any transfer to a trust for the benefit of an individual unless—
>
> (A) during the life of such individual, no portion of the corpus or income of the trust may be distributed to (or for the benefit of) any person other than such individual, and
>
> (B) if the trust does not terminate before the individual dies, the assets of such trust will be includible in the gross estate of such individual.
>
> Rules similar to the rules of section 2652(c)(3) shall apply for purposes of subparagraph (A).

Code § 2652(c)(3), "Certain support obligations disregarded," provides:

> The fact that income or corpus of the trust may be used to satisfy an obligation of support arising under State law shall be disregarded in determining whether a person has an interest in the trust, if—
>
> (A) such use is discretionary, or
>
> (B) such use is pursuant to the provisions of any State law substantially equivalent to the Uniform Gifts to Minors Act.

[6829] See part III.B.2.i.vii.(a) Determining Portion Owned When a Withdrawal Right Does Not Lapse in Full Before Any Income Is Earned.

III.B.2.i.xvii. Conclusion

A beneficiary deemed-owned trust can be a useful tool. It allows a beneficiary to reduce his or her estate by the taxes paid on its income. It might invest in a new business opportunity or buy the beneficiary's interest in a business entity, allowing the beneficiary to keep using the business interest, even though it is outside the estate tax system.

The best candidate for such a trust is a beneficiary who lives in a state that clearly provides that the lapse of the beneficiary's withdrawal right does not make the beneficiary deemed to be the settlor for asset protection purposes. If the beneficiary does not live in such a state, then creditors can press a conflict of laws issue. Such a case might very well occur, given that thinly-capitalized trusts, where the beneficiary can remove and replace the independent trustee at will, have been promoted as safe. A creditor victory might then open the door to IRS attack, making the conflict-of-laws issue more important to avoid.

The beneficiary's taxation on the trust's income seems well-settled as far as private letter rulings are concerned, but what if the IRS changes its approach? Extra attention might be given to lapses of hanging powers when a trust is funded with a large gift or bequest, since concern has been raised about the scope of Reg. § 1.671-3(a)(3). Fitting a lapse of a withdrawal right under Code § 678(a)(2) might cause doubt, unless one uses the structure of Letter Ruling 200949012 (but then one must consider conflict of laws issues, as the author of that ruling told me that Alaska and Delaware are the only states that would provide the beneficiary with protection from creditors).

The allocation of authority between the beneficiary as a trustee and an independent person as trustee needs to be carefully crafted. Once a beneficiary's assets are reduced to a particular level, the beneficiary will want consistent distributions. The beneficiary should be authorized as trustee to make distributions to himself or herself under an ascertainable standard than rely on distributions by an independent trustee. Not only will this make the beneficiary more comfortable with the situation, it will also prevent a potentially dangerous pattern of distributions by the independent trustee. However, if the beneficiary lives in or might move to a state that does not protect the beneficiary's interest in the trust from creditors and is relying on the law of another state, then a different approach should be considered.

Special care should be taken to protect against excessive estate burn off due to taxes imposed on the beneficiary.

In conclusion, a beneficiary deemed-owned trust can be useful in many situations, but it requires careful structuring and consideration of obtaining a private letter ruling (if available). A sale to a trust created by the client's spouse might be a palatable alternative if a private letter ruling is available.

III.B.2.i.xviii. Sample Beneficiary Deemed-Owned Trust

Please use your independent judgment in deciding to use none, part or all of the provisions below:[6830]

> SECTION 3.1 DESIGNATION. Assets to be held as the Beneficiary Deemed-Owned Trust ("BDOT") for the primary benefit of [Beneficiary] pursuant to the provisions

[6830] From Thompson Coburn LLP document number 28003681.

of this Article shall be held as a separate trust estate with income and principal distributed as provided in this Article and shall be designated in substantially the following form: "[Beneficiary] BDOT dated ________ ___, ____." If and to the extent that [Beneficiary] makes a gift to the trust, the trustee shall hold that gift as a separate share (the "Nonappointive Share").

SECTION 3.2 WITHDRAWAL POWER. [Beneficiary] shall have a withdrawal right over the initial transfer to the trust. Such withdrawal right shall lapse thirty (30) days after the initial transfer. Until the withdrawal right lapses, the trust's assets must remain in a non-interest-bearing account. The withdrawal right shall be exercised only in an instrument demanding distribution of part or all of the trust's assets, executed by [Beneficiary] and served on the trustee of the BDOT. Upon receipt of such instrument, the trustee shall immediately satisfy such demand out of trust assets.

SECTION 3.3 DISTRIBUTION OF INCOME AND PRINCIPAL. The trustee may distribute so much or all of the income and principal of the trust as the trustee deems necessary for [Beneficiary]'s support and shall distribute so much or all of the income and principal of the trust as the Special Trustee deems advisable for [Beneficiary]'s welfare.

SECTION 3.4 TERMINATION AND DISTRIBUTION. The trust shall terminate upon [Beneficiary]'s death, and the trustee shall distribute the remaining assets (other than the Nonappointive Share) as [Beneficiary] Appoints among any one or more of a class consisting of all persons, specifically excluding, however, [Beneficiary], [Beneficiary]'s estate, [Beneficiary]'s creditors, and the creditors of [Beneficiary]'s estate. To the extent [Beneficiary] fails to Appoint or has no power to Appoint, the trustee shall allocate the unappointed assets to ….

Features above include:

- To explain the distribution provisions, see part II.J.2.b Trust Provisions Authorizing Distributions.

- The Nonappointive Share is intended to make the gift portion of any alleged bargain sale to the trust be a completed gift. See part III.B.4 Adequate Disclosure on Gift Tax Returns.[6831]

III.B.2.j. Tax Allocations upon Change of Interest in a Business

Both S corporations and partnerships are flow-through entities. The grantor trust rules treat a grantor as owner of the trust for federal income tax purposes. As such, the income generated by the grantor's business, through the trust, is imputed back to the grantor. This income, naturally, generates tax liability.

In the case of either a GRAT or sale to an irrevocable grantor trust, generally the grantor is taxed on all of the trust's income, and payments back to the grantor have no income tax consequences.[6832] A GRAT can be disastrous to the grantor if the company is very successful and the grantor has to pay income tax in excess of the grantor's payments (an "exploding GRAT"), so GRATs should allow the grantor to be reimbursed for income taxes on part or all of

[6831] Especially fn 7061.
[6832] For the lack of income tax on payments using appreciated property, see Rev. Rul. 85-13.

the GRAT's income. This generally is not necessary for an irrevocable grantor trust, which is usually drafted so that the grantor trust taxation can be turned off. The trust agreement may authorize an independent trustee to reimburse the grantor's income tax so long as the decision to reimburse is made in the trustee's absolute discretion and cannot be legally compelled by the grantor.[6833]

This issue is only magnified by the sale of the business. Now, instead of just the imputed income generated by the business, the grantor must pay taxes on any gain from the sale. Ideally, the grantor would like to "turn off" the grantor trust features, essentially making the trust the owner for income tax purposes.[6834] Turning off the grantor trust features generally would be deemed, for income tax purposes, as a transfer from the grantor to the trust at that time.[6835] If a person is treated as the owner of an entire trust (corpus as well as ordinary income), that person takes into account in computing that person's income tax liability all items of income, deduction, and credit (including capital gains and losses) to which that person would have been entitled had the trust not been in existence during the period that person is treated as owner.[6836] See also part III.B.2.d Income Tax Effect of Irrevocable Grantor Trust Treatment.

The next part discusses the income tax effect of turning off grantor trust status, followed by tax allocations upon a change of interest in S corporations and partnerships. See also part III.A.3.c Deadlines for Trust Qualifying as S Corporation Shareholder.

[6833] Rev. Rul. 2004-64, Situation 2; see fns. 6961-6980, found in part III.B.2.j.iv.(a) Grantor Trust Reimbursing for Tax Paid by the Deemed Owner.

[6834] Be sure not to get too cute in deciding which trusts are grantor trusts and when to turn powers on or off. See Notice 2007-73.

[6835] See fns. III.B.2.d.i.(b) Portions of Irrevocable Grantor Trust Deemed Owned for Federal Income Taxation, especially timing issues described in fns. 6552-6554. See also part III.B.1.c.i Gifts with Consideration – Bargain Sales.

[6836] See part III.B.2.d.i.(b) Portions of Irrevocable Grantor Trust Deemed Owned for Federal Income Taxation. Although various rulings discuss how this affects the accounting period the trust generally uses to report income, rulings discussing the exact timing are scarce. Rev Rul. 85-13 held:

(1) A's receipt of the entire corpus of the trust in exchange for A's unsecured promissory note constituted an indirect borrowing of the trust corpus which caused A to be the owner of the entire trust under section 675(3) of the Code.

(2) At the time A became the owner of the trust, A became the owner of the trust property. As a result, the transfer of trust assets to A was not a sale for federal income tax purposes and A did not acquire a cost basis in those assets. Accordingly, when A sold the shares of Corporation Z stock on January 20, 1984, A recognized gain of $30x (amount realized of $50x less adjusted basis of $20x). Further, this holding would apply even if the trust held other assets in addition to A's promissory note if A, under any of the grantor trust provisions, was treated as the owner of the portion of the trust represented by the promissory note because A would be treated as the owner of the purported consideration (the promissory note) both before and after the transaction. See section 1.671-3(a)(2) of the regulations.

III.B.2.j.i. Changing Grantor Trust Status

An article from a prolific tax planner discusses the effect of changing grantor trust status during the grantor's life:[6837]

- Pass through entities
- Payments of estimated taxes
- Suspended losses
- Basis
- Carryovers (including excess deductions on termination under Code § 642(h).[6838]

Note that a change in grantor trust status would not be eligible[6839] for an S corporation accounting cut-off in which S corporation activity is taxed to those who owned the stock on a particular date rather than pro-rata, per-share, per-day,[6840] whereas such a cut-off may very well be available for a partnership interest.[6841] Thus, when a grantor trust owns S corporation stock, the grantor should consider turning off grantor trust status before January 1 of the year of sale if the grantor wants to avoid paying tax when the business is sold. The pro-rata per-share per-day that a change in grantor trust treatment requires applies to K-1 items but not to gain or loss on deemed liquidation of S corp.

III.B.2.j.ii. Tax Allocations on the Transfer of Stock in an S Corporation

III.B.2.j.ii.(a). General Rules for Tax Allocations on the Transfer of Stock in an S Corporation

Although basis adjustments apply to partnership assets when a partnership interest is transferred in a taxable event or at a partner's death,[6842] similar adjustments do not apply to the corporation's assets when stock in an S corporation is transferred in a taxable event or at a shareholder's death. The basis adjustment might be replicated by liquidating the corporation, in which case the corporation is deemed to sell its assets,[6843] increasing the assets' basis. The shareholders are taxed on the sale of the assets. Then the shareholders will have a loss on liquidation to the extent that their basis, increased by death (or purchase, etc.) and increased by

[6843] Code § 336.

their K-1 income from the deemed sale of the corporation's assets, exceeds the fair market value of the assets distributed. In a perfect world, if the sole shareholder dies, the K-1 income will be offset by the shareholder's loss on liquidation. However, the nature of the K-1 income might not be a pure long-term capital gain, as depreciation recapture and the related party rules relating depreciable or amortizable property might apply.[6844] Furthermore, if the shareholder is a QSST, the gain on the deemed asset sale passes through to the beneficiary, whereas the loss is trapped in the trust;[6845] thus, where possible, liquidate the S corporation before funding a QSST after a basis-changing event.

Below is a discussion of pro-rating income from the transfer of stock.[6846]

Big increases in income (such as from the sale of significant capital asset) toward the end of a taxable year can cause problems for a shareholder whose stock is transferred before the sale. The deadline for declaring a dividend is often 1-2 months after the record date, so that the transferring shareholder might not be eligible for the related tax distribution, even if the other shareholders would otherwise have agreed to use an earlier record date. One might consider requiring in the shareholders' agreement a requirement that an accounting cut-off be done so that the gain is allocated to the recipient shareholder and not the transferring shareholder.[6847] If the stock is held in trust before and after the transfer, the Uniform Principal and Income Act might remedy this mismatch.[6848]

III.B.2.j.ii.(b). Transfer of Less Than Shareholder's Entire Interest

A grantor who transfers only a portion of his or her interest in the S corporation has no choice of tax allocation method. The deemed transferor and transferee will be allocated a pro rata portion of S corporation items based upon a two-step process:[6849]

[6844] Code § 1239. Pay careful attention to the Code § 267 attribution rules and exceptions to those rules. Code § 267(c)(1) has more limited attribution when trusts are involved, so Code § 1239 is easier to avoid when the decedent passes assets in trust rather than outright. II.Q.7.g Code § 1239: Distributions or Other Dispositions of Depreciable or Amortizable Property.

[6845] Reg. § 1.1361-(j)(8) provides:

> Coordination with grantor trust rules. If a valid QSST election is made, the income beneficiary is treated as the owner, for purposes of section 678(a), of that portion of the trust that consists of the stock of the S corporation for which the QSST election was made. However, solely for purposes of applying the preceding sentence to a QSST, an income beneficiary who is a deemed section 678 owner only by reason of section 1361(d)(1) will not be treated as the owner of the S corporation stock in determining and attributing the federal income tax consequences of a disposition of the stock by the QSST. For example, if the disposition is a sale, the QSST election terminates as to the stock sold and any gain or loss recognized on the sale will be that of the trust, not the income beneficiary. Similarly, if a QSST distributes its S corporation stock to the income beneficiary, the QSST election terminates as to the distributed stock and the consequences of the distribution are determined by reference to the status of the trust apart from the income beneficiary's terminating ownership status under sections 678 and 1361(d)(1). The portions of the trust other than the portion consisting of S corporation stock are subject to subparts A through D of subchapter J of chapter 1, except as otherwise required by subpart E of the Internal Revenue Code.

[6846] See footnote 226 for a distribution method to take into account varying interests.

[6847] See text accompanying footnotes 6851-6861.

[6848] Section 506 of the Uniform Principal and Income Act. The Comments mention that QSSTs were considered when drafting Section 506(a)(3).

[6849] Code § 1377(a)(1).

(1) each corporate item is assigned, in equal portion, to each day of the taxable year.

(2) that portion is divided pro rata among the shares outstanding on that day.

The grantor is treated as a shareholder for the day of disposition, including the day of his or her death.[6850]

III.B.2.j.ii.(c). Transfer of Shareholder's Entire Interest

When a grantor transfers the entire S corporation interest, he or she uses the daily proration rule of Code § 1377(a)(1) unless an election is made to apply the special rule of Code § 1377(a)(2), described below.

A grantor who terminates his or her entire interest, in conjunction with the remaining shareholders, may elect to terminate the corporation's tax year.[6851] Reg. § 1.1377-1(b)(4) provides that this election is available:[6852]

> on the occurrence of any event through which a shareholder's entire stock ownership in the S corporation ceases, including a sale, exchange, or other disposition of all of the stock held by the shareholder; a gift under section 102(a) of all the shareholder's stock; a spousal transfer under section 1041(a) of all the shareholder's stock; a redemption, as defined in section 317(b), of all the shareholder's stock, regardless of the tax treatment of the redemption under section 302; and the death of the shareholder.

Reg. § 1.1377-1(a)(2)(iii), "Shareholder trust conversions," provides:[6853]

> If, during the taxable year of an S corporation, a trust that is an eligible shareholder of the S corporation converts from a trust described in section 1361(c)(2)(A)(i), (ii), (iii), or (v) for the first part of the year to a trust described in a different subpart of section 1361(c)(2)(A)(i), (ii), or (v) for the remainder of the year, the trust's share of the S corporation items is allocated between the two types of trusts. The first day that a qualified subchapter S trust (QSST) or an electing small business trust (ESBT) is treated

---

6850 Reg. § 1.1377-1(a)(2)(ii).
6851 Code § 1377(a)(2).
6852 Reg. § 1.1377-1(b)(4) also provides that, in determining whether a shareholder's entire interest in an S corporation has been terminated, any interest held by the shareholder as a creditor, employee, director, or in any other non-shareholder capacity is disregarded.
6853 T.D. 8994 explains:

> A commentator suggested that a trust's conversion to an ESBT should result in a complete termination of the trust's interest in the S corporation for purposes of section 1377(a)(2) because the incidence of taxation with respect to S corporation items will change as a result of the ESBT election….The final regulations do not adopt the suggestion that all conversions of a trust to an ESBT should be treated as a complete termination of the trust's interest in the S corporation for purposes of section 1377(a)(2)….When a trust changes from a wholly-owned grantor trust or QSST to an ESBT or from an ESBT to a QSST, the individuals who are shareholders of the S corporation under section 1361(c)(2)(B) remain the same. The election to terminate the taxable year provided in section 1377(a)(2) applies to the termination of a <u>shareholder's</u> interest in the S corporation. Accordingly, it is appropriate to treat the conversion of a trust described in section 1361(c)(2)(A)(ii) or (iii) to an ESBT or QSST as a termination of the prior trust's interest in the S corporation, but not to treat other conversions to an ESBT or QSST as terminations. The election under § 1.1368-1(g) is also not available because the conversion of the trust is not a qualifying disposition.

as an S corporation shareholder is the effective date of the QSST or ESBT election. Upon the conversion, the trust is not treated as terminating its entire interest in the S corporation for purposes of paragraph (b) of this section, unless the trust was a trust described in section 1361(c)(2)(A)(ii) or (iii) before the conversion.

Reg. § 1.1377-1(a)(2)(iii) is illustrated in Reg. § 1.1377-1(c), Example (3), "Effect of conversion of a qualified subchapter S trust (QSST) to an electing small business trust (ESBT):"

(i) On January 1, 2003, Trust receives stock of S corporation. Trust's current income beneficiary makes a timely QSST election under section 1361(d)(2), effective January 1, 2003. Subsequently, the trustee and current income beneficiary of Trust elect, pursuant to § 1.1361-1(j)(12), to terminate the QSST election and convert to an ESBT, effective July 1 2004. The taxable year of S corporation is the calendar year. In 2004, Trust's pro rata share of S corporation's nonseparately computed income is $100,000.

(ii) For purposes of computing the income allocable to the QSST and to the ESBT, Trust is treated as a QSST through June 30, 2004, and Trust is treated as an ESBT beginning July 1, 2004. Pursuant to section 1377(a)(1), the pro rata share of S corporation income allocated to the QSST is $49,727 ($100,000 x 182 days/366 days), and the pro rata share of S corporation income allocated to the ESBT is $50,273 ($100,000 x 184 days/366 days).

For an example of how this could be disastrous, see the indented text accompanying fn. 6556 in part III.B.2.d.i.(b) Portions of Irrevocable Grantor Trust Deemed Owned for Federal Income Taxation.

Query whether a cut-off applies when the deemed owner of a grantor trust dies:[6854]

- It is a conversion of a trust described in Code § 1361(c)(2)(A)(i) (a wholly owned grantor trust)[6855] to a trust described in Code § 1361(c)(2)(A)(ii) (a trust that was a wholly owned grantor trust immediately before the death of the deemed owner and which continues in existence after such death),[6856] so Reg. § 1.1377-1(a)(2)(iii) would seem to prohibit a cut-off. On the other hand, Reg. § 1.1377-1(b)(4) permits a cut-off when a shareholder dies. Generally, conflicting provisions are interpreted by giving effect to the one most tailored to the situation. Because the death of the deemed sole owner of a trust is just one of many ways to convert a grantor trust to a nongrantor trust, Reg. § 1.1377-1(b)(4) should control when conflicting with Reg. § 1.1377-1(a)(2)(iii). On the other hand, Reg. § 1.1377-1(a)(2)(iii) expressly contemplates a conversion to a trust described in Code § 1361(c)(2)(A)(ii), which can occur only when the deemed owner dies.

- Instinctively, most tax advisors would view applying Reg. § 1.1377-1(a)(2)(iii) to a revocable trust would be preposterous – they would argue that of course Reg. § 1.1377-1(b)(4) would control. But I'm not sure how they would get around the fact that Reg. § 1.1377-1(a)(2)(iii) expressly contemplates a conversion to a trust described in Code § 1361(c)(2)(A)(ii). To

avoid this argument, have the (formerly) revocable trust elect income taxation as an estate,[6857] so that it is not taxed as a trust at all.[6858] Another option would be for the

[6857] See part II.J.8 Allocating Capital Gain to Distributable Net Income (DNI)
Although the discussion below generally refers to trusts, generally it applies to estates as well. If a trustee has discretion to make an election regarding that trust, the election does not affect the choices available regarding other trusts the trustee manages.

I.A.1.cc. Capital Gain Constitutes DNI Unless Excluded

Taxable income is DNI unless expressly excluded.

Code § 643(a)(3) provides:

> *Capital gains and losses*. Gains from the sale or exchange of capital assets shall be excluded to the extent that such gains are allocated to corpus and are not (A) paid, credited, or required to be distributed to any beneficiary during the taxable year, or (B) paid, permanently set aside, or to be used for the purposes specified in section 642(c).

Thus, to be excluded from the income of a domestic trust, the gains must:

- Arise from the sale or exchange of capital assets,
- Be allocated to corpus, and
- Not be actually or deemed to be distributed.

The rest of this part II.J.8.a Capital Gain Constitutes DNI Unless Excluded focuses on the first two prongs.

I.A.1.cc.i. Whether the Capital Gain Is from the Sale or Exchange of a Capital Asset

Only gains from the sale of capital assets are ordinarily excluded from DNI.

For example, "property, used in his trade or business, of a character which is subject to the allowance for depreciation provided in section 167, or real property used in his trade or business" is not a capital asset. Therefore, the sale of such property would constitute DNI, although it would not constitute trust accounting income. Whether other real estate is a capital asset depends on various facts.

However, "any recognized gain on the sale or exchange of property used in the trade or business" often receives capital gain treatment to the extent it does not constitute certain depreciation recapture. Goodwill that has not been amortized is a capital asset, but goodwill that is being amortized is not a capital asset. Thus, because such assets are not capital assets, such capital gains generally would be included in DNI.

I.A.1.cc.ii. Whether the Gain from the Sale or Exchange of a Capital Asset Is Allocated to Corpus

I am unaware of any authority defining "allocated to corpus" as used in Code § 643(a)(3). Presumably it means receipts by the trust that are allocated to principal.

Does the statute mean that capital gain are automatically included in DNI unless they are affirmatively allocated to principal and certain other conditions exist? Reg. § 1.643(a)-3(a) might overrule that requirement, providing (highlighting added):

> *In general*. Except as provided in § 1.643(a)-6 and paragraph (b) of this section, gains from the sale or exchange of capital assets are ordinarily excluded from distributable net income and are not ordinarily considered as paid, credited, or required to be distributed to any beneficiary.

This regulation essentially has three parts:

- Reg. § 1.643(a)-6 deals with foreign trusts.

- Reg. § 1.643(a)-3(b) explains when capital gains from the sale or exchange of an asset are included in DNI and does not include a requirement that the capital gain be allocated to principal. In fact, one of the prongs discusses the treatment when capital gains are allocated to income.

- Depending on the meaning one gives to "ordinarily," this regulation might dispense with the statutory requirement that capital gains be allocated to corpus. The regulation does not explain when it says "ordinarily" what the exceptions might be, other than Reg. §§ 1.643(a)-6 and 1.643(a)-3(b). There would appear to be substantial authority for saying that an affirmative allocation of capital gains to principal is or is not required.

This issue seems to be most important for the trust's gross income that does not take the form of receipts of cash or other property. For example, a trust might invest in a partnership, S corporation, or other flow-through entity that does not distribute all of its taxable income. How should one treat capital gain from a flow-through entity's sale of a capital asset, when the entity distributes less than all of its taxable income? Should the undistributed capital gain be included in DNI?

- With respect to the accumulated capital gain, the trust has no receipts and therefore is not allocated to corpus. Arguably, the capital gain is not excluded from DNI and therefore constitutes DNI.

- On the other hand, the accumulated capital gain benefits the trust's corpus. Should it be treated as if it had been allocated to corpus? In that case, should it be trapped inside the trust, given that it was accumulated inside the entity and not distributed to the beneficiary?

- Given this uncertainty, would the trustee have discretion to take a different position each year? In Reg. § 1.643(a)-3(b), the Treasury generally agreed that the trustee would not be required to take a consistent position year-by-year, except for capital gain allocated to corpus and treated consistently by the fiduciary on the trust's books, records, and tax returns as part of a distribution to a beneficiary. Given that this gross income was not allocated corpus (because it was never physically received), perhaps the trustee has discretion to vary the treatment from year to year? Another approach might be to say that, because the undistributed capital gain was not allocated to principal, the regulations might presume that the undistributed capital gain is allocated to income and can be included in DNI inconsistently from year to year under Reg. § 1.643(a)-3(b)(1).

If all of a flow-through entity's K-1 items taxable to the trust are included in DNI, then part II.J.8.c Basic Framework for Allocating Capital Gain to DNI If Allocated to Income or Principal might cause ordinary income to be trapped at the trust level if the flow-through entity distributes cash in an amount less than all of these K-1 items; see part II.J.8.f Consequences of Allocating Capital Gain to DNI. In light of the consequences described there, the most taxpayer-favorable reading may be that capital gain is ordinarily excluded from DNI.

I leave it to the reader to decide which approach is "better" or perhaps to make that decision on a trust-by-trust basis.

For more on using flow-through entities, see part II.J.8.e Partnerships and S corporations Carry Out Income and Capital Gain to Beneficiaries.

I.A.1.dd. Should Capital Gain Be Allocated to DNI?

Often beneficiaries have income below the thresholds that cause the 3.8% tax and the additional 5% capital gain tax to be incurred, whereas trusts start paying those taxes at relatively modest income levels. Therefore, distributing capital gains to beneficiaries might be beneficial – at least from an income tax viewpoint.

Consider various factors described in part II.J.3 Strategic Fiduciary Income Tax Planning.

I.A.1.ee. Basic Framework for Allocating Capital Gain to DNI If Allocated to Income or Principal

Generally, gains from the sale or exchange of capital assets, net of losses, are excluded from distributable net income (DNI). But that statement belies the flexibility we are about to see.

Reg. § 1.643(a)-3(b) provides:

> *Capital gains included in distributable net income*. Gains from the sale or exchange of capital assets are included in distributable net income to the extent they are, pursuant to the terms of the governing instrument and applicable local law, or pursuant to a reasonable and impartial exercise of discretion by the fiduciary (in accordance with a power granted to the fiduciary by applicable local law or by the governing instrument if not prohibited by applicable local law) -
>
> (1) Allocated to income (but if income under the state statute is defined as, or consists of, a unitrust amount, a discretionary power to allocate gains to income must also be exercised consistently and the amount so allocated may not be

greater than the excess of the unitrust amount over the amount of distributable net income determined without regard to this subparagraph § 1.643(a)-3(b));

(2) Allocated to corpus but treated consistently by the fiduciary on the trust's books, records, and tax returns as part of a distribution to a beneficiary; or

(3) Allocated to corpus but actually distributed to the beneficiary or utilized by the fiduciary in determining the amount that is distributed or required to be distributed to a beneficiary.

Note the word "or" after paragraph (2) above. That indicates capital gains are included in DNI if and to the extent that any one or more of paragraph (1) (the "Income Rule"), paragraph (2) (the "Consistent Principal Rule"), or paragraph (3) (the "Discretionary Principal Rule") applies. For more on the:

- Income Rule, see part II.J.8.c.i Income Rule: Capital Gain Allocated to Income Under State Law
- Consistent Principal Rule, see part II.J.8.c.ii Consistent Principal Rule: Capital Gain Allocated to Corpus but Treated Consistently as Part of a Distribution to a Beneficiary
- Discretionary Principal Rule, see part II.J.8.c.iii Discretionary Principal Rule: Allocated to Principal but Actually Distributed to the Beneficiary or Used by the Trustee to Determine the Amount Distributed or Required to be Distributed to a Beneficiary.

Before its amendment by T.D. 9102 (12/30/2003), Reg. § 1.643(a)-3 made it more difficult to include capital gain in DNI.

I.A.1.ee.i. Income Rule: Capital Gain Allocated to Income Under State Law

Most states have adopted the Uniform Principal and Income Act, which will be referred to at UPIA for the rest of this part II.J.8.c.i, or its replacement, which is described in part II.J.5.b Uniform Fiduciary Income & Principal Act (UFIPA).

Generally, any capital gain included as the distributive share of income from a partnership or S corporation and distributed from the entity to the trust will constitute income under the Act, making the rest of this part II.J.8 Allocating Capital Gain to Distributable Net Income (DNI) be moot.

Generally, the Act allocates capital gains to principal. The main exceptions are the power to adjust, unitrust distributions, and exceptions in the governing instrument; the power to adjust and power to convert to a unitrust followed adoption of the prudent investor rule. Following a discussion of each of these is a discussion of the respect fiduciary income tax law gives them.

I.A.1.ee.i.(a). Power to Adjust

Capital gains may be reclassified as income if traditional trust accounting income principles cause insufficient receipts to be classified as income. See parts II.J.5.b.ii.(a) Power to Adjust.

I.A.1.ee.i.(b). Possible Allocation to Income of Gain on Sale of Interest in Partnership or S corporation

It is not uncommon for partnerships and S corporations to reinvest part of their annual income; indeed, to facilitate growth or simply a stronger capital structure (which lenders might require), many distribute only enough to pay their owners' income taxes (commonly referred to as a "tax distribution") plus a modest bonus (referred to below as a "bonus distribution").

Taxes on this reinvested income are charged against the income of a trust that owns such an entity. This is the only practical solution to the trust's obligation to pay its taxes, because the taxing authorities' claims against the trustee are much more pressing than the beneficiaries' claims. (Note that the income beneficiary of a Qualified Subchapter S Trust pays this tax – part III.A.3.e QSSTs and ESBTs – which has an effect similar to charging the trust's income.)

The Uniform Principal and Income Act includes a remedy for the income beneficiary that had to pay the tax on the entity's accumulated income that has been inherently baked into principal. Section 506(a)(3) authorizes a fiduciary to "make adjustments between principal and income to offset the shifting of economic interests or tax benefits between income beneficiaries and remainder beneficiaries which arise from … the ownership by an estate or trust of an interest in an entity whose taxable income, whether or not distributed, is includable in the taxable income of the estate, trust, or a beneficiary." This specific provision supplements any power to adjust that might generally apply.

Thus, when an interest in a partnership or an S corporation is sold, the trustee should consider whether to allocate some of the sale proceeds to income. However, it's not at all obvious that the trustee should make an adjustment; consider that:

- The entity made distributions specifically to pay this tax, so the trust or income beneficiary was not really "out of pocket" for this tax.

- If the entity had been a C corporation, the entity would have paid the tax itself. Its dividend would have equaled the bonus distribution, and this issue would never have arisen.

- The true issue is whether the bonus distribution was sufficient. Was the decision to accumulate income fair – a sound exercise of the business judgment of those who run the entity? Did those who control the entity promise a make-up distribution at some point because of a special project, or was the accumulation merely part of a solid plan to grow the business, which presumably would result in increased income and increased bonus distributions? Were those who control the entity running it just to benefit themselves (and, if owners, trying to extract more benefits as owners than the inactive owners received)? I have probably left out many other relevant considerations, but hopefully I have communicated why this decision is not easy.

See parts II.J.12 Equitable Adjustments to Reimburse Income Tax Paid or Tax Benefit Received by a Party That Does Not Bear the Burden Under the Trust Accounting Rules
and II.J.16 Fiduciary Income Taxation When Selling Interest in a Pass-Through Entity or When the Entity Sells Its Assets.

If the trustee is concerned that the income beneficiary might spend a perceived windfall unwisely, the trustee might consider using the power to adjust to spread distributions over an appropriate period of time. Such a spread over time might be more palatable if, instead of labelling the adjustment to sale proceeds as a tax reimbursement, the trustee labelled it as a make-up for insufficient bonus distributions, taking the position that future distributions to beneficiaries might be loosened because of a prior conservative distribution policy. The bonus distributions might have been sufficient from the viewpoint of what the entity should have distributed but might have been insufficient from the viewpoint of how much income the trustee should have tried to generate. As mentioned in part III.A.4.d.iv Advising Clients about the UPAIA § 505 Change and UFIPA § 506 (discussing conflicts with beneficiaries that might arise when an entity makes tax distributions but little or no bonus distributions), these issues have no easy answer.

See also part II.J.12 Equitable Adjustments to Reimburse Income Tax Paid or Tax Benefit Received by a Party That Does Not Bear the Burden Under the Trust Accounting Rules.

I.A.1.ee.i.(c). Unitrust

A unitrust is a trust that distributes fixed amounts, redetermined annually as a fixed percentage of the value of the trust's value, which value is redetermined annually but might be based on an average of values, such as the average value of the trust's assets for the past three years. See parts II.J.5.b.ii.(b) Unitrust and II.J.5.b.ii.(c) Comparing Power to Adjust to a Unitrust.

Reg. § 1.643(a)-3(e) provides the following examples regarding unitrusts:

> *Example (11)*. The applicable state statute provides that a trustee may make an election to pay an income beneficiary an amount equal to four percent of the fair market value of the trust assets, as determined at the beginning of each taxable year, in full satisfaction of that beneficiary's right to income. State statute also provides that this unitrust amount shall be considered paid first from ordinary and tax-exempt income, then from net short-term capital gain, then from net long-term capital gain, and finally from return of principal. Trust's governing instrument provides that A is to receive each year income as defined under state statute. Trustee makes the unitrust election under state statute. At the beginning of the taxable year, Trust assets are valued at $500,000. During the year, Trust receives $5,000 of dividend income and realizes $80,000 of net long-term gain from the sale of capital assets. Trustee distributes to A $20,000 (4% of $500,000) in satisfaction of A's right to income. Net long-term capital gain in the amount of $15,000 is allocated to income pursuant to the ordering rule of the state statute and is included in distributable net income for the taxable year.
>
> *Example (12)*. The facts are the same as in Example 11, except that neither state statute nor Trust's governing instrument has an ordering rule for the character of the unitrust amount, but leaves such a decision to the discretion of Trustee. Trustee intends to follow a regular practice of treating principal, other than capital gain, as distributed to the beneficiary to the extent that the unitrust amount exceeds Trust's ordinary and tax-exempt income. Trustee evidences this treatment by not including any capital gains in distributable net income on Trust's Federal income tax return so that the entire $80,000 capital gain is taxed to Trust. This treatment of the capital gains is a reasonable exercise

of Trustee's discretion. In future years Trustee must consistently follow this treatment of not allocating realized capital gains to income.

Example (13). The facts are the same as in Example 11, except that neither state statutes nor Trust's governing instrument has an ordering rule for the character of the unitrust amount, but leaves such a decision to the discretion of Trustee. Trustee intends to follow a regular practice of treating net capital gains as distributed to the beneficiary to the extent the unitrust amount exceeds Trust's ordinary and tax-exempt income. Trustee evidences this treatment by including $15,000 of the capital gain in distributable net income on Trust's Federal income tax return. This treatment of the capital gains is a reasonable exercise of Trustee's discretion. In future years Trustee must consistently treat realized capital gain, if any, as distributed to the beneficiary to the extent that the unitrust amount exceeds ordinary and tax-exempt income.

A right to income expressed initially solely as a unitrust interest may qualify for the QTIP marital deduction.

I.A.1.ee.i.(d). Exceptions in the Governing Instrument

Although the Act provides general rules, it also allows trust agreements to override those rules:

> In allocating receipts and disbursements to or between principal and income, and with respect to any matter within the scope of [Articles] 2 and 3, a fiduciary:
>
> (1) shall administer a trust or estate in accordance with the terms of the trust or the will, even if there is a different provision in this [Act];
>
> (2) may administer a trust or estate by the exercise of a discretionary power of administration given to the fiduciary by the terms of the trust or the will, even if the exercise of the power produces a result different from a result required or permitted by this [Act];
>
> (3) shall administer a trust or estate in accordance with this [Act] if the terms of the trust or the will do not contain a different provision or do not give the fiduciary a discretionary power of administration; and
>
> (4) shall add a receipt or charge a disbursement to principal to the extent that the terms of the trust and this [Act] do not provide a rule for allocating the receipt or disbursement to or between principal and income.

I.A.1.ee.i.(e). Fiduciary Income Tax Recognition of the Trust Agreement and State Law

Code § 643(b) generally defers to the trust agreement and applicable state law. The Uniform Principal and Income Act ("UPIA") and the Uniform Fiduciary Principal & Income Act ("UFIPA") authorizes the trust agreement to override the Act.

However, Reg. § 1.643(b)-1 does not recognize trust agreements that depart too far from the usual rules:

> Trust provisions that depart fundamentally from traditional principles of income and principal will generally not be recognized. For example, if a trust instrument directs that all the trust income shall be paid to the income beneficiary but defines ordinary dividends and interest as principal, the trust will not be considered one that under its governing instrument is required to distribute all its income currently for purposes of section 642(b) (relating to the personal exemption) and section 651 (relating to simple trusts). Thus, items such as dividends, interest, and rents are generally allocated to income and proceeds from the sale or exchange of trust assets are generally allocated to principal.

Reg. § 1.643(b)-1 respects variations provided under applicable state law:

> However, an allocation of amounts between income and principal pursuant to applicable local law will be respected if local law provides for a reasonable apportionment between the income and remainder beneficiaries of the total return of the trust for the year, including ordinary and tax-exempt income, capital gains, and appreciation. For example, a state statute providing that income is a unitrust amount of no less than 3% and no more than 5% of the fair market value of the trust assets, whether determined annually or averaged on a multiple year basis, is a reasonable apportionment of the total return of the trust. Similarly, a state statute that permits the trustee to make adjustments between income and principal to fulfill the trustee's duty of impartiality between the income and remainder beneficiaries is generally a reasonable apportionment of the total return of the trust. Generally, these adjustments are permitted by state statutes when the trustee invests and manages the trust assets under the state's prudent investor standard, the trust describes the amount that may or must be distributed to a beneficiary by referring to the trust's income, and the trustee after applying the state statutory rules regarding the allocation of receipts and disbursements to income and principal, is unable to administer the trust impartially. Allocations pursuant to methods prescribed by such state statutes for apportioning the total return of a trust between income and principal will be respected regardless of whether the trust provides that the income must be distributed to one or more beneficiaries or may be accumulated in whole or in part, and regardless of which alternate permitted method is actually used, provided the trust complies with all requirements of the state statute for switching methods.

Circling back to the Act's authorizing trust agreements to depart from traditional principles, Reg. § 1.643(b)-1 concludes with:

> In addition, an allocation to income of all or a part of the gains from the sale or exchange of trust assets will generally be respected if the allocation is made either pursuant to the terms of the governing instrument and applicable local law, or pursuant to a reasonable and impartial exercise of a discretionary power granted to the fiduciary by applicable local law or by the governing instrument, if not prohibited by applicable local law.

For the "reasonable and impartial exercise" requirement in the context of the power to adjust, see part II.J.5.b.ii.(a) Power to Adjust.

I often use a clause providing that the trustee has wide discretion but must reasonably and fairly balance the interests of the income and remainder beneficiaries. That language comes from the marital deduction regulations. Generally, the trustee's authority to allocate between income and principal does not trigger grantor trust status, does not constitute a power of appointment, and does not have generation-skipping transfer tax implications. The trustee might want to consider providing accountings or other notices to the beneficiaries that would start running the statute of limitations for making a claim against the trustee so that the beneficiaries could not add up all of their alleged grievances and then pile this one on top of it, which procedure might help minimize any gift tax consequences to failing to make a claim.

How does one draw the line between what departs "fundamentally from traditional principles of income and principal" and what is "a reasonable and impartial exercise of a discretionary power granted to the fiduciary" under Reg. § 1.643(b)-1?

Presumably, the trustee should be on solid ground in allocating to income capital gains such that the total amount of all receipts allocated to income does not exceed 5%, given that the regulations expressly approve unitrusts in the 3%-5% range. The trusts should also be on solid ground in allocating to income capital gains generated by a partnership that the settlor intended to distribute to the income beneficiary.

Beyond that, it's a matter of facts and circumstances and judgment. However, Reg. § 1.643(a)-3(e), Example (4) respected a mandatory allocation of capital gain to income where a trust had $5,000 of dividends and $10,000 of capital gains, and the trustee distributed $17,000 to the beneficiary.

I.A.1.ee.i.(f). Conclusion Regarding Allocating Capital Gain to Income

Reg. § 1.643(a)-3(b)(1) requires a consistent practice for unitrusts. Considering that the unitrust recipient is receiving cash and presumably would have the liquidity to pay tax on any capital gains distributed to the beneficiary, in many cases it would be fair to allocate capital gain to DNI to the extent that the unitrust amount exceeds the income that would apply under the Act's general rules. Given that one provides for a unitrust when tension between the income beneficiary and remaindermen might be high, the tension created by this tax issue would be high to the same degree. Consider providing a firm rule in the trust agreement regarding the allocation of capital gain to DNI. If one is concerned that shifting tax rates might create an unfair tax result, consider providing a clause reimbursing the unitrust beneficiary for taxes paid on the unitrust and on the reimbursement; this requires cooperation between the trustee's income tax preparer and the beneficiary's income tax preparer, but the calculation should be relatively mechanical.

For trusts that are not unitrusts, Reg. § 1.643(a)-3(b)(1) provides significant flexibility, allowing the trustee discretion whether to allocate capital gain to income for fiduciary accounting purposes (if the trust agreement and state law permit) and also whether to include in DNI the capital gain that was allocated to income.

Consider the nuances for a mandatory income trust. Distributions must be made no later than 65 days after yearend to include capital gain in DNI in every other situation. In a mandatory income trust, a power to adjust might be able to retroactively include capital gain in income – perhaps as late as when the tax return is prepared. For how mandatory income trusts work, see part II.J.5 Mandatory Income Trusts. For limits on retroactivity, see part II.J.5.a Issues Arising with Mandatory Income Trusts.

I.A.1.ee.ii. Consistent Principal Rule: Capital Gain Allocated to Corpus but Treated Consistently as Part of a Distribution to a Beneficiary

Reg. § 1.643(a)-3(e) helps guide our application of Reg. § 1.643(a)-3(b)(2):

> *Example (1)*. Under the terms of Trust's governing instrument, all income is to be paid to A for life. Trustee is given discretionary powers to invade principal for A's benefit and to deem discretionary distributions to be made from capital gains realized during the year. During Trust's first taxable year, Trust has $5,000 of dividend income and $10,000 of capital gain from the sale of securities. Pursuant to the terms of the governing instrument and applicable local law, Trustee allocates the $10,000 capital gain to principal. During the year, Trustee distributes to A $5,000, representing A's right to trust income. In addition, Trustee distributes to A $12,000, pursuant to the discretionary power to distribute principal. Trustee does not exercise the discretionary power to deem the discretionary distributions of principal as being paid from capital gains realized during the year. Therefore, the capital gains realized during the year are not included in distributable net income and the $10,000 of capital gain is taxed to the trust. In future years, Trustee must treat all discretionary distributions as not being made from any realized capital gains.
>
> *Example (2)*. The facts are the same as in Example 1, except that Trustee intends to follow a regular practice of treating discretionary distributions of principal as being paid first from any net capital gains realized by Trust during the year. Trustee evidences this treatment by including the $10,000 capital gain in distributable net income on Trust's federal income tax return so that it is taxed to A. This treatment of the capital gains is a reasonable exercise of Trustee's discretion. In future years Trustee must treat all discretionary distributions as being made first from any realized capital gains.
>
> *Example (3)*. The facts are the same as in Example 1, except that Trustee intends to follow a regular practice of treating discretionary distributions of principal as being paid from any net capital gains realized by Trust during the year from the sale of certain specified assets or a particular class of investments. This treatment of capital gains is a reasonable exercise of Trustee's discretion.

The all-or-nothing approach taken by Examples (1) and (2) is not very attractive, but we need to deal with it. Let's consider some fact patterns:

1. <u>The beneficiary needs regular annual distributions that cannot be made using a power to adjust</u>. Generally, distributions in excess of what can made using a power to adjust would not be sustainable. A power to adjust typically adjusts to a 3%-5% distribution, and most models suggest that distributions in excess of that will lead to a trust being depleted. Thus, a more likely scenario is that a power to adjust is not available, because state law prevents using the power to adjust in particular situations (unless the trust agreement overrides it). In such a case, the beneficiary's federal and state/local income tax bracket for capital gains needs to be compared to the trust's federal and state/local income tax bracket for capital gains. Note that a nonresident trust would have a zero state/local income tax bracket, to the

extent that the trust does not have income from a business sourced to the state/local jurisdiction.

2. The beneficiary's need for distributions in excess of income is sporadic. It's difficult to predict how the beneficiary's federal and state/local income tax bracket for capital gains compares to the trust's federal and state/local income tax bracket for capital gains, given that rates will change and the trust's and its beneficiaries' circumstances might change over time. In such a case, consider whether the distribution might be phrased as "allocated to corpus but actually distributed to the beneficiary or utilized by the fiduciary in determining the amount that is distributed or required to be distributed to a beneficiary." If that is likely to be the case, then consider not electing to carry out capital gain automatically under (b)(2) but rather deciding to rely on (b)(3), because (b)(3) is flexible whether to allocate capital gain to income, allowing the decision to made separately each year on a case-by-case basis.

Generally, trustees would not be likely to take advantage of the discretion that Example (3) provides to allocate to income only capital gain from the sale of certain specified assets or a particular class of investments, because such an election requires additional recordkeeping.

Some people point to the word "deem" in Example (1) and emphasize the need for such authority in the trust agreement or applicable state law. Uniform Trust Code § 816 generally authorizes trustees to make tax elections, so the authority to "deem" distributions to be capital gains is inherently authorized in UTC states, as well as any other state where a trustee generally has the authority to make tax elections.

I.A.1.ee.iii. Discretionary Principal Rule: Allocated to Principal but Actually Distributed to the Beneficiary or Used by the Trustee to Determine the Amount Distributed or Required to be Distributed to a Beneficiary

Reg. § 1.643(a)-3(b)(3) might seem confusing at first, but it actually has very practical use.

First, let's look at some examples that Reg. § 1.643(a)-3(e) provides:

> Example (5). The facts are the same as in Example 1, except that Trustee decides that discretionary distributions will be made only to the extent Trust has realized capital gains during the year and thus the discretionary distribution to A is $10,000, rather than $12,000. Because Trustee will use the amount of any realized capital gain to determine the amount of the discretionary distribution to the beneficiary, the $10,000 capital gain is included in Trust's distributable net income for the taxable year.
>
> *Example (6)*. Trust's assets consist of Blackacre and other property. Under the terms of Trust's governing instrument, Trustee is directed to hold Blackacre for ten years and then sell it and distribute all the sales proceeds to A. Because Trustee uses the amount of the sales proceeds that includes any realized capital gain to determine the amount required to be distributed to A, any capital gain realized from the sale of Blackacre is included in Trust's distributable net income for the taxable year.

Although Reg. § 1.643(a)-3(b)(3) is viewed generally as discretionary, note that Example (6) is mandatory: if the trustee is required to distribute sale proceeds to a beneficiary, the capital gain from the sale is included in the DNI that the distribution carries out the beneficiary. Example (7) similarly requires all capital gain recognized in the trust's final taxable year to be included in the DNI that the distribution carries out the beneficiary.

The practical application is based on the ability to count as prior year distributions those distributions made in the first 65 days of the current year. For example, any distribution made on or before March 5, 2020 can be treated as a 2019 or 2020 distribution. This election applies to the greater of accounting income under Reg. § 1.643(b)-1 or DNI under Reg. §§ 1.643(a)-1 through 1.643(a)-7. By completing the line on the trust's income tax return, Form 1041, page 2, Part B, showing amounts (other than income required to be distributed currently) paid, credited, or otherwise required to be distributed and checking the Code § 663(b) box in "Other Information" at the bottom of Form 1041, page 2, the trustee decides how much of a current year distribution is allocated to the prior year; the balance would then be credited to the current year.

The practical application based on the 65-day rule would generally occur during February after the year ends and applies only if the trustee has discretion to distribute corpus. The regulations do not specify any particular trust records regarding the election, so do whatever seems best to evidence the intent. Perhaps the income tax return preparer emails the trustee recommending how much of a distribution be made to distribute income and capital gain under the 65-day rule (erring on the side of distributing too much), then the trustee makes the distribution, and the tax return carries through the intent. As long as the distribution is made timely, the tax return can treat none, part, or all of the distribution as a distribution of the taxable year's income. In a manner similar to Example (5), the trustee has referred to the capital gain itself in determining how much to distribute. Unlike Reg. § 1.643(a)-3(b)(2), Reg. § 1.643(a)-3(b)(3) allows one to carry out discretionary distributions of capital gain inconsistently from one year to another.

If the beneficiary does not require monthly or quarterly cash flow, the trustee can simply each February make a big distribution and apply it to the prior or current year for tax return preparation purposes. If the beneficiary does require monthly cash flow but is willing to accept informal constraints, the trustee makes the big distribution into an investment account that the beneficiary owns, and the account makes monthly transfers to the beneficiary's checking account. Obviously this would not work for a beneficiary who cannot exercise discipline, but there is a good segment of beneficiaries for whom it would work.

An alternative approach is to distribute an asset to a beneficiary before the asset is sold. Generally, the beneficiary will receive a carryover basis and then be taxed on the gain.

As with all tax planning, the strategies described in this part II.J.8.c.iii may be unavailable (based on the trust terms), inadvisable (based on sound financial planning), or stupid (giving money to a drug addict just to save taxes).

I.A.1.ee.iv. Netting Capital Losses

Reg. § 1.643(a)-3(d), "Capital losses," provides:

> Losses from the sale or exchange of capital assets shall first be netted at the trust level against any gains from the sale or exchange of capital assets, except for a capital gain that is utilized under paragraph (b)(3) of this section in determining the amount that is

distributed or required to be distributed to a particular beneficiary. See § 1.642(h)-1 with respect to capital loss carryovers in the year of final termination of an estate or trust.

Thus, if and to the extent that Reg. § 1.643(a)-3(b)(3) includes capital gains in DNI (see part II.J.8.c.iii Discretionary Principal Rule: Allocated to Principal but Actually Distributed to the Beneficiary or Used by the Trustee to Determine the Amount Distributed or Required to be Distributed to a Beneficiary), capital losses are not netted against such gains. The recipient beneficiaries report all such capital gains, and the capital losses remain in the trust.

However, note that Reg. § 1.643(a)-3(b)(3) has two elements: "actually distributed to the beneficiary," which would tend to require tracing except in the case of trust termination, or "utilized by the fiduciary in determining the amount that is distributed or required to be distributed to a beneficiary," in which case the trustee would have needed to consciously decide to refer to the capital gain when making the distribution.

Unless the trustee traces or decides to refer to the gross capital gain (instead of the net capital gain) when making the distribution, the loss would be offset under Reg. § 1.643(a)-3(b)(3). Alternatively, the trustee might not trace and not refer to capital gain but rather exercise the power to adjust, which would invoke Reg. § 1.643(a)-3(b)(1) (see part II.J.8.c.i Income Rule: Capital Gain Allocated to Income Under State Law) and include an automatic offset.

I.A.1.ee.v. Conclusions Regarding the Basic Framework on Allocating Capital Gains to DNI

Often, one cannot predict whether the combination of federal, state, and local income tax rates will be higher inside or outside of the trust.

Quite frankly, I keep changing my mind regarding the best income tax elections as I encounter new situations. If the document is flexible as to distributions and distributions are appropriate, then I would lean toward:

- Flexible language allowing the trustee to allocate capital gains to income, so long as the trustee must reasonably and fairly balance the interests of the income and remainder beneficiaries.

- Using the 65-day-rule to distribute large capital gains to the beneficiary as DNI.

- Electing not to establish a practice of carrying out capital gain to beneficiaries under Reg. § 1.643(a)-3(b)(2) unless it appears that the above two approaches will not suffice to minimize overall income taxes. However, it is not uncommon for me to decide that the above. two approaches will not suffice to minimize overall income taxes. On the other hand, if the situation involves enough money, the trustee can covert capital gain that would otherwise be trapped inside the trust to trust accounting income, using the tool described in part II.J.8.e Partnerships and S corporations Carry Out Income and Capital Gain to Beneficiaries.

Consider adding a withdrawal right of up to 5% of the trust's value. The beneficiary will be deemed to be the owner of the part that the beneficiary can withdraw and perhaps continue to be deemed the owner with respect to the lapsed portion. However, note that withdrawal rights can increase exposure to creditors to the extent of the withdrawal right and perhaps even after a lapse. For details on all of the ideas mentioned in this paragraph, see part III.B.2.i Code § 678 Beneficiary Deemed-Owned Trusts. If one is concerned about the withdrawal right itself becoming a bad idea, consider using a provision along the following the lines:

> In addition to the distributions authorized by the preceding sentence, subject to the following sentence the trustee shall distribute to the beneficiary so much of the principal of the trust as the beneficiary, while at least __ years of age, may request once between February 23 and March 5 of every calendar year, on a noncumulative basis, up to five percent (5%) of the aggregate value, as of the time of such request by the beneficiary, of the principal of the trust. The trustee may, by instrument placed in the trust's records, provide that the preceding sentence shall not apply during any period (including the beneficiary's remaining life), which period shall begin no earlier than the January 1 following the date of the instrument.

This allows the trustee to turn off the withdrawal rights for any future year(s) without impeding the beneficiary's absolute right to withdraw during the current year.

I.A.1.ee.vi. Fairness of Taxing Capital Gain to Beneficiaries; Need for Tax Distributions Here and Other Areas

Our income tax system taxes income to whoever receives it, subject to certain exceptions not relevant to this part II.J.8.c.vi. Therefore, it is fair to tax the beneficiaries.

However, when a distribution is made for a particular purpose and the money is spent, the beneficiary will get upset when handed a tax bill for which the beneficiary did not plan. Therefore, one might need to make a supplemental distribution to pay tax on the original distribution. The supplemental distribution would also need to be enough to pay tax on the supplemental distribution itself. This supplemental distribution is often referred to as "grossing up the distribution" to pay taxes.

This issue applies to more than just capital gains. Clients who leave residences in trust often wish to have the trust pay expenses that a life tenant would ordinarily pay. Distributions by the trust for those purposes run into the same problem – the money is spent for the intended purpose and not available to pay taxes. These distributions also need to be grossed up to pay taxes.

I.A.1.ff. Distribution in Kind; Specific Bequests

I.A.1.ff.i. Distribution in Kind - Generally

Except as provided below and except to the extent that it carries out DNI or constitutes a bequest of income, a distribution is a nontaxable gift (unless the recipient assumes liabilities, in which case it is taxed as a bargain sale).

When a trust distributes property to satisfy a pecuniary distribution (even if the amount is expressly authorized to be satisfied in cash or in kind), the trust recognizes gain on the deemed sale, even if the trust's residue is less than the pecuniary obligation. Such a pecuniary obligation includes an equalizing distribution (presumably unless expressed as a fractional share). This rule includes a pecuniary obligation in the form of an annuity payment to a beneficiary, and the gain recognized in paying the annuity is not included in the beneficiary's distributive net income (DNI) unless the rules for including capital gain in DNI are satisfied. If the trust's residue is less than the pecuniary obligation, the fact that all bequests are protected by Code § 663(a)(1) and therefore no residual beneficiary can pick up income under Code § 662 means that the trust will pay the tax, given that the beneficiaries of the protected bequests will not be picking up that income; note that the trustee will need to reserve for this tax before making distributions to beneficiaries and may have a mismatch for net investment income tax purposes as well. However, when a charity that was the annuity recipient was bequeathed the remainder, the resulting merger of interests and trust termination were not a taxable event. Also, if the bequest is satisfied using date-of-death values, presumably no gain or loss would be realized, but to qualify for the marital or charitable deduction the assets' value relative to date of death values must be "fairly representative of appreciation or depreciation in the value of all property thus available for distribution in satisfaction of such pecuniary bequest or transfer."

If a trust makes a non-pro rata distribution of residue without either the trust instrument or local law authorizing a non-pro rata distribution, each beneficiary may be treated as having received a pro rata distribution and exchanged it with the other beneficiaries. Otherwise, generally the trust does not recognize any gain or loss and the beneficiaries receive the same basis as the trust's; for further analysis of dividing trusts (including on termination), see part II.D.5 Severing Trusts with Multiple Grantors. However, the trust may elect to treat all property distributions during the taxable year as sales, but losses in transactions with beneficiaries and other related parties are disallowed except to the extent that they are from an estate (including a revocable trust electing to be taxed as an estate) satisfying a pecuniary bequest. The loss disallowance applies even if the distribution, taken as a whole, results in a net gain. Thus, gains are recognized and losses generally are not.

The amount deemed distributed is the lesser of the property's basis or fair market value, unless gain was recognized, in which case it is the property's value.

Distributing low basis assets will generate a new basis (often a step-up) when the beneficiary dies. However, distributed assets are subject to the beneficiary's creditors, changes in the beneficiary's estate tax posture (including not only changes in the tax law but also changes in financial situation through the beneficiary's own efforts or through marriage and change in residence to a state that imposes its own estate tax), and changes in the beneficiary's dispositive goals. To get a basis step-up, I would rather add (perhaps by decanting) a formula general power of appointment, as described in part II.H.2.k Taxable Termination vs. General Power of Appointment vs. Delaware Tax Trap.

Distributing an unmarketable partnership interest would carry out DNI without giving the beneficiary cash. However, valuation adjustments might depress the amount of the deemed distributions, and the beneficiary would be entitled to a proportionate share of future distributions from the partnership. However, if the trustee controls the partnership, the trustee can also control the distribution spigot.

I.A.1.ff.ii. Specific Bequest

A gift or bequest of a specific sum of money or of specific property, which is required by the specific terms of the will or trust instrument and is properly paid or credited to a beneficiary, is not allowed as a deduction to an estate or trust under Code § 661 and is not included in the gross income of a beneficiary under Code § 662, unless under the terms of the will or trust instrument the gift or bequest is to be paid or credited to the recipient in more than three installments.

I.A.1.ff.iii. Distributing a Note to the Obligor

Rev. Rul. 75-68 provides:

> The income of a testamentary trust consisting solely of interest from mortgages on the beneficiary's property was required to be distributed periodically. Although the mortgage notes held by the trust required the periodic payment of interest, it was agreed between the beneficiary and the trustees, that the beneficiary would pay no interest on the mortgages and the trustees would distribute no income from the trust.
>
> *Held*, notwithstanding the foregoing agreement, the interest income due on the mortgages held by the trust is includible in the gross income of the trust, and this same amount, as the distributable income of the trust, is includible in the gross income of the beneficiary. Further, the beneficiary is entitled to a deduction for this interest deemed paid on the mortgages.

Below is authority consistent with this conclusion:

Reg. § 1.643(c)-1(a) treats as a beneficiary "any person with respect to an amount used to discharge or satisfy that person's legal obligation as that term is used in § 1.662(a)-4." Reg. § 1.661(a)-2(d) provides:

> The terms "income required to be distributed currently" and "any other amounts properly paid or credited or required to be distributed" also include any amount used to discharge or satisfy any person's legal obligation as that term is used in § 1.662(a)-4.

Reg. § 1.662(a)-4, "Amounts used in discharge of a legal obligation," provides:

> Any amount which, pursuant to the terms of a will or trust instrument, is used in full or partial discharge or satisfaction of a legal obligation of any person is included in the gross income of such person under section 662(a)(1) or (2), whichever is applicable, as though directly distributed to him as a beneficiary, except in cases to which section 71 (relating to alimony payments) or section 682 (relating to income of a trust in case of divorce, etc.) applies. The term "legal obligation" includes a legal obligation to support another person if, and only if, the obligation is not affected by the adequacy of the dependent's own resources. For example, a parent has a "legal obligation" within the meaning of the preceding sentence to support his minor child if under local law property or income from property owned by the child cannot be used for his support so long as his parent is able to support him. On the other hand, if under local law a mother may use the resources of a child for the child's support in lieu of supporting him herself, no

> obligation of support exists within the meaning of this paragraph, whether or not income is actually used for support. Similarly, since under local law a child ordinarily is obligated to support his parent only if the parent's earnings and resources are insufficient for the purpose, no obligation exists whether or not the parent's earnings and resources are sufficient. In any event, the amount of trust income which is included in the gross income of a person obligated to support a dependent is limited by the extent of his legal obligation under local law. In the case of a parent's obligation to support his child, to the extent that the parent's legal obligation of support, including education, is determined under local law by the family's station in life and by the means of the parent, it is to be determined without consideration of the trust income in question.

Reg. § 1.661(a)-2(d) provides:

> The terms "income required to be distributed currently" and "any other amounts properly paid or credited or required to be distributed" also include any amount used to discharge or satisfy any person's legal obligation as that term is used in § 1.662(a)-4.

I.A.1.gg. Partnerships and S corporations Carry Out Income and Capital Gain to Beneficiaries

Generally, K-1 income from a passthrough business entity will carry out any income (including capital) distributed to the trust and then to the trust's beneficiaries. This section focuses on nongrantor trusts holding partnerships rather than S corporations, because generally a trust can hold S corporation stock that is not a grantor trust, QSST, or ESBT only during a relatively limited amount of time. (Although the principles in this part II.J.8.e would apply to a net income with make-up charitable remainder unitrust – a NIMCRUT – the IRS has concerns about that application and might shut it down at some point.)

Also, if one elected not to carry out capital gains under Reg. § 1.643(a)-3(b)(2) and later decides that all capital gain should be included in DNI going forward (or does not want to take a risk that the IRS will not respect deviations from general rules of the Uniform Principal and Income Act, consider forming an entity taxed as a partnership. Capital gains earned through a partnership generally constitute trust accounting income.

The Uniform Principal and Income Act provides that, generally, all cash distributions from an entity (including a partnership) are considered trust accounting income. Only the following distributions from an entity are not considered trust accounting income:

- property other than money;
- money received in one distribution or a series of related distributions in exchange for part or all of a trust's interest in the entity;
- money received in total or partial liquidation of the entity; and
- money received from an entity that is a regulated investment company or a real estate investment trust if the money distributed is a capital gain dividend for federal income tax purposes.

Thus, a partnership's capital gains recognized in the ordinary course of managing and re-balancing a portfolio would constitute fiduciary accounting income to the extent distributed from the partnership in cash and therefore would be includible in DNI under (1) above.

To keep control of the partnership, consider having the trust be a 1% general partner and 98% limited partner, and the beneficiary or someone else might contribute 1% as a limited partner. Distributing a limited partnership interest to a beneficiary can carry out income and perhaps capital gain while at the same time not giving the beneficiary cash to spend (but be sure to distribute enough cash so that the beneficiary can pay tax on the distribution). Be careful to avoid the gain on formation that applies when a contributing partner diversifies the partner's holdings by forming the partnership. If the trust holds not only marketable securities but also investments in businesses, consider setting up one partnership for the business investments and another partnership for the marketable securities, which would help facilitate allocating trust assets on termination or any other trust division. Also consider whether a state with jurisdiction over the trust might subject the partnership itself to state income tax.

Complexity might arise if a partnership distributes less than all of its taxable income to a mandatory income trust. It is unclear whether all of the trust's distributive share of capital gain is DNI. Furthermore, interrelated calculations might be required for a mandatory income trust. Generally, we should look to see whether planning under part II.J.8.c.i Income Rule: Capital Gain Allocated to Income Under State Law or II.J.8.c.iii Discretionary Principal Rule: Allocated to Principal but Actually Distributed to the Beneficiary or Used by the Trustee to Determine the Amount Distributed or Required to be Distributed to a Beneficiary is sufficient before recommending a partnership solely to address the issues described in part II.J.8.c.ii Consistent Principal Rule: Capital Gain Allocated to Corpus but Treated Consistently as Part of a Distribution to a Beneficiary.

I.A.1.hh. Consequences of Allocating Capital Gain to DNI

I.A.1.hh.i. General Rules of the Proportion of DNI Constitutes Capital Gain Compared to Other Income (and General Retention of the Character of DNI Distributed to Beneficiaries)

This part II.J.8.f.i first discusses netting deductions against income then discusses allocating that income.

I.A.1.hh.i.(a). Allocating Deductions to Various Income Items

Rules for allocating deductions include:

- All deductible items directly attributable to one class of income are allocated to that class. To the extent that any items of deduction which are directly attributable to a class of income exceed that class of income, they may be allocated to any other class of income (including capital gains) included in distributable net income as described above except that any excess deductions attributable to tax-exempt income may not be offset against any other class of income.

- Deductions not directly attributable to a specific class of income may be allocated to any item of income (including capital gains) included in computing DNI, but Code § 265 requires a portion of such indirect expenses to be allocated to non-taxable income. Such indirect expenses include trustee fees, the rental of safe deposit boxes, and state income and personal property taxes. Once one has allocated expenses to tax-exempt income, how does one choose to which items of taxable income to allocate deductions? One would consider allocating to those income items that are most highly taxed, considering federal and state income tax and the 3.8% tax on net investment income. For example, interest income is taxed at the highest rates, whereas qualified dividends are taxed at long-term capital gain rates. Within interest income, consider whether the interest is from U.S. obligations exempt from state income tax. Although distributions from qualified retirement plans and IRAs are taxed at the highest regular tax rate, they are exempt from the 3.8% tax on net investment income. See part II.I.6 Deductions Against NII (especially the text accompanying fns. 2307-2308).

- If a charitable deduction under Code § 642(c) is involved, any allocations of taxable income between the charitable deduction and the beneficiaries must have substantial economic effect.

- Special rules apply to depreciation deductions.

I.A.1.hh.i.(b). Allocating Income Items Among Those Receiving It

In allocating income between the trust and the beneficiary (or beneficiaries), the amounts of DNI distributed to the beneficiaries:

> shall be treated as consisting of the same proportion of each class of items entering into the computation of distributable net income of the estate or trust as the total of each class bears to the total distributable net income of the estate or trust in the absence of the allocation of different classes of income under the specific terms of the governing instrument.

However, this proportionate rule is subject to specific provisions in the governing instrument for the allocation of different classes of income or different allocations under local law, subject to tax-exempt income being allocated in a manner that does not allow it to be deducted.

Thus, except for tax-exempt income and allocations between the charitable and noncharitable shares (and any special rules regarding depreciation deductions), it appears that a trust agreement may create ordering provisions between which items of DNI the trust retains and which items of DNI the trust distributes to beneficiaries. However, such a provision might encounter significant resistance from the IRS.

Once one decides which items of DNI the trust distributes to beneficiaries, generally distributions to each beneficiary carry out a pro rata portion of ordinary income and capital gain items allocated to the beneficiaries, and any other characteristic of the income at the trust level retains its status in the beneficiary's hands (which, among other things, is important for net investment income tax purposes). Code § 652(b) provides that amounts included in the beneficiary's income for regular income tax purposes:

> … shall have the same character in the hands of the beneficiary as in the hands of the trust. For this purpose, the amounts shall be treated as consisting of the same proportion

> of each class of items entering into the computation of distributable net income of the trust as the total of each class bears to the total distributable net income of the trust, unless the terms of the trust specifically allocate different classes of income to different beneficiaries. In the application of the preceding sentence, the items of deduction entering into the computation of distributable net income shall be allocated among the items of distributable net income in accordance with regulations prescribed by the Secretary.

Code § 662(b) provides that amounts included in the beneficiary's income for regular income tax purposes:

> … shall have the same character in the hands of the beneficiary as in the hands of the estate or trust. For this purpose, the amounts shall be treated as consisting of the same proportion of each class of items entering into the computation of distributable net income as the total of each class bears to the total distributable net income of the estate or trust unless the terms of the governing instrument specifically allocate different classes of income to different beneficiaries. In the application of the preceding sentence, the items of deduction entering into the computation of distributable net income (including the deduction allowed under section 642(c)) shall be allocated among the items of distributable net income in accordance with regulations prescribed by the Secretary. In the application of this subsection to the amount determined under paragraph (1) of subsection (a), distributable net income shall be computed without regard to any portion of the deduction under section 642(c) which is not attributable to income of the taxable year.

Reg. § 1.662(b)-1 provides:

> In determining the amount includible in the gross income of a beneficiary, the amounts which are determined under section 662(a) and §§ 1.662(a)-1 through 1.662(a)-4 shall have the same character in the hands of the beneficiary as in the hands of the estate or trust. The amounts are treated as consisting of the same proportion of each class of items entering into the computation of distributable net income as the total of each class bears to the total distributable net income of the estate or trust unless the terms of the governing instrument specifically allocate different classes of income to different beneficiaries, or unless local law requires such an allocation. For this purpose, the principles contained in § 1.652(b)-1 shall apply.

Reg. § 1.652(b)-1 provides:

> In determining the gross income of a beneficiary, the amounts includible under § 1.652(a)-1 have the same character in the hands of the beneficiary as in the hands of the trust. For example, to the extent that the amounts specified in § 1.652(a)-1 consist of income exempt from tax under section 103, such amounts are not included in the beneficiary's gross income. Similarly, dividends distributed to a beneficiary retain their original character in the beneficiary's hands for purposes of determining the availability to the beneficiary of the dividends received credit under section 34 (for dividends received on or before December 31, 1964) and the dividend exclusion under section 116…. Similarly, to the extent such amounts consist of an amount received as a part of a lump sum distribution from a qualified plan and to which the provisions of

> section 72(n) would apply in the hands of the trust, such amount shall be treated as subject to such section in the hands of the beneficiary except where such amount is deemed under section 666(a) to have been distributed in a preceding taxable year of the trust and the partial tax described in section 668(a)(2) is determined under section 668(b)(1)(B). The tax treatment of amounts determined under § 1.652(a)-1 depends upon the beneficiary's status with respect to them not upon the status of the trust. Thus, if a beneficiary is deemed to have received foreign income of a foreign trust, the includibility of such income in his gross income depends upon his taxable status with respect to that income.

This proportionate requirement applies "unless the terms of the governing instrument specifically allocate different classes of income to different beneficiaries, or unless local law requires such an allocation."

When allocating income among beneficiaries:

> The terms of the trust are considered specifically to allocate different classes of income to different beneficiaries only to the extent that the allocation is required in the trust instrument, and only to the extent that it has an economic effect independent of the income tax consequences of the allocation.

I.A.1.hh.ii. How Undistributed Capital Gains Being Allocated to DNI Affects Character of Income Trapped Inside of Trust Compared to Distributed to the Beneficiary

If the amount of DNI is less than the amount distributed to the beneficiary, the issues described in this part II.J.8.f.ii How Undistributed Capital Gains Being Allocated to DNI Affects Character of Income Trapped Inside of Trust Compared to Distributed to the Beneficiary become important.

Some income might be inadvertently trapped in the trust if the allocation rules of part II.J.8.f.i General Rules of the Proportion of DNI Constitutes Capital Gain Compared to Other Income apply without being modified by any special ordering rule in the trust agreement and if all of a pass-through entity's capital gain constitutes DNI under an approach described in part II.J.8.a.ii Whether the Gain from the Sale or Exchange of a Capital Asset Is Allocated to Corpus That's because looking exclusively at those two factors bypasses the analysis of part II.J.5.c.i Basic Framework for Allocating Capital Gain to DNI If Allocated to Income or Principal.

For example, trust has $10,000 of interest income. Trust's distributive share of partnership's income is $20,000 of dividend income and $70,000 of long-term capital gains. If the rules described in the preceding paragraph apply, then 10% of all distributions constitute interest income, 20% constitute dividend income, and 70% constitute long-term capital gains. Trust distributes $50,000 to the beneficiary. Therefore, each of the beneficiary and the trust has $5,000 of interest income, $10,000 of dividend income, and $35,000 of long-term capital gains.

Contrast that to an approach under which the trustee is able to control how much capital gain is included in DNI, under part II.J.5.c.i Basic Framework for Allocating Capital Gain to DNI If Allocated to Income or Principal. On a year-by-year basis, the trustee can selectively include capital gain in DNI to the extent that one or both of part II.J.8.c.ii Consistent Principal Rule: Capital Gain Allocated to Corpus but Treated Consistently as Part of a Distribution to a individual to hold the stock in his or her own name and do a nonprobate transfer via either the applicable state's nonprobate transfer statute or by ensuring that the stock is a "security" that can be transferred using the Uniform TOD Security Registration Act.[6859]

To effect this interim closing of the corporation's books, each of the affected shareholders and the corporation must consent to the election. An affected shareholder is defined as:[6860]

(1) the shareholder whose interest is terminated; and

(2) all shareholders to whom such shareholder has transferred shares during the taxable year (if such shareholder has transferred shares to the corporation, the affected shareholders include all persons who are shareholders during the taxable year).

Subsequently, the books will be treated as if the taxable year consisted of two taxable years, the first of which ends on the close of the day in which the grantor's entire interest in the S corporation is terminated.[6861]

However, the grantor probably will not be able or willing to divest himself or herself of his or her entire interest in the S corporation to effect this result. More likely, the grantor has structured the transfer so that he or she retains the voting shares of the company, while transferring the vast majority of corporate stock to the trust as non-voting shares. A conventional structure might have the grantor retaining 5% of the company shares as its only voting stock, while transferring 95% of the remaining non-voting stock to the trust. By terminating grantor trust status in such a situation, the grantor will not be able cut off his or her entire interest in the S corporation. Instead, the grantor should consider turning off the grantor trust powers before the tax year of sale to avoid this concern.

Beneficiary or part II.J.8.c.iii Discretionary Principal Rule: Allocated to Principal but Actually Distributed to the Beneficiary or Used by the Trustee to Determine the Amount Distributed or Required to be Distributed to a Beneficiary is available. By including in DNI just enough capital gain to cause the DNI to match the cash distributed to the beneficiary, the trustee can ensure that all of the ordinary income is distributed to the beneficiary.

I.A.1.ii. Effectuating Allocation of Capital Gain to DNI

Form 1041 (Schedule D), Part III, column (1) allocates the beneficiaries' shares. Once one separates that, the rest should flow naturally.

.
[6858] See fn 5906 in part III.A.3.b.ii A Trust That Was a Grantor Trust with Respect to All of Its Assets Immediately Before the Death of The Deemed Owner and Which Continues in Existence After Such Death.
[6859] For the latter, search https://www.uniformlaws.org/home. If the S corporation is an LLC, the operating agreement might provide for such a transfer on death, if allowed by state law (which generally would be the case).
[6860] Code § 1377(a)(2)(B).
[6861] Reg. § 1.1377-1(b)(1).

See part II.A.2.k Terminating an S Election regarding allocation of income between taxable periods when an S election terminates, which provides more liberal opportunities to do accounting cut-offs (but generally at a high tax cost).

III.B.2.j.ii.(d). Death of a Shareholder

The death of a shareholder (grantor) is treated as if the grantor had sold his or her entire interest in the S corporation. As such, the applicable tax allocation rules upon the death of the grantor are similar to those of a transfer of the entire interest, as enunciated above. If the shareholder dies (or if the shareholder is an estate or trust and the estate or trust terminates) before the end of the taxable year of the corporation, the shareholder's pro rata share of these items is taken into account on the shareholder's final return,[6862] with the date of death being reported on the decedent shareholder's final individual income tax return.[6863] Items from the portion of the corporation's taxable year after the shareholder's death will be taken into account by the estate or other person acquiring the stock.[6864]

If the stock is held in a revocable trust or an irrevocable grantor trust, see text accompanying fns 6855-6859 in part III.B.2.j.ii.(c) Transfer of Shareholder's Entire Interest.

***General Rule (Default Rule)* — Daily Proration**

As above, the default rule of daily proration applies absent the corporation and shareholder's joint election for an interim closing of the books.

***Special Rule (By Agreement)* — Interim Closing of the Books**

The executor or administrator of the deceased grantor's estate may consent to the termination election on behalf of the deceased grantor and his estate.[6865] As before, all affected shareholders must consent to the election.

III.B.2.j.ii.(e). Change in Qualification of Trust to Hold S corporation Stock During Taxable Year

If, during an S corporation's taxable year, a trust that is an eligible shareholder of the S corporation converts from a trust described in Code § 1361(c)(2)(A)(i), (ii), (iii), or (v)[6866] for the first part of the year to a trust described in a different subpart of Code § 1361(c)(2)(A)(i), (ii), or (v) for the remainder of the year, the trust's share of the S corporation items is allocated

---

[6862] Reg. § 1.1366-1(a)(1).
[6863] Reg. § 1.1377-1(a)(2)(ii) provides:

> *Determining shareholder for day of stock disposition*. A shareholder who disposes of stock in an S corporation is treated as the shareholder for the day of the disposition. A shareholder who dies is treated as the shareholder for the day of the shareholder's death.

[6864] Senate Report, 1982 Subchapter S Revision Act, PL 97-354.
[6865] Reg. § 1.1377-1(b)(5)(ii).
[6866] See part III.A.3.b Comprehensive Description of Types of Trusts That Can Hold Stock in an S Corporation.

between the two types of trusts.[6867] This includes a trust that is an ESBT[6868] for part of the year and an eligible shareholder under Code § 1361(c)(2)(A)(i)-(iv) for the rest of the year.[6869]

The first day that a QSST[6870] or an ESBT is treated as an S corporation shareholder is the effective date of the QSST or ESBT election.[6871] Upon the conversion, the trust is not treated as terminating its entire interest in the S corporation for purposes of part III.B.2.j.ii.(c) Transfer of Shareholder's Entire Interest, unless the trust was a trust described in part III.A.3.b.ii A Trust That Was a Grantor Trust with Respect to All of Its Assets Immediately Before the Death of The Deemed Owner and Which Continues in Existence After Such Death or III.A.3.b.iii A Trust with Respect to Stock Transferred to It Pursuant to The Terms of a Will (or a Qualified Revocable Trust When a Code § 645 Election Terminates), But Only for the 2-Year Period Beginning on The Day on Which Such Stock Is Transferred to It before the conversion.[6872]

III.B.2.j.ii.(f). Distribution after Transfer

Consider whether the donor or other transferor will need to receive distributions after the transfer and whether state law permits such transfers. For example, a shareholder might need a distribution to pay taxes but might not know how much until after the corporate income tax return for the year is filed.

State corporate law might impose time limits preventing distributions to shareholders more than a particular number of days after the record date.[6873] Using an LLC or other unincorporated entity for state law purposes might allow one to dispense with this limitation. Of course, the transferee could always agree to pay more to the transferor, but that imposes risk on the transferor with respect to the transferee's ability or willingness to perform.

One taxpayer argued that distributions the calendar year after her gave 95% of his stock should be applied against the basis of the donated stock, suggesting that the gift was not complete because that following calendar year he received distributions with respect to the donated stock, but the court didn't agree with his arguments.[6874]

III.B.2.j.ii.(g). Mismatch When Grantor Trust Status Changes in Year of Sale

Note that changes in grantor trust status do not generate an accounting cut-off for K-1 items, including gain from the deemed sale of assets; see part III.B.2.j.ii.(c) Transfer of Shareholder's Entire Interest. When an S corporation undergoes a deemed asset sale, the K-1 income tends to increase basis to equal or exceed the stock's liquidation value; see part II.Q.8.e.iii.(f) Code §§ 338(g), 338(h)(10), and 336(e) Exceptions to Lack of Inside Basis Step-Up for Corporations: Election for Deemed Sale of Assets When All Stock Is Sold.

However, when turning on grantor trust status, gain or loss on the sale of the stock is reportable solely by the deemed owner on the day of sale. See part III.B.2.d.i.(b) Portions of Irrevocable

[6867] Reg. § 1.1377-1(a)(2)(iii).
[6868] See part III.A.3.e.ii Electing Small Business Trusts (ESBTs.
[6869] Reg. § 1.1361-1(m)(3)(iv). Reg. § 1.641(c)-1(d)(2)(i) refers to Reg. § 1.1361-1(m)(3)(iv), which in turn refers to Reg. § 1.1377-1(a)(2)(iii).
[6870] See part III.A.3.e.i QSSTs.
[6871] Reg. § 1.1377-1(a)(2)(iii).
[6872] Reg. § 1.1377-1(a)(2)(iii).
[6873] See, *e.g.*, R.S.Mo. § 351.250.
[6874] *Miller v. Commissioner*, T.C. Memo. 2011-189.

Grantor Trust Deemed Owned for Federal Income Taxation. Given that the sale of stock tends to be a loss, as described above, ideally it would offset the K-1 gain described above; however, it might not, to the extent that K-1 gain is allocated to the nongrantor trust.

And the converse situation arises when grantor trust status is turned off.

III.B.2.j.iii. Allocations upon Change of Interest in a Partnership

Special rules apply if a partnership interest is created by gift. See part III.B.1.a.iv.(b) Income Tax Aspects of Family Partnerships.

For implementation of the rules set forth in this part III.B.2.j.iii Allocations upon Change of Interest in a Partnership, see part III.B.2.j.iii.(e) Allocation of Specific Items, which also applies in other situations.

Rev. Rul. 72-352 held that a trust's distribution of its partnership interest to the remainderman on the termination of the trust did not terminate the taxable year of the partnership but the taxable year of the partnership did close with respect to the trust in its capacity as partner, so that the trustees must include in the gross income of the trust its distributive share of the partnership items and any guaranteed payments as though the partnership year had ended on the trust's termination date. Consider that ruling in the context of the rest of part III.B.2.j.iii, which describes regulations adopted after that ruling but do not expressly refer to that ruling.

III.B.2.j.iii.(a). Transfer of Less Than a Partner's Entire Interest

Generally, the partnership's taxable year does not close with respect to a partner who sells or exchanges less than his entire interest or whose interest is reduced (whether by entry of a new partner, partial liquidation of a partner's interest, gift, or otherwise);[6875] even a transfer of a partner's entire interest by gift does not close the taxable year.[6876] Under prior law, the sale or exchange of at least 50% of a partnership terminated the partnership, closing the books,[6877]but for those purposes a "sale or exchange" did not include the disposition of a partnership interest by gift (including assignment to a successor in interest), bequest, or inheritance, or the liquidation of a partnership interest;[6878] see part II.Q.8.e.iv Interests Resulting in Deemed Termination: Effect on Partnership (repealed by 2017 tax reform).

Subject to certain exceptions, if during any taxable year of the partnership there is a change in any partner's interest in the partnership, each partner's distributive share of any item of income, gain, loss, deduction, or credit of the partnership for such taxable year are determined by the use of any method prescribed by regulations which takes into account the varying interests of the partners in the partnership during such taxable year.[6879] The exceptions are:

[6875] Code § 706(c)(2)(B); Reg. § 1.706-1(c)(3).
[6876] Reg. § 1.706-1(c)(5), which further provides that the income up to the date of gift attributable to the donor's interest shall be allocated to the donor under Code § 704(e)(2).
[6877] Reg. § 1.708-1(b)(3).
[6878] Reg. § 1.708-1(b)(2).
[6879] Code § 706(d)(1).

- If during any taxable year of the partnership any partner's interest changes, then (except to the extent provided in regulations) each partner's distributive share of any allocable cash basis item[6880] shall be determined:[6881]
    - by assigning the appropriate portion of such item to each day in the period to which it is attributable,[6882] and
    - by allocating the portion assigned to any such day among the partners in proportion to their interests in the partnership at the close of such day.[6883]
- If during any taxable year of the partnership there is a change in any partner's interest in the partnership (the "upper tier partnership"), and such partnership is a partner in another partnership (the "lower tier partnership"), then (except to the extent provided in regulations) each partner's distributive share of any item of the upper tier partnership attributable to the lower tier partnership shall be determined by assigning the appropriate portion (determined by applying principles similar to the principles described in fn. 6882) of each such item to the appropriate days during which the upper tier partnership is a partner in the lower tier partnership and by allocating the portion assigned to any such day among the partners in proportion to their interests in the upper tier partnership at the close of such day.[6884]

III.B.2.j.iii.(b). Transfer of Partner's Entire Interest

The taxable year of a partnership closes "with respect to a partner whose entire interest terminates (whether by reason of death, liquidation or otherwise.)"[6885]

[6880] Code § 706(d)(2)(B) provides:

> For purposes of this paragraph, the term allocable cash basis item means any of the following items with respect to which the partnership uses the cash receipts and disbursements method of accounting:
> (i) Interest.
> (ii) Taxes.
> (iii) Payments for services or for the use of property.
> (iv) Any other item of a kind specified in regulations prescribed by the Secretary as being an item with respect to which the application of this paragraph is appropriate to avoid significant misstatements of the income of the partners.

[6881] Code § 706(d)(2)(A).

[6882] Code § 706(d)(2)(A)(i). Code § 706(d)(2)(C)(i) provides that, if any portion of any allocable cash basis item is attributable to any period before the beginning of the taxable year, such portion shall be assigned under this rule to the first day of the taxable year. Code § 706(d)(2)(D) provides that, if any portion of a deductible cash basis item is assigned under this rule to the first day of any taxable year, then such portion shall be allocated among persons who are partners in the partnership during the period to which such portion is attributable in accordance with their varying interests in the partnership during such period, and any amount allocated under this rule to a person who is not a partner in the partnership on such first day shall be capitalized by the partnership and treated in the manner provided for in Code § 755.

Code § 706(d)(2)(C)(ii) provides that, if any portion of any allocable cash basis item is attributable to any period after the close of the taxable year, such portion shall be assigned under this rule to the last day of the taxable year.

[6883] Code § 706(d)(2)(A)(ii).

[6884] Code § 706(d)(3).

[6885] Code § 706(c)(2)(A). See also part II.Q.8.e.i Distribution of Partnership Interests.

A partnership taxable year closes with respect to a partner:[6886]

- who sells or exchanges his entire interest in the partnership,[6887]
- whose entire interest in the partnership is liquidated, or
- who dies.

In such a case, the partner includes in the partner's taxable income for the partner's taxable year within or with which the partner's interest in the partnership ends the partner's distributive share of items described in Code § 702(a) and any guaranteed payments under Code § 707(c) for the partnership taxable year ending with the date of such termination.[6888]

The partnership's taxable year, with respect to the remaining partners, does not close, unless the partnership is otherwise terminated, such as under Code § 708(b), which used to provide that the sale or exchange of a partnership interest which, by itself or aggregated with sales or exchanges in the preceding 12 months, transfers an interest of 50% or more of the total partnership capital or profits will effectively terminate the partnership.[6889]

III.B.2.j.iii.(c). Death of a Partner — Treated Like a Transfer of a Partner's Entire Interest

The death of a partner is treated as if the partner had transferred his or her entire interest in the partnership. Previously, the deceased partner's estate received all of the deceased partner's income for the partnership taxable year in which the death occurred. This is no longer true, and the taxable year closes with respect to a partner whose entire interest in the partnership has terminated.[6890] Thus, the death of a partner is treated as a transfer of the deceased partner's entire partnership interest to his or her estate.

If the decedent partner's estate or other successor sells or exchanges its entire interest in the partnership, or if its entire interest is liquidated, the partnership taxable year with respect to the estate or other successor in interest closes on the date of such sale or exchange, or the date of the completion of the liquidation.[6891]

[6886] Reg. § 1.706-1(c)(2)(i).

[6887] Note also that Reg. § 1.706-1(c)(2)(iii) provides:

> *Deemed dispositions*. A deemed disposition of the partner's interest pursuant to § 1.1502-76(b)(2)(vi) (relating to corporate partners that become or cease to be members of a consolidated group within the meaning of §§ 1.1502-1(h)), 1.1362-3(c)(1) (relating to the termination of the subchapter S election of an S corporation partner), or 1.1377-1(b)(3)(iv) (regarding an election to terminate the taxable year of an S corporation partner), shall be treated as a disposition of the partner's entire interest in the partnership solely for purposes of section 706.

[6888] Reg. § 1.706-1(c)(2)(i). For details on Code § 707(c), see part II.C.8.a Code § 707 - Compensating a Partner for Services Performed, which focuses on guaranteed payments for services rather than for capital even though Code § 707 covers both.

[6889] Reg. § 1.708-1(b)(3). See parts II.Q.8.e.i Distribution of Partnership Interests (when a distribution as a sale or exchange) and II.Q.8.e.iv Transfer of Partnership Interests Resulting in Deemed Termination: Effect on Partnership (repealed by 2017 tax reform).

[6890] Code § 706(c)(2)(A).

[6891] Reg. § 1.706-1(c)(2)(i). The sale or exchange of a partnership interest does not, for the purpose of this rule, include any transfer of a partnership interest which occurs at death as a result of inheritance or any testamentary disposition. *Id.*

Reg. § 1.706-1(c)(2)(ii) provides an example:

> H is a partner of a partnership having a taxable year ending December 31. Both H and his wife W are on a calendar year and file joint returns. H dies on March 31, 2016. Administration of the estate is completed and the estate, including the partnership interest, is distributed to W as legatee on November 30, 2016. Such distribution by the estate is not a sale or exchange of H's partnership interest. The taxable year of the partnership will close with respect to H on March 31, 2016, and H will include in his final return for his final taxable year (January 1, 2016, through March 31, 2016) his distributive share of partnership items for that period under the rules of sections 706(d)(2), 706(d)(3), and § 1.706-4. W will include in her return for the taxable year ending December 31, 2016, her distributive share of partnership items for the period of April 1, 2016, through December 31, 2016, under the rules of sections 706(d)(2), 706(d)(3), and § 1.706-4.

Note that a partner's death can trigger a basis increase – or reduction – in that partner's share of the partnership's assets.[6892] Even absent a Code § 754 election, the possibility of reduction requires monitoring to make sure that the partnership's assets do not have a substantial built-in loss.[6893]

III.B.2.j.iii.(d). Other Occasions Calling for an Interim Closing of the Books

Because determination of the adjusted basis and fair market value is necessary to comply with Code § 755 allocations, a Code § 754 election[6894] by the partnership to adjust the basis of partnership assets for the benefit of a transferee partner[6895] or in the case of a liquidation[6896] will require an interim closing of the books.

Applying Code § 732(d) basis adjustments on distributions[6897] and Code § 708(b) partnership terminations[6898] might also require interim closings.

III.B.2.j.iii.(e). Allocation of Specific Items

The rules of this part III.B.2.j.iii.(e) apply for determining the partners' distributive shares of partnership items when a partner's interest in a partnership varies during the taxable year as a result of the disposition of a partial or entire interest in a partnership[6899] or if a partner sells or exchanges a part of his interest in a partnership or if the interest of a partner is reduced[6900]

[6892] See part II.Q.8.e.iii Inside Basis Step-Up (or Step-Down) Applies to Partnerships and Generally Not C or S Corporations.
[6893] See part II.Q.8.e.iii.(c) When Code § 754 Elections Apply; Mandatory Basis Reductions When Partnership Holds or Distributes Assets with Built-In Losses Greater Than $250,000.
[6894] For more on Code § 754 elections (and similar rules that apply without an election when the partnership has a substantial built-in loss), see part II.Q.8.e.iii.(b) Transfer of Partnership Interests: Effect on Partnership's Assets.
[6895] Code § 743(b).
[6896] Code § 734(b).
[6897] See part II.Q.8.e.iii.(e) Code § 734 Basis Adjustment Resulting from Distributions, Including Code § 732(d) Requiring an Adjustment Without Making Code § 754 Election.
[6898] See part II.Q.8.e.iv Interests Resulting in Deemed Termination: Effect on Partnership (repealed by 2017 tax reform).
[6899] As described in Reg. § 1.706-1(c)(2) and (3).
[6900] As described in Reg. § 1.706-1(c)(3), including by the entry of a new partner.

(collectively, a "variation").[6901] However, they do not override certain other provisions.[6902] In all cases, all partnership items for each taxable year must be allocated among the partners, and no partnership items may be duplicated, regardless of the particular provisions that apply and regardless of the method or convention adopted by the partnership.[6903]

In allocating items, a partnership must take the following steps in the order indicated:[6904]

1. Determine whether certain additional exceptions apply:[6905]

    - This general rule will not preclude changes in the allocations among contemporaneous partners for the entire partnership taxable year (or among contemporaneous partners for a segment if the item is entirely attributable to a segment), if any variation in a partner's interest is not attributable to a contribution of money or property by a partner to the partnership or a distribution of money or property by the partnership to a partner; and the allocations resulting from the modification satisfy the provisions of Code § 704(b) and the regulations promulgated thereunder.[6906]

    - With respect to any taxable year in which there is a change in any partner's interest in a partnership for which capital is not a material income-producing factor, the partnership and such partner may choose to determine the partner's distributive share of partnership income, gain, loss, deduction, and credit using any reasonable method to account for the varying interests of the partners in the partnership during the taxable year provided that the allocations satisfy the provisions of Code § 704(b).[6907]

[6901] Reg. § 1.706-4(a)(1).

[6902] Reg. § 1.706-4(a)(2) provides:

> Items subject to allocation under other rules, including sections 108(e)(8) and 108(i) (which provide special allocation rules for certain items from the discharge or retirement of indebtedness section), section 704(c) (relating to allocations with respect to certain contributed property), § 1.704-3(a)(6) (relating to allocations with respect to revalued property), section 706(d)(2) (relating to the determination of partners' distributive shares of allocable cash basis items), and section 706(d)(3) (relating the determination of partners' distributive share of any item of an upper tier partnership attributable to a lower tier partnership), are not subject to the rules of this section. In addition, the rules of this section do not apply in making allocation of book items pursuant to § 1.704-1(b)(2)(iv)(e), (f), or (s).

[6903] Reg. § 1.706-4(a)(2).

[6904] Reg. § 1.706-4(a)(3).

[6905] Reg. § 1.706-4(a)(3)(i), referring to Reg. § 1.706-4(b).

[6906] Reg. § 1.706-4(b)(1).

[6907] Reg. § 1.706-4(b)(2). Whether capital is a material income-producing factor might have changed since the regulation was promulgated by T.D. 9728 on July 31, 2015. See part III.B.1.a.iv.(b) Income Tax Aspects of Family Partnerships.

2. Determine which of its items are subject to allocation under certain special rules for extraordinary items, and allocate those items accordingly.[6908] Subject to a small item exception,[6909] extraordinary items that may not be prorated[6910] include: [6911]

    - Any item from the disposition or abandonment (other than in the ordinary course of business) of a capital asset;[6912]

    - Any item from the disposition or abandonment (other than in the ordinary course of business) of property used in a trade or business;[6913]

    - Any item from the disposition or abandonment of certain assets excluded from the definition of capital asset[6914] if substantially all the assets in the same category from the

---

[6908] Reg. § 1.706-4(a)(3)(ii), referring to Reg. § 1.706-4(e).

[6909] Reg. § 1.706-4(e)(3) provides:

> *Small item exception*. A partnership may treat an item described in paragraph (e)(2) of this section as other than an extraordinary item for purposes of this paragraph (e) if, for the partnership's taxable year the total of all items in the particular class of extraordinary items (as enumerated in paragraphs (e)(2)(i) through (xi) of this section, for example, all tort or similar liabilities, but in no event counting an extraordinary item more than once) is less than five percent of the partnership's gross income, including tax-exempt income described in section 705(a)(1)(B), in the case of income or gain items, or gross expenses and losses, including section 705(a)(2)(B) expenditures, in the case of losses and expense items; and the total amount of the extraordinary items from all classes of extraordinary items amounting to less than five percent of the partnership's gross income, including tax-exempt income described in section 705(a)(1)(B), in the case of income or gain items, or gross expenses and losses, including section 705(a)(2)(B) expenditures, in the case of losses and expense items, does not exceed $10 million in the taxable year, determined by treating all such extraordinary items as positive amounts.

[6910] Reg. § 1.706-4(e)(1), which provides:

> The partnership must allocate extraordinary items among the partners in proportion to their interests in the partnership item at the time of day on which the extraordinary item occurred, regardless of the method (interim closing or proration method) and convention (daily, semi-monthly, or monthly) otherwise used by the partnership. These rules require the allocation of extraordinary items as an exception to the proration method, which would otherwise ratably allocate the extraordinary items across the segment, and the conventions, which could otherwise inappropriately shift extraordinary items between a transferor and transferee. However, publicly traded partnerships (as defined in section 7704(b)) that are treated as partnerships may, but are not required to, apply their selected convention in determining who held publicly traded units (as described in § 1.7704-1(b) or (c)(1)) at the time of the occurrence of an extraordinary item. Extraordinary items continue to be subject to any special limitation or requirement relating to the timing or amount of income, gain, loss, deduction, or credit applicable to the entire partnership taxable year (for example, the limitation for section 179 expenses).

[6911] Reg. § 1.706-4(e)(2).

[6912] As defined in Code § 1221 (determined without the application of any other rules of law). Reg. § 1.706-4(e)(2). Real estate might or might not constitute inventory. See part II.G.26.c Future Development of Real Estate.

[6913] As defined in Code § 1231(b) (determined without the application of any holding period requirement). Reg. § 1.706-4(e)(2)(ii).

[6914] Referring to the following provisions in Code § 1221(a):

> (1) stock in trade of the taxpayer or other property of a kind which would properly be included in the inventory of the taxpayer if on hand at the close of the taxable year, or property held by the taxpayer primarily for sale to customers in the ordinary course of his trade or business;
>
> (2) [excluded from this list]

same trade or business are disposed of or abandoned in one transaction (or series of related transactions);[6915]

- Any item from assets disposed of in an applicable asset acquisition;[6916]

- Any item resulting from any change in accounting method initiated by the filing of the appropriate form after a variation occurs;[6917]

- Any item from the discharge or retirement of indebtedness (except items subject to special allocation rules provided in Code § 108(e)(8) and (i));[6918]

- Any item from the settlement of a tort or similar third-party liability or payment of a judgment;[6919]

- Any credit, to the extent it arises from activities or items that are not ratably allocated;[6920]

- For all partnerships, any additional item if, the partners agree[6921] to consistently treat such item as an extraordinary item for that taxable year; however, this rule does not apply if treating that additional item as an extraordinary item would result in a substantial distortion of income in any partner's return; any additional extraordinary items continue to be subject to any special limitation or requirement relating to the timing or amount of income, gain, loss, deduction, or credit applicable to the entire partnership taxable year (for example, the limitation for Code § 179 expenses);[6922]

---

(3) a copyright, a literary, musical, or artistic composition, a letter or memorandum, or similar property, held by-
  (A) a taxpayer whose personal efforts created such property,
  (B) in the case of a letter, memorandum, or similar property, a taxpayer for whom such property was prepared or produced, or
  (C) a taxpayer in whose hands the basis of such property is determined, for purposes of determining gain from a sale or exchange, in whole or part by reference to the basis of such property in the hands of a taxpayer described in subparagraph (A) or (B);
(4) accounts or notes receivable acquired in the ordinary course of trade or business for services rendered or from the sale of property described in paragraph (1);
(5) a publication of the United States Government (including the Congressional Record) which is received from the United States Government or any agency thereof, other than by purchase at the price at which it is offered for sale to the public, and which is held by-
  (A) a taxpayer who so received such publication, or
  (B) a taxpayer in whose hands the basis of such publication is determined, for purposes of determining gain from a sale or exchange, in whole or in part by reference to the basis of such publication in the hands of a taxpayer described in subparagraph (A);
[remaining provisions of Code § 1221(a) are excluded from this list.]

[6915] Reg. § 1.706-4(e)(2)(iii).
[6916] Reg. § 1.706-4(e)(2)(iv), referring to Code § 1060(c).
[6917] Reg. § 1.706-4(e)(2)(v).

[6919] Reg. § 1.706-4(e)(2)(vii).
[6920] Reg. § 1.706-4(e)(2)(viii), giving as an example the Code § 47 rehabilitation credit, which is based on placement in service.
[6921] Within the meaning of Reg. § 1.706-4(f) ; see fns. 6949-6952.
[6922] Reg. § 1.706-4(e)(2)(ix).

- Any item which, in the IRS' opinion, would, if ratably allocated, result in a substantial distortion of income in any return in which the item is included;[6923]

- Any item identified as an additional class of extraordinary item in guidance published in the Internal Revenue Bulletin.[6924]

3. Determine with respect to each variation whether it will apply the interim closing method or the proration method.[6925] Absent an agreement of the partners[6926] to use the proration method, the partnership must use the interim closing method.[6927] The partnership may use different methods (interim closing or proration) for different variations within each partnership taxable year; however, the IRS may place restrictions on the ability of partnerships to use different methods during the same taxable year in guidance published in the Internal Revenue Bulletin.[6928]

4. Determine when each variation is deemed to have occurred under the partnership's selected convention (generally, daily, semi-monthly, or monthly).[6929]

5. Determine whether there is an agreement of the partners[6930] to perform regular monthly or semi-monthly interim closings.[6931] If so, then the partnership will perform an interim closing of its books at the end of each month (in the case of an agreement to perform monthly closings) or at the end and middle of each month (in the case of an agreement to perform

---

6923 Reg. § 1.706-4(e)(2)(x).
6924 Reg. § 1.706-4(e)(2)(xi).
6925 Reg. § 1.706-4(a)(3)(iii).
6926 Within the meaning of Reg. § 1.706-4(f); see fns. 6949-6952.
6927 Reg. § 1.706-4(a)(3)(iii).
6928 Reg. § 1.706-4(a)(3)(iii).
6929 Reg. § 1.706-4(a)(3)(iv), referring to the selected convention under Reg. § 1.706-4(c). However, all variations within a taxable year shall be deemed to occur no earlier than the first day of the partnership's taxable year, and no later than the close of the final day of the partnership's taxable year. Thus, for a calendar year partnership applying either the semi-monthly or monthly convention to a variation occurring on January 1st through January 15th, the variation will be deemed to occur at the beginning of the day on January 1st. Reg. § 1.706-4(c)(2)(i). Also, if a person becomes a partner during the partnership's taxable year as a result of a variation, and ceases to be a partner as a result of another variation, if both such variations would be deemed to occur at the same time under the rules of Reg. § 1.706-4(c)(1), then the variations with respect to that partner's interest will instead be treated as occurring on the dates each variation actually occurred. Reg. § 1.706-4(c)(2)(ii). Thus, the partnership must treat such a person as a partner for the entire portion of its taxable year during which the partner actually owned an interest; see Reg. § 1.706-4(c)(4), Example (2). However, Reg. § 1.706-4(c)(2)(ii) (by its own terms) does not apply to publicly traded partnerships (as defined in Code § 7704(b)) that are treated as partnerships with respect to holders of publicly traded units (as described in Reg. § 1.7704-1(b) or 1.7704-1(c)(1)).
6930 Within the meaning of Reg. § 1.706-4(f); see fns. 6949-6952.
6931 Reg. § 1.706-4(a)(3)(v), referring to closings under Reg. § 1.706-4(d). Reg. § 1.706-4(d)(1) provides:

> *Optional regular monthly or semi-monthly interim closings*. Under the rules of this section, a partnership is not required to perform an interim closing of its books except at the time of any variation for which the partnership uses the interim closing method (taking into account the applicable convention). However, a partnership may, by agreement of the partners (within the meaning of paragraph (f) of this section) perform regular monthly or semi-monthly interim closings of its books, regardless of whether any variation occurs. Regardless of whether the partners agree to perform these regular interim closings, the partnership must continue to apply the interim closing or proration method to its variations according to the rules of this section.

For a discussion of Reg. § 1.706-4(f) referred to above, see fns. 6949-6952.
Reg. § 1.706-4(d)(2) provides an example of the principles of Reg. § 1.706-4(d)(1).

semi-monthly closings), regardless of whether any variation occurs.[6932] Absent an agreement of the partners to perform regular monthly or semi-monthly interim closings, the only interim closings during the partnership's taxable year will be at the deemed time of the occurrence of variations for which the partnership uses the interim closing method.[6933]

6. Determine the partnership's segments, which are specific periods of the partnership's taxable year created by interim closings of the partnership's books.[6934] The first segment starts with the beginning of the taxable year of the partnership and ends at the time of the first interim closing.[6935] Any additional segment begins immediately after the closing of the prior segment and ends at the time of the next interim closing.[6936] However, the last segment of the partnership's taxable year must end no later than the close of the last day of the partnership's taxable year.[6937] If no interim closings occur, the partnership has one segment, which corresponds to its entire taxable year.[6938]

7. Apportion the partnership's items for the year among its segments.[6939] The partnership determines the items of income, gain, loss, deduction, and credit of the partnership for each segment.[6940] Generally, a partnership treats each segment as though the segment were a separate distributive share period.[6941] For purposes of determining allocations to segments, any special limitation or requirement relating to the timing or amount of income, gain, loss, deduction, or credit applicable to the entire partnership taxable year will apply based upon the partnership's satisfaction of the limitation or requirement as of the end of the partnership's taxable year.[6942]

8. Determine the partnership's proration periods, which are specific portions of a segment created by a variation for which the partnership chooses to apply the proration method.[6943] The first proration period in each segment begins at the beginning of the segment and ends at the first time of the first variation within the segment for which the partnership selects the proration method.[6944] The next proration period begins immediately after the close of the prior proration period and ends at the time of the next variation for which the partnership selects the proration method.[6945] However, each proration period ends no later than the close of the segment.[6946]

[6932] Reg. § 1.706-4(a)(3)(v).
[6933] Reg. § 1.706-4(a)(3)(v).
[6934] Reg. § 1.706-4(a)(3)(vi).
[6935] Reg. § 1.706-4(a)(3)(vi).
[6936] Reg. § 1.706-4(a)(3)(vi).
[6937] Reg. § 1.706-4(a)(3)(vi).
[6938] Reg. § 1.706-4(a)(3)(vi).
[6939] Reg. § 1.706-4(a)(3)(vii).
[6940] Reg. § 1.706-4(a)(3)(vii).
[6941] Reg. § 1.706-4(a)(3)(vii). For example, a partnership may compute a capital loss for a segment of a taxable year even though the partnership has a net capital gain for the entire taxable year. Reg. § 1.706-4(a)(3)(vii).
[6942] Reg. § 1.706-4(a)(3)(vii). For example, the expenses related to the election to expense a Code § 179 asset must first be calculated (and limited if applicable) based on the partnership's full taxable year, and then the effect of any limitation must be apportioned among the segments in accordance with the interim closing method or the proration method using any reasonable method. Reg. § 1.706-4(a)(3)(vii).
[6943] Reg. § 1.706-4(a)(3)(viii).
[6944] Reg. § 1.706-4(a)(3)(viii).
[6945] Reg. § 1.706-4(a)(3)(viii).
[6946] Reg. § 1.706-4(a)(3)(viii).

9. Prorate the items of income, gain, loss, deduction, and credit in each segment among the proration periods within the segment.[6947]

10. Determine the partners' distributive shares of partnership items by taking into account the partners' interests in such items during each segment and proration period.[6948]

Various provisions above refer to agreements by the partners.[6949] "Agreement of the partners" refers to:

- An agreement of all the partners to select the method, convention, or extraordinary item in a dated, written statement maintained with the partnership's books and records,[6950] or

- A selection of the method, convention, or extraordinary item made by a person authorized to make that selection,[6951] if that person's selection is in a dated, written statement maintained with the partnership's books and records.[6952]

In either case, the dated written agreement must be maintained with the partnership's books and records by the due date, including extension, of the partnership's tax return.

As mentioned in fn. 6902, a special rule for determining a partner's share of the partnership's allocable cash-basis items also applies.[6953] Each partner's distributive share of any allocable cash basis items shall be determined:[6954]

(1) by assigning the appropriate portion of such items to each day in the period to which it is attributable; and

(2) by allocating the portion assigned to any such day among the partners in proportion to their partnership interests at the close of such day.

Also, the modified accrual method must be applied with respect to the following allocable cash basis items, as paid or received by the partnership:[6955]

(1) interest; or

(2) taxes; or

(3) payments for services or for the use of property (for example, rent); or

III.B.2.j.iv. Income Tax Reimbursement Clause

III.B.2.j.iv.(a). Grantor Trust Reimbursing for Tax Paid by the Deemed Owner

I usually include a clause providing that the trust cannot reimburse the grantor, to avoid a possible argument that the grantor has an equitable right to be reimbursed that may be included in the grantor's estate for estate tax purposes. The Uniform Trust Decanting Act[6956] suggests that decanting[6957] may allow a trust to be switched from grantor trust to nongrantor trust or vice versa.[6958]

If the grantor cannot achieve accounting cut off or cannot terminate his grantor trust powers to escape the dire tax consequences of an exploding GRAT or irrevocable grantor trust, an income tax reimbursement clause may be a valuable tool to remedy this problem. In its simplest form, the income tax reimbursement clause authorizes the trustee with a discretionary power to reimburse the grantor for income taxes incurred in excess of the annuity or note payments.

An income tax reimbursement provision will cause inclusion of the trust assets in the grantor's gross estate if it constitutes a transfer with a retained life estate interest in the trust assets.[6959] Any retention of a right to apply the trust property towards the discharge of a legal obligation

---

[6956] As adopted July 2015. See http://www.uniformlaws.org/Act.aspx?title=Trust Decanting.

[6957] See part II.J.18 Trust Divisions, Mergers, and Commutations; Decanting.

[6958] Section 19(b)(9) provides:

> Subject to paragraph (4):
>
> (A) except as otherwise provided in paragraph (7), the second trust may be a nongrantor trust, even if the first trust is a grantor trust; and
>
> (B) except as otherwise provided in paragraph (10), the second trust may be a grantor trust, even if the first trust is a nongrantor trust.

Section 19(b)(4) prohibits decanting that would mess up an S election. For example, I do not believe that a QSST's S corporation stock can be transferred into another trust by decanting, but the Act authorizes decanting to take the form of a trust amendment without actually transferring the stock, which may be permissible by a QSST, depending on the amendment. See part III.A.3.e.i.(a) QSSTs Generally.
Section 19(b)(7) protects grantor trust status under Code § 672(f)(2)(A), which describes the conditions under which the grantor trust rules treat a nonresident alien as a deemed owner.
Section 19(b)(10) provides:

> An authorized fiduciary may not exercise the decanting power if a settlor objects in a signed record delivered to the fiduciary within the notice period and:
>
> (A) the first trust and a second trust are both grantor trusts, in whole or in part, the first trust grants the settlor or another person the power to cause the first trust to cease to be a grantor trust, and the second trust does not grant an equivalent power to the settlor or other person; or
>
> (B) the first trust is a nongrantor trust and a second trust is a grantor trust, in whole or in part, with respect to the settlor, unless:
>
> (i) the settlor has the power at all times to cause the second trust to cease to be a grantor trust; or
>
> (ii) the first-trust instrument contains a provision granting the settlor or another person a power that would cause the first trust to cease to be a grantor trust and the second-trust instrument contains the same provision.

[6959] Code § 2036(a). The right to be reimbursed for tax liability over the annuity or note amount, presumably, could be deemed as the possession or enjoyment of, or the right to the income from, the property or the right, either alone or in conjunction with any person, to designate the persons who shall possess or enjoy the property or the income therefrom.

causes inclusion under Code § 2036[6960] and, if the right is absolute, Code § 2041. GRATs should include income tax reimbursement clauses, which potentially makes them includible in the grantor's gross estate. Often, this is not a concern, because GRATs are often fully included in the grantor's estate if the grantor dies during the annuity term. However, in the case of a sale to the irrevocable grantor trust, only the note is included under Code § 2036; therefore, avoiding estate inclusion due to tax reimbursement clauses is particularly important.

Rev. Rul. 2004-64 provides specific guidance on this point.[6961] When trust language provides an unrelated trustee[6962] discretionary power to reimburse the grantor for excess income taxes, the reimbursement clause will not necessarily cause estate inclusion, if there is no understanding that the trustee will reimburse the grantor.[6963] Subsequent rulings discussing tax reimbursement clauses include:

- In Letter Ruling 200822008, the trust was to be modified authorizing the trustee "to pay to the Grantor or the Grantor's legal representative those amounts sufficient to satisfy the Grantor's federal, state, or local income tax liability actually incurred by the Grantor attributable to the 'pass through' of the Trust's taxable income." Such distributions would be subject to the consent of an independent "Reimbursement Committee"[6964] and an adult child who qualifies as a Code § 672(c) adverse party; including the child seems unnecessary[6965]

6960 Reg. § 20.2036-1(b)(2). The grantor is legally obligated to pay his or her income taxes, thus any right to reimbursement for this legal obligation may be included in the grantor's gross estate.

6961 See also Forsberg & Worthington, Income Tax Reimbursement Clauses in Irrevocable Grantor Trusts – When to Use Them and When Not to Use Them, *Probate & Property*, Vol. 19, No. 3, May/June 2005.

6962 Rev. Rul. 2004-64 includes in its facts, "The governing instrument of Trust requires that the trustee be a person not related or subordinate to [the grantor] within the meaning of § 672(c) of the Internal Revenue Code.

6963 Rev. Rul. 2004-64, Situation 3. See Letter Ruling 201647001, described in fn. 6976.

6964 The ruling included the following details:

> The initial member of the Reimbursement Committee will be A. It is represented that A is neither an employee of Grantor, nor an employee of a corporation whose stock is owned by the Grantor (or Trust, Exempt Trust or Non-Exempt Trust) or whose executives include Grantor, nor a relative of the Grantor listed in section 672(c). Spouse, if she is then living, otherwise Grantor's living children by majority vote, or if there are no then living children of Grantor, then Grantor's living issue (by majority vote) may remove any persons then serving on the Reimbursement Committee, and or appoint additional persons at any time with or without cause. However, no one related or subordinate to the Grantor within the meaning of § 672(c), can be appointed to the Reimbursement Committee.

The ruling elaborated on A's relationship:

> In addition, because A's only relationship to the Grantor presumably is that of the Grantor's independent attorney, A also does not meet the definition of a related or subordinate party under § 672(c). Accordingly, the Reimbursement Committee consisting of A will not be considered a related or subordinate party within the meaning of § 672(c).

6965 The ruling noted:

> Under the terms of the provision, a consenting child beneficiary must be an adverse party; therefore, such a child beneficiary does not meet the definition of a related or subordinate party under § 672(c). Accordingly, a consenting child beneficiary will not be considered a related or subordinate party within the meaning of § 672(c). We note that this conclusion does not require us to address whether the beneficiary children of the Grantor are in fact adverse parties (and if they are, to what extent, *i.e.*, part or all of the Trust), because the Reimbursement Provision requires a child beneficiary be an adverse party.

and potentially harmful, given that a child who is an adverse party may make a taxable gift by consenting.[6966]

- In Letter Ruling 200944002, instead of providing an income tax reimbursement right,[6967] the trust authorized distributions to the grantor, among other beneficiaries, in the trustee's sole and absolute discretion.[6968] The trustee was independent.[6969] State law respected spendthrift provisions regarding the settlor.[6970] The ruling held no Code § 2036 inclusion so long as no pre-arrangement regarding distributions to the settlor.[6971]

[6966] To be an adverse party, the child must have "a substantial beneficial interest in a trust which would be adversely affected by the exercise or nonexercise of a power which he possesses respecting the trust." See part III.B.2.h.vii Distribution Provisions Might Prevent Turning Off Grantor Trust Status, especially the text accompanying fns. 6682-6688. By negative implication, Reg. § 25.2511-1(g)(1) suggests the possibility that a trustee's decision to make distributions may be a gift if the trustee is a beneficiary: "A transfer by a trustee of trust property in which he has no beneficial interest does not constitute a gift by the trustee…." Reg. § 25.2511-1(g)(2) elaborates - see text accompanying fn 2485 in part II.J.2.b **Trust** Provisions Authorizing Distributions. See also Reg. § 20.2041-1(c)(2) (exception to estate tax general power of appointment – see text accompanying fn 2124 in part II.H.2.k Taxable Termination vs. General Power of Appointment vs. Delaware Tax Trap).
Without suggesting whether or not the tax reimbursement clause fits this exception, I would prefer to avoid the issue.

[6967] The trust agreement "provides that trustee shall not pay Grantor or Grantor's executors any income or principal of Trust in discharge of Grantor's income tax liability." See text accompanying fn. 6979.

[6968] The trust provided that:

> trustee will pay over the income and principal of Trust in such amounts and proportions as trustee in its sole and absolute discretion may determine for the benefit of one or more members of the class consisting of Grantor, Grantor's spouse and Grantor's descendants.

[6969] The trust provided that:

> the following persons may not be a trustee of Trust or any other trust created under trust: (1) Grantor; (2) the spouse or a former spouse of Grantor; (3) any individual who is a beneficiary of Trust or a trust created under Trust; (4) the spouse or a former spouse of a beneficiary of any trust hereunder; (5) anyone who is related or subordinate to Grantor within the meaning of § 672(c).

[6970] The ruling described applicable state law:

> State Statute provides that a person who in writing transfers property in trust may provide that the interest of a beneficiary of the trust, including a beneficiary who is the settlor of the trust, may not be either voluntarily or involuntarily transferred before payment or delivery of the interest to the beneficiary by the trustee. Under State Statute, if the trust instrument contains this transfer restriction, it prevents a creditor existing when the trust is created or a person who subsequently becomes a creditor, from satisfying a claim out of the beneficiary's interest in the trust unless, (1) the trust provides that the settlor may revoke or terminate all or part of the trust without the consent of a person who has a substantial beneficial interest in the trust and the interest would be adversely affected by the exercise of the power held by the settlor to revoke or terminate all or part of the trust; (2) the settlor intends to defraud a creditor by transferring the assets to the trust;(3) the settlor is currently in default of a child support obligation by more than 30 days; or (4) the trust requires that all or a part of the trust's income or principal, or both, must be distributed to the settlor.

[6971] After citing the non-reimbursement clause in fn. 6967, the ruling reasoned and held:

> Although Rev. Rul. 2004-64 does not consider this situation, it is clear from the analysis, that because the trustee is prohibited from reimbursing Grantor for taxes Grantor paid, that Grantor has not retained a reimbursement right that would cause Trust corpus to be includible in Grantor's gross estate under § 2036. See Rev. Rul. 2004-64. In addition, the trustee's discretionary

- Letter Ruling 201647001, ***which the IRS has since disavowed***, approved modifying a trust to authorize independent trustees[6972] to reimburse income tax[6973] when, due to "unforeseen and unanticipated circumstances," the grantors' payment of income tax had become "unduly burdensome." Letter Ruling 201647001 held that the children did not make a gift when the trust was modified, because the reimbursement clause was "administrative in nature" and did not "result in a change in beneficial interests" in the trust, meaning the changes did not constitute a gift[6974] and did not cause it to lose its zero inclusion ratio for GST purposes.[6975]

---

authority to distribute income and/or principal to Grantor, does not, by itself, cause the Trust corpus to be includible in Grantor's gross estate under § 2036.

We are specifically not ruling on whether Trustee's discretion to distribute income and principal of Trust to Grantor combined with other facts (such as, but not limited to, an understanding or pre-existing arrangement between Grantor and trustee regarding the exercise of this discretion) may cause inclusion of Trust's assets in Grantor's gross estate for federal estate tax purposes under § 2036.

[6972] The ruling analyzed the trustee provisions:

Trust prohibits Grantors from serving as trustees of Trust and any trusts created thereunder. However, pursuant to the modifications to Article 8 of Trust, Grantors will retain the power to remove and replace the Trustees, including the Independent Trustee. However, any successor Independent Trustee appointed by Grantors cannot be related or subordinate within the meaning of § 672(c) to the Grantors. Accordingly, under Rev. Rul. 95-58, Grantor's retained removal and replacement powers are not considered the reservation of the Independent Trustee's powers for purposes of § 2038. Further, the Family Trustees do not possess any powers to distribute income or corpus to the Trust beneficiaries. Therefore, Grantors' powers to remove and replace the Family Trustees will not cause the Trust corpus to be included in the gross estate of either Grantor under § 2038. Accordingly, we conclude that the modifications to Article 8 which grants Grantors the power to remove and replace the Trustees will not cause the Trust corpus to be included in the gross estate of either Grantor under § 2038.

[6973] The modification included:

Section 13.3(b) is modified to include a tax reimbursement clause requiring compliance with Situation 3 of Rev. Rul. 2004-64, 2004-2 C.B. 7. Specifically, Section 13.3(b), as modified, provides that Grantors shall not be entitled to any right of reimbursement under any applicable law for their tax liability (whether federal, state or otherwise), if any, attributable to a trust being treated as a "grantor trust" as to either Grantor under §§ 671 through 679. If in any calendar year, a trust created hereunder is treated as a "grantor trust" as to either Grantor under §§ 671 through 679, an Independent Trustee may from time to time, distribute to a Grantor so much of the income or principal of the trust as may be sufficient to satisfy all or part of such Grantor's personal income tax liability attributable to the inclusion of all or part of the trust's income in such Grantor's taxable income in excess of the amount of such taxes that would have been imposed if the trust's income, gains, losses and deductions had not been included in the determination of such Grantor's income tax liability.

[6974] "The proposed modifications to Articles 5, 6, 9, 12, and 13 are administrative in nature and do not result in a change in beneficial interests in Trust. We conclude that these modifications do not result in a deemed transfer by any of the children for purposes of § 2501."

[6975] The ruling reasoned and held:

In the instant case, Trust became irrevocable after September 25, 1985. It is represented that sufficient GST exemption was allocated to Trust so that Trust has an inclusion ratio of zero under § 2642. No guidance has been issued concerning changes that may affect the status of trusts that are exempt from GST tax because sufficient GST exemption was allocated to the trust to result in an inclusion ratio of zero. At a minimum, a change that would not affect the GST status of a trust that was irrevocable on September 25, 1985, should similarly not affect the exempt status of such a trust.

Article 5.1 is modified only to the extent to provide that the modification to Trust may not extend the term of any trust created under Trust. Under Rulings 2 and 4, we concluded that the

Subject to qualifications regarding any prearrangement, the ruling held no inclusion in the grantors' estates.[6976] (Note that, if the trustee mistakenly taxes the sale to a beneficiary, reimbursing the beneficiary should not generate any transfer tax consequences.[6977])

In contrast, CCA 202352018, which had the opposite result, involved the following facts:

> In Year 1, A establishes and funds Trust, an irrevocable inter vivos trust, for the benefit of A's Child and Child's descendants. Trustee is the current trustee of Trust and satisfies the governing instrument requirement that a trustee of Trust must be a person not related or subordinate to A within the meaning of § 672(c) of the Code. Under the governing instrument of Trust, a trustee of Trust may distribute income and principal to or for the benefit of Child in the trustee's absolute discretion. Upon Child's death, Trust's remainder is to be distributed to Child's issue, per stirpes.
>
> Under the governing instrument of Trust, A retains a power that causes A to be the deemed owner of Trust under § 671 of the Code, and, accordingly, all items of income, deductions, and credits attributable to Trust are included in A's taxable income.

> proposed modifications to do not constitute the release, exercise, or lapse of powers of appointment for purposes of §§ 2041 and 2514. Accordingly, the proposed modifications do not constitute constructive additions to Trust. The modifications were effected in accordance with state law and pertain to the administration of Trust.
>
> Accordingly, the proposed modifications to Articles 5, 6, 8, 9, 12, and 13 of Trust are administrative in nature and under § 26.2601-1(b)(4)(i)(D)(2), will not be considered to shift a beneficial interest to a lower generation in the trust or extend the time for vesting of any beneficial interest in the trust beyond the period provided for in Trust. See Example 10 of § 26.2601-1(b)(4)(i)(E).
>
> Therefore, based upon the facts submitted and representations made, we conclude that the proposed modifications of Trust will not cause Trust, as modified, to lose its zero inclusion ratio for GST tax purposes under chapter 13.

[6976] The ruling reasoned and held:

> In this case, under the terms of Section 13.3(b), as proposed, the Independent Trustee will have the discretion to reimburse either Grantor with respect to the income tax liability actually incurred by the Grantor attributable to Trust items, for periods after the Trust instrument is modified. Only a Trustee who is not related or subordinate to either Grantor, within the meaning of § 672(c) may exercise the powers to reimburse either Grantor. Accordingly, assuming there is no understanding, express or implied, between either Grantor and the Independent Trustee regarding the Independent Trustee's exercise of discretion, the Independent Trustee's discretion to satisfy either of the Grantor's obligation would not alone cause the inclusion of the trust in either of the Grantor's gross estate for federal estate tax purposes. However, as noted in Rev. Rul. 2004-64, such discretion combined with other facts (including but not limited to: an understanding or pre-existing arrangement between either of the Grantor and the Independent Trustee regarding the Independent Trustee's exercise of this discretion; a power retained by either Grantor to remove the trustee and name the grantor as successor trustee; or applicable local law subjecting the trust assets to the claims of either of the Grantor's creditors) may cause inclusion of Trust's assets in either of the Grantor's gross estate for federal estate tax purposes.
>
> Based upon the facts submitted and representations made, we conclude that the proposed modifications of Trust will not cause the property of Trust to be included in the gross estate of either Grantor for federal estate tax purposes.

[6977] See part II.J.12 Equitable Adjustments to Reimburse Income Tax Paid or Tax Benefit Received by a Party That Does Not Bear the Burden Under the , especially fn. 2909.

Neither State law nor the governing instrument of Trust requires or provides authority to a trustee of Trust to distribute to A amounts sufficient to satisfy A's income tax liability attributable to the inclusion of Trust's income in A's taxable income.

In Year 2, when Child has no living grandchildren or more remote descendants, Trustee petitions State Court to modify the terms of Trust. Pursuant to State Statute, Child and Child's issue consent to the modification. Later that year, State Court grants the petition and issues an Order modifying Trust to provide a trustee of Trust the discretionary power to reimburse A for any income taxes A pays as a result of the inclusion of Trust's income in A's taxable income.

CCA 202352018 cited the following authority:

Under § 671 of the Code, if the grantor of a trust is treated as the owner of any portion of the trust under subpart E, those items of income, deductions, and credits against tax of the trust that are attributable to that portion of the trust must be included in computing taxable income or credits of the grantor.

Section 2501(a)(1) imposes a tax for each calendar year on the transfer of property by gift during the calendar year by any individual. Section 2511(a) provides that the gift tax applies whether the transfer is in trust or otherwise, whether the gift is direct or indirect, and whether the property is real or personal, tangible or intangible.

Section 25.2511-1(c)(1) of the Gift Tax Regulations provides that the gift tax applies to gifts indirectly made. Further, any transaction in which an interest in property is gratuitously passed or conferred upon another, regardless of the means or device employed, constitutes a gift subject to tax.

Section 25.2511-1(e) provides that if a donor transfers by gift less than their entire interest in property, the gift tax is applicable to the interest transferred. Further, if the donor's retained interest is not susceptible of measurement on the basis of generally accepted valuation principles, the gift tax is applicable to the entire value of the property subject to the gift.

Section 25.2511-1(g)(1) provides in relevant part that donative intent on the part of the transferor is not an essential element in the application of the gift tax to the transfer. The application of the tax is based on the objective facts of the transfer and the circumstances under which it is made, rather than on the subjective motives of the donor.

Section 25.2511-2(a) provides that the gift tax is not imposed upon the receipt of the property by the donee, nor is it necessarily determined by the measure of enrichment resulting to the donee from the transfer. Rather, it is a tax upon the donor's act of making the transfer. The measure of the gift is the value of the interest passing from the donor with respect to which they have relinquished their rights without full and adequate consideration in money or money's worth.

Section 25.2511-2(b) provides that as to any property, or part thereof or interest therein, of which the donor has so parted with dominion and control as to leave in him no power to change its disposition, whether for their own benefit or for the benefit of another, the gift is complete. If a donor transfers property to another in trust to pay the income to the donor or accumulate it in the discretion of the trustee, and the donor retains a testamentary power to appoint the remainder among the donor's descendants, no portion of the transfer is a completed gift. On the other hand, if the donor had not retained the testamentary power of appointment, but instead provided that the remainder should go to X or X's heirs, the entire transfer would be a completed gift.

> Rev. Rul. 67-370, 1967-1 C.B. 324,[6978] concludes that a defeasible remainder interest in trust which is subject to termination at the will of another is an interest in property within the meaning of § 2033 of the Code. The ruling notes that the fair market value of the interest would be affected by its possible divestment under general transfer tax rules for the valuation of property, but the value of that interest would not necessarily be nominal.

> In Rev. Rul. 2004-64, 2004-2 C.B. 7, a grantor created an irrevocable inter vivos trust for the benefit of the grantor's descendants and retained sufficient powers with respect to the trust so that the grantor is treated as the owner of the trust under subpart E of the Code. In relevant part, the ruling considers two situations in which the trustee reimburses the grantor for taxes paid by the grantor that are attributable to the inclusion of all or part of the trust's income in the grantor's income. In Situation 2 of Rev. Rul. 2004-64, the distribution reimbursing the grantor is mandated under the terms of the governing instrument. In Situation 3 of Rev. Rul. 2004-64, the governing instrument provides the trustee with the discretionary authority to make a reimbursing distribution. In both of these situations, when the trustee of the trust reimburses the grantor for the income tax paid by the grantor, the ruling concludes that the payment does not constitute a gift by the trust beneficiaries because the distribution was either mandated by the terms of the governing instrument or made pursuant to the exercise of the trustee's discretionary authority granted under the terms of the governing instrument.

CCA 202352018 reasoned and concluded:

> Under the governing instrument of Trust, Child and Child's issue each have an interest in the trust property. As a result of the Year 2 modification of Trust, A acquires a beneficial interest in the trust property in that A becomes entitled to discretionary distributions of income or principal from Trust in an amount sufficient to reimburse A for any taxes A pays as a result of inclusion of Trust's income in A's gross taxable income. In substance, the modification constitutes a transfer by Child and Child's issue for the benefit of A. This is distinguishable from the situations in Rev. Rul. 2004-64 where the original governing instrument provided for a mandatory or discretionary right to reimbursement for the grantor's payment of the income tax. Thus, as a result of the Year 2 modification, Child and Child's issue each have made a gift of a portion of their respective interest in income and/or principal.[1] *See* § 25.2511-1(e) and § 25.2511-2(b). *See also Robinette v. Helvering*, 318 U.S. 184 (1943). The result would be the same if the modification was pursuant to a state statute that provides beneficiaries with a right to notice and a right to object to the modification and a beneficiary fails to exercise their right to object.

> [1] PLR 201647001 concludes that the modification of a trust to add a discretionary trustee power to reimburse the grantor for the income tax paid attributable to the trust

---

[6978] [my footnote] Rev. Rul. 67-370 is excerpted in the text accompanying fn 6366 in part III.B.1.b Transfers for Insufficient Consideration, Including Restructuring Businesses or Trusts.

income is administrative in nature and does not result in a change of beneficial interests in the trust. These conclusions no longer reflect the position of this office.

The gift from Child and Child's issue of a portion of their interests in trust should be valued in accordance with the general rule for valuing interests in property for gift tax purposes in accordance with the regulations under § 2512 and any other relevant valuation principles under subtitle B of the Code.[2]

[2] Although the determination of the values of the gifts requires complex calculations, Child and Child's issue cannot escape gift tax on the basis that the value of the gift is difficult to calculate. *See Smith v. Shaughnessy*, 318 U.S. 176, 180 (1943) ("The language of the gift tax statute, 'property ... real or personal, tangible or intangible,' is broad enough to include property, however conceptual or contingent.")

For more on consequences of trust modifications, see parts III.B.1.b Transfers for Insufficient Consideration, Including Restructuring Businesses or Trusts and III.B.1.e.ii Valuing a Beneficial Interest in a Trust. A trust modification adding a reimbursement right when no reimbursement is contemplated may be at most a nominal gift, whereas such a modification anticipating a concrete need for reimbursement might not be quite so innocuous. Consider the grantor selling illiquid assets to the trust to raise the cash to pay tax instead of adding a reimbursement right.

However, if the grantor has an enforceable right to reimbursement, the reimbursement right will cause estate inclusion.[6979] Furthermore, applicable local law subjecting the trust assets to the claims of the grantor's creditors may cause inclusion of the trust in the grantor's gross estate.[6980] This raises the issue of whether or not the availability of self-settled trusts (spendthrift trusts in which the grantor is the beneficiary) to the grantor's creditors subjects the trust to inclusion under Code § 2036.

The general rule is that the grantor's creditors can require distribution of self-settled trust assets to the extent which the trustee had discretion to make distributions.[6981] To the extent creditors can reach a self-settled trust, they are generally includible under Code § 2036 or an incomplete gift due to the grantor's retained power to terminate the trust by consigning his or her creditors to the trust assets.[6982] However, some states permit self-settled trusts to be protected from the grantor's creditors generally[6983] and some states only with respect to reimbursing taxes.[6984]

The Bankruptcy Abuse and Prevention Act of 2005, however, causes some concern about how well domestic asset protection trusts ("DAPTs") prevent creditors from gaining access to trust assets. Of particular concern is the 10-year lookback provision, which states that transfers to self-settled trusts by the debtor in which the debtor is a beneficiary of the trust within ten years before filing for bankruptcy.[6985] However, the language of the Act included a scienter requirement indicating that the grantor, by means of the transfer, intended to hinder, delay, or

defraud any party to which the debtor was indebted.[6986] In other words, the burden would lay on the bankruptcy trustee to show that the filer had the necessary fraudulent intent. Thus, DAPTs formed for legitimate purposes, such as transfer tax minimization, will retain their usefulness as estate planning tools.[6987] However, at least one commentator has noted that it would be difficult for a filer to argue that the transfer of assets to a DAPT was not intended to delay or hinder a creditor.[6988] As such, some uncertainty remains as to whether a grantor will be required to wait the full ten years before the hole in the DAPT is plugged so that creditors will be unable to reach the trust assets. With this lingering uncertainty about the 2005 Act, it will be difficult for practitioners to definitively say that these self-settled trusts are free from creditor claims, and subsequently, not includible in the grantor's gross estate. Keep that in mind when considering using a tax reimbursement clause.

If the grantor is concerned about being able to pay the income tax and cannot structure the trust to allow the grantor to turn off grantor trust status, the grantor should consider retaining a sizable portion of the asset being transferred. That retention may frustrate the grantor's goal of minimizing estate tax, but the grantor needs to be able to sleep at night.

III.B.2.j.iv.(b). Tax Distributions from Partnerships and S Corporations after Termination of Interest

Partnerships and S corporations typically make distributions to pay their owners' taxes. Usually these consist of just enough to their quarterly estimated tax payments, followed by a distribution the following March or April so that their owners can pay any balance due on undistributed income, to the extent not covered by the distributions to make the required quarterly estimated tax payments.

This practice causes certain issues to arise when an interest terminates before distributions are made to pay all of the tax incurred on income earned before termination. Language to address this issue is included in part III.A.3.d Special Income Tax Issues Regarding Bequeathing S Corporation Stock and Partnership Interests.

III.B.3. Defined Value Clauses in Sale or Gift Agreements or in Disclaimers

III.B.3.a. Overview

Usually property sold to an irrevocable grantor trust is a difficult-to-value asset. The IRS might assert that the property that was sold was worth more than what the seller received and that therefore the seller made a large gift. A defined value clause often provides that any such excess goes to an entity, gifts to which do not trigger gift tax. The excess might go to a charity, marital deduction trust, or a GRAT (the latter being most likely to be attacked by the IRS). However, *Wandry* (described in part III.B.3.j) approved a gift of LLC interests defined by a fixed dollar amount, without any excess going to a charity or other entity, so we have a path for making such gifts; on the other hand:

[6986] 11 U.S.C. § 548(e)(1)(D).
[6987] Shaftel & Bundy, D.A.P.T. 2005: The Report of My Death Was an Exaggeration, *Steve Leimberg's Asset Protection Planning Newsletter* #68 (May 23, 2005), available at http://www.leimbergservices.com.
[6988] Jay Adkisson & Chris Reiser, Bankruptcy Act Impact on Life Insurance and Domestic Asset Protection Trusts, *Steve Leimberg's Asset Protection Planning Newsletter* #66 (May 3, 2005), available at http://www.leimbergservices.com.

- The IRS officially said that it disagreed with the case.[6989] It has been suggested that the IRS feared appealing the case because of the 10th Circuit's taxpayer-favorable holding described in *King*, which is found in part III.B.3.e. My understanding is that IRS examiners have been stubbornly resisting respecting *Wandry* clauses, with more reasonable positions taken on appeal.

- It has been suggested that:[6990]

  - "The finality rules apply to the value of a prior gift but not necessarily to the extent of the property transferred."[6991]

[6989] In nonacquiescing, AOD 2012-004 (11/13/2012) argued:

> In 2004, each taxpayer executed a document transferring to each donee that number of membership interests in an LLC equal to a specified dollar value. Relying on an appraisal, each taxpayer then transferred a fixed percentage interest to each donee equal to the specified dollar value, *i.e.*, a 2.39 percent interest. Each transfer was subject to a reallocation between the taxpayer and the donee based upon the fair market value of the interest as finally determined for federal gift tax purposes. Until such time, each donee will enjoy the beneficial ownership of a 2.39 percent interest. In the Tax Court, the parties resolved the valuation issue by agreeing to a value that was higher than that stated in the taxpayers' appraisal. Interpreting the instrument of transfer in light of *Estate of Petter v. Commissioner*, 653 F.3d 1012 (9th Cir. 2009), the Tax Court held that the gifts were of a specified dollar value of LLC interests, to be construed in light of the agreed value, *i.e.*, a 1.98 percent interest. Further, the court held that the instrument of transfer did not allow the taxpayers to "take property back" but rather, simply corrected the allocation of the interests between the taxpayers and the donees. The application of the gift tax is based on the objective facts and circumstances of the transfer, and not upon the donative intent of the donor. Treas. Reg. § 25.2511-1(g). A gift is complete for federal tax purposes when the donor parts with dominion and control, leaving him no power to change its disposition. Treas. Reg. § 25.2511-2(b). The donor's retention of an interest that is dependent upon the occurrence of an event beyond the donor's control will not cause the transfer to be incomplete. *Smith v. Shaughnessy*, 318 U.S. 176, 181 (1943); *Robinette v. Helvering*, 318 U.S. 184, 187 (1943); *Estate of Kolb v. Commissioner*, 5 T.C. 588, 593 (1945); *Mack v. Commissioner*, 39 B.T.A. 220, 229 (1939). In determining the scope of the transfer, the Tax Court dismissed the entries on the LLC's books and records, the entries on the taxpayers' gift tax returns, and the entries on the LLC's subsequent income tax returns, finding that the instrument of transfer best described the gifts. Based on the LLC's books and records, the gift tax returns, and the LLC's income tax returns, however, it is undisputed that on the date of the gift, each taxpayer transferred a 2.39 percent interest to each donee, subject to a return of a portion of that interest in the event of a final determination of a greater value. The final determination of value for federal gift tax purposes is an occurrence beyond the taxpayers' control. Thus, on the date of the gift the taxpayers relinquished all dominion and control over the fixed percentage interests. The fact that the contingency occurred, and that the taxpayers are now entitled to a return of a portion of the interests, does not change this fact. See Treas. Reg. § 25.2511-2(b). *Estate of Petter v. Commissioner*, *supra*, is not to the contrary. In *Petter*, there was no possibility that the transferred property would return to the donor, and thus, the court had no need to consider the extent to which the gift was complete. Accordingly, the Tax Court erred in determining that the property transferred for federal gift tax purposes was anything other than the fixed percentage membership interest, *i.e.*, a 2.39 percent interest, transferred on the date of the gift to each donee.

[6990] Bramwell and Dillion, "Not Another *Wandry* Article: Real Issue With *Wandry* Formulas," *Estate Planning Journal* (5/2014).

[6991] The authors of the article in fn 6990 point out that Code §§ 2504(c) and 2001(f) provide that the statute of limitations runs regarding the valuation of gifts but do not refer to other issues. However, the authors also point out that, using language similar to that of Reg. § 25.2504-2(b), Reg. § 20.2001-1(b) provides:

- "There may not be a mechanism in the first place for achieving a final determination of the extent of the property transferred."[6992]

- Finality rules are strictly construed in favor of the government,[6993] so the uncertainty described in the above bullet points may be interpreted against the taxpayer.

In his 2019 Heckerling materials, John Porter argued that, "Given the numerous types of formula clauses routinely sanctioned by the Treasury, the IRS's position seems disingenuous."[6994] The formula clauses he cited include:

> *Adjusted taxable gifts and section 2701(d) taxable events occurring after August 5, 1997*. For purposes of determining the amount of adjusted taxable gifts as defined in section 2001(b), if, under section 6501, the time has expired within which a gift tax may be assessed under chapter 12 of the Internal Revenue Code (or under corresponding provisions of prior laws) with respect to a gift made after August 5, 1997…, then the amount of the taxable gift will be the amount as finally determined for gift tax purposes under chapter 12 of the Internal Revenue Code and the amount of the taxable gift may not thereafter be adjusted. The rule of this paragraph (b) applies to adjustments involving all issues relating to the gift, including valuation issues and legal issues involving the interpretation of the gift tax law.

[6992] The authors suggest:

> Section 2001(f)(2), however, only defines the "final determination" of a gift's "value." It does not explain how a "final determination" of any other issue can be achieved. Based on the text of Section 2001(f)(2), therefore, it is unclear whether there is a mechanism for resolving whether the taxpayer has correctly determined how much property he or she previously transferred by dollar formula.
>
> Moreover, it does not appear that a court would have jurisdiction even to decide what portion was transferred by a *Wandry* formula.[23] The Tax Court does not generally issue declaratory judgments….
>
> [23] Strictly speaking, the nature of the property transferred by dollar formula is a question of state law, not federal law. However, federal courts must understand what rights are created under state law in order to decide the federal tax questions. See, *e.g.*, *Pierre*, 133 TC 24 (2009) ("A fundamental premise of transfer taxation is that State law creates property rights and interests, and Federal tax law then defines the tax treatment of those property rights.").
>
> Without such a declaration, however, or without at least the possibility of such a declaration,[28] a taxpayer cannot achieve a final determination of the extent of the property transferred by a Wandry formula. Even after the statute of limitations for assessment of gift tax has lapsed, therefore, the IRS might still contend, upon a later transfer, that more of the property previously transferred by dollar formula remained in the hands of the taxpayer than the taxpayer supposed. A Wandry-style gift does not so much reduce or eliminate gift tax risk as postpone it until a later time.
>
> [28] The concept of a "final determination" implies that a court could have made a determination, even if the parties ultimately agree or one party concedes. After all, if the extent of property transferred by Wandry-style formula is contested but no court has jurisdiction to resolve the dispute, it is unclear whose position—the taxpayer's or the IRS's—should prevail.

Pierre is described in part III.B.1.e Valuation Issues.

[6993] The authors suggest:

> The United States Supreme Court has held that "statutes of limitation ... must receive a strict construction in favor of the government."[29] The finality rules, meanwhile, are "essentially ... statute of limitations provision[s]."[30] Consequently, the finality rules must be construed against the taxpayer.

[6994] Saved as Thompson Coburn LLP document number 7336669.

- Formula marital deduction clauses (Rev. Proc. 64-19, 1964-1 C.B. 682)
- Formula GST transfers (Treas. Regs. §§ 26.2632-1(b)(2)(11), 26.2632-1(d)(1))
- Split-interest charitable trusts (Treas. Reg. § 1.644-2(a)(1)(iii); Rev. Rul. 72-395, 1972-2 C.B. 340; Treas. Reg. § 20.2055-2(e)(2)(vi)(a))
- Formula transfers to a GRAT (Treas. Reg. § 25.2702-3(b)(1)(ii)(B))

To avoid arguments over *Wandry*, consider using an inter vivos QTIP trust. The donor can make a formula QTIP election (beware that the election must be made timely – no relief is available for a late gift tax QTIP election).[6995] A special trustee could be authorized to distribute the marital deduction trust,[6996] so this part of the trust could be terminated once the gift tax statute of limitations expires, then the donee spouse could engage in estate planning with the distributed assets. A disadvantage of such a plan is that the nonmarital portion is mandatory income, which is inconsistent with the goal of accumulating assets in that trust. Furthermore, a later sale to the mandatory income trust has some disadvantages,[6997] so a later sale to a separate accumulation trust guaranteed by the mandatory income trust[6998] would be more helpful (but clients tend to dislike the complexity of administering multiple trusts).

Another alternative is to make a gift to trust, with any excess over the desired gift passing as described in part III.B.3.e Disclaimers.

It has been suggested that fixing the excess value to a charity provides an independent third party that has the attorney general and the IRS (through Code § 4958 intermediate sanctions) looking over its shoulder. In *Petter* (described in part III.B.3.m) and *McCord* (described in part III.B.3.n), representatives from the charity described their due diligence. That was absent in *Christiansen* (described in part III.B.3.l), involving a formula disclaimer in favor of charity, but the executor was able to describe her fiduciary duties. The tension between taxable and deductible is already present when we do formula marital bequests. However, having different interests in the buyer and recipient of the gift suggests a tension between the parties involved that would lead to the defined value clause being enforced independent of IRS attack, providing the defined value clause with more credibility. *Petter* and *Christiansen* are great for families who don't mind getting more money to charities, because they involved increased gifts to charity. *McCord* is better for those who want to agree up front, because it involved a formula clause that the charity and donee settled without the donor's involvement. Regardless of the approach, see part III.B.3.d Charity Due Diligence.

An alternative is to have a defined value purchase clause:

- Suppose the buyer has liquidity to pay the entire purchase price up front.[6999] The grantor sells to the trust an interest in an operating business in exchange for an interest in an LLC that holds marketable securities. The LLC is designed to try to avoid valuation discounts; for

[6995] Regarding lack of relief for a late inter vivos QTIP election, see fn 2004 in part II.H.2.a Free Basis Step-Up When First Spouse Dies.
[6996] I include the special trustee for the marital and nonmarital portions, so that the donor's gift tax election does not change beneficial interests in the trust.
[6997] See part III.A.3.e.vi.(c) Required Structure for a Sale to a QSST (Including Possible Pitfalls).
[6998] See part III.B.1.a.ii Loan Guarantees.
[6999] Carlyn McCaffrey suggested this idea at the 2011 Heckerling Institute.

example, any member can withdraw at will and receive cash or marketable securities. The consideration is so much of the buyer's interest in the LLC as has a value equal to the interest in the operating business.

- For a leveraged deal, use a promissory note, the principal of which is the fair market value, as finally determined, of the transferred asset, relying on part III.B.3.f Defined Consideration Clause.

- In either event, clauses providing for a gift over leave some unfinished business, particularly if the gift over goes to a trust that continues to be inside the estate tax system. Furthermore, retroactively adjusting cash flows from the transferred asset might be awkward. It might very well be easier simply to adjust the principal on a note, recharacterizing past payments and extending the payment term a little. Whether the consideration itself has a defined value or simply is a note with principal equal to a formula amount, transferring the entire difficult-to-value asset provides certainty that growth in the asset is outside the estate tax system; if one instead transferred a portion of that asset determined by formula, then an IRS audit might bring part of that asset (and its growth) back into the transferor's estate.

Defining the transfer or consideration received based on finally determined values, rather than making a transfer and causing a subsequent transfer to avoid gift tax, remains an important distinction. In December 2014, the Fourth Circuit reaffirmed in a different context [7000] its commitment to *Procter* (described in part III.B.3.o *Procter* and Other Cases) and refused to recognize a transfer made after a determination; the Tax Court continues to strongly reject conditions subsequent.[7001]

Formula transfers based on values as finally determined for gift tax purposes require running the gift tax statute of limitations. See part III.B.4 Adequate Disclosure on Gift Tax Returns.

III.B.3.b. Due Diligence Regarding Values

Caveat for all strategies described in this part III.B.3 Defined Value Clauses in Sale or Gift Agreements or in Disclaimers: These strategies are intended to help taxpayers deal with the fact that the IRS may in good faith disagree with the appraisals the taxpayers obtain in good faith, simply because appraisal involves a lot of judgment and is not a precise science. Please, please, please – I beg you - do not use these tools to game the system with an appraisal that the taxpayer knows is low. Such a bad faith effort will meet stiff IRS opposition, as described in the text accompanying and preceding fn 6487 in part III.B.2 Irrevocable Grantor Trust Planning, Including GRAT vs. Sale to Irrevocable Grantor Trust. I am concerned that the IRS will successfully litigate such a bad faith effort and make these strategies less effective in protecting taxpayers who are using them merely to deal with the uncertainty inherent in the appraisal process. Instead, in a sale to an irrevocable grantor trust, one might ask the appraiser whether any additional factors would generate a higher value that the draft appraisal, because the consequences of a higher value estimated by the appraiser – taking a little longer to repay the note than otherwise might have been the case – are small relative to the risk that the IRS successfully argues that the transaction does not work at all because the taxpayer was trying to game the system.

[7000] *Belk v. Commissioner*, 774 F.3d 221, *aff'g* 140 T.C. 1 (2013) (savings clause did not fix provision expressly prohibited by conservation easement regulations).
[7001] See fn. 7030 in part III.B.3.l *Christiansen*.

Also note that the IRS has greatly cut back appraisers' procedural protections. See generally 20.1.12 Penalties Applicable to Incorrect Appraisals | Internal Revenue Service (irs.gov). IRM part 20.1.12.3, "Asserting the IRC 6695A Penalty" (10-06-2021), provides:

(1) An IRC 6695A appraiser penalty case will be conducted as a separate and distinct case from the related tax examination.

(2) During the related tax examination, examiners and attorneys will, as warranted, develop facts and circumstances to determine whether or not an IRC 6695A appraiser penalty case should be opened. This determination will be documented in the examination workpapers.

(3) All discussions related to appraiser penalties with either the taxpayer, return preparer, or designated power of attorney, will be limited to the development of facts to determine the applicability of a penalty. Penalties under IRC 6695A will not be proposed in the presence of the taxpayer.

(4) Generally, an IRC 6695A penalty against an appraiser will not be proposed until the related tax examination is completed at the group level. The appraiser penalty case can proceed when the related tax examination case is closed agreed, closed no response after default, is in Appeals or is in Tax Court.

    Caution: If the statute of limitation on the IRC 6695A penalty will expire within 180 days, then the penalty case file should be worked, or a statute extension should be obtained so a protective assessment can be made if needed. See IRM 20.1.12.4, Statute of Limitations.

(5) The penalty does not apply if the appraiser can establish the appraisal value "more likely than not" was correct. Pending further guidance, consult Counsel regarding "more likely than not" determinations.

(6) The amount of the IRC 6695A penalty is the lesser of:

    a. The greater of:

        10% of the amount of the underpayment (defined by IRC 6664(a) attributable to the misstatement)

        or

        $1,000, or

    b. 125% of the gross income received from the preparation of the appraisal.

(7) If the claimed value of the property on the return or claim for refund, which is based on an appraisal, results in a substantial valuation misstatement, substantial estate or gift tax valuation understatement, or gross valuation misstatement, with respect to such property, the examiner or attorney should open an IRC 6695A penalty case.

    a. **Substantial Valuation Misstatement**. A substantial valuation misstatement under Chapter 1 (Normal Taxes and Surtaxes) occurs when the claimed value of the property is 150% or more of the correct amount of such valuation, IRC 6662(e).

b. **Substantial Estate or Gift Tax Valuation Understatement**. A substantial estate or gift tax valuation understatement occurs if the value of the property claimed is 65% or less of the amount determined to be the correct amount of such valuation, IRC 6662(g).

c. **Gross Valuation Misstatement**. A gross valuation misstatement under Chapter 1 (Normal Taxes and Surtaxes) occurs when the claimed value of the property is 200% or more of the correct amount of such valuation, IRC 6662(h).

d. **Gross Estate or Gift Tax Valuation Understatement**. A gross estate or gift tax valuation understatement occurs if the value of the property claimed is 40% or less of the amount determined to be the correct amount of such valuation, IRC 6662(h).

See Sheppard, "No Notice, No Examination, No Problem: IRS Further Deprives Appraisers of Procedural Protections," *Taxation of Exempts* (WG&L) (1/2022).

III.B.3.c. Sale from One Trust to Another

Suppose a trust sells a difficult-to-value asset to another trust. The grantor trust rules (part III.B.2 Irrevocable Grantor Trust Planning, Including GRAT vs. Sale to Irrevocable Grantor Trust) can prevent tax on the sale in some circumstances:

- Transfers between trusts deemed owned by the same grantor, if sale is completed sufficiently before grantor trust status terminates. "Completed sufficiently" means that the remaining balance on the note is no more than the basis of the transferee trust's assets; see part III.B.1.c.i.(a) Bargain Sales to Individuals.

- The transferee trust ("buyer") might be deemed owned by transferor trust ("seller"). The buyer's grantor gives up to $5,000 to the buyer in a non-interest-bearing account and gives the seller a right to withdraw the gift, far enough in advance that the gift is not stepped together with the sale. An independent person is authorized to make unlimited distributions from the buyer to the seller, and the buyer has no features that would make its grantor the deemed owner of any part of the buyer. The seller would be the deemed owner of the buyer. For more analysis, see part III.B.2.i Code § 678 Beneficiary Deemed-Owned Trusts.

Before describing the sale, let's explore more the idea of the buyer being deemed owned by the seller. For example, suppose a decedent did not have enough GST exemption to fully protect bequests to a beneficiary, and the trustee of the trust that is protected from GST tax (the "exempt trust") would like to use a grantor trust strategy to acquire the assets of the trust that is not protected from GST tax (the "nonexempt trust"):

- The exempt trust transfers up to $5,000 to a new trust in a non-interest-bearing account and gives the seller a right to withdraw the gift, far enough in advance that the gift is not stepped together with the sale.

- An independent person is authorized to make unlimited distributions from the new trust to the nonexempt trust, and the new trust has no features that would make the exempt trust the deemed owner of any part of the new trust. This is important not only to trigger Code § 678(a)(2) but also to give the trustee of the nonexempt trust a source of assets to pay tax for the year of its termination.

- The exempt trust, the terms of which are identical to the new trust except for the features described above, would guarantee the new trust's purchase of the nonexempt trust's assets.

- While the note effectuating the sale is outstanding, the nonexempt trust would use note payments to pay taxes on the new trust's taxable items and to make distributions to the nonexempt trust's beneficiaries.

Ideally, all of the living beneficiaries of the trust have identical interests before and after, so that all one really is doing in the event of a gift is changing the terms of their limited powers of appointment (relating on how far into the future they can appoint the property). Whether or not one is in that situation, let's discuss the type of formula valuation clause to use - define what is transferred or define the purchase price?

- If the transaction is adjusted in the former, then the refunded business interest will need to be transferred, leaving one with the valuation issue again.

- If the transaction is adjusted in the latter, then it's just an additional purchase price that needs to be paid.

How would one run the statute of limitations? Would each beneficiary file a gift tax return? If not, then one never has finality for gift tax purposes, and formula valuation clauses that depend on gift tax return finality would not apply. If you are able to get all beneficiaries to file gift tax returns, I would try to make sure that some significant part of any gift made would constitute a completed gift.[7002] If a beneficiary who consents or fails to object to the sale has an interest in the transferee trust, Code § 2702 may treat the beneficiary as having made a gift of the beneficiary's entire interest in the transferring trust, without subtracting the beneficiary's retained interest.[7003]

The main concern might be any effect on protection from generation-skipping transfer (GST) tax; see part III.B.1.d Generation-Skipping Transfer (GST) Issues. If the sale is challenged, it might be a constructive or actual addition that affects the trust's exclusion from the GST system (in the case of a grandfathered trust)[7004] or a gift that changes the inclusion ratio (for other trusts). Advise the trustee of the recipient trust to make a small taxable distribution after the sale and do appropriate reporting relating to Form 706-GS(D-1), so that the statute of limitations runs on the issue of inclusion ratio:

- Each time a distribution from a trust that is not grandfathered from the GST system is made to a skip person, the trustee must file Form 706-GS(D-1), Notification of Distribution from a Generation-Skipping Trust, with the IRS and gives to the beneficiary. This form is required even if the trust has a zero inclusion ratio.

- The first time a distribution is made after the sale, the beneficiary files Form 706-GS(D), Generation-Skipping Transfer Tax Return for Distributions, in which the beneficiary reports

[7002] See text accompanying fn 7061 in part III.B.4 Adequate Disclosure on Gift Tax Returns.
[7003] See text accompanying fns 7381-7390 in part III.B.7.d Code § 2702 Overview.
[7004] See part III.B.1.d.i Effect of "Additions" on Grandfathering from GST Rules.

zero GST tax due. Presumably no matter how small or large the distribution is, this filing runs one prong of the statute of limitations (SOL) for the inclusion ratio; the SOL runs on the later of that or when the SOL runs for the transferor's estate tax return.[7005] Because the form's instructions say that a beneficiary is not required to file if the trust has a zero inclusion ratio, the beneficiary would not file any more Forms 706-GS(D) after the SOL on the inclusion ratio has run until some event occurs that might change the trust's inclusion ratio.

Note further that, if and to the extent that a beneficiary makes a gift to a trust, that beneficiary becomes the transferor with respect to that portion of the trust.[7006] Therefore:

- Many individuals who are skip persons with respect to the transferor are not skip persons with respect to the beneficiary who became a transferor. Presumably Form 706-GS(D) would run the SOL with respect to only the portion of the trust from which the distribution to the filing recipient of the distribution constituted a generation-skipping transfer.

- The beneficiary should allocate GST exemption to provide a zero inclusion ratio to protect the portion of the trust with respect to which the beneficiary is the transferor. However, if that beneficiary is also a beneficiary of the transferee trust, the gift may be incomplete or the retained beneficial interest or power of appointment may also trigger Code § 2036 or 2038.[7007] If and to the extent the beneficiary is the transferor of a portion that is includible in the beneficiary's estate, consider part III.B.1.d.ii Estate Tax Inclusion Period (ETIP).

Note that Reg. § 301.6501(c)-1 requires "adequate disclosure" for only Chapters 12 (gift tax) and 14 (special valuation rules applying to lifetime transfers), not for Chapter 13 (GST tax). The instructions to Form 706-GS-(D) and Form 706-GS(D-1) do not require evidence of inclusion ratio. Therefore, it looks like we don't need to provide any particular information that would help the IRS decide whether to audit GST transfers from a trust not included in the beneficiary's estate, other than letting it know of the bare existence of the distribution.

[7005] Reg. § 26.2642-5(b) provides:

> (b) *Other GSTs*. With respect to taxable distributions and taxable terminations, the inclusion ratio for a trust becomes final, on the later of—
>
> (1) The expiration of the period for assessment with respect to the first GST tax return filed using that inclusion ratio (unless the trust is subject to an election under section 2032A in which case the applicable date under this subsection is the expiration of the period of assessment of any additional GST tax due as a result of a cessation, etc. of qualified use under section 2032A); or
>
> (2) The expiration of the period for assessment of Federal estate tax with respect to the estate of the transferor. For purposes of this paragraph (b)(2), if an estate tax return is not required to be filed, the period for assessment is determined as if a return were required to be filed and as if the return were timely filed within the period prescribed by section 6075(a).

For gifts to a trust, an additional GST rule informs us about finality. The inclusion ratio is 1 minus the applicable fraction. Code § 2642(a)(1). The applicable fraction is based on allocations of GST exemption to the trust, Code § 2642(a)(2)(A), and the growth of property to which GST exemption has already been allocated, Code 2642(d). Reg. § 26.2642-2(a)(1) helps some – particularly with initial transfers to a trust that are reported timely.

> In the case of a timely allocation under § 26.2632-1(b)(2)(ii), the denominator of the applicable fraction is the fair market value of the property as finally determined for purposes of chapter 12.

[7006] See part III.B.1.d.iii Who Is the Transferor.

[7007] See parts III.C Code § 2036 and III.D Code § 2038.

The question then is whether to:

- Take one's chances on a sale between trusts, or

- Distribute to the beneficiaries, who can then decide separately whether to engage in estate planning transactions that would provide better finality.

As to the latter:

- If the beneficiaries have quantifiable rights, consider any income tax consequences described in part II.J.18 Trust Divisions, Mergers, and Commutations; Decanting, especially part II.J.18.f Commutation vs Mere Division. For an oral discussion, see Sale of Interest in Trust; Negative Capital Accounts; Final Regs on Transfer for Value.

- Be careful to avoid a step transaction. For example, suppose a trust not protected from GST tax distributes to a child of the transferor, then that child sets up a trust for that child's children. That child's children would be skip persons with respect to the original transferor. If and to the extent that the distribution and creation of the new trust are treated as a continuation of the original trust, the transferor may be treated as the transferor of none, part, or all of the new trust, even if the child made a taxable gift. See part III.B.1.d.iii Who Is the Transferor.

III.B.3.d. Charity Due Diligence

At a meeting I attended, one charity stated that it vets gifts very seriously because it has large reputational exposure with the IRS. Due diligence includes:

- Reviewing the governing documents of the business entity, the interest of which is being transferred. This includes closely-held business entities, real estate, restricted stock, and cash value life insurance.

- Having an exit strategy within a reasonable amount of time to sell to someone who is not the donor and is not a family member but can include the company (if the other shareholders have similar price when they retire, die, etc.). Transfer restrictions cannot burden the sale too much. However, they are careful to avoid assignment of income.

- Leaving some money in escrow if any contingent liabilities, capital calls, or unrelated business income tax are involved.

- Donor needs to get appraisal and file Form 8283. The charity will file Form 8282 reporting a sale within two years of donation.

Examples of what that charity has done:

- Donor wanted to make serial gifts of $10K per year. The charity asked whether governing documents permit the transfer, what its transfer rights were, how the redeemed stock would be valued, and what was the redemption plan (including company's financial capability to redeem). The company eventually put together a standing charitable plan.

- Donor wanted to give S corporation stock. The fund escrowed 20% to pay unrelated business income tax and for accounting fees. The fund keeps an escrow until the three-year statute of limitations runs.

The lawyer who has beaten the IRS in these cases cautions us not to refer to the gift over as a contingent or conditional gift. This is a fixed gift, and he likes to see not just a lid but a real gift to the charity that occurs at the time of the transaction; his caution to that effect is borne out by part III.B.3.h *Moore*. This gives the charity incentive to audit the gift. The charity's due diligence is strong evidence of substance/bona fides.

One advisor views donor advised funds as the best charitable donees. Minimum distribution, excess business holding,[7008] self-dealing, and jeopardizing investment rules burden planning for a private foundation, particularly when an uncertain interest is being donated.

For cases involving formula charitable gifts, see parts:

- III.B.3.h *Moore* – Charitable deduction denied because charity gets nothing unless IRS audits

- III.B.3.i Graev - Charitable deduction denied because chance that charity would have to return the gift was not "so remote as to be negligible"

- III.B.3.l *Christiansen* – approved formula disclaimer that resulted in charitable gift

- III.B.3.m Petter – approved a transfer to charity in a sale/gift transfer, based on values as "finally determined for federal gift tax purposes"

- III.B.3.n *McCord* (2003, 2006) – courts respected agreement under which fixed dollar amounts worth of business interests determined what portion went to the family and what portion went to charity; after the transfer, the family and charity obtained appraisals that they used to agree among themselves who got what portion of business interests

III.B.3.e. Disclaimers

A formula disclaimer can be quite effective and, unlike the other tools described in this part III.B.3, is not susceptible to IRS audit if one complies with all of the rules of Code § 2518 and the regulations thereunder.

First, we will describe the Code and selected regulations. Then, we will describe practical issues.

[7008] Code § 4943(e) applies this tax to donor advised funds in certain situations.

III.B.3.e.i. Disclaimers – Code and Regulations

Code § 2518(a), "General rule," provides:[7009]

> For purposes of this subtitle, if a person makes a qualified disclaimer with respect to any interest in property, this subtitle shall apply with respect to such interest as if the interest had never been transferred to such person.

"This subtitle" means estate, gift, GST, and similar transfer taxes. Thus, Code § 2518 allows a certain amount retroactive transfer tax planning. Generally, qualified disclaimers are recognized for income tax purposes, even though Code § 2518 does not expressly apply for that purpose.

Code § 2518(b), "Qualified disclaimer defined," provides:

> For purposes of subsection (a), the term "qualified disclaimer" means an irrevocable and unqualified refusal by a person to accept an interest in property but only if –
>
> (1) such refusal is in writing,
>
> (2) such writing is received by the transferor of the interest, his legal representative, or the holder of the legal title to the property to which the interest relates not later than the date which is 9 months after the later of -
>
> (A) the day on which the transfer creating the interest in such person is made, or
>
> (B) the day on which such person attains age 21,
>
> (3) such person has not accepted the interest or any of its benefits, and
>
> (4) as a result of such refusal, the interest passes without any direction on the part of the person making the disclaimer and passes either -
>
> (A) to the spouse of the decedent, or
>
> (B) to a person other than the person making the disclaimer.

Generally, Code § 2518 applies to transfers creating an interest in the person disclaiming made after December 31, 1976, so the time for making a disclaimer under a pre-1977 trust may be

---

[7009] Reg. § 25.2518-1(b), "Effect of a qualified disclaimer," provides:

> If a person makes a qualified disclaimer as described in section 2518(b) and § 25.2518-2, for purposes of the Federal estate, gift, and generation-skipping transfer tax provisions, the disclaimed interest in property is treated as if it had never been transferred to the person making the qualified disclaimer. Instead, it is considered as passing directly from the transferor of the property to the person entitled to receive the property as a result of the disclaimer. Accordingly, a person making a qualified disclaimer is not treated as making a gift. Similarly, the value of a decedent's gross estate for purposes of the Federal estate tax does not include the value of property with respect to which the decedent, or the decedent's executor or administrator on behalf of the decedent, has made a qualified disclaimer. If the disclaimer is not a qualified disclaimer, for the purposes of the Federal estate, gift, and generation-skipping transfer tax provisions, the disclaimer is disregarded and the disclaimant is treated as having received the interest.

later than that required by Code § 2518(b)(2). Specifically, Reg. § 25.2518-1(a), "Applicability," provides:

> (1) *In general*. The rules described in this section, § 25.2518-2, and § 25.2518-3 apply to the qualified disclaimer of an interest in property which is created in the person disclaiming by a transfer made after December 31, 1976. In general, a qualified disclaimer is an irrevocable and unqualified refusal to accept the ownership of an interest in property. For rules relating to the determination of when a transfer creating an interest occurs, see § 25.2518-2(c)(3) and (4).
>
> (2) *Example*. The provisions of paragraph (a)(1) of this section may be illustrated by the following example:
>
> *Example*. W creates an irrevocable trust on December 10, 1968, and retains the right to receive the income for life. Upon the death of W, which occurs after December 31, 1976, the trust property is distributable to W's surviving issue, per stirpes. The transfer creating the remainder interest in the trust occurred in 1968. See § 25.2511-1(c)(2). Therefore, section 2518 does not apply to the disclaimer of the remainder interest because the transfer creating the interest was made prior to January 1, 1977. If, however, W had caused the gift to be incomplete by also retaining the power to designate the person or persons to receive the trust principal at death, and, as a result, no transfer (within the meaning of § 25.2511-1(c)(2)) of the remainder interest was made at the time of the creation of the trust, section 2518 would apply to any disclaimer made after W's death with respect to an interest in the trust property.
>
> (3) Paragraph (a)(1) of this section is applicable for transfers creating the interest to be disclaimed made on or after December 31, 1997.

Reg. § 25.2518-1, "Cross-reference," provides:

> For rules relating to the effect of qualified disclaimers on the estate tax charitable and marital deductions, see §§ 20.2055-2(c) and 20.2056(d)-1 respectively. For rules relating to the effect of a qualified disclaimer of a general power of appointment, see § 20.2041-3(d).

Reg. § 20.2055-2(c)(1), "Decedents dying after December 31, 1976," authorizes disclaimers in favor of charity as late as the extended due date for the estate tax return:

> In the case of a bequest, devise, or transfer made by a decedent dying after December 31, 1976, the amount of a bequest, devise or transfer for which a deduction is allowable under section 2055 includes an interest which falls into the bequest, devise or transfer as the result of either -
>
> (i) A qualified disclaimer (see section 2518 and the corresponding regulations for rules relating to a qualified disclaimer), or
>
> (ii) The complete termination of a power to consume, invade, or appropriate property for the benefit of an individual by reason of the death of such individual or for any other reason, if the termination occurs within the period of time (including extensions) for

filing the decedent's Federal estate tax return and before such power has been exercised.

Reg. § 20.2056(d)-1 cross-references Reg. §§ 20.2056A-1 through 20.2056A-13, which include rules for fixing a trust to allow it to qualify for the marital deduction for a trust for the beneficiary of a noncitizen spouse.

Reg. § 20.2041-3(d)(6) discusses a disclaimer of a general power of appointment:

(i) A disclaimer or renunciation of a general power of appointment created in a transfer made after December 31, 1976, is not considered to be the release of the power if the disclaimer or renunciation is a qualified disclaimer as described in section 2518 and the corresponding regulations. For rules relating to when the transfer creating the power occurs, see § 25.2518-2(c)(3) of this chapter. If the disclaimer or renunciation is not a qualified disclaimer, it is considered a release of the power by the disclaimant.

(ii) The disclaimer or renunciation of a general power of appointment created in a taxable transfer before January 1, 1977, in the person disclaiming is not considered to be a release of the power. The disclaimer or renunciation must be unequivocal and effective under local law. A disclaimer is a complete and unqualified refusal to accept the rights to which one is entitled. There can be no disclaimer or renunciation of a power after its acceptance. In the absence of facts to the contrary, the failure to renounce or disclaim within a reasonable time after learning of its existence will be presumed to constitute an acceptance of the power. In any case where a power is purported to be disclaimed or renounced as to only a portion of the property subject to the power, the determination as to whether or not there has been a complete and unqualified refusal to accept the rights to which one is entitled will depend on all the facts and circumstances of the particular case, taking into account the recognition and effectiveness of such a disclaimer under local law. Such rights refer to the incidents of the power and not to other interests of the decedent in the property. If effective under local law, the power may be disclaimed or renounced without disclaiming or renouncing such other interests.

(iii) The first and second sentences of paragraph (d)(6)(i) of this section are applicable for transfers creating the power to be disclaimed made on or after December 31, 1997.

Reg. § 25.2518-2(a) parrots the requirements of Code § 2518(b). Reg. § 25.2518-2(b) provides details on the disclaimer being written.[7010]

[7010] Reg. § 25.2518-2(b), "Writing," provides:

(1) *Requirements*. A disclaimer is a qualified disclaimer only if it is in writing. The writing must identify the interest in property disclaimed and be signed either by the disclaimant or by the disclaimant's legal representative.

(2) *Delivery*. The writing described in paragraph (b)(1) of this section must be delivered to the transferor of the interest, the transferor's legal representative, the holder of the legal title to the property to which the interest relates, or the person in possession of such property.

Reg. § 25.2518-2(c), "Time limit," provides:

(1) *In general*. A disclaimer is a qualified disclaimer only if the writing described in paragraph (b)(1) of this section is delivered to the persons described in paragraph (b)(2) of this section no later than the date which is 9 months after the later of -

(i) The date on which the transfer creating the interest in the disclaimant is made, or

(ii) The day on which the disclaimant attains age 21.

(2) *A timely mailing of a disclaimer treated as a timely delivery*. Although section 7502 and the regulations under that section apply only to documents to be filed with the Service, a timely mailing of a disclaimer to the person described in paragraph (b)(2) of this section is treated as a timely delivery if the mailing requirements under paragraphs (c)(1), (c)(2) and (d) of § 301.7502-1 are met. Further, if the last day of the period specified in paragraph (c)(1) of this section falls on Saturday, Sunday or a legal holiday (as defined in paragraph (b) of § 301.7503-1), then the delivery of the writing described in paragraph (b)(1) of this section shall be considered timely if delivery is made on the first succeeding day which is not Saturday, Sunday or a legal holiday. See paragraph (d)(3) of this section for rules applicable to the exception for individuals under 21 years of age.

(3) *Transfer*.

(i) For purposes of the time limitation described in paragraph (c)(1)(i) of this section, the 9-month period for making a disclaimer generally is to be determined with reference to the transfer creating the interest in the disclaimant. With respect to inter vivos transfers, a transfer creating an interest occurs when there is a completed gift for Federal gift tax purposes regardless of whether a gift tax is imposed on the completed gift. Thus, gifts qualifying for the gift tax annual exclusion under section 2503(b) are regarded as transfers creating an interest for this purpose. With respect to transfers made by a decedent at death or transfers that become irrevocable at death, the transfer creating the interest occurs on the date of the decedent's death, even if an estate tax is not imposed on the transfer. For example, a bequest of foreign-situs property by a nonresident alien decedent is regarded as a transfer creating an interest in property even if the transfer would not be subject to estate tax. If there is a transfer creating an interest in property during the transferor's lifetime and such interest is later included in the transferor's gross estate for estate tax purposes (or would have been included if such interest were subject to estate tax), the 9-month period for making the qualified disclaimer is determined with reference to the earlier transfer creating the interest. In the case of a general power of appointment, the holder of the power has a 9-month period after the transfer creating the power in which to disclaim. If a person to whom any interest in property passes by reason of the exercise, release, or lapse of a general power desires to make a qualified disclaimer, the disclaimer must be made within a 9-month period after the exercise, release, or lapse regardless of whether the exercise, release, or lapse is subject to estate or gift tax. In the case of a nongeneral power of appointment, the holder of the power, permissible appointees, or takers in default of appointment must disclaim within a 9-month period after the original transfer that created or authorized the creation of the power. If the transfer is for the life of an income beneficiary with succeeding interests to other persons, both the life tenant and the other remaindermen, whether their interests are vested or contingent, must disclaim no later than 9 months after the original transfer creating an interest. In the case of a remainder interest in property which an executor elects to treat as qualified terminable interest property under section 2056(b)(7), the remainderman must disclaim within 9 months of the transfer creating the interest, rather than 9 months from the date such interest is subject to tax under section 2044 or 2519. A person who receives an interest in property as the result of a qualified disclaimer of the interest must disclaim the previously disclaimed interest no later than 9 months after the date of the transfer creating the interest in the preceding disclaimant. Thus, if A were to make a qualified disclaimer of a specific bequest and as a result of the qualified disclaimer the property passed as part of the residue, the beneficiary of the residue could make a qualified disclaimer no later than 9 months after the date of the testator’s death. See paragraph (d)(3) of this section for the time limitation rule with reference to recipients who are under 21 years of age.

(ii) Sentences 1 through 10 and 12 of paragraph (c)(3)(i) of this section are applicable for transfers creating the interest to be disclaimed made on or after December 31, 1997.

(4) Joint property.

(i) Interests in joint tenancy with right of survivorship or tenancies by the entirety. Except as provided in paragraph (c)(4)(iii) of this section (with respect to joint bank, brokerage, and other investment accounts), in the case of an interest in a joint tenancy with right of survivorship or a tenancy by the entirety, a qualified disclaimer of the interest to which the disclaimant succeeds upon creation of the tenancy must be made no later than 9 months after the creation of the tenancy regardless of whether such interest can be unilaterally severed under local law. A qualified disclaimer of the survivorship interest to which the survivor succeeds by operation of law upon the death of the first joint tenant to die must be made no later than 9 months after the death of the first joint tenant to die regardless of whether such interest can be unilaterally severed under local law and, except as provided in paragraph (c)(4)(ii) of this section (with respect to certain tenancies created on or after July 14, 1988), such interest is deemed to be a one-half interest in the property. (See, however, section 2518(b)(2)(B) for a special rule in the case of disclaimers by persons under age 21.) This is the case regardless of the portion of the property attributable to consideration furnished by the disclaimant and regardless of the portion of the property that is included in the decedent’s gross estate under section 2040 and regardless of whether the interest can be unilaterally severed under local law. See paragraph (c)(5), Examples (7) and (8), of this section.

(ii) Certain tenancies in real property between spouses created on or after July 14, 1988. In the case of a joint tenancy between spouses or a tenancy by the entirety in real property created on or after July 14, 1988, to which section 2523(i)(3) applies (relating to the creation of a tenancy where the spouse of the donor is not a United States citizen), the surviving spouse may disclaim any portion of the joint interest that is includible in the decedent's gross estate under section 2040. See paragraph (c)(5), Example (9), of this section.

(iii) Special rule for joint bank, brokerage, and other investment accounts (*e.g.*, accounts held at mutual funds) established between spouses or between persons other than husband and wife. In the case of a transfer to a joint bank, brokerage, or other investment account (e.g., an account held at a mutual fund), if a transferor may unilaterally regain the transferor's own contributions to the account without the consent of the other cotenant, such that the transfer is not a completed gift under §25.2511-1(h)(4), the transfer creating the survivor's interest in the decedent's share of the account occurs on the death of the deceased cotenant. Accordingly, if a surviving joint tenant desires to make a qualified disclaimer with respect to funds contributed by a deceased cotenant, the disclaimer must be made within 9 months of the cotenant's death. The surviving joint tenant may not disclaim any portion of the joint account attributable to consideration furnished by that surviving joint tenant. See paragraph (c)(5), Examples (12), (13), and (14), of this section, regarding the treatment of disclaimed interests under sections 2518, 2033 and 2040.

(iv) Effective date. This paragraph (c)(4) is applicable for disclaimers made on or after December 31, 1997.

(5) Examples. The provisions of paragraphs (c)(1) through (c)(4) of this section may be illustrated by the following examples. For purposes of the following examples, assume that all beneficiaries are over 21 years of age.

Example (1). On May 13, 1978, in a transfer which constitutes a completed gift for Federal gift tax purposes, A creates a trust in which B is given a lifetime interest in the income from the trust. B is also given a nongeneral testamentary power of appointment over the corpus of the trust. The power of appointment may be exercised in favor of any of the issue of A and B. If there are no surviving issue at B's death or if the power is not exercised, the corpus is to pass to E. On May 13, 1978, A and B have two surviving children, C and D. If A, B, C or D wishes to make a qualified disclaimer, the disclaimer must be made no later than 9 months after May 13, 1978.

Example (2). Assume the same facts as in example (1) except that B is given a general power of appointment over the corpus of the trust. B exercises the general power of appointment in favor of C upon B's death on June 17, 1989. C may make a qualified disclaimer no later than 9 months after June 17, 1989. If B had died without exercising the general power of appointment, E could have made a qualified disclaimer no later than 9 months after June 17, 1989.

Example (3). F creates a trust on April 1, 1978, in which F's child G is to receive the income from the trust for life. Upon G's death, the corpus of the trust is to pass to G's child H. If either G or H wishes to make a qualified disclaimer, it must be made no later than 9 months after April 1, 1978.

Example (4). A creates a trust on February 15, 1978, in which B is named the income beneficiary for life. The trust further provides that upon B's death the proceeds of the trust are to pass to C, if then living. If C predeceases D, the proceeds shall pass to D or D's estate. To have timely disclaimers for purposes of section 2518, B, C, and D must disclaim their respective interests no later than 9 months after February 15, 1978.

Example (5). A, a resident of State Q, dies on January 10, 1979, devising certain real property to B. The disclaimer laws of State Q require that a disclaimer be made within a reasonable time after a transfer. B disclaims the entire interest in real property on November 10, 1979. Although B's disclaimer may be effective under State Q law, it is not a qualified disclaimer under section 2518 because the disclaimer was made later than 9 months after the taxable transfer to B.

Example (6). A creates a revocable trust on June 1, 1980, in which B and C are given the income interest for life. Upon the death of the last income beneficiary, the remainder interest is to pass to D. The creation of the trust is not a completed gift for Federal gift tax purposes, but each distribution of trust income to B and C is a completed gift at the date of distribution. B and C disclaim each income distribution no later than 9 months after the date of the particular distribution. In order to disclaim an income distribution in the form of a check, the recipient must return the check to the trustee uncashed along with a written disclaimer. A dies on September 1, 1982, causing the trust to become irrevocable, and the trust corpus is includible in A's gross estate for Federal estate tax purposes under section 2038. If B or C wishes to make a qualified disclaimer of his income interest, he must do so no later than 9 months after September 1, 1982. If D wishes to make a qualified disclaimer of his remainder interest, he must do so no later than 9 months after September 1, 1982.

Example (7). On February 1, 1990, A purchased real property with A's funds. Title to the property was conveyed to "A and B, as joint tenants with right of survivorship." Under applicable state law, the joint interest is unilaterally severable by either tenant. B dies on May 1, 1998, and is survived by A. On January 1, 1999, A disclaims the one-half survivorship interest in the property to which A succeeds as a result of B's death. Assuming that the other requirements of section 2518(b) are satisfied, A has made a qualified disclaimer of the one-half survivorship interest (but not the interest retained by A upon the creation of the tenancy, which may not be disclaimed by A). The result is the same whether or not A and B are married and regardless of the proportion of consideration furnished by A and B in purchasing the property.

Example (8). Assume the same facts as in Example (7) except that A and B are married and title to the property was conveyed to "A and B, as tenants by the entirety." Under applicable state law, the tenancy cannot be unilaterally severed by either tenant. Assuming that the other requirements of section 2518(b) are satisfied, A has made a qualified disclaimer of the one-half survivorship interest (but not the interest retained by A upon the creation of the tenancy, which may not be disclaimed by A). The result is the same regardless of the proportion of consideration furnished by A and B in purchasing the property.

Example (9). On March 1, 1989, H and W purchase a tract of vacant land which is conveyed to them as tenants by the entirety. The entire consideration is paid by H. W is not a United States citizen. H dies on June 1, 1998. W can disclaim the entire joint interest because this is the interest includible in H's gross estate under section 2040(a). Assuming that W's disclaimer is received by the executor of H's estate no later than 9 months after June 1, 1998, and the other requirements of section 2518(b) are satisfied, W's disclaimer of the property would be a qualified disclaimer. The result would be the same if the property was held in joint tenancy with right of survivorship that was unilaterally severable under local law.

Example (10). In 1986, spouses A and B purchased a personal residence taking title as tenants by the entirety. B dies on July 10, 1998. A wishes to disclaim the one-half undivided interest to which A would succeed by right of survivorship. If A makes the disclaimer, the property interest would pass under B's will to their child C. C, an adult, and A resided in the residence at B's death and will continue to reside there in the future. A continues to own a one-half undivided interest in the property. Assuming that the other requirements of section 2518(b) are satisfied, A may make a qualified disclaimer with respect to the one-half undivided survivorship interest in the residence if A delivers the written disclaimer to the personal representative of B's estate by April 10, 1999, since A is not deemed to have accepted the interest or any of its benefits prior to that time and A's occupancy of the residence after B's death is consistent with A's retained undivided ownership interest. The result would be the same if the property was held in joint tenancy with right of survivorship that was unilaterally severable under local law.

Example (11). H and W, husband and wife, reside in state X, a community property state. On April 1, 1978, H and W purchase real property with community funds. The property is not held by H and W as jointly owned property with rights of survivorship. H and W hold the property until January 3, 1985, when H dies. H devises his portion of the property to W. On March 15, 1985, W disclaims the portion of the property devised to her by H. Assuming all the other requirements of section 2518(b) have been met, W has made a qualified disclaimer of the interest devised to her by H. However, W could not disclaim the interest in the property that she acquired on April 1, 1978.

Example (12). On July 1, 1990, A opens a bank account that is held jointly with B, A's spouse, and transfers $50,000 of A's money to the account. A and B are United States citizens. A can regain the entire account without B's consent, such that the transfer is not a completed gift under §25.2511-1(h)(4). A dies on August 15, 1998, and B disclaims the entire amount in the bank account on October 15, 1998. Assuming that the remaining requirements of section 2518(b) are satisfied, B made a qualified disclaimer under section 2518(a) because the disclaimer was made within 9 months after A's death at which time B had succeeded to full dominion and control over the account. Under state law, B is treated as predeceasing A with respect to the disclaimed interest. The disclaimed account balance passes through A's probate estate and is no longer joint property includible in A's gross estate under section 2040. The entire account is, instead, includible in A's gross estate under section 2033. The result would be the same if A and B were not married.

Example (13). The facts are the same as Example (12), except that B, rather than A, dies on August 15, 1998. A may not make a qualified disclaimer with respect to any of the funds in the bank account, because A furnished the funds for the entire account and A did not relinquish dominion and control over the funds.

Example (14). The facts are the same as Example (12), except that B disclaims 40 percent of the funds in the account. Since, under state law, B is treated as predeceasing A with respect to the disclaimed interest, the 40 percent portion of the account balance that was disclaimed passes as part of A's probate estate, and is no longer characterized as joint property. This 40 percent portion of the account balance is, therefore, includible in A's gross estate under section 2033. The remaining 60 percent of the account balance that was not disclaimed retains its character as joint property and, therefore, is includible in A's gross estate as provided in section 2040(b). Therefore, 30 percent (½ × 60 percent) of the account balance is includible in A's gross estate under section 2040(b), and a total of 70 percent of the aggregate account balance is includible in A's gross estate. If A and B were not married, then the 40 percent portion of the account subject to the disclaimer would be includible in A's gross estate as provided in section 2033 and the 60 percent portion of the account not subject to the disclaimer would be includible in A's gross estate as provided in section 2040(a), because A furnished all of the funds with respect to the account.

Example (1) above illustrates a harsh rule. The remaindermen need to disclaim based not on the primary beneficiary's death but on the first irrevocable transfer that caused them to have any kind of interest whatsoever. They need to make that decision up front, even if they have no idea whether the primary beneficiary might appoint to them, put restrictions on them, or cut them out entirely. Even harsher is if the trust is a QTIP trust that may give rise to transferee liability with respect to estate tax on assets passing at the surviving spouse's death.[7011] However, as Example (2) illustrates, if a remainderman takes subject to a preceding general power of appointment, that remainderman can wait to disclaim until after the general power of appointment lapses or is exercised.

Reg. § 25.2511-1(h)(4) is extended to savings bonds by Rev. Rul. 68-269, Situation 5, and to brokerage accounts by Rev. Rul. 69-148.

Reg. § 25.2518-2(d), "No acceptance of benefits," provides:

(1) *Acceptance*. A qualified disclaimer cannot be made with respect to an interest in property if the disclaimant has accepted the interest or any of its benefits, expressly or impliedly, prior to making the disclaimer. Acceptance is manifested by an affirmative act which is consistent with ownership of the interest in property. Acts indicative of acceptance include using the property or the interest in property; accepting dividends, interest, or rents from the property; and directing others to act with respect to the property or interest in property. However, merely taking delivery of an instrument of title, without more, does not constitute acceptance. Moreover, a disclaimant is not considered to have accepted property merely because under applicable local law title to the property vests immediately in the disclaimant upon the death of a decedent. The acceptance of one interest in property will not, by itself, constitute an acceptance of any other separate interests created by the transferor and held by the disclaimant in the same property. In the case of residential property, held in joint tenancy by some or all of the residents, a joint tenant will not be

[7011] See part III.B.5.e.v Transferee Liability, especially the text accompanying fn 7208.

considered to have accepted the joint interest merely because the tenant resided on the property prior to disclaiming his interest in the property. The exercise of a power of appointment to any extent by the donee of the power is an acceptance of its benefits. In addition, the acceptance of any consideration in return for making the disclaimer is an acceptance of the benefits of the entire interest disclaimed.

(2) *Fiduciaries*. If a beneficiary who disclaims an interest in property is also a fiduciary, actions taken by such person in the exercise of fiduciary powers to preserve or maintain the disclaimed property shall not be treated as an acceptance of such property or any of its benefits. Under this rule, for example, an executor who is also a beneficiary may direct the harvesting of a crop or the general maintenance of a home. A fiduciary, however, cannot retain a wholly discretionary power to direct the enjoyment of the disclaimed interest. For example, a fiduciary's disclaimer of a beneficial interest does not meet the requirements of a qualified disclaimer if the fiduciary exercised or retains a discretionary power to allocate enjoyment of that interest among members of a designated class. See paragraph (e) of this section for rules relating to the effect of directing the redistribution of disclaimed property.

(3) *Under 21 years of age*. A beneficiary who is under 21 years of age has until 9 months after his twenty-first birthday in which to make a qualified disclaimer of his interest in property. Any actions taken with regard to an interest in property by a beneficiary or a custodian prior to the beneficiary's twenty-first birthday will not be an acceptance by the beneficiary of the interest.

(4) *Examples*. The provisions of paragraphs (d)(1), (2) and (3) of this section may be illustrated by the following examples:

Example (1). On April 9, 1977, A established a trust for the benefit of B, then age 22. Under the terms of the trust, the current income of the trust is to be paid quarterly to B. Additionally, one half the principal is to be distributed to B when B attains the age of 30 years. The balance of the principal is to be distributed to B when B attains the age of 40 years. Pursuant to the terms of the trust, B received a distribution of income on June 30, 1977. On August 1, 1977, B disclaimed B's right to receive both the income from the trust and the principal of the trust, B's disclaimer of the income interest is not a qualified disclaimer for purposes of section 2518(a) because B accepted income prior to making the disclaimer. B's disclaimer of the principal, however, does satisfy section 2518(b)(3). See also §25.2518-3 for rules relating to the disclaimer of less than an entire interest in property.

Example (2). B is the recipient of certain property devised to B under the will of A. The will stated that any disclaimed property was to pass to C. B and C entered into negotiations in which it was decided that B would disclaim all interest in the real property that was devised to B. In exchange, C promised to let B live in the family home for life. B's disclaimer is not a qualified disclaimer for purposes of section 2518(a) because B accepted consideration for making the disclaimer.

Example (3). A received a gift of Blackacre on December 25, 1978. A never resided on Blackacre but when property taxes on Blackacre became due on July 1, 1979, A paid them out personal funds. On August 15, 1979, A disclaimed the gift of Blackacre. Assuming all the requirements of section 2518(b) have been met, A has made a qualified disclaimer of Blackacre. Merely paying the property taxes does not constitute an acceptance of Blackacre even though A's personal funds were used to pay the taxes.

Example (4). A died on February 15, 1978. Pursuant to A's will, B received a farm in State Z. B requested the executor to sell the farm and to give the proceeds to B. The executor then sold the farm pursuant to B's request. B then disclaimed $50,000 of the proceeds from the sale of the farm. B's disclaimer is not a qualified disclaimer. By requesting the executor to sell the farm B accepted the farm even though the executor may not have been legally obligated to comply with B's request. See also §25.2518-3 for rules relating to the disclaimer of less than an entire interest in property.

Example (5). Assume the same facts as in example (4) except that instead of requesting the executor to sell the farm, B pledged the farm as security for a short-term loan which was paid off prior to distribution of the estate. B then disclaimed his interest in the farm. B's disclaimer is not a qualified disclaimer. By pledging the farm as security for the loan, B accepted the farm.

Example (6). A delivered 1,000 shares of stock in Corporation X to B as a gift on February 1, 1980. A had the shares registered in B's name on that date. On April 1, 1980, B disclaimed the interest in the 1,000 shares. Prior to making the disclaimer, B did not pledge the shares, accept any dividends or otherwise commit any acts indicative of acceptance. Assuming the remaining requirements of section 2518 are satisfied, B's disclaimer is a qualified disclaimer.

Example (7). On January 1, 1980, A created an irrevocable trust in which B was given a testamentary general power of appointment over the trust's corpus. B executed a will on June 1, 1980, in which B provided for the exercise of the power of appointment. On September 1, 1980, B disclaimed the testamentary power of appointment. Assuming the remaining requirements of section 2518(b) are satisfied, B's disclaimer of the testamentary power of appointment is a qualified disclaimer.

Example (8). H and W reside in X, a community property state. On January 1, 1981, H and W purchase a residence with community funds. They continue to reside in the house until H dies testate on February 1, 1990. Although H could devise his portion of the residence to any person, H devised his portion of the residence to W. On September 1, 1990, W disclaims the portion of the residence devised to her pursuant to H's will but continues to live in the residence. Assuming the remaining requirements of section 2518(b) are satisfied, W's disclaimer is a qualified disclaimer under section 2518(a). W's continued occupancy of the house prior to making the disclaimer will not by itself be treated as an acceptance of the benefits of the portion of the residence devised to her by H.

Example (9). In 1979, D established a trust for the benefit of D's minor children E and F. Under the terms of the trust, the trustee is given the power to make discretionary distributions of current income and corpus to both children. The corpus of the trust is to be distributed equally between E and F when E becomes 35 years of age. Prior to attaining the age of 21 years on April 8, 1982, E receives several distributions of income from the trust. E receives no distributions of income between April 8, 1982 and August 15, 1982, which is the date on which E disclaims all interest in the income from the trust. As a result of the disclaimer the income will be distributed to F. If the remaining requirements of section 2518 are met, E's disclaimer is a qualified disclaimer under section 2518(a). To have a qualified disclaimer of the interest in corpus, E must disclaim the interest no later than 9 months after April 8, 1982, E's 21st birthday.

Example (10). Assume the same facts as in example (9) except that E accepted a distribution of income on May 13, 1982. E's disclaimer is not a qualified disclaimer under section 2518 because by accepting an income distribution after attaining the age of 21, E accepted benefits from the income interest.

Example (11). F made a gift of 10 shares of stock to G as custodian for H under the State X Uniform Gifts to Minors Act. At the time of the gift, H was 15 years old. At age 18, the local age of majority, the 10 shares were delivered to and registered in the name of H. Between the receipt of the shares and H's 21st birthday, H received dividends from the shares. Within 9 months of attaining age 21, H disclaimed the 10 shares. Assuming H did not accept any dividends from the shares after attaining age 21, the disclaimer by H is a qualified disclaimer under section 2518.

Reg. § 25.2518-2(e), "Passage without direction by the disclaimant of beneficial enjoyment of disclaimed interest," provides:

(1) *In general*. A disclaimer is not a qualified disclaimer unless the disclaimed interest passes without any direction on the part of the disclaimant to a person other than the disclaimant (except as provided in paragraph (e)(2) of this section). If there is an express or implied agreement that the disclaimed interest in property is to be given or bequeathed to a person specified by the disclaimant, the disclaimant shall be treated as directing the transfer of the property interest. The requirements of a qualified disclaimer under section 2518 are not satisfied if -

(i) The disclaimant, either alone or in conjunction with another, directs the redistribution or transfer of the property or interest in property to another person (or has the power to direct the redistribution or transfer of the property or interest in property to another person unless such power is limited by an ascertainable standard); or

(ii) The disclaimed property or interest in property passes to or for the benefit of the disclaimant as a result of the disclaimer (except as provided in paragraph (e)(2) of this section).

If a power of appointment is disclaimed, the requirements of this paragraph (e)(1) are satisfied so long as there is no direction on the part of the disclaimant with respect to the transfer of the interest subject to the power or with respect to the transfer of the power to another person. A person may make a qualified disclaimer of a beneficial interest in property even if after such disclaimer the disclaimant has a fiduciary power to distribute to designated beneficiaries, but only if the power is subject to an ascertainable standard. See examples (11) and (12) of paragraph (e)(5) of this section.

(2) *Disclaimer by surviving spouse*. In the case of a disclaimer made by a decedent's surviving spouse with respect to property transferred by the decedent, the disclaimer satisfies the requirements of this paragraph (e) if the interest passes as a result of the disclaimer without direction on the part of the surviving spouse either to the surviving spouse or to another person. If the surviving spouse, however, retains the right to direct the beneficial enjoyment of the disclaimed property in a transfer that is not subject to Federal estate and gift tax (whether as trustee or otherwise), such spouse will be treated as directing the beneficial enjoyment of the disclaimed property, unless such power is limited by an ascertainable standard. See examples (4), (5), and (6) in paragraph (e)(5) of this section.

(3) *Partial failure of disclaimer*. If a disclaimer made by a person other than the surviving spouse is not effective to pass completely an interest in property to a person other than the disclaimant because -

(i) The disclaimant also has a right to receive such property as an heir at law, residuary beneficiary, or by any other means; and

(ii) The disclaimant does not effectively disclaim these rights, the disclaimer is not a qualified disclaimer with respect to the portion of the disclaimed property which the disclaimant has a right to receive. If the portion of the disclaimed interest in property which the disclaimant has a right to receive is not severable property or an undivided portion of the property, then the disclaimer is not a qualified disclaimer with respect to any portion of the property. Thus, for example, if a disclaimant who is not a surviving spouse receives a specific bequest of a fee simple interest in property and as a result of the disclaimer of the entire interest, the property passes to a trust in which the disclaimant has a remainder interest, then the disclaimer will not be a qualified disclaimer unless the remainder interest in the property is also disclaimed. See §25.2518-3(a)(1)(ii) for the definition of severable property.

(4) *Effect of precatory language*. Precatory language in a disclaimer naming takers of disclaimed property will not be considered as directing the redistribution or transfer of the property or interest in property to such persons if the applicable State law gives the language no legal effect.

(5) *Examples*. The provisions of this paragraph (e) may be illustrated by the following examples:

Example (1). A, a resident of State X, died on July 30, 1978. Pursuant to A's will, B, A's son and heir at law, received the family home. In addition, B and C each received 50 percent of A's residuary estate. B disclaimed the home. A's will made no provision for the distribution of property in the case of a beneficiary's disclaimer. Therefore, pursuant to the disclaimer laws of State X, the disclaimed property became part of the residuary estate. Because B's 50 percent share of the residuary estate will be increased by 50 percent of the value of the family home, the disclaimed property will not pass solely to another person. Consequently, B's disclaimer of the family home is a qualified disclaimer only with respect to the 50 percent portion that passes solely to C. Had B also disclaimed B's 50 percent interest in the residuary estate, the disclaimer would have been a qualified disclaimer under section 2518 of the entire interest in the home (assuming the remaining requirements of a qualified disclaimer were satisfied). Similarly, if under the laws of State X, the disclaimer has the effect of divesting B of all interest in the home, both as devisee and as a beneficiary of the residuary estate, including any property resulting from its sale, the disclaimer would be a qualified disclaimer of B's entire interest in the home.

Example (2). D, a resident of State Y, died testate on June 30, 1978. E, an heir at law of D, received specific bequests of certain severable personal property from D. E disclaimed the property transferred by D under the will. The will made no provision for the distribution of property in the case of a beneficiary's disclaimer. The disclaimer laws of State Y provide that such property shall pass to the decedent's heirs at law in the same manner as if the disclaiming beneficiary had died immediately before the testator's death. Because State Y's law treats E as predeceasing D, the property disclaimed by E does not pass to E as an heir at law or otherwise. Consequently, if the remaining requirements of section 2518(b) are satisfied, E's disclaimer is a qualified disclaimer under section 2518(a).

Example (3). Assume the same facts as in example (2) except that State Y has no provision treating the disclaimant as predeceasing the testator. E's disclaimer satisfies section 2518(b)(4) only to the extent that E does not have a right to receive the property as an heir at law. Had E disclaimed both the share E received under D's will and E's intestate share, the requirement of section 2518(b)(4) would have been satisfied.

Example (4). B died testate on February 13, 1980. B's will established both a marital trust and a nonmarital trust. The decedent's surviving spouse, A, is an income beneficiary of the marital trust and has a testamentary general power of appointment over its assets. A is also an income beneficiary of the nonmarital trust, but has no power to appoint or invade the corpus. The provisions of the will specify that any portion of the marital trust disclaimed is to be added to the nonmarital trust. A disclaimed 30 percent of the marital trust. (See §25.2518-3(b) for rules relating to the disclaimer of an undivided portion of an interest in property.) Pursuant to the will, this portion of the marital trust property was transferred to the nonmarital trust without any direction on the part of A. This disclaimer by A satisfies section 2518(b)(4).

Example (5). Assume the same facts as in example (4) except that A, the surviving spouse, has both an income interest in the nonmarital trust and a testamentary nongeneral power to appoint among designated beneficiaries. This power is not limited by an ascertainable standard. The requirements of section 2518(b)(4) are not satisfied unless A also disclaims the nongeneral power to appoint the portion of the trust corpus that is attributable to the property that passed to the nonmarital trust as a result of A's disclaimer. Assuming that the fair market value of the disclaimed property on the date of the disclaimer is $250,000 and that the fair market value of the nonmarital trust (including the disclaimed property) immediately after the disclaimer is $750,000, A must disclaim the power to appoint one-third of the nonmarital trust's corpus. The result is the same regardless of whether the nongeneral power is testamentary or inter vivos.

Example (6). Assume the same facts as in example (4) except that A has both an income interest in the nonmarital trust and a power to invade corpus if needed for A's health or maintenance. In addition, an independent trustee has power to distribute to A any portion of the corpus which the trustee determines to be desirable for A's happiness. Assuming the other requirements of section 2518 are satisfied. A may make a qualified disclaimer of interests in the marital trust without disclaiming any of A's interests in the nonmarital trust.

Example (7). B died testate on June 1, 1980. B's will created both a marital trust and a nonmarital trust. The decedent's surviving spouse, C, is an income beneficiary of the marital trust and has a testamentary general power of appointment over its assets. C is an income beneficiary of the nonmarital trust, and additionally has the noncumulative right to withdraw yearly the greater of $5,000 or 5 percent of the aggregate value of the principal. The provisions of the will specify that any portion of the marital trust disclaimed is to be added to the nonmarital trust. C disclaims 50 percent of the marital trust corpus. Pursuant to the will, this amount is transferred to the nonmarital trust. Assuming the remaining requirements of section 2518(b) are satisfied, C's disclaimer is a qualified disclaimer.

Example (8). A, a resident of State X, died on July 19, 1979. A was survived by a spouse B, and three children, C, D, and E. Pursuant to A's will, B received one-half of A's estate and the children received equal shares of the remaining one-half of the estate. B disclaimed the entire interest B had received. The will made no provisions for the distribution of property in the case of a beneficiary's disclaimer. The disclaimer laws of State X provide that under these circumstances disclaimed property passes to the decedent's heirs at law in the same manner as if the disclaiming beneficiary had died immediately before the testator's death. As a result, C, D, and E are A's only remaining heirs at law, and will divide the disclaimed property equally among themselves. B's disclaimer includes language stating that "it is my intention that C, D, and E will share equally in the division of this property as a result of my disclaimer." State X considers these to be precatory words and gives them no legal effect. B's disclaimer meets all other requirements imposed by State X on disclaimers, and is considered an effective disclaimer under which the property will vest solely in C, D, and E in equal shares without any further action required by B. Therefore, B is not treated as directing the redistribution or transfer of the property. If the remaining requirements of section 2518 are met, B's disclaimer is a qualified disclaimer.

Example (9). C died testate on January 1, 1979. According to C's will, D was to receive ⅓ of the residuary estate with any disclaimed property going to E. D was also to receive a second ⅓ of the residuary estate with any disclaimed property going to F. Finally, D was to receive a final ⅓ of the residuary estate with any disclaimed property going to G. D specifically states that he is disclaiming the interest in which the disclaimed property is designated to pass to E. D has effectively directed that the disclaimed property will pass to E and therefore D's disclaimer is not a qualified disclaimer under section 2518(a).

Example (10). Assume the same facts as in example (9) except that C's will also states that D was to receive Blackacre and Whiteacre. C's will further provides that if D disclaimed Blackacre then such property was to pass to E and that if D disclaimed Whiteacre then Whiteacre was to pass to F. D specifically disclaims Blackacre with the intention that it pass to E. Assuming the other requirements of section 2518 are met, D has made a qualified disclaimer of Blackacre. Alternatively, D could disclaim an undivided portion of both Blackacre and Whiteacre. Assuming the other requirements of section 2518 are met, this would also be a qualified disclaimer.

Example (11). G creates an irrevocable trust on February 16, 1983, naming H, I and J as the income beneficiaries for life and F as the remainderman. F is also named the trustee and as trustee has the discretionary power to invade the corpus and make discretionary distributions to H, I or J during their lives. F disclaims the remainder interest on August 8, 1983, but retains his discretionary power to invade the corpus. F has not made a qualified disclaimer because F retains the power to direct enjoyment of the corpus and the retained fiduciary power is not limited by an ascertainable standard.

Example (12). Assume the same facts as in example (11) except that F may only invade the corpus to make distributions for the health, maintenance or support of H, I or J during their lives. If the other requirements of section 2518(b) are met, F has made a qualified disclaimer of the remainder interest because the retained fiduciary power is limited by an ascertainable standard.

Reg. § 25.2518-3(a), "Disclaimer of a partial interest," explains how various interests in trusts can be parsed and separately disclaimer or accepted:

(1) *In general*.

(i) *Interest*. If the requirements of this section are met, the disclaimer of all or an undivided portion of any separate interest in property may be a qualified disclaimer even if the disclaimant has another interest in the same property. In general, each interest in property that is separately created by the transferor is treated as a separate interest. For example, if an income interest in securities is bequeathed to A for life, then to B for life, with the remainder interest in such securities bequeathed to A's estate, and if the remaining requirements of section 2518(b) are met, A could make a qualified disclaimer of either the income interest or the remainder, or an undivided portion of either interest. A could not, however, make a qualified disclaimer of the income interest for a certain number of years. Further, where local law merges interests separately created by the transferor, a qualified disclaimer will be allowed only if there is a disclaimer of the entire merged interest or an undivided portion of such merged interest. See example (12) in paragraph (d) of this section. See § 25.2518-3(b) for rules relating to the disclaimer of an undivided portion. Where the merger of separate interests would occur but for the creation by the transferor of a nominal interest (as defined in paragraph (a)(1)(iv) of this section), a qualified disclaimer will be allowed only if there is a disclaimer of all the separate interests, or an undivided portion of all such interests, which would have merged but for the nominal interest.

(ii) *Severable property*. A disclaimant shall be treated as making a qualified disclaimer of a separate interest in property if the disclaimer relates to severable property and the disclaimant makes a disclaimer which would be a qualified disclaimer if such property were the only property in which the disclaimant had an interest. If applicable local law does not recognize a purported disclaimer of severable property, the disclaimant must comply with the requirements of paragraph (c)(1) of § 25.2518-1 in order to make a qualified disclaimer of the severable property. Severable property is property which can be divided into separate parts each of which, after severance, maintains a complete and independent existence. For example, a legatee of shares of corporate stock may accept some shares of the stock and make a qualified disclaimer of the remaining shares.

(iii) *Powers of appointment*. A power of appointment with respect to property is treated as a separate interest in such property and such power of appointment with respect to all or an undivided portion of such property may be disclaimed independently from any other interests separately created by the transferor in the property if the requirements of section 2518(b) are met. See example (21) of paragraph (d) of this section. Further, a disclaimer of a power of appointment with respect to property is a qualified disclaimer only if any right to direct the beneficial enjoyment of the property which is retained by the disclaimant is limited by an ascertainable standard. See example (9) of paragraph (d) of this section.

(iv) *Nominal interest*. A nominal interest is an interest in property created by the transferor that -

(A) Has an actuarial value (as determined under § 20.2031-7) of less than 5 percent of the total value of the property at the time of the taxable transfer creating the interest,

(B) Prevents the merger under local law or two or more other interests created by the transferor, and

(C) Can be clearly shown from all the facts and circumstances to have been created primarily for the purpose of preventing the merger of such other interests.

Factors to be considered in determining whether an interest is created primarily for the purpose of preventing merger include (but are not limited to) the following: the relationship between the transferor and the interest holder; the age difference between the interest holder and the beneficiary whose interests would have merged; the interest holder's state of health at the time of the taxable transfer; and, in the case of a contingent remainder, any other factors which indicate that the possibility of the interest vesting as a fee simple is so remote as to be negligible.

(2) *In trust*. A disclaimer is not a qualified disclaimer under section 2518 if the beneficiary disclaims income derived from specific property transferred in trust while continuing to accept income derived from the remaining properties in the same trust unless the disclaimer results in such property being removed from the trust and passing, without any direction on the part of the disclaimant, to persons other than the disclaimant or to the spouse of the decedent. Moreover, a disclaimer of both an income interest and a remainder interest in specific trust assets is not a qualified disclaimer if the beneficiary retains interests in other trust property unless, as a result of the disclaimer, such assets are removed from the trust and pass, without any direction on the part of the disclaimant, to persons other than the disclaimant or to the spouse of the decedent. The disclaimer of an undivided portion of an interest in a trust may be a qualified disclaimer. See also paragraph (b) of this section for rules relating to the disclaimer of an undivided portion of an interest in property.

Reg. § 25.2518-3(b), "Disclaimer of undivided portion," allows an undivided fractional interest to be disclaimed, so long as the character of the interest is not changed:

> A disclaimer of an undivided portion of a separate interest in property which meets the other requirements of a qualified disclaimer under section 2518(b) and the corresponding regulations is a qualified disclaimer. An undivided portion of a disclaimant's separate interest in property must consist of a fraction or percentage of each and every substantial interest or right owned by the disclaimant in such property and must extend over the entire term of the disclaimant's interest in such property and in other property into which such property is converted. A disclaimer of some specific rights while retaining other rights with respect to an interest in the property is not a qualified disclaimer of an undivided portion of the disclaimant's interest in property. Thus, for example, a disclaimer made by the devisee of a fee simple interest in Blackacre is not a qualified disclaimer if the disclaimant disclaims a remainder interest in Blackacre but retains a life estate.

Reg. § 25.2518-3(c) allows a pecuniary amount to be disclaimed, so long as a proportionate amount of the income is also disclaimed.

Reg. § 25.2518-3(d) provides examples.

III.B.3.e.ii. Disclaimer Strategy

Take-aways from part III.B.3.e.i Disclaimers – Code and Regulations include:

- A disclaimer may be made within 9 months after a transfer. A remainderman needs to consider disclaiming when the trust creating his/her interest is created.[7012]

- The disclaimant cannot receive any income or other benefits from the portion of the property that was disclaimed.

- A disclaimer may be made using a formula.

In the context of this part III.B.3 Defined Value Clauses in Sale or Gift Agreements or in Disclaimers, we typically do sales to irrevocable grantor trusts.[7013] In a year in which gift/estate tax exemption is decreasing or other uncertainties exist, a free look for 9 months - the period within which a disclaimer generally must be made – is helpful.

Suppose a donor wants to make a gift using his exemption before it decreases but would like a free look. The donor might make a gift, and then the recipient might disclaim if it looks like the exemption won't decrease, after all. For example, wife makes a gift to a trust for her husband. The instrument of gift provides that, if the gift is disclaimed, it reverts back to wife. Now the question is who can disclaim. Because trustees have a fiduciary duty to promote the beneficiaries' interests in the trust, a trustee would be very reluctant to disclaim, unless the trust agreement expressly authorizes the trustee to disclaim and releases the trustee from liability for doing so. If the husband disclaims, then the trust would pass to those who would succeed to his

---

[7012] See text accompanying and immediately preceding fn 7011 in part III.B.3.e.i Disclaimers – Code and Regulations.

[7013] See part III.B.2 Irrevocable Grantor Trust Planning, Including GRAT vs. Sale to Irrevocable Grantor Trust.

interest, unless the trust agreement provides that the husband's disclaimer binds all beneficiaries. So, whenever a disclaimer is contemplated regarding a gift to a trust, consider special drafting of the trust. Also consider that the disclaimant cannot hold a power of appointment in any trust that receives the disclaimed assets.

Because the disclaimant cannot control where the gift passes, consider the including in the instrument of gift where the remainder might go.

Part III.B.3.l *Christiansen* described how the Tax Court approved a formula disclaimer that resulted in charitable gift.

Consider a gift to a trust for descendants with a formula disclaimer that goes outright to the donor's spouse.

III.B.3.f. Defined Consideration Clause

Although a gift to an alternative taker, particularly but not necessarily a charity, has worked well in recent cases, consider instead defining the consideration to be paid. Below is an example; readers are cautioned not to rely on this example but rather to analyze the law themselves in determining what might be appropriate language.

A clause in the sale agreement might provide:

> In consideration of a sum equal to the "Fair Market Value" (defined below) of the Transferred Property (the "Sale Price"), concurrently with its execution of this Agreement on the Effective Date, Seller is irrevocably granting, selling, transferring and conveying the Transferred Property to Buyer on the terms set forth herein.
>
> The "Fair Market Value" of the Transferred Property shall be such value as finally determined for federal gift tax purposes on the transfer of the Transferred Property by Seller as of the Effective Date, in accordance with the valuation principles set forth in United States Treasury Regulation section 25.2512-1. Seller agrees to file a gift tax return reporting this transaction so as to cause the gift tax statute of limitations to run.[7014]

See part III.B.4 Adequate Disclosure on Gift Tax Returns, with some additional features suggested when then the seller is also a beneficiary of the buyer trust.

A promissory note might refer to the Sale Price in the sale agreement and then provide:

> Promptly after the initial determination of the Sale Price and again upon the final determination for federal gift tax purposes of the Sale Price under the Sale Agreement, Holder shall be entitled to attach to this Note a statement fixing the amount of principal due under this Note in a manner appropriate to make this Note a "negotiable instrument" within the meaning of Section 3-104 of the Uniform Commercial Code as in effect in the State of ____.

[7014] If the seller is the client's revocable trust, the client would – as an additional party - sign the sale agreement as an individual, personally making the promise to file the gift tax return.

An Allonge might then estimate the purchase price once the appraisal is finalized:

> Effective as of the date of such Promissory Note, the initial principal amount of the Promissory Note is estimated to be $__________________.

In the examples above, the purchase price is the finally determined gift tax value. Any amount in the promissory note is expressly referred to as an estimate.

If the seller is a beneficiary of the buyer trust, see text accompanying fns 6753- 6755 in part III.B.2.i.v Sale to a Beneficiary Deemed-Owned Trust – When a Traditional Sale to an Irrevocable Grantor Trust Does Not Meet the Client's Objectives.

Although *King* below approved a defined consideration clause, it did not follow procedures as strong as that suggested above. Following *King* are some cases that set initial prices and required subsequent action to adjust the price to the gift tax value, rather than referring to the gift tax value as the sale price the way the example above does. These other cases might be viewed as falling into Rev. Rul. 86-41, Situation 2, quoted further below.[7015] As of the Fall 2016, the IRS was attacking a formula purchase price that does not quite follow my example,[7016] but my understanding is that the case settled favorably.

King v. United States[7017] approved the following clause:

> ... However, if the fair market value of The Colorado Corporation stock as of the date of this letter is ever determined by the Internal Revenue Service to be greater or less than the fair market value determined in the same manner described above, the purchase price shall be adjusted to the fair market value determined by the Internal Revenue Service.

The Tenth Circuit held:

> The district court distinguished the facts in the case at bar from those in *Procter*, *supra*, finding that the parties intended that the trusts pay a full and adequate consideration for the stock and that the clause was a proper means of overcoming the uncertainty in ascertaining the fair market value of the stock. The court concluded that there was an intention to cause the trusts to pay full and fair consideration for the stock and to make an actual adjustment of the price paid upon the event of a determination by the IRS. We agree. It is important to observe that the IRS does not dispute the contention that it was difficult, if not impossible, to accurately value the stock at the time of its transfer in 1969 and that the parties inserted the specific valuation paragraph in the agreement because the transaction was intended as a sale and not as a gift. The trial court's determination was one of fact. That finding is not clearly erroneous.

[7015] The text accompanying fn. 7041, found in part III.B.3.o *Procter* and Other Cases, reproduces Rev. Rul. 86-41.

[7016] Steve Akers' November 2016 report on *True v. Commissioner*, Tax Court Docket Nos. 21896-16 and 21897-16 (petitions filed October 11, 2016), states:

> According to the petition, the transfer agreement for the sales to his children provided that if it is determined for federal gift tax purposes that the interests sold were undervalued by FMV Opinions, the purchase price would be increased to reflect the finally-determined fair market values.

The description above seems to lie somewhere between *King* and *McLendon*, both described below.

[7017] 545 F.2d 700 (10th Cir. 1976).

We believe that the IRS reliance on *Procter*, *supra*, is misplaced. Here, there was at no time or in any way an attempt to alter or negate the plain terms of the valuation clause and no attempt by the trustees was made to reconvey the stock to King or to cancel the notes in anticipation of an unfavorable valuation ruling.

Authorities relied upon by the Government dealing with contingencies which, upon fruition, alter, change or destroy the *nature* of the transaction do not apply here. The proviso for adjustment of the purchase price of the stock to equal its fair market value did not affect the *nature* of the transaction. But, argues the IRS, even though the parties may have intended to pay full consideration for the stock, still this fact is immaterial for gift tax purposes because the test is solely objective, i.e., whether the transfer was made for full and adequate consideration. In a nutshell, IRS contends that if King's intent to make a sale would not be sufficient to prevent the gift tax were the price adjustment clause absent, "that intent obviously cannot be used to legitimate the presence of the clause so as to avoid the tax". [Br. of Appellant, p. 16]. Treasury regulations, references and citations are relied upon. The IRS presents persuasive arguments, based upon its rules that (a) for accounting purposes, absent specific statutory language to the contrary, tax consequences attach at the end of fixed and regular accounting periods, regardless how subsequent events might affect the economic or tax results of the transaction, (b) taxpayers cannot amend a transaction retroactively to avoid the federal tax consequences of prior taxable periods and (c) the difficulty of valuing the property transferred does not make the gift tax inapplicable. IRS further contends that the record does not show an attempt by the parties at the time of suit to make an actual price adjustment and the gift tax would be virtually emasculated if the parties' intention to effect a transfer for a full consideration were enough to satisfy the requirements of 26 U.S.C.A. § 2512(b) of the Internal Revenue Code of 1954.

The trial court's finding that there was no donative intent and that the transaction was made in the ordinary course of business at arm's length is not clearly erroneous. Further, it does not work an abuse upon the operative intent of § 2512, *supra*, *i.e.*, to reach donative transfers and to exclude transfers whose consideration is not reducible to money or money's worth. The transfers involved here can be ultimately reduced to money's worth and are, accordingly, excluded from the gift tax consequences. No diminution of King's estate can result from the trial court's finding.

The statutory framework underlying the federal gift tax scheme is clear on its face. § 2501 imposes a tax on the transfer of property by gift. § 2512(a) provides that if the gift made is in property, the value thereof at the date of the gift shall be considered the amount of the gift. In the case of a holding company such as The Colorado Corporation, gifts of its shares of stock are governed by Treas. Reg. § 25.2512-2 (26 C.F.R.) which provides general guidance for valuing the shares of stock based on bid and asked prices, where selling prices and bid and asked prices are not available for dates both before and after date of gifts, where selling prices or bid and asked prices do not represent fair market value and where selling prices or bid and asked prices are unavailable. Treas. Reg. § 25.2512(1)(1968) is the general valuation rule. It provides that "the value of the property is the price at which such property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell, and both having reasonable knowledge of relevant facts".

We are cognizant of the rule that in reviewing a challenged regulation, the regulation must be sustained if found to be reasonable and consistent with the statute.

> *Commissioner of Internal Revenue v. South Texas Lumber Co.*, 333 U.S. 496 (1948). We are also aware of the rule that where there is a possibility that several methods of valuation are permissible, any one chosen by the IRS may not be set aside. *DuPont's Estate v. Commissioner of Internal Revenue*, 233 F.2d 210 (3rd Cir. 1956), *cert. denied* 352 U.S. 878 (1956).
>
> The IRS contention that the price adjustment clause violates public policy in that it deters administrative enforcement of the gift tax provisions is valid *only* if the transaction be construed as an inter vivos transfer undertaken to reduce King's estate. The IRS argument would be applicable if we were to hold that the trial court's finding that King intended that the trust pay full and adequate consideration predicated upon the price-adjustment proviso is clearly erroneous. It is not. Under the facts found, King is not subject to the gift tax under Treas. Reg. § 25.2512-8 because the transaction was made in the ordinary course of business at arm's length, free from any donative intent. We hold that the trial court did not err in holding that the aforesaid stock transfers are not subject to a gift tax.
>
> To be sure, it has been held that the absence of a donative intent will not alone prevent a transfer from being subject to gift taxation, but this is not the controlling factor when the transfer has been found to have been made "at arm's length in the ordinary course of business". *Commissioner of Internal Revenue v. Wemyss*, 324 U.S. 303, 307 (1945). See also 156 A.L.R. 1022. Interpretive of the Code requirements of "an adequate and full consideration in money or money's worth" the Supreme Court has held that the return must be an adequate and full equivalent and that the requisite consideration cannot be equated with mutual promises satisfying common law consideration sufficient to support an agreement. *Taft v. Commissioner*, 304 U.S. 351 (1938); 116 A.L.R. 346.
>
> Significantly, we believe, is the fact that perhaps the main purpose of the gift tax was to prevent or compensate for the avoidance of death taxes by taxing the gifts of property inter vivos which, but for the gifts, would be subject in its original or converted form to the tax laid upon transfers at death. *Sanford's Estate v. Commissioner*, 308 U.S. 39 (1939). No such risk is involved in the instant case.
>
> We hold that the trial court did not err in finding that the stock sold to Trusts No. 1 under the "price adjustment" proviso is not subject to the gift tax provisions.

Estate of McLendon v. Commissioner[7018] rejected a clause that did not define the purchase price as the gift tax value but rather set a price that would later be adjusted:

> The parties here to recognize that the valuation of many of the assets set out on attached Exhibit A are, by their nature, as determined by the best judgement of the parties and independent consultants engaged to assist in the valuation process and may be subject to differing opinions. Therefore, the parties agree that, to the extent any of the values on the attached Exhibit A are changed through a settlement process with the Internal Revenue Service, or a final decision of the United States Tax Court, the purchase price hereunder shall be adjusted accordingly, with interest on said adjustment at the rate of ten percent (10%) from the date hereof until said final determination of

[7018] T.C. Memo. 1993-459.

> value, and the annuity payments due and payable hereunder shall likewise be adjusted to reflect any such change in valuation.

In *Harwood v. Commissioner*,[7019] the Tax Court reviewed the following provision, which did not define the purchase price as the gift tax value but rather set a price that would later be adjusted:

> Article First. Property subject to this instrument listed in Schedule "A" is referred to as the "trust estate" and shall be held, administered, and distributed in accordance with this instrument. In the event that the value of the partnership interest listed in Schedule "A" shall be *finally determined* to exceed $400,000 for purposes of computing the California or United States Gift Tax, and in the opinion of the Attorney for the trustee a lower value *is not reasonably defendable*, the trustee shall immediately execute a promissory note to the trustors in the usual form at 6 percent interest in a principal amount equal to the difference between the value of such gift and $400,000. The note shall carry interest and be effective as of the day of the gift. [Emphasis supplied.]

The court held:

> In the instant case, we have found that the interests in HIC held by the Harwood Family Trusts were worth substantially in excess of $400,000.
>
> The trustees were aware (we assume) of the Kleiner report and the IRS's gift tax determination, but they evidently believed that a value lower than the appraised value and the value determined by IRS was defensible, and did not issue promissory notes to the trust grantors. There, we believe, the matter ends, since we do not believe the savings clause in issue requires (or entitles) the trustees to issue promissory notes to the trust grantors in the event of a court judgment finding a value above $400,000 for the limited partnership interests given to the trusts.[28]
>
> We hold that the savings clause in the Morris J. Harwood 1976 Family Trust and the Arthur H. Harwood 1976 Family Trust has no effect on the amount of the gifts we have otherwise determined were made to the trusts by petitioners herein.[29]
>
> [28] It might be thought that *King v. United States,* 545 F.2d 700 (10th Cir. 1976), should control because no diminution of petitioners' estates will occur if we find that neither trust received a gift in excess of $400,000, since arguably they will be compensated by the trusts for any amount that the value of the interests in HIC donated to the trusts exceeded $400,000. Since we have no guarantee that the trusts will ever issue notes to petitioners, and, indeed, since on our reading of the trust instruments the time for issuing notes is past, we are unable to accept this position.
>
> [29] We express no opinion as to what result we would have reached had the trustees issued notes to the grantors, or had HIC been bankrupt at the time of trial, or had the savings clause required the issuance of notes if a final judgment by a court found that the interests in HIC donated to each trust had values in excess of $400,000.

In 1975, Tax Court in *Dickinson*[7020] approved an agreement that provided for the estate to sell stock for its value, as finally determined for federal estate tax purposes.

[7019] 82 T.C. 239 (1984).

[7020] *Dickinson* is excerpted in fn 7044 in part III.B.3.o *Procter* and Other Cases.

III.B.3.g. Value Determined by Appraiser

If a formula transfers a business interest equal in value to that determined by an appraiser, rather than using a value "finally determined for federal gift tax purposes," the business interest is whatever the appraiser determined, rather than that finally determined for federal gift tax purposes.

This matter of common sense was unsuccessfully disputed by the taxpayer in *Nelson v. Commissioner*, T.C. Memo. 2020-81, which reasoned and held:

> We look to the transfer documents rather than subsequent events to decide the amount of property given away by a taxpayer in a completed gift. See *Estate of Petter v. Commissioner*, T.C. Memo. 2009-280, 2009 WL 4598137, at *12 (citing *Succession of McCord v. Commissioner*, 461 F.3d 614, 627 (5th Cir. 2006), *rev'g and remanding* 120 T.C. 358 (2003)), *aff'd*, 653 F.3d 1012 (9th Cir. 2011); see also *Commissioner v. Procter*, 142 F.2d 824 (4th Cir. 1944) (disregarding the subsequent reallocation of property to the donor via a saving clause as contrary to public policy), *rev'g and remanding* a Memorandum Opinion of this Court. Petitioners argue that the transfer instruments show that Mrs. Nelson transferred specific dollar amounts, not fixed percentages, citing a series of cases that have respected formula clauses as transferring fixed dollar amounts of ownership interests. In each of those cases we respected the terms of the formula, even though the percentage amount was not known until fair market value was subsequently determined, because the dollar amount was known. *Wandry v. Commissioner*, T.C. Memo. 2012-88, 2012 WL 998483, at *4; *Hendrix v. Commissioner*, T.C. Memo. 2011-133, 2011 WL 2457401, at *5-*9; *Estate of Petter v. Commissioner*, 2009 WL 4598137, at *11-*16.
>
> Saving clauses have been treated differently. As we explained in *Estate of Petter* and *Wandry*, courts have rejected saving clauses because they relied on conditions subsequent to adjust the gifts or transfers so the size of the transfer (as measured either in dollar amount or percentage) could not be known. Thus, for example, in *Commissioner v. Procter*, 142 F.2d at 827, the Court of Appeals for the Fourth Circuit rejected a clause adjusting part of a gift to "automatically be deemed not to be included in the conveyance in trust hereunder and shall remain the sole property of … [the taxpayer]" because the adjustment would be triggered only by a "final judgment or order of a competent federal court of last resort that any part of the transfer … is subject to gift tax."
>
> In *Succession of McCord v. Commissioner*, 461 F.3d at 618, the Court of Appeals for the Fifth Circuit upheld a gift of an interest in a partnership expressed as "a dollar amount of fair market value in interest" reduced by a transfer tax obligation rather than a percentage interest that was determined in agreements subsequent to the gift. It held that "a gift is valued as of the date that it is complete; the flip side of that maxim is that subsequent occurrences are off limits." *Id*. at 626. The formula clause in the initial transfer document did not include qualifying language that fair market value was to be "as finally determined for [Federal gift] tax purposes," but the court did not find that omission fatal because the value of the gift was ascertainable as of the date it was complete. *Id*. at 627.
>
> Petitioners argue that we should construe the transfer clauses here as more akin to the formula clauses that were upheld in *Succession of McCord*, *Estate of Petter*, and

Wandry, that is, read them as transferring dollar amounts rather than percentages. However, as part of their argument, they cite evidence of their intent, which includes their settlement discussions with IRS Appeals and subsequent adjustments to reflect changes in valuation to reflect those discussions. Of course, as in *Succession of McCord*, we look to the terms of the transfer instruments and not to the parties' later actions except to the extent that we conclude the terms are ambiguous and their actions reveal their understanding of those terms. *Id*. at 627-628.

Therefore, to decide whether the transfers were of fixed dollar amounts or fixed percentages, we start with the clauses themselves, rather than the parties' subsequent actions. The gift is expressed in the memorandum of gift as a "limited partner interest having a fair market value of TWO MILLION NINETY-SIX THOUSAND AND NO/100THS DOLLARS ($2,096,000.00) as of December 31, 2008 …, as determined by a qualified appraiser within ninety (90) days of the effective date of this Assignment." Similarly, the sale is expressed in the memorandum of sale as a "limited partner interest having a fair market value of TWENTY MILLION AND NO/100THS DOLLARS ($20,000,000.00) as of January 2, 2009 …, as determined by a qualified appraiser within one hundred eighty (180) days of the effective date of this Assignment."

The transferred interests thus are expressed in the transfer instruments as an interest having a fair market value of a specified amount as determined by an appraiser within a fixed period. The clauses hang on the determination by an appraiser within a fixed period; value is not qualified further, for example, as that determined for Federal estate tax purposes. See, *e.g.*, *Estate of Christiansen v. Commissioner*, 130 T.C. 1, 14-18 (2008) (upholding gift clause providing fair market value "as such value is finally determined for federal estate tax purposes"), *aff'd*, 586 F.3d 1061 (8th Cir. 2009); *Estate of Petter v. Commissioner*, 2009 WL 4598137, at *11-*16 (upholding gift clause transferring the number of units of a limited liability company "that equals one-half the minimum … dollar amount that can pass free of federal gift tax by reason of Transferor's applicable exclusion amount" along with a clause providing for an adjustment to the number of units if the value "is finally determined for federal gift tax purposes to exceed the amount described" in the first clause).

Unlike the clause in *Succession of McCord*, "fair market value" here already is expressly qualified. By urging us to interpret the operative terms in the transfer instruments as transferring dollar values of the limited partner interests on the bases of fair market value as later determined for Federal gift and estate tax purposes, petitioners ask us, in effect, to ignore "qualified appraiser … [here, Mr. Shrode] within … [a fixed period]" and replace it with "for federal gift and estate tax purposes." While they may have intended this, they did not write this.

They are bound by what they wrote at the time. As the texts of the clauses required the determination of an appraiser within a fixed period to ascertain the interests being transferred, we conclude that Mrs. Nelson transferred 6.14% and 58.35% of limited partner interests in Longspar to the Trust as was determined by Mr. Shrode within a fixed period.

III.B.3.h. *Moore*

Moore v. Commissioner, T.C. Memo. 2020-40, disallowed a charitable deduction that was contingent on a Code § 2036 disrespecting of a family limited partnership (FLP):

The Commissioner argues that the estate is not entitled to an increase in charitable deductions as a result of any increase in the value of Moore's estate. The estate, however, points to article 5, section 2 of the Irrevocable Trust. That section directs the Irrevocable Trust's trustees to distribute funds to the Living Trust to allow the Living Trust to move money to the Charitable Trust to enable the estate to take additional charitable deductions thereby minimizing its estate tax.

There are two problems for the estate here. The first is a very specific problem in the actual language of the Irrevocable Trust, which doesn't speak of increased value, but instead speaks of "an amount equal to the value of any asset of *this trust* which is includible in my gross estate for federal estate tax purposes" (emphasis added). The asset's value that we find is includible in Moore's gross estate is his farm, and his farm is not an asset of the Irrevocable Trust - it's an asset of the Mellons now and was in part an asset of the FLP. All the Irrevocable Trust owns is a large chunk of that FLP, not that partnership's assets.

There is also a second, much more general problem here. Charitable deductions are allowed only for the value of property in a decedent's gross estate if transferred to a charitable donee "by the decedent during his lifetime or by will." Sec. 20.2055-1(a), Estate Tax Regs. We have repeatedly denied charitable deductions where the donation turned upon the actions of the decedent's beneficiary or an estate's executor or administrator. See, *e.g.*, *Estate of Engelman v. Commissioner*, 121 T.C. 54, 70-71 (2003); *Estate of Marine v. Commissioner*, 97 T.C. 368, 378-79 (1991), *aff'd*, 990 F.2d 136 (4th Cir. 1993).

Charitable deductions must be ascertainable at a decedent's date of death. *Ithaca Tr. Co. v. United States*, 279 U.S. 151, 154 (1929) (transfers to a charity must be "fixed in fact and capable of being stated in definite terms of money"); *Estate of Marine*, 97 T.C. at 375. Section 20.2055-2(b)(1), Estate Tax Regs., states:

> If, as of the date of a decedent's death, a transfer for charitable purposes is dependent upon the performance of some act or the happening of a precedent event in order that it might become effective, no deduction is allowable unless the possibility that the charitable transfer will not become effective is so remote as to be negligible.

Whether the Living Trust would get additional funds from the Irrevocable Trust to transfer to the Charitable Trust was not ascertainable at Moore's death but only after an audit by the Commissioner, followed by a determination that additional property should be included in Moore's estate, followed by either the successful defense of that position or the estate's acquiescence to his determinations. For the exception to apply, it would have to have been almost certain that the Commissioner would not only challenge, but also successfully challenge the value of the estate. We do not think that's a reasonable conclusion.

The estate likens its facts to those of *Estate of Christiansen v. Commissioner*, 586 F.3d 1061 (8th Cir. 2009), *aff'g* 130 T.C. 1 (2008), and *Estate of Petter v. Commissioner*, 653 F.3d 1012 (9th Cir. 2011), *aff'g* T.C. Memo. 2009-280. In *Estate of Christiansen v. Commissioner*, 586 F.3d at 1062-63, even though the amount of the property to be transferred was subject to change based on a formula clause, we allowed a charitable deduction because the transfer itself was not contingent on the happening of some event.

In *Estate of Petter*, a FLP was to distribute LLC units to the trusts that Ms. Petter had set up for each of her children. The trusts were to receive a specific number of units up to a set dollar amount, with any units over that set value going to charity. *Estate of Petter*, 653 F.3d at 1020. Since the value of these units was unknown (because it was based on the FMV of stock held by the FLP), *id*., if a subsequent audit by the Commissioner led to a revaluation of the units then some of those units that had already been transferred to trusts had to be retransferred to the charitable donee in accordance with the trust provisions, *id*. at 1019. As in *Estate of Christiansen*, value was at issue, but not whether there would be a transfer to the donee at all. *Estate of Petter*, 653 F.3d at 1018.

Article 5, section 2 of Moore's Irrevocable Trust does not say that the Living Trust will receive a transfer of assets of unknown value. It says that whether the Living Trust will even receive a transfer of assets is unknown - contingent on an examination by the Commissioner. This is unlike *Estate of Christiansen*, where we knew the charity would get a transfer of assets, just not the value, or *Estate of Petter*, where we knew the charity would get some transfer of value, just not how much. Here, we don't know if the charity would get any additional assets at all.

We, therefore, deny any charitable deduction for funds that might be transferred to the Charitable Trust under article 5, section 2 of the Irrevocable Trust.[23]

[23] As an alternate argument, the Commissioner contends that even if the article 5, section 2 clause is valid, the Irrevocable Trust lacks the assets to donate a sum large enough to eliminate the estate tax. We need not address that issue here.

III.B.3.i. Graev

Graev v. Commissioner[7021] involved a side letter in which the charity agreed to return the donation if the charitable deduction for a conservation easement was disallowed. The court held that the chance of disallowance was not so remote as to be negligible, so the existence of that reversionary interest disallowed the deduction, citing Reg. § 1.170A-1(e) for the principle that:

> no deduction for a charitable contribution that is subject to a condition (regardless of what the condition might be) is allowable, unless on the date of the contribution the possibility that a charity's interest in the contribution "would be defeated" is "negligible".

The Tax Court explained this standard:

> In prior cases, we have defined "so remote as to be negligible" as "a chance which persons generally would disregard as so highly improbable that it might be ignored with reasonable safety in undertaking a serious business transaction." *885 Inv. Co. v. Commissioner*, 95 T.C. 156, 161 (1990) (quoting *United States v. Dean*, 224 F.2d 26, 29 (1st Cir. 1955)). Stated differently, it is "a chance which every dictate of reason would justify an intelligent person in disregarding as so highly improbable and remote as to be lacking in reason and substance." *Briggs v. Commissioner*, 72 T.C. at 657. What is

[7021] 140 T.C. 377 (2013).

> determinative under the section 170 “remote” regulations is the possibility, after considering all the facts and circumstances, that NAT’s reception and retention of the easement and cash would be defeated.

The side later proved fatal to this:

> Informed by his accountants’ warning, Mr. Graev initially asked NAT about the possibility of a side letter from NAT that promised the return of contributions if deductions were disallowed. NAT eventually gave Mr. Graev such a letter on September 24, 2004. The mere fact that he required the side letter is strong evidence that, at the time of Mr. Graev’s contribution, the risk that his corresponding deductions might be disallowed could not be (and was not) “ignored with reasonable safety in undertaking a serious business transaction.” *885 Inv. Co. v. Commissioner*, 95 T.C. at 161.
>
> Mr. Graev was not alone in his assessment of the risk of disallowance. NAT considered it “standard Trust policy” to return a cash contribution to the extent a deduction therefor was disallowed by the IRS. In numerous instances NAT issued “comfort letters” assuring donors of this policy. The very essence of a comfort letter implies a non-negligible risk; and the author uses the letter to induce the recipient to enter into a transaction. In this case the risk was either partial or complete disallowance of Mr. Graev’s claimed charitable contribution deductions. NAT’s course of dealing confirms that the possibility that the IRS might disallow Mr. Graev’s deductions was not “so remote as to be negligible”. See 26 C.F.R. secs. 1.170A-1(e), 1.170A-7(a)(3), 1.170A-14(g)(3).

Among many other unsuccessful arguments, the taxpayers argued that the side letter “is a nullity and should be disregarded for tax purposes because it provides for the donor’s potential recovery of the contributions in the event of unwanted tax consequences,” relying on *Commissioner v. Procter*, 142 F.2d 824, 827-828 (4th Cir. 1944). After describing the Fourth Circuit’s opinion (see part III.B.3.o *Procter* and Other Cases), the Tax Court explained why *Procter* did not apply:

> The Court of Appeals for the Fourth Circuit held that the clause in Procter was “clearly a condition subsequent and void because contrary to public policy”, *id*., for three reasons:
>
> (1) Such a clause “has a tendency to discourage the collection of the tax by the public officials charged with its collection”, thereby discouraging efforts to collect the tax. *Id.*
>
> (2) “[T]he effect of the condition would be to obstruct the administration of justice by requiring the courts to pass upon a moot case”. *Id.*
>
> (3) “[T]he condition is to the effect that the final judgment of a court is to be held for naught because of the provision of an indenture necessarily before the court when the judgment is rendered.” *Id*. That is, a final judgment would cause the condition to be operative, but the condition should not be allowed to operate to undo the judgment, since the instrument containing the condition was before the court, and all matters pertaining thereto merged in the judgment. *Id*. at 827-828.
>
> None of these three reasons would apply to nullify NAT’s side letter:
>
> First, the conditions in NAT’s side letter would not discourage the collection of tax. This Opinion decides that the Graevs are not entitled to charitable contribution deductions

(and that there are therefore deficiencies in their income tax), and the return of the contributions to the Graevs would not at all undo or contradict that holding but would instead be consistent with that holding. In order for the condition in the side letter to be triggered, the deductions must be disallowed, and income tax will thereafter be owing whether or not the contribution is returned.

Second, the possibility of the subsequent return of the contributions does not render this case moot. The Graevs claimed deductions; the IRS disallowed them and determined deficiencies of tax; the Graevs challenged that determination, and we must decide the matter. If we had upheld the deductions, the condition in the side letter would never have been met, the gift would be complete, the contribution would be deductible (assuming other qualifications are met), and we would enter decision in favor of the Graevs to overturn the IRS's deficiency determination. Because instead we disallow the deductions and enter decision in the IRS's favor, upholding the deficiency determination, the condition in the side letter is triggered and the gift presumably reverts to the donor. However, in this case, unlike *Procter*, the reversion to the donor would not be inconsistent with the court's holding—i.e., the tax collector in our case, unlike *Procter*, would collect the tax consistent with the judgment even if the condition become operative and the gift were returned to the donor.

Third, although the final judgment in the IRS's favor would cause the side letter to be operative, the return of the contribution pursuant to the side letter would not operate to undo the judgment, as was the case in *Procter*. The return would have no effect on the Graevs' tax liabilities.

Other cases have similarly distinguished *Procter* and have held that certain tax contingency provisions are not void as against public policy. See *Estate of Christiansen v. Commissioner*, 130 T.C. 1, 8 n.7, 17-18 (2008) (a clause that "increases the amount donated to charity should the value of the estate be increased", "would not make us opine on a moot issue [i.e., the value of the estate], and wouldn't in any way upset the finality of our decision in this case"), *aff'd*, 586 F.3d 1061 (8th Cir. 2009); *Estate of Dickinson v. Commissioner*, 63 T.C. 771, 777 (1975) (stating that the "agreement makes no attempt to nullify … [the Court's] determination" (citing *Surface Combustion Corp. v. Commissioner*, 9 T.C. 631, and *O'Brien v. Commissioner*, 46 T.C. 583)); *Estate of Petter v. Commissioner*, T.C. Memo. 2009-280 ("a judgment adjusting the value of each unit will actually trigger a reallocation of the number of units between the trusts and the foundation under the formula clause. So we are not issuing a merely declaratory judgment"), *aff'd*, 653 F.3d 1012 (9th Cir. 2011).

III.B.3.j. Wandry

Wandry v. Commissioner[7022] approved a defined value gift of LLC interests, rejecting the IRS' usual arguments:

> I hereby assign and transfer as gifts, effective as of January 1, 2004, a sufficient number of my Units as a Member of Norseman Capital, LLC, a Colorado limited liability company, so that the fair market value of such Units for federal gift tax purposes shall be as follows:

[7022] T.C. Memo. 2012-88.

Name	Gift Amount
Kenneth D. Wandry	$261,000
Cynthia A. Wandry	261,000
Jason K. Wandry	261,000
Jared S. Wandry	261,000
Grandchild A	11,000
Grandchild B	11,000
Grandchild C	11,000
Grandchild D	11,000
Grandchild E	11,000
	1,099,000

> Although the number of Units gifted is fixed on the date of the gift, that number is based on the fair market value of the gifted Units, which cannot be known on the date of the gift but must be determined after such date based on all relevant information as of that date. Furthermore, the value determined is subject to challenge by the Internal Revenue Service ("IRS"). I intend to have a good-faith determination of such value made by an independent third-party professional experienced in such matters and appropriately qualified to make such a determination. Nevertheless, if, after the number of gifted Units is determined based on such valuation, the IRS challenges such valuation and a final determination of a different value is made by the IRS or a court of law, the number of gifted Units shall be adjusted accordingly so that the value of the number of Units gifted to each person equals the amount set forth above, in the same manner as a federal estate tax formula marital deduction amount would be adjusted for a valuation redetermination by the IRS and/or a court of law.

After filing a notice of appeal and then dropping its appeal, the IRS nonacquiesced in *Wandry*, viewing the adjustment as a reversion that occurred after the date of the gift.[7023] The nonacquiescence might be viewed as an implicit acquiescence in *Petter*.[7024]

[7023] AOD 2012-004 asserted that the initially estimated amount of the gift was a completed gift of that amount, reasoning:

> In determining the scope of the transfer, the Tax Court dismissed the entries on the LLC's books and records, the entries on the taxpayers' gift tax returns, and the entries on the LLC's subsequent income tax returns, finding that the instrument of transfer best described the gifts. Based on the LLC's books and records, the gift tax returns, and the LLC's income tax returns, however, it is undisputed that on the date of the gift, each taxpayer transferred a 2.39 percent interest to each donee, subject to a return of a portion of that interest in the event of a final determination of a greater value . The final determination of value for federal gift tax purposes is an occurrence beyond the taxpayers' control. Thus, on the date of the gift the taxpayers relinquished all dominion and control over the fixed percentage interests. The fact that the contingency occurred, and that the taxpayers are now entitled to a return of a portion of the interests, does not change this fact. See Treas. Reg. § 25.2511-2(b)…. Accordingly, the Tax Court erred in determining that the property transferred for federal gift tax purposes was anything other than the fixed percentage membership interest, *i.e.*, a 2.39 percent interest, transferred on the date of the gift to each donee.

[7024] See part III.B.3.m. AOD 2012-004 reasoned:

> *Estate of Petter v. Commissioner*, *supra*, is not to the contrary. In *Petter*, there was no possibility that the transferred property would return to the donor, and thus, the court had no need to consider the extent to which the gift was complete.

III.B.3.k. *Hendrix*

Hendrix v. Commissioner,[7025] was similar to *McCord*[7026] with respect to having a formula division between charitable and noncharitable donees, and the Tax Court followed the Fifth Circuit's holding.

III.B.3.l. *Christiansen*

Estate of Helen Christiansen v. Commissioner,[7027] affirming a unanimous decision of the Tax Court, approved a formula disclaimer based on fixed dollar values, with the residue passing to other beneficiaries based on values as finally determined for estate tax purposes. See part III.B.3.e Disclaimers.

The reasoning would also apply to defined value clauses. The case is strongest when those who benefit from an increase in value have interests adverse to those who benefit from a decrease in value. The presence of a charity was helpful in this case, but that didn't necessarily decide the outcome - it simply rebuffed one of the IRS' complaints about the effect of the holding.

The Tax Court, in a unanimous reviewed opinion,[7028] had held that a partial disclaimer was valid at least as to an amount that subsequently passed to a foundation that Helen Christiansen ("Christiansen") named as a contingent beneficiary in her will. The Tax Court also held that Christiansen's estate was entitled to a charitable deduction for this amount.

Christiansen's only child, who was also the executor of Christiansen's estate, disclaimed her interest in the estate "as finally determined for federal estate tax purposes" as to all amounts over $6.35 million. The disclaimer read:[7029]

> A. Partial Disclaimer of the Gift: Intending to disclaim a fractional portion of the Gift, Christine Christiansen Hamilton hereby disclaims that portion of the Gift determined by reference to a fraction, the numerator of which is the fair market value of the Gift (before payment of debts, expenses and taxes) on April 17, 2001, less Six Million Three Hundred Fifty Thousand and No/100 Dollars ($6,350,000.00) and the denominator of which is the fair market value of the Gift (before payment of debts, expenses and taxes) on April 17, 2001 ("the Disclaimed Portion"). For purposes of this paragraph, the fair market value of the Gift (before payment of debts, expenses and taxes) on April 17, 2001, shall be the price at which the Gift (before payment of debts, expenses and taxes) would have changed hands on April 17, 2001, between a hypothetical willing buyer and a hypothetical willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts for purposes of Chapter 11 of the [Internal Revenue] Code, as such value is finally determined for federal estate tax purposes.

[7025] T.C. Memo. 2011-133.
[7026] See part III.B.3.n McCord (2003, 2006).
[7027] 586 F.3d 1061 (8th Cir. 2009).
[7028] 130 T.C. 1 (2008).
[7029] 130 T.C. at 5.

Christiansen's will provided that 25% of any disclaimed amounts were to go to a charitable foundation. The IRS challenged both the validity of the disclaimer and the amount reported as the estate's overall value.

The parties eventually settled regarding a substantially increased valuation for the estate based largely on adjustments to marketability discounts the estate had claimed for limited partnership interests in a family ranching enterprise. This resulted in a corresponding increase in the valuation of the contribution to the charitable foundation. However, the IRS denied the estate an increased charitable deduction. The IRS argued that the act of challenging the estate's return and the resulting adjustment to the estate's value served as post-death, post-disclaimer contingencies that disqualified the disclaimer under Code § 2518 and Reg. § 20.2055-2(b)(1). The estate appealed to the Tax Court, and the Tax Court rejected the IRS' arguments.

On appeal to the Eighth Circuit, the IRS argued two points:

1. Because the overall value of the estate was not finally determined at the time of death, but only after the Commissioner's partially successful challenge, the transfer to the foundation was, ultimately, "dependent upon the performance of some act or the happening of a precedent event," violating Reg. § 20.2055-2(b)(1). The IRS claimed that the challenge mounted against the estate's initial return and the ultimate process of settling the estate's value constituted the purported "precedent event" or contingency.

2. The IRS asserted policy concerns related to the incentives and disincentives that exist regarding the decision to conduct audits in any given case. In particular, the IRS argued that the Eighth Circuit should disallow fractional disclaimers that have a practical effect of disclaiming all amounts above a fixed-dollar amount. The IRS maintained that such disclaimers fail to preserve a financial incentive for it to audit an estate's return. With such a disclaimer, any post-challenge adjustment to the value of an estate could consist entirely of an increased charitable donation. Because this scenario would provide no possibility of enhanced tax receipts as an incentive for the IRS to audit the return and ensure accurate valuation of the estate, the IRS argued such disclaimers should be categorically disqualified as against public policy.

Regarding the first argument, the court rejected the IRS' interpretation of Reg. § 20.2055-2(b)(1). The court held that the regulation is clear and unambiguous and it does not speak in terms of the existence or finality of an accounting valuation at the date of death or disclaimer; rather, it speaks in terms of the existence of a transfer at the date of death. The court quoted Reg. § 20.2055-2(b)(1): "If, as of the date of a decedent's death, a transfer for charitable purposes is dependent upon the performance of some act or the happening of a precedent event in order that it might become effective, no deduction is allowable unless the possibility that the charitable transfer will not become effective is so remote as to be negligible." It also pointed out that Code § 2518(a) provides that a qualifying disclaimer relates back to the time of death by allowing disclaimed amounts to pass as though the initial transfer had never occurred, which was consistent with applicable state law. The court held that all that remained uncertain following the disclaimer was the valuation of the estate, and therefore, the value of the charitable donation; the foundation's right to receive 25% of those amounts in excess of $6.35 million was certain.

The court criticized the IRS for failing to distinguish between events that occur post-death that change the actual value of an asset or estate and events that occur post-death that are merely part of the legal or accounting process of determining value at the time of death. The IRS cited several cases in which courts disallowed deductions because future contingent events might have defeated a transfer or a charitable contribution, but the court pointed out that, in each cited case, the actual contingencies under scrutiny were outside the legal or accounting process of determining a date-of-death value for the estate or an asset. The court pointed out that none of the cited cases stands for the proposition that deductions are to be disallowed if valuations involve lengthy or disputed appraisal efforts or if the IRS actions in challenging a return result in determination of an adjusted value. The court agreed with the Tax Court's statement:

> That the estate and the IRS bickered about the value of the property being transferred doesn't mean the transfer itself was contingent in the sense of dependent for its existence on a future event. Resolution of a dispute about the fair market value of assets on the date Christiansen died depends only on a settlement or final adjudication of a dispute about the past, not the happening of some event in the future.

The court pointed out that, in a different subsection of the regulation, Treasury recognizes that references to values "as finally determined for Federal estate tax purposes" are sufficiently certain to be considered "determinable" for purposes of qualifying as a guaranteed annuity interest. Reg. § 20.2055-2(e)(2)(vi)(a). In doing so, Treasury expressly uses the above-quoted language to distinguish fixed determinable amounts from fluctuating formulas that depend upon future conditions for their determination. The regulation provides:

> An amount is determinable if the exact amount which must be paid under the conditions specified in the instrument of transfer can be ascertained as of the appropriate valuation date. For example, the amount to be paid may be a stated sum for a term of years, or for the life of the decedent's spouse, at the expiration of which it may be changed by a specified amount, but *it may not be redetermined by reference to a fluctuating index such as the cost of living index*. In further illustration, the amount to be paid may be expressed in terms *of a fraction or a percentage of the net fair market value, as finally determined for Federal estate tax purposes*, of the residue of the estate on the appropriate valuation date, or it may be expressed in terms of a fraction or percentage of the cost of living index on the appropriate valuation date.

Id. (Emphasis added by the court). The court held that references to value "as finally determined for estate tax purposes" are not references that are dependent upon post-death contingencies that might disqualify a disclaimer. Because the only uncertainty in this case was the calculation of value to be placed on a right to receive 25% of the estate in excess of $6.35 million, and because no post-death events outside the context of the valuation process are alleged as post-death contingencies, the court held that the disclaimer was a "qualified disclaimer" under Code § 2518(a). The court strongly rejected the IRS' assertion that its challenge to the estate's return and the ultimate valuation process and settlement are the type of post-death events that may disqualify a partial disclaimer.

The court then addressed the IRS' second argument. It agreed with the IRS that the Tax Court's ruling in this case may marginally detract from the incentive to audit estate returns. The court accepted the possibility that in some hypothetical case involving a fixed-dollar-amount partial disclaimer, a post-challenge correction to an estate's value could result in a charitable deduction equal to the increase in the estate, resulting in no increased estate tax (which was not the case here, but the court said that it would not have changed the result). The IRS argued that a policy supporting audits as a means to enforce accurate reporting requirements mandates that the court disallow fixed-dollar-amount partial disclaimers because of the potential moral hazard or untoward incentive they create for executors to undervalue estates.

For several reasons, the court rejected the IRS' demand that it interpret the statute and regulations in an effort to maximize the incentive to audit:

a. The court noted that the IRS' role is not merely to maximize tax receipts and conduct litigation based on a calculus as to which cases will result in the greatest collection. Rather, the Commissioner's role is to enforce the tax laws, citing Code §§ 7801(a)(1), 7803(a)(2).

b. The court found no evidence of a clear Congressional intent suggesting a policy to maximize incentives for the Commissioner to challenge or audit returns. The court found Congress' relevant policy to be to encourage charitable donations by allowing deductions for such donations and held that allowing fixed-dollar-amount partial disclaimers supports this broad policy.

c. The court placed weight on the fact that, even if it were to find a general congressional intent regarding a need to maximize the incentive-to-audit, no corresponding rule of construction would be necessary in the present context to promote accurate reporting of estate values. The IRS' policy argument assumed that executors and administrators will purposefully undervalue assets in order to take advantage of his marginally decreased incentive to audit. In this case, executors must accurately report estate values, not only because of general state law fiduciary duties but also because and state and federal laws impose financial liability or, in some circumstances criminal sanctions, upon false statements, fraud, and knowing misrepresentations.

d. Finally, the court pointed out, with a fixed-dollar-amount partial disclaimer, the contingent beneficiaries taking the disclaimed property have an interest in ensuring that the executor does not under-report the estate's value. Thus, the contingent beneficiaries have an interest in serving a watchdog function, which is aligned with the IRS' interest in ensuring accurate reporting of estate values. Furthermore, the daughter was not only the primary beneficiary who made the contested partial disclaimer, she was also the executor of the estate and a board member for the charity that benefitted from the disclaimer. Because she owed a fiduciary obligation to both the estate and the foundation, any self-dealing in this instance would clearly violate her general state law fiduciary obligation to put the charity's interests above her own and possibly also violate state and federal statutory prohibitions on certain forms of self-dealing. The court held that, in general and on the specific facts of the present case, sufficient mechanisms were in place to promote and police the accurate reporting of estate values beyond just the threat of IRS audit, thereby undercutting the IRS' policy-based argument.

Although the Eighth Circuit had more sympathy for the taxpayer because charity was involved, the court emphasized that it rejected the IRS' policy for broader policy reasons. This was a big taxpayer win as to the foundation.

However, the Tax Court did not respect a disclaimer of the primary beneficiary's interest in a trust, because the beneficiary did not disclaim her contingent remainder interest. Over a lone dissent, the court rejected the disclaimer's savings clause, in which the beneficiary "hereby takes such actions to the extent necessary to make the disclaimer set forth above a qualified disclaimer." The court held:[7030]

> Such contingent clauses—contingent because they depend for their effectiveness on a condition subsequent—are as ineffective as disclaimers as they are for revocable spousal interests, see *Estate of Focardi v. Commissioner*, T.C. Memo. 2006-56, and gift adjustment agreements, see *Ward v. Commissioner*, 87 T.C. 78, 110-11 (1986).

For more about *Ward*, see the text following fn. 7042 in part III.B.3.o *Procter* and Other Cases.

III.B.3.m. *Petter*

In *Estate of Petter v. Commissioner*,[7031] the donor (Anne) inherited a large amount of valuable stock and set up an LLC to hold it. She divided ownership of the company among herself, trusts for her children's benefit, and charities, using the following formula gift:

> 1.1 Transferor …
>
> 1.1.1 assigns to the Trust as a gift the number of Units described in Recital C above that equals one-half the minimum[7032] dollar amount that can pass free of federal gift tax by reason of Transferor's applicable exclusion amount allowed by Code Section 2010(c). Transferor currently understands her unused applicable exclusion amount to be $907,820, so that the amount of this gift should be $453,910; and
>
> 1.1.2 assigns to The Seattle Foundation as a gift to the A.Y. Petter Family Advised Fund of The Seattle Foundation the difference between the total number of Units described in Recital C above and the number of Units assigned to the Trust in Section 1.1.1.
>
> 1.2
>
> The Trust agrees that, if the value of the Units it initially receives is finally determined for federal gift tax purposes to exceed the amount described in Section 1.1.1, Trustee will,

---

[7030] 130 T.C. at 13-14. In denying the use of a savings clause to qualify a conservation easement for a charitable deduction, *Palmolive Building Investors v. Commissioner*, 149 T.C. No. 18 (10/10/2017) (a unanimous reviewed decision) reaffirmed its rejection of conditions subsequent, holding:

> We have previously held that the requirements of section 170 must be satisfied at the time of the gift. See *Kaufman II*, 136 T.C. at 309; *Mitchell v. Commissioner*, at *13-*14. Additionally, this Court and others have held that "[w]hen a savings clause provides that a future event alters the tax consequences of a conveyance, the savings clause imposes a condition subsequent and will not be enforced." *Belk v. Commissioner*, 774 F.3d 221, 229 (4th Cir. 2014), *aff'g* T.C. Memo. 2013-154; see also *Commissioner v. Procter*, 142 F.2d 824, 827 (4th Cir. 1944); *Estate of Christiansen v. Commissioner*, 130 T.C. 1, 13, (2008), *aff'd*, 586 F.3d 1061 (8th Cir. 2009). The saving clause cannot retroactively modify the Deed to comply with section 170 and its regulations.

See part III.B.3.o *Procter* and Other Cases.

[7031] T.C. Memo. 2009-280 (Judge Holmes).

[7032] The court noted here:

> This is a typo. The intention of all the parties involved was to refer to the maximum amount that could pass free of gift tax. The Commissioner did not raise any problems that this language might cause, and we find it to have been a mere scrivener's error.

> on behalf of the Trust and as a condition of the gift to it, transfer the excess Units to The Seattle Foundation as soon as practicable.
>
> The Foundations similarly agree to return excess units to the trust if the value of the units is "finally determined for federal gift tax purposes" to be less than the amount described in section 1.1.1. Donna's documents are similar but substitute the Kitsap Community Foundation for the Seattle Foundation.

The formula sale included the following:

> 1.1 Transferor …
>
> 1.1.1 assigns and sells to the Trust the number of Units described in Recital C above that equals a value of $4,085,190 as finally determined for federal gift tax purposes; and
>
> 1.1.2 assigns to The Seattle Foundation as a gift to the A.Y. Petter Family Advised Fund of The Seattle Foundation the difference between the total number of Units described in Recital C above and the number of Units assigned and sold to the Trust in Section 1.1.1.
>
> 1.2
>
> The Trust agrees that, if the value of the Units it receives is finally determined to exceed $4,085,190, Trustee will, on behalf of the Trust and as a condition of the sale to it, transfer the excess Units to The Seattle Foundation as soon as practicable. Likewise, the Seattle Foundation agrees to transfer shares to the trust if the value is found to be lower than $4,085,190.

The court stated, "We have no doubt that behind these complex transactions lay Anne's simple intent to pass on as much as she could to her children and grandchildren without having to pay gift tax, and to give the rest to charities in her community."

In summarizing *Christiansen* and *McCord* (the latter discussed further below), the court said:

> A shorthand for this distinction is that savings clauses are void, but formula clauses are fine. But figuring out what kind of clause is involved in this case depends on understanding just what it was that Anne was giving away. She claims that she gave stock to her children equal in value to her unified credit and gave all the rest to charity. The Commissioner claims that she actually gave a particular number of shares to her children and should be taxed on the basis of their now-agreed value.

After giving various reasons for its decision, the court held:

> Again, we fail to see how Anne's gift to the trusts was not an "assignment of a … fraction of a certain value." Anne's initial gift to her children could have been expressed as a gift of the number of units equal to the lesser of 940 or the fraction with the numerator of $453,910 and the denominator of the value of a unit as finally determined for Federal tax purposes. Her gift to the foundations would then be expressed as 940 less the fraction where the numerator is $453,910 and the denominator is the value of a unit as finally determined for Federal tax purposes, or:
>
> 940 - 453,910 /(Value of a unit for tax purposes) = charitable gift

> The sales could be expressed in a similar mathematical formula. In fact, only the charities could take a gift of an "open ended amount;" the children's gifts and sales were capped at the dollar amounts set in the transfer documents. We are again unpersuaded. We refuse to hold against Anne simply because she chose to express her intended allocation of the gift in plain English, rather than the kind of mathematical formula outlined in regulations for other types of transfers.
>
> In summary, Anne's transfers, when evaluated at the time she made them, amounted to gifts of an aggregate and set number of units, to be divided at a later date based on appraised values. The formulas used to effect these transfers were not void as contrary to public policy, as there was no "severe and immediate" frustration of public policy as a result, and indeed no overarching public policy against these types of arrangements in the first place.

Thus, in addition to the Tax Court approving formula disclaimers in *Christiansen*, we now have a Tax Court case approving a formula sale. The approved formula sale included a condition subsequent - if the value of the property the buyer receives were finally determined to exceed the sale price, the trustee, on behalf of the trust and as a condition of the sale to it, would be required to transfer the excess property to the charity as soon as practicable.

III.B.3.n. *McCord* (2003, 2006)

In *McCord v. Commissioner* taxpayers prevailed in the Fifth Circuit[7033] after losing in the Tax Court in a reviewed opinion.[7034] *McCord* involved an assignment of limited partnership interests, which the Fifth Circuit described as:

> a sequentially structured "defined value clause":
>
> 1. First, to the Generation Skipping Tax Trusts ("GST trusts"), "a dollar amount of fair market value in interest of MIL equal to the dollar amount of Taxpayers' net remaining generation skipping tax exemption, reduced by the dollar value of any transfer tax obligation owed by these trusts by virtue of their assumption thereof.
>
> 2. Second, to the Sons $6,910,932.52 worth of fair market value in interest of MIL, reduced by the dollar value of (1) the interests in MIL given to the GST trusts, and (2) any transfer tax obligation owed by the Sons by virtue of their assumption thereof.
>
> 3. Third, to the Symphony, $134,000.00 worth of such in interest of MIL.
>
> 4. Last, to CFT,[7035] the dollar amount of the interests of the Taxpayers in MIL, if any, that remained after satisfying the gifts to the GST trusts, the Sons, and the Symphony.
>
> All gifts were complete on execution of the Assignment Agreement on January 12, 1996. No other agreements - written or oral, express or implied - were found to have existed between the Taxpayers and (1) the Sons, (2) the GST trusts, (3) the Symphony, or (4) CFT, as to what putative percentage interest in MIL belonged to, or might eventually be received by, any of the donees under the dollar-value formula clause. Rather,

---

[7033] 461 F.3d 614 (2006).
[7034] 120 T.C. 358 (2003).
[7035] The court's abbreviation for the Community Foundation of Texas, Inc.

> because the interests donated by the Taxpayers to the GST trusts, the Sons, and the Symphony were expressed in dollars, "fair market value" is defined in the Assignment Agreement in terms of the applicable "willing-buyer/willing-seller" test specified in the applicable Treasury Regulation.[7036]

About one and one-half months after signing the assignment, an independent appraisal valued the interests, and then the parties entered into an agreement defining their rights based on that appraisal. The IRS attacked the transaction, and a majority of the Tax Court, rejecting the trial judge's view, found for the IRS. The Fifth Circuit upheld the plain language of the assignment.

Part of the formula language that the Tax Court had disallowed but to which the Fifth Circuit gave effect was the net gift treatment (reducing the value of a gift by any liabilities assumed by the donee) of the transferees' agreement to pay any estate tax on gift tax brought back into the donor's estate with respect to gifts made within three years before death.[7037] In a 2013 reviewed decision, the Tax Court reversed its position on this net gift treatment, so that the net gift should work in all jurisdictions.[7038] Although unpaid gift taxes on gifts made by a decedent are deductible,[7039] the donee's agreement to pay the gift tax makes the gift tax nondeductible for estate tax purposes.[7040]

III.B.3.o. ***Procter* and Other Cases**

The IRS has been trying to use its victory in *Commissioner v. Procter*, 142 F.2d 824 (4th Cir. 1944), *cert. denied,* 323 U.S. 756 (144), reversing a Tax Court Memorandum Opinion dated July 6, 1943 (1943 WL 9169). The Fourth Circuit was disturbed by:

> the following provision of the trust indenture making the gift, viz.:
>
> > Eleventh: The settlor is advised by counsel and satisfied that the present transfer is not subject to Federal gift tax. However, in the event it should be determined by final judgment or order of a competent federal court of last resort that any part of the transfer in trust hereunder is subject to gift tax, it is agreed by all the parties hereto that in that event the excess property hereby transferred which is decreed by such court to be subject to gift tax, shall automatically be deemed not to be included in the conveyance in trust hereunder and shall remain the sole property of Frederic W. Procter free from the trust hereby created.
>
> We do not think that the gift tax can be avoided by any such device as this. Taxpayer has made a present gift of a future interest in property. He attempts to provide that, if a federal court of last resort shall hold the gift subject to gift tax, it shall be void as to such part of the property given as is subject to the tax. This is clearly a condition subsequent and void because contrary to public policy. A contrary holding would mean that upon a decision that the gift was subject to tax, the court making such decision must hold it not a gift and therefore not subject to tax. Such holding, however, being made in a tax suit to which the donees of the property are not parties, would not be binding upon them and they might later enforce the gift notwithstanding the decision of the Tax Court. It is

[7036] Citing Reg. § 25.2512-1.
[7037] Code § 2035(b).
[7038] *Steinberg v. Commissioner*, 141 T.C. 258.
[7039] Reg. § 20.2053-6(d).
[7040] *Estate of Sommers v. Commissioner*, 149 T.C. No. 8 (2017).

manifest that a condition which involves this sort of trifling with the judicial process cannot be sustained.

The condition is contrary to public policy for three reasons: In the first place, it has a tendency to discourage the collection of the tax by the public officials charged with its collection, since the only effect of an attempt to enforce the tax would be to defeat the gift. In the second place, the effect of the condition would be to obstruct the administration of justice by requiring the courts to pass upon a moot case. If the condition were valid and the gift were held subject to tax, the only effect of the holding would be to defeat the gift so that it would not be subject to tax. The donor would thus secure the opinion of the court as to the taxability of the gift, when there would be before the court no controversy whatever with the taxing authorities which the court could decide, the only possible controversy being as to the validity of the gift and being between the donor and persons not before the court. *Cf. Lord v. Veazie*, 8 How. 251, 12 L.Ed. 1067; *Van Horn v. Kittitas County, C.C*., 112 F. 1. As was well said by Chief Justice Taney *in Lord v. Veazie*, *supra* [8 How. 255, 12 L.Ed. 1067]:

> It is the office of courts of justice to decide the rights of persons and of property, when the persons interested cannot adjust them by agreement between themselves,—and to do this upon the full hearing of both parties. And any attempt, by a mere colorable dispute, to obtain the opinion of the court upon a question of law which a party desires to know for his own interest or his own purposes, when there is no real and substantial controversy between those who appear as adverse parties to the suit, is an abuse which courts of justice have always reprehended, and treated as a punishable contempt of court.

In the third place the condition is to the effect that the final judgment of a court is to be held for naught because of the provision of an indenture necessarily before the court when the judgment is rendered. It should be remembered that it is not possible to obtain a declaratory judgment from a federal court as to whether the gift in question is subject to the gift tax. 28 U.S.C.A. § 400; *Wilson v. Wilson*, 4 Cir., 141 F.2d 599. The only way, therefore, in which it could be determined by "final judgment" of a federal court of last resort that any part of a transfer was subject to a gift tax would be for a tax to be assessed by the Commissioner and upheld by such court in the course of legal proceedings instituted for its enforcement or for its recovery after payment. This final judgment would fix the liability of the donor for the tax; and only then could the condition become operative. The condition, [pg. 754] however, could not be given the effect of invalidating a judgment which had been rendered when the instrument containing the condition was before the court, since all matters are merged in the judgment. To state the matter differently, the condition is not to become operative until there has been a judgment; but after the judgment has been rendered it cannot become operative because the matter involved is concluded by the judgment.

The IRS' view of *Procter* is enshrined in Rev. Rul. 86-41:[7041]

Situation 1.

In 1982, A transferred an interest in a tract of income producing real property to B. Under the deed of transfer, B received a one-half undivided interest in the tract. However, the

[7041] Situation 2 is referred in fn. 7015, which is found in part III.B.3.e Disclaimers.

deed further provided that if the one-half interest received by B were ever determined by the Internal Revenue Service to have a value for federal gift tax purposes in excess of $10,000, then B's fractional interest would be reduced so that its value equaled $10,000. Under local law the adjustment clause operated as a condition subsequent. Thus, if the Service determined that a gift was made in excess of $10,000, the adjustment clause would effectively reconvey to A a fractional share of the tract of real property sufficient to reduce the value of B's interest to $10,000 as of the date of the gift.

On A's federal gift tax return, A reported that the fair market value of the one-half interest transferred by gift to B was $10,000 (one-half the value of the entire tract), and applied the annual exclusion against the gift. On examination of A's 1982 federal gift tax return, it was determined that the fair market value of a one-half interest in the tract subject to the transfer to B was $15,000 rather than $10,000.

Situation 2.

The facts are the same as in Situation 1, except that B was not required to reconvey any property to A. Rather, the transfer contained the condition that if the Internal Revenue Service determined that B received a gift in excess of $10,000, B would transfer to A consideration equal to the amount of the excess.

The IRS held:

In *Situations 1 and 2*, the facts demonstrate that A intended to make a gift to B of a present one-half interest in the property. In both cases, the purpose of the adjustment clause was not to preserve or implement the original, bona fide intent of the parties, as in the case of a clause requiring a purchase price adjustment based on an appraisal by an independent third party retained for that purpose. Rather, the purpose of the clause was to recharacterize the nature of the transaction in the event of a future adjustment to A's gift tax return by the Service. As in Rev. Rul. 65-144, the terms of the deed of transfer to B providing for the reduction of the portion transferred would tend to discourage the examination of returns and the collections of tax and therefore are ineffective for federal gift tax purposes. Because the reduction provision is ineffective for federal gift tax purposes, A has made a gift of a present one-half interest in the property, the first $10,000 of which qualifies for the annual exclusion under section 2503 of the Code. The value of the gift is $15,000, the fair market value of a one-half interest in the tract as determined on examination. The fact that, in *Situation 2*, the adjustment of the gift was to be made by recharacterizing the transfer as a part-gift/part-sale is irrelevant…..

In both *Situations 1* and *2,* if the donor transfers a specified portion of real property under terms that provide for a recharacterization of the transaction depending on the Service's valuation of the property for federal gift tax purposes, the adjustment clause will be disregarded for federal tax purposes. Consequently, in both cases the value of the gift will be determined without regard to the adjustment clause and the first $10,000 in the value of the gift, as so determined, will qualify for the annual exclusion from gift tax.

In *Ward v. Commissioner,*[7042] the Tax Court rejected the following clause as void as against public policy:

> 2. Future Adjustment. Each party hereto agrees that if it should be finally determined for Federal gift tax purposes that the fair market value of each share of capital stock of the Corporation exceeds or is less [pg. 88] than $2,000.00 an adjustment will be made in the number of shares constituting each gift so that each Donor will give to each Donee the maximum number of full shares of capital stock of the Corporation, the total value of which will be $50,000.00 from each Donor to each Donee and a total of $150,000 from each Donor to all Donees. Any adjustment so made which results in an increase or decrease in the number of shares held by a stockholder of the Corporation will be made effective as of the same date as this Agreement, and any dividends paid thereafter shall be recomputed and reimbursed as necessary to give effect to the intent of this Agreement.

The court held:[7043]

> [T]he agreement here purports to retroactively alter the amount of an otherwise completed gift. Furthermore, since there is no assurance that the petitioners will either recover the excess shares or, at the time of their deaths, possess the power to recover such shares, and since the shares are not worthless, the petitioners' estates may be reduced by the transfer of the shares. See *Harwood v. Commissioner*, 82 T.C. at 275 n. 28.
>
> Accordingly, we conclude that the gift adjustment clause involved here is void as contrary to public policy and has no effect on the gift taxes otherwise due on the gifts of stock to the petitioners' sons.

For the continued viability of *Ward*, see part III.B.3.l *Christiansen*, text accompanying fn. 7030.

Estate of Dickinson, Jr. v. Commissioner[7044] involved the following corporate agreement entered into in 1961:

> 1. (a) Dickinson for himself, his heirs, executors and administrators agrees that his estate shall sell to the Company and the Company agrees that it will purchase from said estate a number of shares of the Company's stock which shall be the lesser of the following two numbers of shares: either (i) 8795 shares of the Company's stock owned by Dickinson at the date of this agreement, or (ii) the number of shares whose total price computed in accordance with paragraph 3 below shall have a total equal to the sum of the estate, inheritance and succession taxes (including any interest collected as part of such taxes) imposed because of the death of Dickinson. ***
>
> 2. Dickinson agrees that during his lifetime he will not, by sale or other disposition, reduce the number of shares of the Company's stock held by him below 8795 shares.

[7042] 87 T.C. 78 (1986).
[7043] For the clause that *Harwood* (cited in the quote below) struck down, see the text accompanying fn. 7019 in part III.B.3.e Disclaimers.
[7044] 63 T.C. 771 (1975).

> 3. The price per share to be paid by the Company for the shares which it is obligated to purchase from Dickinson's estate shall be the sum of the following items taken from the Company's balance sheet—(a) Reserve for Replacement and Advertising, (b) Employees' Pension and Contingency Reserve, (c) Common Stock, (d) Capital Surplus, (e) Earned Surplus—divided by the number of shares of stock of the Company outstanding at the date of said balance sheet. The balance sheet to be used in computing the price per share, in accordance with this paragraph 3, shall be that set forth in the Company's Federal Corporation Income Tax Return (Treasury Form 1120, Schedule L or such equivalent schedule as may hereafter be required by law) for the end of the taxable period ending next prior to the death of Dickinson.

In the course of estate administration, the parties entered into the following agreement:

> Whereas, *** [Mr. Dickinson] is irrevocably bound by an Agreement between him and *** [the company] dated June 29th, 1961, so that his executors will be required to sell to the Company a number of shares of stock in the Company as provided in paragraph 1(a) of *** [the 1961] Agreement at a specified price as provided in paragraph 3 of *** [the 1961] Agreement, and *** [Mr. Dickinson] is precluded by *** [the 1961] Agreement from selling such shares to others during his lifetime; and ***
>
> Whereas, *** [Mrs. Dickinson, E. E. Dickinson III, and Alan Page Dickinson] hold all of the common stock in the Company not held by *** [Mr. Dickinson] and desire that *** [the 1961] Agreement remain in full force and effect;
>
> Now Therefore:
>
> In consideration of the foregoing and of the sum of One (1) Dollar and other good and valuable considerations, the parties hereto do hereby agree as follows:
>
> 1. (a) In the event that the Internal Revenue Service should take an action which would disregard for estate tax valuation purposes the price for said shares as provided in paragraph 3 of *** [the 1961] Agreement or take an action which would in effect deny the benefits of Section 303[7045] and thereby be contradictory to the intentions of Congress in enacting this section governing the redemption of stock to pay death taxes, the personal representatives of *** [Mr. Dickinson] may, if they in their sole discretion deem such action by the Internal Revenue Service to threaten a damaging result either to the estate, heirs, devisees and legatees of *** [Mr. Dickinson], or to the remaining stockholders of the Company, request to be relieved of the estate's obligation to sell said stock pursuant to *** [the 1961] agreement, and *** [Mrs. Dickinson, E. E. Dickinson III, and Alan Page Dickinson] agree for themselves, their heirs, executors, administrators and assigns, that upon receipt of such request they will whether acting as stockholders and/or directors of the Company cause the Company to release the estate of *** [Mr. Dickinson] from such obligations as it may have under *** [the 1961] Agreement.

The court held:

> There is no doubt about what Mr. Dickinson wished to happen and about what has in fact taken place. After having made the 1961 agreement, apparently he became

[7045] [my footnote:] Code § 303 is explained in part II.Q.7.a.iv.(a) Actual Payments, which is within part II.Q.7.a.iv Dividends; Avoiding Dividend Treatment Using Redemptions under Code §§ 302 and 303.

concerned about its tax consequences and sought the advice of his counsel. The counsel advised him that the “buy-sell” agreement might not be effective for purposes of determining the value of the stock subjected to taxation. He was also advised that if the 1961 agreement were not modified, the estate might encounter the very situation which now exists—namely, the Commissioner would take the position that the fair market value of the stock should be used for valuation purposes, but that the agreement should be applied for purposes of administering the estate. To avoid such paradoxical results, Mr. Dickinson and his family made the 1962 agreement, which was designed to enable his family to set aside the 1961 agreement for all purposes, if the Commissioner sought to set it aside for valuation purposes. Since the Commissioner has adopted the anticipated position as to the valuation of the stock, the family has carried out Mr. Dickinson’s wishes and set the 1961 agreement aside for all purposes. Thus, we have a situation in which the “buy-sell” agreement has been duly set aside, and it should have no effect in administering the estate, unless we hold that it is to be given effect notwithstanding the efforts to terminate it.

In our judgment, there are no reasons for refusing to give effect to the 1962 agreement and the actions taken pursuant thereto. See *Estate of Arthur H. Hull,* 38 T.C. 512 (1962), reversed on another issue 325 F.2d 367 (C.A. 3, 1963); *Estate of Mary Redding Shedd,* 37 T.C. 394 (1961), *aff’d* 320 F.2d 638 (C.A. 9, 1963); cf. *Welch v. Hall,* 134 F.2d 366 (C.A. 1, 1943); compare *William H. Board,* 14 T.C. 322 (1950). The Commissioner relies upon *Commissioner v. Procter,* 142 F.2d 824 (C.A. 4, 1944), reversing and remanding a Memorandum Opinion of this Court, certiorari denied 323 U.S. 756 (1944), in which the grantor of a trust provided that if one of the gifts was held by a court to be subject to the gift tax, the gift was to be revoked. The court held that such a clause was void because it would tend to discourage administrative action and would cause a judicial decision to become a mere nullity. However, the rationale of *Procter* is not applicable to the facts of the case before us. In this case, the Commissioner has taken the position that the 1961 agreement should be disregarded for purposes of fixing the value of the stock subjected to taxation, and the estate has accepted that position. The 1962 agreement makes no attempt to nullify that determination; its only objective is to establish consistency in the administration of the estate. Mr. Dickinson recognized that if the stock was to be taxed on the basis of its fair market value, his estate plan would be distorted if the formula price was used for other purposes, and the only purpose of the 1962 agreement was to avoid such a distortion of his plan. That agreement was a reasonable and appropriate means of anticipating possible future adverse action by the Commissioner and avoiding its consequences. Such agreement is similar to those provisions which we have recognized in *Surface Combustion Corp.,* 9 T.C. 631 (1947), *aff’d* 181 F.2d 444 (C.A. 6, 1950), and *William D. O’Brien,* 46 T.C. 583 (1966).

Nor are we convinced by the Commissioner’s other objection to the 1962 agreement. Both parties agree that the 1961 and 1962 agreements have no effect on the value of the stock to be included in the estate. Once the 1962 agreement was made, there was no serious uncertainty about what would ultimately take place. One could be assured that the Commissioner would not accept the formula price for purposes of valuing the stock (section 20.2031-2(h), Estate Tax Regs.), and once he takes that action, it would set in motion proceedings under the 1962 agreement to set aside the 1961 agreement for all purposes. Thus, there was no genuine difficulty in determining the value of the interests that would pass under the will. Cf. *Estate of Inez G. Coleman,* 52 T.C. 921 (1969). Accordingly, we hold that the parties to the 1962 agreement have effectively terminated any obligations under the 1961 agreement and that the formula price has no effect in determining the amount of the estate which passes under the will and the value of the interests passing thereunder.

Readers are encouraged to reconcile the clauses described in the above cases and the reasoning set forth by the courts and the IRS.

III.B.3.p. Beneficiary Deemed-Owned Trust as an Alternative to Formula Sale

The beneficiary deemed-owned trusts discussed in part III.B.2.i, Code § 678 Beneficiary Deemed-Owned Trusts, generally include a broad non-general power of appointment exercisable at the beneficiary's death.

If a beneficiary makes a sale to such a trust, any resulting gift is likely to be an incomplete gift and therefore protected from gift tax. However, that portion would be subject to estate tax.

If one wants to a do a formula sale to a beneficiary deemed-owned trust, consider making part of the transfer a completed gift to another transferee.[7046] Consider whether the formula clause might refer to value as finally determined for "transfer tax" purposes, instead of "gift tax" purposes, so that estate tax finality would work if the gift tax statute of limitations does not run.

III.B.3.q. Settlement of *Sorensen* (*Wandry* Clause) (2022)

"Estate Planning Current Developments and Hot Topics," by Steve R. Akers, Ronald D. Aucutt, and Kerri G. Nipp of Bessemer Trust, Dallas, Texas, for ALI's Estate Planning for the Family Business Owner 2023 (10/6/2023), included item 13:

> ***Wandry* Clause Gift Tax Case Settled, *Sorensen v. Commissioner*, T.C. Docket 24797-18, 24798-18, 20284-19, 20285-19 (Decision Entered Aug. 22, 2022)**
>
> a. **Basic Facts**. Chris and Robin Sorensen grew up in a firefighter family. Their father was a firefighter. They loved joining in communal meals at the firehouse, and Robin decided at a young age that one day he would open a restaurant. Eventually, the brothers scrounged $28,000 in loans from family members and in 1994 started a sandwich shop (because it required the least capital investment compared to other restaurants). They had only one employee and the family (parents, sisters, spouses, even children) volunteered to provide other labor for the restaurant. Their single sandwich shop eventually turned into a number of Firehouse Subs franchises across the country. Their motto: "Big picture, we love to cook, we love to serve people, we love the hospitality industry. We make sandwiches for a living."
>
> The company succeeded and grew substantially. By 2014, the company owned 27 restaurants, had 823 franchisees, and had over $550 million of sales system wide. In late 2014 they decided to make gifts to use their $5.34 million gift exclusion amounts for fear that the gift exclusion might be reduced in the future. On December 31, 2014, each brother created a grantor trust and made a gift to the trust of nonvoting shares of Firehouse stock having a value of $5,000,000 as finally determined for federal gift tax purposes. [Observation: This approach had been approved two years earlier in *Wandry*

[7046] See text accompanying fn. 7061, found in part III.B.4 Adequate Disclosure on Gift Tax Returns.

v. Commissioner, T.C. Memo. 2012-88.] They signed Irrevocable Stock Powers transferring

> [a] specific number of nonvoting shares in FIREHOUSE RESTAURANT GROUP, INC., a Florida corporation (the "Company"), that have a fair market value as finally determined for federal gift tax purposes equal to exactly $5,000,000. The precise number of shares transferred in accordance with the preceding sentence shall be determined based on all relevant information as of the date of transfer in accordance with a valuation report that will be prepared by the Dixon Hughes Goodman, LLP ("DHG"), Jacksonville, Florida, an independent third-party professional organization that is experienced in such matters and appropriately qualified to make such a determination. However, the determination of fair market value is subject to challenge by the Internal Revenue Service ("IRS"). While the parties intend to initially rely upon and be bound by the valuation report prepared by DHG, if the IRS challenges the valuation and a final determination of a different fair market value is made by the IRS or a court of law, the number shares [sic] transferred from the transferor to the transferee shall be adjusted accordingly so that the transferred shares have a value exactly equal to $5,000,000, in the same manner as a federal estate tax formula marital deduction amount would be adjusted for a valuation redetermination by the IRS and/or court of law.

An appraisal valued the nonvoting shares at $532.79 per share as of December 31, 2014, and $5.0 million worth of shares was 9,384.56 shares. The attorney recommended transferring that amount exactly, but the parties rounded the number of initially transferred shares to 9,385, which represented about 30% of each brother's nonvoting shares. They later decided to transfer a total of up to about 50% of their shares, and on March 31, 2015, each brother sold to his respective trust 5,365 nonvoting shares in exchange for a $2,858,418 secured promissory note (using the $532.79 per share value in the appraisal as of December 31, 2014). (The sales were not *Wandry* defined value transfers.)

The 2014 gift tax returns reported the defined value formula transfers, described the number of shares determined to have a value of $5.0 million based on an appraisal (attached on one brother's gift tax return but not on the other brother's return), and further explained:

> Therefore based on the formula set forth above and the value as determined by the Valuation Report, the donor transferred 9,385 non-voting shares in Firehouses stock … with a value equal to $5,000,000, and the precise number of shares transferred cannot be finally determined until the value of such shares are finally determined for federal gift tax purposes.

The 2015 gift tax returns did not report the sale of shares in 2015 as a non-gift transaction.

In a gift tax audit, the IRS's expert appraised the shares at $1,923.56/share, later adjusted to $2,076.86/share. The Notices of Deficiency were confusing because of confusion by the IRS as to how many shares had been transferred in 2014 and 2015, but the amount of gift tax ultimately in dispute for each brother (according to their pretrial memorandum) was about $8.95 million for 2014 and $4.62 million for 2015, totaling about $13.57 million. In addition, penalties in dispute for each brother were about $3.58 million for 2014 and $1.85 million for 2015, or a total of $5.43 million.

Jumping ahead seven years, the entire company was sold on November 15, 2021, for $1 billion cash, which was allocated among the shareholders. Each of the trusts received about $153 million.

b. **Issues**. Three issues were in contention. (1) Are the defined value formula gifts respected? At issue is whether the defined value approach approved in Wandry v. Commissioner, T.C. Memo. 2012-88 would be respected. (2) What is the appropriate fair market value of the shares on the dates of the 2014 gift and the 2015 sale? (3) Are penalties appropriate or should they be waived for reasonable cause?

c. **IRS Arguments for Refusing to Respect the Defined Value Transfers.**

(1) **The Donors Relinquished Dominion and Control of 9,385 Shares on 12/31/14.**

(a) **Facts Supporting.**

i. **Company Reporting**. The company reported that each trust owned 9,385 shares on its stock ledgers and on income tax returns. [***Planning Observation***: Include an "asterisked" explanation on the stock ledger and tax returns. Using "uncertificated shares" may facilitate this reporting.]

ii. **Distributions**. The trusts received pro rata distributions based on owning 9,385 shares. [***Planning Observation***: Document in company records that distributions are based on the initially determined amount of shares, which could be adjusted based on finally determined gift tax values, and that the brothers and their trusts will make appropriate adjustments between themselves if the shares are changed.]

[my comment: I build that into stock powers.]

iii. **No Agreement with Trusts**. The trusts never agreed to transfer shares based on the defined value formula and did not countersign the stock powers, which described the transfers as defined value formula transfers. [**Planning Observation**: Have the trusts countersign the stock powers to specifically acknowledge the conditions under which they are receiving the stock transfers.]

[my comment: I build that into stock powers.]

iv. **Third-Party Buyer**. The trusts transferred 9,385 shares each to the third-party purchaser, who paid the trusts for those shares. [Planning Observation: Have the buyer acknowledge that the ownership of shares is based on the defined value formula transfers, but that the trusts and donors agree that collectively they own the 9,385 shares and transfer them to the buyer; if adjustments are made in the ownership of the shares, the donors and trusts will adjust the sales proceeds appropriately but acknowledge that the buyer can pay the purchase price attributable to the 9,385 shares to the respective trusts.]

(b) **Cow Analogy**. The IRS's Pretrial Memorandum includes this analogy to a defined value gift of cows.

> Consider that if a farmer agrees to transfer his son [sic] several cows worth $1,000 as finally determined for federal gift tax purposes, and the farmer's appraiser determines that five cows equal that value, then the transfer is for five cows. The son is now the owner of five cows. Years pass. The son breeds the cows and opens a barbeque stand. If a later gift tax examination finds that each cow was actually worth more, and that two extra cows had been included in the transfer, **nothing in the agreement would allow the farmer to take the two cows back. They were sold as barbeque.** The parties might be held to their agreement - a transfer of the number of cows as finally determined to equal $1,000 coupled with the possibility of the farmer getting something (barbeque?) in the event of a redetermination of value. But whatever it is, it won't be the cows transferred. And it might be nothing; the farmer may not pursue his claim, and if he does, he is now just a general creditor who must stand in line with all the other unsecured creditors of the barbecue operation.
>
> The farmer's use of a transfer clause that contemplates subsequent events does not change the fact that the transfer of the five cows was complete on the execution of the documents. This is the case even though the number of cows was indefinite until the initial appraisal was completed. [Citations omitted.] The transfer was of five cows, regardless of whether the transfer is structured as a gift or a sale.
>
> Under the farmer's transfer document, however, a redetermination of the value of a cow might give rise to a right of recovery against the son. But a right that is dependent upon the occurrence of an event beyond the donor's control, such as a later redetermination of value by federal authorities or the courts, does not alter the fact that the transfer is complete for gift tax purposes upon the execution of the documents. [Citations omitted.] The possibility that the farmer might get something back does not change the fact that he transferred five cows upon the execution of the documents, regardless of whether the transfer is structured as a gift or a sale. (Emphasis added.)

[***Observation***: The IRS reportedly often uses this folksy analogy in audits involving *Wandry* transfers. The Fifth Circuit in *Nelson v. Commissioner*, 128 AFTR 2d 2021-6532, Cause No. 20-61068 (5th Cir. November 3, 2021), *aff'g*, T.C. Memo. 2020-81, referred to this analogy presented by the IRS in that case. The emphasis on not being able to adjust the transfer of cows because they have been turned into barbeque ignores that we are in a society with a monetary system and can make appropriate adjustments to determine that the proper value is transferred.]

(c) ***Procter* Argument**. The language in the stock power attempting to "adjust" the number of shares transferred is a condition subsequent and violates public policy, based on *Commissioner v. Procter*, 142 F.2d 824 (4th Cir. 1944). That language precludes the IRS from enforcing the gift or making efforts to collect gift tax and precludes enforcing valuation misstatement penalties.

[my comment: see part III.B.3.o *Procter* and Other Cases]

The taxpayers reside in Florida so the case would be appealable to the Eleventh Circuit Court of Appeals. The IRS cited an Eleventh Circuit case that referred to Procter. *TOT Property Holdings, LLC v. Commissioner*, 1 F.4th 1354 (11th Cir. 2021) (language in a conservation easement deed purporting to bring the easement in compliance with regulations held to be an unenforceable savings clause; clause presented "the same sort of catch-22 situation that leads to the trifling with the judicial process").

The IRS distinguished formula allocation clauses in which the transferor clearly transferred all of a specific block of shares or interests, and the formula clause allocates the block between two recipients (and the transfer to one of those recipients would not result in a taxable gift). Those types of clauses have been approved in various cases (*Petter*, *Christiansen*, *McCord*, *Hendrix*). [***Planning Observation***: This argument by the IRS clearly suggests that those types of defined value clauses are more likely to be respected by the IRS.]

[my comment: see parts III.B.3.m *Petter*, III.B.3.l *Christiansen*, III.B.3.n *McCord* (2003, 2006), and III.B.3.k *Hendrix*.]

(2) ***Wandry* Was Wrongly Decided**. *Wandry* reasoned (referring to *Estate of Petter v. Commissioner*) that a savings clause is void because it creates a donor that tries to "take property back," but the transfer document in question reflected the intent to transfer "a predefined … percentage interest expressed through a formula" to each donee, and the transfer document does not allow taxpayers to "take property back," but only to correct the allocations. The IRS suggested several reasons why that analysis is faulty.

- The formula transfer created a condition subsequent that could not change the fact the gift was complete as of the date the donors gave up control of LLC units.

- The adjustment to capital accounts to reflect the values as finally determined for gift tax purposes was not merely an internal accounting adjustment as discussed in Wandry but affected each member's economics in the LLC.

- *Wandry* referred to competing interests, but unlike a situation involving a transfer to a third party, there are no real competing interests where the donor is gifting property to a spouse and/or children and both the donor and donee want to maximize the number of units transferred.

- The *Wandry* approach subverts Congressional intent regarding valuation misstatement penalties in gift tax matters. The court would not be deciding the amount of gift tax on property transferred but would just be determining the property that should be returned to the donor. In that scenario, there could never be a valuation misstatement penalty.

- The IRS's Pretrial Memorandum summarized its criticism of *Wandry*:

> The Wandry opinion improperly focused on the donors' intent rather than the donors' relinquishment of dominion and control over gifted property, as required by the statutes and regulations thereunder. Therefore, to the extent necessary to resolve this issue, this Court should find Wandry was wrongly decided, and petitioners owe additional gift tax to the extent that the value of 9,385 nonvoting shares of FRG exceeds petitioner's annual exclusions and lifetime exemption equivalents.

(3) **Facts Are Distinguishable from Wandry**. In Wandry, the court noted that the number of LLC units initially transferred was unclear from the record before the court. In

this case, specific shares were gifted and the benefits attributable to those shares were shifted.

Furthermore, unlike the donors in *Wandry*, the Sorensen donors failed to follow their own transfer clauses. Based on the appraised value, $5.0 million worth of shares would have been 9,384.56 shares, but (contrary to their attorney's advice) the donors for administrative simplicity rounded that to 9,385 shares, which resulted in transferring shares worth $5,000,234.15. Thus, the facts align more with *Knight v. Commissioner*, 115 T.C. 515-16 (2000) (in which the donors did not report the transfer as a formula transfer on the gift tax return) than with Wandry. [***Observation***: The IRS made this argument over $234.15 in a transfer of $5.0 million worth of hard-to-value assets. Really??]

A transfer of shares in an S corporation (by the Sorensens) is different than the transfer of units in an LLC in Wandry (where there is broader flexibility to determine the economic rights of members).

(4) **Other Arguments**. The IRS also argued that the shares transferred could not be adjusted because of the sale of all shares to a third party and because the taxpayers had stipulated that each brother had gifted 9,385 shares.

d. **Valuation**. The parties obviously had substantial differences in their valuations of the nonvoting shares. The experts used similar valuation approaches but applied significantly different risk adjustments and comparables. Also, the IRS disputed the use of "tax affecting" for valuing S corporation shares. [***Observation***: the IRS Pretrial Memorandum cited several cases that rejected tax affecting but did not cite the more recent *Estate of Jones v. Commissioner* case (T.C. Memo. 2019-101) that accepted a tax affecting analysis under the facts of that case.]

e. **Penalties**. The taxpayers argued that penalties should not apply because a three-prong test (described in *Neonatology Associates v. Commissioner*, 115 T.C. 43, 99 (2000), *aff'd*, (3rd Cir. 2002)) for the reasonable cause exception was satisfied: (1) the adviser was a professional with expertise to justify reliance, (2) the taxpayer provided accurate and necessary information to the adviser, and (3) the taxpayer actually relied on the adviser's judgment in good faith.

The IRS maintained that the valuation understatements were attributable to negligence and disregard of rules and regulations.

As to the 2014 gifts, the brothers knew they gifted 9,385 shares as shown by their reporting on 2015-2020 income tax returns, stock ledgers, and their gift tax returns, as well as the receipt by each of the trusts of about $153 million from the sale of the company. Also, they knew the 9,385 shares were worth far more than $5.0 million because of the company's "prior five years of distributions, revenue, and operating income growth, and store expansion."

As to the 2015 sales, the brothers "failed to report a transaction in which they transferred stock … for far less than its value." Also, they relied on an appraisal with a December 31, 2014, valuation date to determine the value of shares transferred in 2015.

f. **Settlement**. A Stipulation of Settled Issues reached the following conclusions:

- A defined value formula clause does not apply to or control the donor's transfer of nonvoting shares on December 31, 2014.

- Each brother gave 9,385 shares on December 31, 2014.

- Each gifted nonvoting share was valued at $1,640, for a total gift from each brother of $15,391,400 (a difference of $10,391,400 from the reported value of $5,000,000, which had resulted in a gift tax of zero).

- No penalties applied as a result of the 2014 gifts.

- Each brother sold 5,365 shares on March 31, 2015.

- Each sold nonvoting share was valued at $1,722, for a total transferred value of $9,238,530, less the $2,858,418 consideration received, resulting in a gift by each brother of $6,380,112.

- The 10% accuracy related penalty under § 6662(a) applies to the 2015 transfer.

A Decision for the 2015 transaction reported a gift tax deficiency of $2,516,045 and a penalty under §6662(a) of $251,605.

The Stipulation regarding the 2014 gift of $15,391,400 would have resulted in a gift tax of a little over $4.0 million (assuming few taxable gifts had been made previously).

Therefore, the total gift tax deficiency for each brother for 2014 and 2015 was $4,000,000+ plus $2,516,045, or a total of $6,516,045+. The total penalty was $251,605.

Observations:

(1) Because of the huge appreciation resulting from the sale in 2021, the brothers were probably highly motivated to be treated as having transferred 9,385 shares in 2014, and not have some of those shares treated as having been owned by the donors. Applying the defined value formula, based on the stipulated value of $1,640 per share, would have resulted in each trust receiving only about $87 million from the sale in 2021 rather than about $153 million.

[Each brother was treated as giving 9,385 shares and selling 5,365 shares to his grantor trust. That is a total of 14,750 shares (9,385 + 5,365). In the 2021 sale, each trust received $153 million. That is about $10,372.88 per share (153,000,000 ÷ 14,750).

Under the settlement, the gift tax value was stipulated to be $1,640 per share. If the defined value clause were given effect, that would reduce the number of shares given to about 3,049 (5,000,000 ÷ 1,640). The total shares held by each grantor trust would then be about 8,414 (3,049 + 5,365). Then upon sale in 2021, each trust would have received about $87,277,412 (8,414 × 10,372.88).]

(2) The values resulting from the settlement ($1,640 per share for the gift and $1,722 per share for the sale) were much closer to the IRS's position that the shares were worth about $2,000 per share than the donors' appraised value of about $500 per share.

Query how much of that added value was attributable to not allowing tax affecting of the S corporation shares?

(3) The 10% negligence penalty under § 6662(a) was applied to the 2015 transaction but not the 2014 transaction. Was this because the 2015 transfer was not reported on a gift tax return? Or perhaps it was because the sale price was based on an appraisal as of three months earlier if significant financial changes occurred during those three months (the stipulated per share value was increased by five percent from December 31, 2014, to March 31, 2015, representing a 20% annualized increase if that growth was extrapolated over a full year).

(4) By any measure, the transfer transactions were wildly successful from a transfer planning standpoint (unless the parents were concerned they had transferred too much!). For a gift tax of about $6.5 million, as of seven years later each brother had transferred $153 million minus the $2.9 million (approximately) note from the 2015 sale, or $150.1 million – reflecting an effective tax rate of less than 5%.

(5) Do not use the *Wandry* formula in the stock power in Sorensen as a template for drafting *Wandry* assignments. The assignment began with assigning that number of shares equal to a particular value as finally determined for federal gift tax purposes, but then continued on with language that arguably could be closer to a Procter transfer. Stick closer to the assignment language used in *Wandry*.

(6) As discussed in Item 13.c(1)(a) above, planning tips can be gleaned from the IRS arguments in *Sorensen* for structuring and documenting the transfer of shares in satisfaction of the formula assignment before the time that a final determination of gift tax value is made, including documentation regarding the stock ledger, distributions, and the sale to the third party as well as having the donee specifically acknowledge the formula transfer on the stock power.

(7) The treatment of *Wandry* transfers varies among IRS estate and gift tax attorneys, but the national office of the IRS does not like Wandry clauses.

(8) Be wary of using *Wandry* transfers if the transferred assets could explode in value. A change in the finally determined gift tax value could result in many of the transferred assets remaining with the donor – and all the appreciation attributable those assets remaining in the donor's gross estate.

(9) An alternative to assure that all of a particular block of assets is transferred is to use a combined *Wandry*/*King* approach as discussed in Item 12.c(6) above.

Item 12.c(6), "Combined Wandry/King Approach," comments:

In addition, a combined *Wandry*/consideration adjustment approach could be used (sometimes referred to as a two-tiered *Wandry* transfer). The client would make a traditional *Wandry* transfer of that number of units that is anticipated to be worth the desired transfer amount (which could either be a gift or a sale), but with a provision that if those units are finally determined for federal gift tax purposes to be worth a higher value, the shares that were not transferred because of the *Wandry* provision would be sold for a note as of the same date as the *Wandry* gift, with the price being determined by the finally determined gift tax value. See Joy Matak, Steven Gorin & Martin

Shenkman, *2020 Planning Means a Busy 2021 Gift Tax Return Season*, LEIMBERG ESTATE PLANNING NEWSLETTER #2858 (February 2, 2021) (includes excellent suggested detailed disclosures for reporting a two-tiered *Wandry* transfer on a gift tax return and income tax return, including Schedule K-1 disclosures).

That approach was used in *True v. Commissioner* (Tax Court Docket Nos. 21896-16 & No. 21897-16), which cases were settled on a basis that, as reported in Tax Court filings, appears favorable for the taxpayer. The father made transfers of assets worth well over $160 million under these clauses (any gifts were deemed to be made equally by the spouses under the split gift election). The IRS determined that the transfers resulted in additional gifts by the parents collectively of $94,808,104 resulting in additional combined gift taxes of 35% of that amount, or $33,182,836. The taxpayers avoided that horror show and ended up paying only an additional $4,008,642 (combined) of gift tax under stipulated decisions filed in both cases in July 2018. The taxpayers no doubt viewed an additional current outlay of about $4 million rather than $33 million as a huge victory (even if the audit may have resulted in additional value being included in the parents' estates under revised face amounts of notes). For a discussion of *True v. Commissioner*, see Item 8.c(17) of Aucutt, Grantor Retained Annuity Trusts (GRATs) and Installment Sales to Grantor Trusts (July 2022) found here[7047] and available at www.bessemertrust.com/for-professionalpartners/advisor-insights.

III.B.4. Adequate Disclosure on Gift Tax Returns

If any gift of property the value of which is required to be shown on a gift tax return and is not shown on such return, any gift tax on such gift may be assessed, or a proceeding in court for the collection of such tax may be begun without assessment, at any time.[7048] However, any understatement of use of lifetime gift tax exemption that causes for future returns does not prevent the statute of limitations for the future returns from running, unless the understatement resulted from a false or fraudulent return with intent to evade tax or willful attempt to defeat or evade tax.[7049] CCA 201614036, which reasoned:

> Under the regs, only the failure to disclose a gift on the return for the year of that gift keeps the ASED open, not a failure to accurately report the sum of prior year gifts on a return for a later year.

[7047] The link I supplied is to the September 2023 version, but the item number is the same.

[7048] Code § 6501(c)(9), which also provides:

> The preceding sentence shall not apply to any item which is disclosed in such return, or in a statement attached to the return, in a manner adequate to apprise the Secretary of the nature of such item.

Reg. § 301.6501(c)-1(f)(1), "In general," provides:

> If a transfer of property, other than a transfer described in paragraph (e) of this section, is not adequately disclosed on a gift tax return (Form 709, "United States Gift (and Generation-Skipping Transfer) Tax Return"), or in a statement attached to the return, filed for the calendar period in which the transfer occurs, then any gift tax imposed by chapter 12 of subtitle B of the Internal Revenue Code on the transfer may be assessed, or a proceeding in court for the collection of the appropriate tax may be begun without assessment, at any time.

[7049] See also CCA 201643020, which held:

> In this case, the $a gift was reported on the tax year Y31 gift tax return. Thus, step one is met and the matter is concluded. Therefore, despite X's failure to report prior years' gifts on the Y31 return, the special limitation period in section 6501(c)(9) does not apply to the $a gift.

As a result, if the only problem with the subsequent year gift tax returns is understatement of the amounts of prior year gifts, then the understatement of gift tax due for those subsequent years may be assessed only within the normal § 6501(a) 3-year period. The returns for [Redacted Text] should be carefully evaluated, because the ASEDs for those returns should still be open.

The six-year ASED for substantial omission in § 6501(e)(2) will not extend the ASED for gift tax returns whose only defect is underreported prior year gifts, because the language "if the taxpayer omits from... the total amount of the gifts made during the period for which the return was filed" also refers to the current-year gifts; gift tax returns are annual returns, even if the taxpayer is required to report prior year gifts and to properly use those when calculating the tax on the current year gifts.

It would take a legislative fix to § 6501(c)(9) and (e)(2) to close this gap.

Of course, if some other exception, like § 6501(c)(1) (false or fraudulent return with intent to evade tax) or § 6501(c)(2) (willful attempt to defeat or evade tax), applies, there would be an independent ground for an unlimited ASED. But there would have to be sufficient facts to support one of those exceptions.

Once the statute of limitations runs for assessing gift tax, it also runs for determining adjusted taxable gifts for estate tax purposes.[7050]

Of course, the gift tax return needs to be properly signed. Unfortunately, only a court-appointed personal representative may sign a decedent's gift tax return.[7051]

[7050] Code § 2001(f), "Valuation of gifts," provides:

(1) *In general*. If the time has expired under section 6501 within which a tax may be assessed under chapter 12 (or under corresponding provisions of prior laws) on -

(A) the transfer of property by gift made during a preceding calendar period (as defined in section 2502(b)); or

(B) an increase in taxable gifts required under section 2701(d),

the value thereof shall, for purposes of computing the tax under this chapter, be the value as finally determined for purposes of chapter 12.

(2) *Final determination*. For purposes of paragraph (1), a value shall be treated as finally determined for purposes of chapter 12 if -

(A) the value is shown on a return under such chapter and such value is not contested by the Secretary before the expiration of the time referred to in paragraph (1) with respect to such return;

(B) in a case not described in subparagraph (A), the value is specified by the Secretary and such value is not timely contested by the taxpayer; or

(C) the value is determined by a court or pursuant to a settlement agreement with the Secretary.

For purposes of subparagraph (A) , the value of an item shall be treated as shown on a return if the item is disclosed in the return, or in a statement attached to the return, in a manner adequate to apprise the Secretary of the nature of such item.

[7051] Reg. § 25.6019-1(g) requires the "executor or administrator" of the decedent's estate to file and makes no reference to anyone else having the authority or obligation to file. CCA 201405016 reasoned:

What we may not have said clearly enough is that § 2203 is only operative in the estate tax context. In relevant part, the statute provides:

When an election to split gifts was improperly applied to split a gift to trust in which a spouse had an interest that was not susceptible of determination, the running of the statute of limitations precluded adjusting the split gift reporting to correct the error.[7052]

If the taxpayer omits from the total amount of the gifts made during the period for which the return was filed such total gifts as exceed in amount 25% of the total amount of gifts stated in the return, the tax may be assessed, or a proceeding in court for the collection of such tax may be begun without assessment, at any time within 6 years after the return was filed.[7053] However, any item that is disclosed in the return, or in a statement attached to the return, in a manner adequate to apprise the IRS of the nature and amount of such item, is not considered to have been omitted.[7054] Also, any increases in the valuation of assets disclosed on the return are not taken into account in computing the 25% omission from the total gifts stated in the gift tax return.[7055]

> > The term "executor" whenever it is used in this title **in connection with the estate tax imposed by this chapter** means...
>
> The plain language of the statute limits the statutory executor to the estate tax regime (Chapter 11). Section 2203 does not provide any authority in the income tax regime (Chapter 1) or in the gift tax regime (Chapter 12) or in the GSTT regime (Chapter 13).

For how an executor might obtain protection against gift tax liability, see text accompanying fn 7186 in part III.B.5.e.iv.(g) How to Avoid the Pitfalls of the Estate Tax Lien.

[7052] Letter Ruling 201523003 reasoned:

> In Rev. Rul. 56-439, 1956-2 C.B. 605, a gift is made in trust pursuant to which the trustee is to distribute any part or all of the income or principal of the trust to or among the spouse of the donor and other descendants of the donor at such times and in such proportions and amounts as the trustee determines in its sole discretion. The ruling concludes that, under the facts presented, the value of the right to receive the income or principal to be distributed to the spouse is not susceptible of determination. Therefore, the gift to the spouse is not severable from the gifts to the other beneficiaries, and the gift may not to any extent be considered as made one-half by the donor and one-half by his spouse within the meaning of § 2513.
>
> In this case, in Year 1, Husband transferred property to Family Trust, Trust 1, and Trust 2. On their Year 1 Forms 709, Husband and Wife each elected gift split treatment for those gifts. The property of Trust 1 and Trust 2 was transferred to Family Trust at the end of the annuity terms of those trusts. Wife is an income and principal beneficiary of Family Trust. Family Trust provides that the independent trustee may pay to or use for the benefit of any one or more of Wife, Husband's descendants, and his descendant's spouses so much or all of the income and principal of the trust in such proportions as the independent trustee, in the trustee's discretion, determines to be desirable for their respective welfare and best interests. Wife's interests in the income and principal of Family Trust are not susceptible of determination and, therefore, Wife's interests are not severable from the interests that the other beneficiaries have in Family Trust. See Rev. Rul. 56-439. However, under § 2504(c), the time for determining whether gift split treatment is effective with respect to the Year 1 through Year 3 transfers of property to Family Trust has expired. Therefore, the gift split treatment is irrevocable for purposes of the Year 1 transfer to Family Trust and the Years 2 and 3 transfers of property from Trust 1 and Trust 2 to Family Trust.
>
> In Year 3, on their Forms 709, Husband and Wife each elected gift split treatment for the transfers to Trusts 3 and 4. Under § 25.2513-1(b)(4), the election to split gifts is not effective. The period of limitations has not expired for Year 3. Accordingly, Husband is not precluded under § 2504(c) from filing a supplemental Year 3 Form 709 to report the Year 3 transfers to Trust 3 and Trust 4 as being made solely by him.

[7053] Code § 6501(e)(2).

[7054] Code § 6501(e)(2).

[7055] Reg. § 301.6501(e)-1(b)(2).

Reg. § 301.6501(c)-1(f)(2), “Adequate disclosure of transfers of property reported as gifts,” provides:

> A transfer will be adequately disclosed on the return only if it is reported in a manner adequate to apprise the Internal Revenue Service of the nature of the gift and the basis for the value so reported. Transfers reported on the gift tax return as transfers of property by gift will be considered adequately disclosed under this paragraph (f)(2) if the return (or a statement attached to the return) provides the following information -
>
> (i) A description of the transferred property and any consideration received by the transferor;
>
> (ii) The identity of, and relationship between, the transferor and each transferee;
>
> (iii) If the property is transferred in trust, the trust's tax identification number and a brief description of the terms of the trust, or in lieu of a brief description of the trust terms, a copy of the trust instrument;
>
> (iv) Except as provided in § 301.6501-1(f)(3), a detailed description of the method used to determine the fair market value of property transferred, including any financial data (for example, balance sheets, etc. with explanations of any adjustments) that were utilized in determining the value of the interest, any restrictions on the transferred property that were considered in determining the fair market value of the property, and a description of any discounts, such as discounts for blockage, minority or fractional interests, and lack of marketability, claimed in valuing the property. In the case of a transfer of an interest that is actively traded on an established exchange, such as the New York Stock Exchange, the American Stock Exchange, the NASDAQ National Market, or a regional exchange in which quotations are published on a daily basis, including recognized foreign exchanges, recitation of the exchange where the interest is listed, the CUSIP number of the security, and the mean between the highest and lowest quoted selling prices on the applicable valuation date will satisfy all of the requirements of this paragraph (f)(2)(iv). In the case of the transfer of an interest in an entity (for example, a corporation or partnership) that is not actively traded, a description must be provided of any discount claimed in valuing the interests in the entity or any assets owned by such entity. In addition, if the value of the entity or of the interests in the entity is properly determined based on the net value of the assets held by the entity, a statement must be provided regarding the fair market value of 100 percent of the entity (determined without regard to any discounts in valuing the entity or any assets owned by the entity), the pro rata portion of the entity subject to the transfer, and the fair market value of the transferred interest as reported on the return. If 100 percent of the value of the entity is not disclosed, the taxpayer bears the burden of demonstrating that the fair market value of the entity is properly determined by a method other than a method based on the net value of the assets held by the entity. If the entity that is the subject of the transfer owns an interest in another non-actively traded entity (either directly or through ownership of an entity), the information required in this paragraph (f)(2)(iv) must be provided for each entity if the information is relevant and material in determining the value of the interest; and

(v) A statement describing any position taken that is contrary to any proposed, temporary or final Treasury regulations or revenue rulings published at the time of the transfer (see § 601.601(d)(2) of this chapter).

An informal IRS memo discussed adequate disclosure a little and asserted that failure to report a complete and accurate EIN for the business entity that was the subject of the gift caused the statute of limitations not to run when a qualified appraisal was not attached.[7056] A qualified appraisal must, in addition to stating the appraiser's qualifications, contain:[7057]

(A) The date of the transfer, the date on which the transferred property was appraised, and the purpose of the appraisal.

(B) A description of the property.

(C) A description of the appraisal process employed.

(D) A description of the assumptions, hypothetical conditions, and any limiting conditions and restrictions on the transferred property that affect the analyses, opinions, and conclusions.

(E) The information considered in determining the appraised value, including in the case of an ownership interest in a business, all financial data that was used in determining the value of the interest that is sufficiently detailed so that another person can replicate the process and arrive at the appraised value.

(F) The appraisal procedures followed, and the reasoning that supports the analyses, opinions, and conclusions.

(G) The valuation method utilized, the rationale for the valuation method, and the procedure used in determining the fair market value of the asset transferred.

(H) The specific basis for the valuation, such as specific comparable sales or transactions, sales of similar interests, asset-based approaches, merger-acquisition transactions, etc.

LAFA 20172801F asserted that the statute of limitations had not run when:

> Donor filed a Form 709 to report the Year 7 gifts, but failed to adequately report any of the Year 7 gifts because Donor did not describe the transferred property, nor did Donor provide a description of the method used to determine the value of the transferred property.

[7056] LAFA 20152201F commented:

> Our research identified only two opinions involving adequate disclosure under I.R.C.§ 6501(c)(9): *Lewis v. Commissioner* (*In re Estate of Brown*), T.C. Memo. 2013-50 and *Estate of Sanders v. Commissioner*, T.C. Memo. 2014-100. Both opinions deny motions for summary judgment without analyzing whether the respective taxpayers had adequately disclosed their gifts under the applicable regulations.

[7057] Reg. § 301.6501(c)-1(f)(3)(ii).

CCA 200221010 involved the following facts:

> ABC LLC was formed in 1997 as a limited liability company under Delaware law and treated as a partnership for federal tax purposes. At the time of formation, Taxpayer was a member in ABC LLC and held a 1% interest. Through a series of transactions not relevant to the determination of the issues in this case, Taxpayer acquired an additional 19% interest in ABC LLC. Taxpayer's entire 20% interest was composed of Class B units.
>
> On April 7, 1997, Taxpayer gifted the 19% interest in ABC LLC to a generation-skipping trust. On that same day, Taxpayer gifted the remaining 1% interest in ABC LLC to a family trust. Taxpayer and Taxpayer's Wife split the value of both gifts in accordance with section 2513 of the Internal Revenue Code. Taxpayer filed his gift tax return (Form 709) on October 9, 1998 and attached the following description of the gifts: "Class B units in ABC LLC. Units acquired on 4/6/97 for $200,000 cash." In addition, Taxpayer indicated that the gifts were made on 4/7/97 with a value on that date of $200,000 and an adjusted basis of $200,000. Taxpayer's Form 709 was due on April 15, 1998 and therefore was not timely filed.
>
> The Service maintains that the fair market value of Taxpayer's transfers to the two trusts at the time of the transfers was $14 million. The Service proposes to issue a notice of deficiency to Taxpayer for the 1997 tax year for the deficiency in gift tax. The Service has raised the question of whether it may rely on the exception for gifts not adequately shown on a return as a defense to the argument that the period of limitations for assessing deficiencies has expired with respect to Taxpayer's 1997 gift tax liability. In the alternative, the Service has raised the question of whether it may rely on the exception for a substantial omission of gifts as a defense to the argument that the period of limitations for assessing deficiencies has expired with respect to Taxpayer's 1997 gift tax liability.

CCA 200221010 reasoned and asserted:

> Neither the Code nor the Treasury regulations provide guidance on what constitutes "a manner adequate to apprise the Service of the nature and amount of such item." Moreover, we have found no gift tax cases interpreting the adequate disclosure standards of sections 6501(c)(9) or 6501(e)(2). However, we note that section 6501(e)(1) provides a similar exception to the period of limitations for a substantial omission of items in the income tax context and section 6501(e)(1)(A)(ii) contains identical language regarding adequate disclosure. The Tax Court has recognized that "an examination of section 6501(e)(1) and (2) shows that the two are in pari materia in dealing with the same subject - the application of the statute of limitations - and, accordingly, we may give due consideration to income tax cases in deciding estate tax cases on this same subject." *Estate of Williamson v. Commissioner*, T.C. Memo. 1996-426. While this decision was in the context of the period of limitations exception for the substantial omission of items from the gross estate, we see no reason why the same standard should not apply in the gift tax context. Moreover, the legislative history for section 6501(e)(2) indicates that section 6501(e)(2) "applies to estate and gift taxes a rule, corresponding to the income-tax rule." S. Rep. No. 83-1622, at 584 (1954); H.R. Rep. No. 83-1337, at 414 (1954). In addition, because section 6501(c)(9) also utilizes the "manner adequate to apprise the Secretary" language, we believe the same adequate disclosure standard should apply. Thus, income tax cases construing the

adequate disclosure standard in the context of a substantial omission of items can be used as guidance for determining whether there has been adequate disclosure for purposes of sections 6501(c)(9) and 6501(e)(2).

The disclosure required to trigger section 6501(e)(1) and avoid application of the POSTF-160250-01 extended period of limitations has been held to require production of a "clue" with respect to the omission of income. *University Country Club, Inc. v. Commissioner*, 64 T.C. 460, 470 (1975). "[T]his does not mean simply a 'clue' which would be sufficient to intrigue a Sherlock Holmes. But neither does it mean a detailed revelation of each and every underlying fact." *George Edward Quick Trust v. Commissioner*, 54 T.C. 1336 (1970), *aff'd per curiam*, 444 F.2d 90 (8th Cir. 1971). The disclosure must be sufficiently detailed that a decision whether to select the return for audit may be a reasonably informed one. *Estate of Fry v. Commissioner*, 88 T.C. 1020, 1023 (1987) (citation omitted). Moreover, the 6-year period of limitations applies where there is either a complete omission of an item of the requisite amount or misstating of the nature of an item. *Phinney v. Chambers*, 392 F.2d 680, 685 (5th Cir. 1968). In either situation, the Service is at a disadvantage in detecting errors and consequently needs more time to uncover those errors. *Id*.

Turning now to the question of whether there was sufficient information on Taxpayer's gift tax return to apprise the Service of the nature of the interests in ABC LLC, we note that the regulations that correspond with section 6501(c)(9) contain detailed guidance on what constitutes adequate disclosure of transfers of property reported as gifts. In this regard, Treas. Reg. § 301.6501(c)-1(e) sets detailed guidelines for a transfer of property subject to the special valuation rules of section 2701 or section 2701, while Treas. Reg. § 301.6501(c)-1(f) sets detailed guidelines for gifts made after December 31, 1996 not adequately disclosed on a return filed after December 3, 1999. Based on the facts submitted, we cannot determine whether Taxpayer's transfers of interests in ABC LLC were subject to the special valuation rules of sections 2701 or 2702. Thus, we cannot determine whether the adequate disclosure standard of Treas. Reg. § 301.6501(c)-1(e) is applicable in this case. Moreover, we note that Taxpayer and Taxpayer's Wife filed gift tax returns for the 1997 calendar year prior to December 3, 1999, (the effective date of the regulations) making Treas. Reg. § 301.6501(c)-1(f) also inapplicable. See Treas. Reg. § 301.6501(c)-1(f)(8). Nonetheless, both regulations illustrate the type of information that should be on the return (or a statement attached thereto) for the return to commence the running of the period of limitations on assessment. In particular, a gift tax return (or statement attached thereto) should contain, at a minimum, a description of the transferred property, the identity of the transferor and each transferee, the relationship between those parties, and a description of the method used to determine the value of the gift. In addition, for a transfer of property in trust, the gift tax return should contain a description of the terms of the trust. Moreover, the Service has indicated that where a donor files a gift tax return but fails to adequately disclose a gift because the information required under Treas. Reg. § 301.6501(c)-1(f)(2) for the gift was not submitted with the return, the period of limitations on assessment with respect to that return does not begin to run. Rev. Proc. 2000-34, 2000-2 C.B. 186.

While the effective date of the regulations under section 6501(c)(9) and the publication date of the revenue procedure make them inapplicable in this case, the principles upon which they are based are implicit in section 6501(c)(9) itself. The statute requires that information about the nature and amount of the gift must be included on the return (or statement attached thereto). The regulations under section 6019 illustrate the type of information a gift tax return should contain. First, the gift tax return must contain "the fair market value of all gifts not made in money." Treas. Reg. § 25.6019-3(a). In addition, "[t]he instructions printed on the return should be carefully followed." *Id*. Further, the gifts made during the calendar year "must be listed on the return and described in a manner that they may be readily identified." Treas. Reg. § 25.6019-4. See also Instructions to Form 709, p. 5 (" Describe each gift in enough detail so that the property can be easily identified.") While there are no examples in the Treasury regulations or the Instructions to Form 709 pertaining to ownership interests in a limited liability company, we believe information similar to that required for a gift of stock should be contained on the gift tax return. In this regard, the gift tax regulations provide the following:

> Description of stocks shall include number of shares, whether common or preferred, and, if preferred, what issue thereof, par value, quotation at which returned, exact name of corporation, and, if the stock is unlisted, the location of the principal business office, the State in which incorporated and the date of incorporation, or if the stock is listed, the principal exchange upon which sold.

Treas. Reg. § 25.6019-4.

Analogizing the requirements for a gift of stock to a gift of an interest in a limited liability company, we conclude that the description of a gift of an interest in an LLC should include the number of units in the limited liability company, the class type, and the percentage of ownership interest that the gift represents.

In the present situation, we conclude that the Taxpayer did not include an adequate description of the gifts to the two trusts. In particular, Taxpayer did not identify the number of units in ABC LLC being transferred, the percentage of ownership interest that those units represented, or the nature of Class B interests. Taxpayer only identified the name of the limited liability company, the purported value and the fact that the units were Class B units. This information did not allow the Commissioner to make a reasonably informed decision whether to select the return for audit. Nor do we believe that Taxpayer may legitimately argue that the absence of detailed information on the return should itself have given the Commissioner a "clue" to look for the missing information. We believe that in enacting section 6501(c)(9), Congress intended that taxpayers should fully disclose the nature of their gifts on the return or attachments thereto-not simply leave a trail of questions for the Commissioner to pursue. Therefore, we conclude that Taxpayer did not adequately disclose the nature of the gifts. Consequently, the period of limitations on POSTF-160250-01 assessment with respect to Taxpayer's gift tax return remains open.

Turning now to whether section 6501(e)(2) applies in this case, we note that the total amount of gifts stated on Taxpayer's return was $200,000. In order to apply the 6-year period of limitations on assessment to Taxpayer's return, the Service must prove that items properly includible in total gifts for that calendar year in excess of $50,000 were omitted. Taxpayer's gift tax return discloses Class B units in a limited liability company. The fair market value of the Class B units at the time the gifts were made was $14 million. In accordance with section 2503, those gifts were subject to gift tax. Because the fair market value of the Class B units is in excess of 25% of the total gifts stated on Taxpayer's return, we conclude that there has been a substantial omission of items within the meaning of section 6501(e)(2). As discussed above, Taxpayer did not

> adequately disclose the nature and amount of the omitted items. Therefore, the tax due on the transfers can be assessed at any time on or before October 9, 2004.

Reg. § 25.6019-4, "Description of property listed on return," which is not promulgated under the adequate disclosure rules but rather the rules for filing gift tax returns (before the adequate disclosure rule was enacted), provides:

> The properties comprising the gifts made during the calendar year (or calendar quarter with respect to gifts made after December 31, 1970, and before January 1, 1982) must be listed on the return and described in a manner that they may be readily identified. Thus, there should be given for each parcel of real estate a legal description, its area, a short statement of the character of any improvements, and, if located in a city, the name of the street and number. Description of bonds shall include the number transferred, principal amount, name of obligor, date of maturity, rate of interest, date or dates on which interest is payable, series number where there is more than one issue, and the principal exchange upon which listed, or the principal business office of the obligor, if unlisted. Description of stocks shall include number of shares, whether common or preferred, and, if preferred, what issue thereof, par value, quotation at which returned, exact name of corporation, and, if the stock is unlisted, the location of the principal business office, the state in which incorporated and the date of incorporation, or if the stock is listed, the principal exchange upon which sold. Description of notes shall include name of maker, date on which given, date of maturity, amount of principal, amount of principal unpaid, rate of interest and whether simple or compound, and date to which interest has been paid. If the gift of property includes accrued income thereon to the date of the gift, the amount of such accrued income shall be separately set forth. Description of the seller's interest in land contracts transferred shall include name of buyer, date of contract, description of property, sale price, initial payment, amounts of installment payments, unpaid balance of principal, interest rate and date prior to gift to which interest has been paid. Description of life insurance policies shall show the name of the insurer and the number of the policy. In describing an annuity, the name and address of the issuing company shall be given, or, if payable out of a trust or other fund, such a description as will fully identify the trust or fund. If the annuity is payable for a term of years, the duration of the term and the date on which it began shall be given, and if payable for the life of any person, the date of birth of that person shall be stated. Judgments shall be described by giving the title of the cause and the name of the court in which rendered, date of judgment, name and address of judgment debtor, amount of judgment, rate of interest to which subject, and by stating whether any payments have been made thereon, and, if so, when and in what amounts.

Estate of Robinson, 101 T.C. 499 (1993), which was before the adequate disclosure statute was enacted, discussed omitted gifts:

> Assuming, without deciding, for the purpose of the instant case, that claiming more annual exclusions than allowable under section 2503(b) would lead to our holding that an omission from the total amount of gifts occurred for purposes of section 6501(e)(2), the gift tax returns filed by decedent made no such omission. As stated above, section 6501(e)(2) provides that items which are adequately disclosed are not taken into account in determining the amount omitted from total gifts. The Federal gift tax returns filed by decedent stated the number of annual exclusions being claimed and, therefore, adequately apprised the Commissioner of the specific number of annual exclusions claimed by decedent. Indeed, respondent does not argue that decedent did not

> adequately disclose the annual exclusions being claimed. Consequently, the exclusions are not to be taken into account for purposes of determining the amount omitted from total gifts for purposes of section 6501(e)(2), and the 6-year period of limitations found in section 6501(e)(2) is not applicable to the 1983 gift tax year.

Daniels v. Commissioner, T.C. Memo. 1994-591, which also was before the adequate disclosure statute was enacted, involved the following facts and holding:

> On March 9, 1983, petitioners each timely filed for 1982 a Federal gift tax return that reflected the gifts of 285 shares of Penn-Daniels common stock to their children in the total amount of $110,110. Respondent, however, contends that the alleged gift of “value” (namely, the alleged increase in the value of the children’s common stock as a result of the alleged $1,751,680 difference between the fair market value of the common stock petitioner exchanged for the preferred stock petitioner received) constitutes a separate and distinct gift (*i.e.*, separate from the gift of the common stock itself) that was not disclosed on petitioners’ 1982 Federal gift tax returns and that respondent’s adjustment with regard to this gift of “value” does not constitute a mere increase in the value of the gift of the common stock. Respondent then contends that the amount of this omitted gift constitutes more than 25 percent of the total gifts that were reported on petitioners’ gift tax returns, and therefore that the 6-year period of limitation on assessment is applicable, and petitioners’ consents extending the statute of limitations are applicable as to both the alleged $1,751,680 gift of “value” and also as to the $717,288 alleged increase in the value of the gift of the common stock.
>
> Petitioners respond that, in fact and substance, respondent’s alleged gift of “value” simply constitutes a determination by respondent that petitioner’s gift of Penn-Daniels common stock should be increased in value, and that there was no second, separate, and distinct gift apart from the gift of the 285 shares of Penn-Daniels common stock. Petitioners, therefore, argue that regardless of the merit or lack of merit in respondent’s revaluation of the gift, because a mere increase by respondent in the value of a reported gift does not constitute an “omitted item” under section 6501(e)(2), respondent’s proposed adjustments for 1982 are barred by the 3-year period of limitation. The reported fair market value of the gifts was based on the liquidation value of the 285 shares of Penn-Daniels common stock that was transferred by petitioner to the children as reflected in the Robinson-Humphrey valuation report. The gifts of the 285 shares of Penn-Daniels common stock were described on petitioners’ gift tax returns as being part of the reorganization of Penn-Daniels….
>
> Regardless of which theory is used under the step-transaction doctrine, the facts before us lead to the same conclusion. The transaction that respondent seeks to treat as giving rise to two separate gifts constituted only one gift to each of petitioners’ children. There was a single plan of corporate reorganization and recapitalization intended to create, simultaneously, a single specific outcome regardless of the sequence of the steps. Accomplishing only one of the steps in the reorganization would not have effected the change in control sought by the various participants to the reorganization.
>
> The undisputed record shows that only petitioner was to exchange Penn-Daniels common stock for preferred stock and that exchange, effectively, was to occur simultaneously with petitioner’s gift of the remaining 285 shares of Penn-Daniels common stock to his children. The evidence is clear that no one step would have been taken except in contemplation of the other steps. We agree with petitioners that the

relevant steps before us constitute one gift by petitioner to his children of Penn-Daniels common stock. We would be exalting form over substance if we were to conclude that petitioner made one direct gift of the common stock and another gift of the alleged increase in "value" of that common stock as a result of some difference in the value of the common stock petitioner exchanged for the preferred stock he received. If respondent is correct in her valuation of the common and preferred stock of Penn-Daniels, that increase simply would cause an increase in the valuation of the 285 shares of common stock that petitioner gave to his children.

It appears that respondent is making this second gift of "value" argument because respondent failed to increase the value of petitioner's gift of common stock to petitioners' children within the 3-year limitation period on the assessment of tax under section 6501(a). Respondent's argument that there was a second distinct gift undisclosed on petitioners' gift tax returns, therefore triggering the 6-year statute of limitations, in fact is nothing more than a belated effort to revalue petitioner's gift of the common stock to petitioners' children.

Schlapfer v. Commissioner, T.C. Memo. 2023-65, explained (yellow highlighting is mine):

IV Adequate Disclosure

"A disclosure is 'adequate' if it is 'sufficiently detailed to alert the Commissioner and his agents as to the nature of the transaction so that the decision as to whether to select the return for audit may be a reasonably informed one.'" *Thiessen v. Commissioner*, 146 T.C. 100, 114 (2016) (quoting *Estate of Fry v. Commissioner*, 88 T.C. 1020, 1023 (1987)). The Commissioner directs us to the reporting requirements for strict compliance. *See, e.g.*, Treas. Reg. § 25.6019-4. But Treasury Regulation § 301.6501(c)-1(f)(2) provides that transfers reported on a gift tax return will be considered adequately disclosed if the return (or a statement attached to the return) provides the following information:

(i) A description of the transferred property and any consideration received by the transferor;

(ii) The identity of, and relationship between, the transferor and each transferee;

(iii) If the property is transferred in trust, the trust's tax identification number and a brief description of the terms of the trust, or in lieu of a brief description of the trust terms, a copy of the trust instrument;

(iv) Except as provided in § 301.6501(c)-1(f)(3), a detailed description of the method used to determine the fair market value of property transferred, including any financial data (for example, balance sheets, etc. with explanations of any adjustments) that were utilized in determining the value of the interest, any restrictions on the transferred property that were considered in determining the fair market value of the property, and a description of any discounts, such as discounts for blockage, minority or fractional interests, and lack of marketability, claimed in valuing the property....; and

(v) A statement describing any position taken that is contrary to any proposed, temporary or final Treasury regulations or revenue rulings published at the time of the transfer....

These requirements can be satisfied by filing Form 709 with the required information, or if needed, an amended Form 709 with the required information. Rev. Proc. 2000-34, §§ 3 and 4, 2000-2 C.B. 186, 186. However, if an amended return is the one that satisfies adequate disclosure, then the period of limitations commences with the filing of the amended return, not the original return. *Id.* Whether a statement attached to a gift tax return adequately discloses a gift is a question of fact. *Estate of Hicks Sanders v. Commissioner*, T.C. Memo. 2014-100, at *7. Mr. Schlapfer argues that the period to assess gift tax has expired because he adequately disclosed the gift on his 2006 gift tax return. He points to four documents to support this claim: (1) the gift tax return; (2) a protective filing attachment; (3) Schedule F of Form 5471 for his 2006 tax return; and (4) the Offshore Entity Statement. The Commissioner argues that the period to assess gift tax did not expire because Mr. Schlapfer did not adequately disclose the gift. Specifically, he asserts that (1) the Offshore Entity Statement is not part of the 2006 gift tax return and it should not be considered to determine whether Mr. Schlapfer made an adequate disclosure of the gift; and (2) even if the Offshore Entity Statement is considered, Mr. Schlapfer still failed to adequately disclose the gift because he failed to satisfy all applicable requirements of Treasury Regulation § 301.6501(c)-1(f)(2).

A. Disclosure Contents We Can Consider

The Commissioner argues that the Offshore Entity Statement is not among the documents we should consider in determining whether the gift was adequately disclosed. We disagree.

We have addressed the question of what documents to consider for adequate disclosure in cases interpreting section 6501(e)(1) (regarding substantial income omissions), and we find that the rationale used in those cases applies with equal force here. Under section 6501(c)(9), the Commissioner may assess a gift tax at any time if a gift is not shown on a return unless the gift is "*disclosed in such return, or in a statement attached to the return, in a manner adequate to apprise the Secretary of the nature of such item*." (Emphasis added.) Section 6501(e)(1)(B)(iii) has similar wording, providing that the period of limitations for the Commissioner to determine the amount omitted from gross income will extend to six years unless "*such amount is disclosed in the return, or in a statement attached to the return, in a manner adequate to apprise the Secretary of the nature and amount of such item*." (Emphasis added.) "Where the same word or phrase appears multiple times within a statutory text, it is generally presumed to have the same meaning each place it appears." *Whistleblower 22716-13W v. Commissioner*, 146 T.C. 84, 92-93 (2016) (citing *Atl. Cleaners & Dyers, Inc. v. United States*, 286 U.S. 427, 433 (1932) ("Undoubtedly, there is a natural presumption that identical words used in different parts of the same act are intended to have the same meaning.")). A review of applicable IRS guidance and a plain reading of the statute do not warrant a conclusion that Congress intended the similar phrases in section 6501(c)(9) and (e)(1) to be interpreted differently. Therefore, we look to adequate disclosure caselaw decided under section 6501(e)(1) for guidance in determining what documents can be used to prove adequate disclosure under section 6501(c)(9).

This Court has frequently looked beyond a taxpayer's return for purposes of determining adequate disclosure, especially where the return references a separate document. *See Reuter v. Commissioner*, T.C. Memo. 1985-607, 51 T.C.M. (CCH) 99, 102 (discussing *Benderoff v. United States*, 398 F.2d 132 (8th Cir. 1968), *Walker v. Commissioner*, 46 T.C. 630 (1966), *Roschuni v. Commissioner*, 44 T.C. 80 (1965), and *Rose v. Commissioner*, 24 T.C. 755 (1955)). For example, when the taxpayer's individual return references an information return (such as a partnership or S corporation return), we may look to those information returns to determine whether items were adequately disclosed. See Reuter, 51 T.C.M. (CCH) at 102. When deciding whether an item has been adequately disclosed, we may consider not only a return, but also documents attached to the return plus informational documents referenced in the return.

The Offshore Entity Statement provided with the gift tax return must be considered in determining adequate disclosure. It was submitted to the OVDP in a disclosure packet that included the gift tax return. Furthermore, the protective filing attached to the gift tax return referenced controlled foreign company (CFC) stock, which alerted the IRS to look to the Offshore Entity Statement for information on the gift referred to in the gift tax return. We will consider the return and all documents accompanying the return. Therefore, the documents we will consider in determining whether Mr. Schlapfer adequately disclosed the gift are the gift tax return, the protective filing, all relevant Forms 5471, and the Offshore Entity Statement.

B. Strict vs. Substantial Compliance

The Commissioner argues that Mr. Schlapfer did not adequately disclose the gift because he failed to strictly satisfy all applicable requirements of Treasury Regulation § 301.6501(c)-1(f)(2). Mr. Schlapfer disagrees, arguing that he strictly, or at least substantially, complied with all applicable requirements of the Treasury regulation.

The Commissioner may insist that taxpayers strictly comply with regulatory requirements, but in certain circumstances we have held that regulatory requirements can be satisfied by substantial compliance. *See, e.g.*, *Am. Air Filter Co. v. Commissioner*, 81 T.C. 709, 719 (1983). The question the Court must ask in determining whether to apply substantial or strict compliance to regulatory requirements is whether the requirements relate "to the substance or essence of the statute." *Bond v. Commissioner*, 100 T.C. 32, 41 (1993) (quoting *Taylor v. Commissioner*, 67 T.C. 1071, 1077 (1977)). If the requirement is essential, then strict adherence to all regulatory requirements is a precondition to satisfying the statute. *Id*. However, if the requirement is "procedural or directory in that [it is] not of the essence of the thing to be done...[it] may be fulfilled by substantial...compliance." *Id*. (quoting *Taylor*, 67 T.C. at 1077-78). This test requires us to examine section 6501(c)(9) to determine whether the adequate disclosure requirements of Treasury Regulation § 301.6501(c)-1(f)(2) go to the essence of the statute or are merely procedural or directory.

Section 6501(c)(9) provides that the Commissioner may assess a gift tax at any time if a taxpayer fails to report a gift on a gift tax return, unless the gift is otherwise adequately disclosed on the return or a statement attached to it. Its essence is to provide the Commissioner with a viable way to identify gift tax returns that should be examined with minimum expenditure of resources. T.D. 8845, 1999-2 C.B. 683, 684. The purpose of the adequate disclosure requirements in the regulation is to provide taxpayers with guidance on what constitutes adequate disclosure for purposes of section 6501(c)(9).

The Department of the Treasury has acknowledged that substantial compliance can satisfy the adequate disclosure requirements. In Treasury Decision 8845, which promulgated Treasury Regulation § 301.6501(c)-1(f), Treasury specifically addressed substantial compliance. It rejected a recommendation that the regulation should expressly allow substantial compliance because of "the difficulty in defining and illustrating what would constitute substantial compliance." T.D. 8845, 1999-2 C.B at 685. It went on to note, however, that its rejection of the suggestion did not mean "that the absence of any particular item or items would necessarily preclude satisfaction of the regulatory requirements, depending on the nature of the item omitted and the overall adequacy of the information provided." *Id*. That statement describes, and accepts, the very essence of substantial compliance. Therefore, we conclude that the adequate disclosure requirements can be satisfied by substantial compliance.[7]

[7] Generally, "[s]tatutes of limitation sought to be applied to bar rights of the Government, must receive a strict construction in favor of the Government." *Badaracco v. Commissioner*, 464 U.S. 386, 391 (1984) (quoting *E.I. Dupont de Nemours & Co. v. Davis*, 264 U.S. 456, 462 (1924)). However, we have applied the substantial compliance doctrine to situations where we are tasked in determining whether a return was sufficient to commence the running of the statute of limitations. *See*, *e.g.*, *Gen. Mfg. Corp. v. Commissioner*, 44 T.C. 513, 523-24 (1965).

C. Whether Mr. Schlapfer Strictly or Substantially Complied With the Adequate Disclosure Requirements

Under Treasury Regulation § 301.6501(c)-1(f)(2), a transfer will be considered adequately disclosed if the taxpayer provides the following information on a gift tax return or statement attached to it: (i) a description of the gift and consideration received for the gift; (ii) the identities of and relationship between the transferor and transferee; (iii) if the gift is transferred in trust, the trust tax identification number and a description of the terms of the trust; (iv) a detailed description of the method used to determine the fair market value of the gift; and (v) a statement describing any position taken that is contrary to Treasury regulations or revenue rulings published at the time of the transfer. Here, we need to decide only whether Mr. Schlapfer strictly or substantially satisfied requirements (i), (ii), and (iv). A taxpayer will be deemed to have substantially complied with a requirement if it is procedural and the taxpayer fulfilled all other essential purposes of the requirement. *See Am. Air Filter Co.*, 81 T.C. at 719. Therefore, if Mr. Schlapfer fails to strictly comply with a requirement, we will find that he substantially complied with it if he has fulfilled all essential purposes of the requirement. We will look to the gift tax return, the protective filing, all relevant Forms 5471, and the Offshore Entity Statement to determine compliance.

1. Description of the Property and Consideration Received

Assuming the gift is the EMG stock, Mr. Schlapfer has strictly satisfied this requirement. Treasury Regulation §§ 301.6501(c)-1(f)(2)(i) requires that Mr. Schlapfer's gift tax return, or a statement attached to it, provide a description of the transferred property and any consideration he received.[8] The 2006 Instructions for Form 709 instructed taxpayers to "[d]escribe each gift in enough detail so that the property can be easily identified." 2006 Instructions for Form 709, United States Gift (and Generation-Skipping Transfer) Tax Return, at 8. For stock, the instructions specify that the taxpayer should disclose the number of shares and identify whether they are common or preferred. *Id*. Mr. Schlapfer provided the required information via three attachments: the protective filing, the Offshore Entity Statement, and the 2006 Form 5471. On the protective filing attached to the return, Mr. Schlapfer stated that he made a gift of CFC stock valued at $6,056,686. On the Offshore Entity Statement, he stated that "EMG was established by the Taxpayer in 2003, and was beneficially owned by the Taxpayer until July 6, 2006, at which time the Taxpayer gifted his entire interest in EMG to his mother." Lastly, on the 2006 Form 5471, he disclosed the number of and type of EMG shares. Together, these statements provided the IRS with a description of the property.

[8] Mr. Schlapfer transferred his shares of EMG stock for no consideration.

However, if the gift is the UVL Policy, Mr. Schlapfer did not strictly satisfy this requirement. He did not provide any information on his gift tax return, or on documents attached to it, that directly referenced or described a transfer of a life insurance policy. But this failure does not preclude him from satisfying adequate disclosure. As previously mentioned, disclosure is adequate if it is sufficiently detailed to alert the Commissioner to the nature of the transaction so that the decision to select a return for audit is reasonably informed. *Thiessen*, 146 T.C. at 114. And when finalizing the adequate disclosure regulations, Treasury provided "that the absence of any particular item or items would [not] necessarily preclude satisfaction of the regulatory requirements, depending on the nature of the item omitted and the overall adequacy of the information provided." T.D. 8845, 1999-2 C.B at 685. Thus, these "regulatory requirements" are not actually required. A requirement does not have to be satisfied depending on the importance of the requirement and what information is provided by the taxpayer. Furthermore, the Treasury Regulations provide that "[a] transfer *will* be adequately disclosed...only if it is reported in a manner adequate to apprise the [IRS] of the nature of the gift....Transfers reported on the gift tax return as transfers of property by gift will be considered adequately disclosed...if the return...provides the following information." Treas. Reg. § 301.6501(c)-1(f)(2) (emphasis added). The difference between the wording used in these two sentences informs us that the requirements are not mandatory, but act as guidance to taxpayers to inform them on a way to satisfy adequate disclosure. Thus, we must determine whether Mr. Schlapfer's description of the property transferred was sufficient to alert the Commissioner to the nature of the gift.

Mr. Schlapfer provided enough information to satisfy this requirement through substantial compliance. While he may have failed to describe the gift in the correct way (assuming the gift is the UVL Policy), he did provide information to describe the underlying property that was transferred. Mr. Schlapfer asserts that he chose to disclose the assets held in the insurance policy instead of the actual policy because the OVDP required him to disregard entities holding foreign assets. The UVL Policy's value comes primarily from EMG stock, so Mr. Schlapfer's describing the transferred property as EMG stock goes to the nature of the gift. Because this description was sufficient to alert the Commissioner to the nature of the gift, Mr. Schlapfer substantially complied with this requirement.

2. Identity of the Parties[9]

Mr. Schlapfer did not strictly satisfy this requirement. Treasury Regulation § 301.6501(c)-1(f)(2)(ii) requires that Mr. Schlapfer provide the identity of, and his relationship to, each transferee. Mr. Schlapfer has stated various times that he transferred property by gift to his mother, aunt, and uncle. However, the Offshore Entity

Statement states that he “gifted his entire interest in EMG to his mother;” there was no mention of his aunt or uncle. Because his return and documents attached thereto failed to identify his aunt and uncle as transferees, he did not strictly comply with this requirement.

[9] For this requirement, it is immaterial whether the gift is the stock or the life insurance policy; therefore we do not analyze it separately for each gift.

But Mr. Schlapfer substantially complied with this requirement. This requirement was procedural, and a failure to list the identity and relationship of each transferee was not essential to the overall purpose of the requirement, which was to provide the IRS with enough information to understand the nature of the transfer. Mr. Schlapfer’s statement on the Offshore Entity Statement listing his mother as the transferee provided the IRS with enough to understand the relationship between Mr. Schlapfer and the transferee, a member of his family. His failure to provide the names of his aunt and uncle does not make a meaningful difference in understanding the nature of the transfer. Therefore, we find that he substantially complied with the requirement when he identified his mother as the transferee.

3. Description of Method Used to Determine FMV of Gift

Mr. Schlapfer did not strictly satisfy this requirement. Treasury Regulation § 301.6501(c)-1(f)(2)(iv) requires that Mr. Schlapfer provide a detailed description of the method used to determine the fair market value of property transferred, including any financial data (balance sheets, etc. with explanations of any adjustments). Mr. Schlapfer did not provide any statement describing how he determined the fair market value of the gift, regardless of whether it is the EMG stock or the UVL Policy. Therefore, he failed to strictly satisfy this requirement.

However, Mr. Schlapfer substantially complied with this requirement. Assuming the gift is the EMG stock, Mr. Schlapfer provided enough financial information to apprise the Commissioner of the method used to determine its fair market value. The 2006 instructions for Form 709 explained that the purpose of this requirement is to provide the IRS with information on how the taxpayer determined the gift’s fair market value. See 2006 Instructions for Form 709, at 8. The instructions also identified documents that could be submitted to satisfy this requirement. *Id*. (“For stock of close corporations or inactive stock, attach balance sheets, particularly the one nearest the date of the gift, and statements of net earnings or operating results and dividends paid for each of the 5 preceding years.”)

Mr. Schlapfer provided all the documents identified in the instructions. His Forms 5471 for 2004, 2005, and 2006 enclosed balance sheets, statements of net earnings, dividends paid, and operating results. Furthermore, his Offshore Entity Statement stated that “[t]axpayer is taking into account all of the income earned by the accounts underlying EMG in the enclosed Amended U.S. Individual Tax Returns during the years he controlled and beneficially owned EMG.” Although Mr. Schlapfer did not provide all the financial documentation listed in the regulation, he provided the information identified in the 2006 Form 709 instructions, which was enough to show the IRS how he determined the fair market value of the EMG stock. Therefore, he substantially complied with this requirement.

> Furthermore, Mr. Schlapfer substantially complied even if the gift is the UVL Policy. The UVL Policy's principal asset is the EMG stock, and the documents we considered above were enough to apprise the Commissioner of the method used to determine the fair market value of the EMG stock. Because the UVL Policy's value stems primarily from the EMG stock, those same documents can be used to illustrate the method used to determine the fair market value of the UVL Policy. Accordingly, we find that Mr. Schlapfer substantially complied with this requirement.
>
> **V. Conclusion**
>
> Mr. Schlapfer strictly or substantially complied with Treasury Regulation § 301.6501(c)-1(f)(2)(i), (ii), and (iv) by way of his gift tax return, protective filing, Offshore Entity Statement, and Forms 5471. As a result, he adequately disclosed the gift on his 2006 gift tax return, causing the three-year assessment period to commence on November 20, 2013, when he submitted his disclosure package to the OVDP, and end on November 30, 2017 (three years after that date including extensions). Therefore, we conclude that the period of limitations to assess the gift tax expired before the Commissioner issued the notice of deficiency. Accordingly, we will deny the Commissioner's Motion for Summary Judgment and grant Mr. Schlapfer's Cross-Motion for Summary Judgment.

Steve Akers and Ron Aucutt comment on the case at https://www.bessemertrust.com/insights/schlapfer-v-commissioner-tc-memo-2023-65. Their analysis is very helpful (as always).

Note that disclosures made in connection with the OVDP were not necessarily attached to the gift tax return, but the court considered them anyway, given that the gift tax returns were reviewed as part of the examination. In *Bishop v. U.S.*, 338 F.Supp 1336 (N.D. Miss. 1970), *aff'd per curiam* 468 F.2d 950 (5th Cir. 1972), *cert. den.* 10/10/1972, "the Agent charged with the responsibility of examining decedent's Estate Tax Return was fully informed in respect to" the transaction that was later determined to be a gift instead of a qualified disclaimer, but that did not run the statute of limitations for the decedent's gift tax returns; so, be sure to file gift tax returns separately instead of relying on attaching them to the estate tax return.

Consider disclosing a transfer on a gift tax return as a sale that is not taxed as a gift but is disclosed for the sake of completeness, including running the statute of limitations on whether a transaction is an incomplete gift. Reg. § 301.6501(c)-1(f)(4), "Adequate disclosure of non-gift completed transfers or transactions," provides:

> Completed transfers to members of the transferor's family, as defined in section 2032A(e)(2), that are made in the ordinary course of operating a business are deemed to be adequately disclosed under paragraph (f)(2) of this section, even if the transfer is not reported on a gift tax return, provided the transfer is properly reported by all parties for income tax purposes. For example, in the case of salary paid to a family member employed in a family owned business, the transfer will be treated as adequately disclosed for gift tax purposes if the item is properly reported by the business and the family member on their income tax returns. For purposes of this paragraph (f)(4), any other completed transfer that is reported, in its entirety, as not constituting a transfer by gift will be considered adequately disclosed under paragraph (f)(2) of this section only if the following information is provided on, or attached to, the return -

(i) The information required for adequate disclosure under paragraphs (f)(2)(i), (ii), (iii) and (v) of this section; and

(ii) An explanation as to why the transfer is not a transfer by gift under chapter 12 of the Internal Revenue Code.

The description might be along these lines:

> Information relating to this transaction, including an appraisal that considers discounts for lack of marketability and lack of a right to vote, is attached to this gift tax return as Exhibit A and is disclosed under United States Treasury Regulation § 301.6501(c)-1(f)(4). This transfer is not a gift under Chapter 12 of the Internal Revenue Code because it is a bona fide sale for an adequate and full consideration in money or money's worth.

For a formula sale described in part III.B.3 Defined Value Clauses in Sale or Gift Agreements or in Disclaimers, which uses language such as "value as finally determined for federal gift tax purposes," adequate disclosure is required to effectuate that clause. I have the potential donor sign the transfer agreement personally agreeing to file a gift tax return adequately disclosing the transfer.

If the sale is from a beneficiary of a trust to that trust (or vice versa), which may include a beneficiary deemed-owned trust or a spousal limited access trust (SLAT),[7058] additional considerations arise. Any gift to the trust would be an incomplete gift if beneficiary has certain interests in the trust life and upon death.[7059] It has been suggested that the gift tax statute of limitations would not run;[7060] my main concern is whether any such gift being an incomplete gift would make the sale not constitute a "completed transfer" under Reg. § 301.6501(c)-1(f)(4). Whether that argument is correct is up to the reader to decide. If one is concerned about that argument, one might consider including a gift of all or a portion of the transferred asset to a

[7058] For a SLAT, see part III.B.2.i.xv Sale to Trust Created by Spouse: An Alternative Way to Have a Trust Benefitting Client.

[7059] Reg. § 301.6501(c)-1(f)(5) discusses disclosing incomplete gifts. For what is an incomplete gift, see Reg. § 25.2511-2.

[7060] Mulligan, "Searching for Transfer Tax Finality With Sales to BIDITs," *Journal of Taxation* (Nov. 2013), criticized reporting sale treatment as causing finality. He asserts that reporting the sale as a completed gift misleads the IRS because any gift would, in fact, be incomplete. I disagree with the criticism, which perhaps was directed against statements that the gift is complete. The reporting I do does not mention whether the gift is complete or incomplete; it merely states that a sale was made that the IRS can audit and is accompanied by copies of the trust and transactional documents. I believe that disclosing the sale puts the IRS on notice that a transfer was made that can be audited and does not discourage the IRS from auditing the way that a disclosure under Reg. § 301.6501(c)-1(f)(5) would. Furthermore, that author suggested that the trust include language providing that any beneficial interest and any inter vivos or testamentary power of appointment conferred on the beneficiary does not apply to any assets that are ultimately determined for federal gift tax purposes to have been transferred by the beneficiary to the trust for less than adequate and full consideration. Such a provision would eliminate any interest or power in assets that the transfers to the trust that would cause the transfer to be an incomplete gift, which would also undermine the purpose of a sale to that trust.
More on point is Reg. § 301.6501(c)-1(f)(4), which applies only to a "completed transfer," without defining or otherwise describing what a "completed transfer" is. Is a sale to a trust a "completed transfer" whenever the sale completely transfers the property? The article implicitly assumes that completed transfer requires that, if the fair market value of the property transferred exceeds the sales price, the excess must be a completed gift.

donee as to whom a gift would be completed, generally by limiting the beneficiary's power to appoint at death.[7061] If the trust is well-funded (more likely to be the case for a SLAT), instead of using a formula sale consider the trust paying the beneficiary more than the estimated fair market value, with the idea that the sale price will be adequate even with significant audit adjustments and any excess of the sale price over the value constituting a distribution. The latter may be estate-tax-inefficient in that more assets are now in the beneficiary's estate, but presumably the beneficiary's or grantor's estate eventually may be depleted by the grantor trust income tax liability.

Special rules apply to disclosing transfers under Chapter 14.[7062]

If one fails to adequately disclose, one can file a supplemental gift tax return with adequate disclosure to get the statute of limitations running.[7063] In Letter Ruling 201638017, a gift in trust was reported as an outright gift to the primary beneficiary, and the donor was allowed to file a supplemental gift tax return retroactively allocating GST exemption to the trust.

It is not unusual to see a draft appraisal omitting the date of transfer and including what might be an incomplete description of the property (value per share rather than valuing the block of stock actually transferred). If one uses a defined value clause determining the price of sold property or the quantity of ownership interest transferred,[7064] one can readily have the appraisal finalized after the transfer to include the date of transfer and provide a full description of the property transferred. Also, it is not unusual for financial information to be available only through the end of the month or quarter preceding the sale, in which case management would represent no material changes in operations between the end of that month or quarter and the date of the transfer, and the appraisal is provided as of the date of the transfer (as stated in Reg. § 301.6501(c)-1(f)(3)(ii)(A) above) rather than as of month-end or quarter-end. In light of *Schlapfer*, an appraisal valuing one share that is attached in support of a reporting a fully disclosed bloc of shares that is described on the return may suffice, but I would rather use the process described in this paragraph than argue substantial compliance.

Which statute of limitations (SOL) runs due to adequate disclosure? An exception to the general 3-year rule is Code § 6501(e)(2), "Estate and gift taxes," provides:

> In the case of a return of estate tax under chapter 11 or a return of gift tax under chapter 12, if the taxpayer omits from the gross estate or from the total amount of the gifts made during the period for which the return was filed items includible in such gross estate or such total gifts, as the case may be, as exceed in amount 25 percent of the gross estate stated in the return or the total amount of gifts stated in the return, the tax may be assessed, or a proceeding in court for the collection of such tax may be begun without assessment, at any time within 6 years after the return was filed. In determining the items omitted from the gross estate or the total gifts, there shall not be taken into account any item which is omitted from the gross estate or from the total gifts stated in

[7061] See part III.B.2.i.xviii Sample Beneficiary Deemed-Owned Trust (fully completed gift) and text accompanying fn. 6144, found in part III.A.3.e.vi.(c) Required Structure for a Sale to a QSST (Including Possible Pitfalls).
[7062] See text accompanying fn. 7271, found in part III.B.7 Chapter 14.
[7063] Rev. Proc. 2000-34.
[7064] See the other provisions of this part III.B.3 Defined Value Clauses in Sale or Gift Agreements or in Disclaimers.

> the return if such item is disclosed in the return, or in a statement attached to the return, in a manner adequate to apprise the Secretary of the nature and amount of such item.

Reg. § 301.6501(e)-1(b)(2) elaborates:

> Further, there shall not be taken into account in computing the 25 percent omission from the gross estate stated in the estate tax return or from the total gifts stated in the gift tax return, any increases in the valuation of assets disclosed on the return.

Estate of Dillingham v. Commissioner, 903 F.2d 760 (10th Cir. 1990) gives the IRS the burden to establish that the 6-year limitation period applies:

> Appellant first argues that, because the respondent issued the notice of deficiency in the estate tax case after the expiration of the three-year limitation period, respondent has the burden to establish that the alternate six-year limitation period applies.[3] We agree. To obtain the extended limitation period of § 6501(e)(2), respondent must show that omitted amounts were properly includible in the gross estate and that an amount in excess of twenty-five percent of the gross estate was omitted. See, *Weikel v. Commissioner*, 51 T.C.M. (CCH) 432 (1986); *Reis v. Commissioner*, 1 T.C. 9 (1942), *aff'd*, 142 F.2d 900 (6th Cir. 1944). Accordingly, respondent in this case must show that the six checks delivered by the decedent on December 24, 1980, were properly includible in decedent's gross estate. However, as we discuss below, we conclude that respondent's burden was satisfied as a matter of law through the facts as stipulated.
>
> [3] Appellant made this same argument before the tax court in its first motion for reconsideration. The tax court agreed with appellant, but found that respondent had met the burden. Memorandum Sur Order at 2-3.

Do omitted charitable gifts count toward the 15% test? 2022 Form 709 Instructions provide:

> If you are required to file a return to report noncharitable gifts and you made gifts to charities, you must include all of your gifts to charities on the return.

One might consider the cost-benefit in reporting small outright charitable gifts if they are not material to the 25% calculation.

Note that running the gift tax SOL does not run the SOL on the trust's being exempt from GST tax. To do the latter, the trustee makes a distribution to a skip person and files the appropriate forms to run the statute of limitations on the GST inclusion ratio.[7065]

III.B.5. Estate Tax Issues

Estate tax issues include general valuation problems, deferral under Code § 6166, and marital deduction considerations and related planning.

[7065] See part 0 See Sheppard, "No Notice, No Examination, No Problem: IRS Further Deprives Appraisers of Procedural Protections," *Taxation of Exempts* (WG&L) (1/2022).
Sale from One Trust to Another, especially the text accompanying fns. 7005.

III.B.5.a. Alternate Valuation Date

Code § 2032, "Alternate Valuation," may reduce estate tax if values decrease within 6 months after death. Code § 2032(a), "General," provides:

> The value of the gross estate may be determined, if the executor so elects, by valuing all the property included in the gross estate as follows:
>
> (1) In the case of property distributed, sold, exchanged, or otherwise disposed of, within 6 months after the decedent's death such property shall be valued as of the date of distribution, sale, exchange, or other disposition.
>
> (2) In the case of property not distributed, sold, exchanged, or otherwise disposed of, within 6 months after the decedent's death such property shall be valued as of the date 6 months after the decedent's death.
>
> (3) Any interest or estate which is affected by mere lapse of time shall be included at its value as of the time of death (instead of the later date) with adjustment for any difference in its value as of the later date not due to mere lapse of time.

Code § 2632(b), "Special rules," coordinates deductions with the alternate valuation.

Code § 2032(c), "Election must decrease gross estate and estate tax," provides:

> No election may be made under this section with respect to an estate unless such election will decrease –
>
> (1) the value of the gross estate, and
>
> (2) the sum of the tax imposed by this chapter and the tax imposed by chapter 13 with respect to property includible in the decedent's gross estate (reduced by credits allowable against such taxes).

Code § 2032(d), "Election," provides:

> (1) *In general*. The election provided for in this section shall be made by the executor on the return of the tax imposed by this chapter. Such election, once made, shall be irrevocable.
>
> (2) *Exception*. No election may be made under this section if such return is filed more than 1 year after the time prescribed by law (including extensions) for filing such return.

Consistent with Code § 2032(d)(2), Letter Ruling 202019015 granted an extension of time to elect alternative valuation when:

> Attorney advised the personal representative of the potential benefits of making an alternate valuation election and the personal representative intended to make such election on Form 706. However, the alternate valuation date appraisals were not completed by the extended due date of the Form 706. On Date 2, Decedent's estate timely filed Form 706 without making the election for alternate valuation under § 2032.

> On Date 3, Decedent's estate filed a supplemental Form 706, attached all appraisals required, paid the reported tax due, and elected alternate valuation under § 2032.

Letter Ruling 202329001 granted an extension of time to elect alternate valuation:

> Decedent's estate timely filed Form 706 on Date 2. Tax Professional did not advise Decedent's estate of its option to elect alternate valuation under § 2032 on the Form 706, and, consequently, Decedent's estate did not elect alternate valuation under § 2032 on the Form 706.
>
> On or about Date 3, which was within one year after the due date of the Form 706, Decedent's estate filed a supplemental Form 706 making the alternate valuation election under § 2032. Subsequently, Decedent's estate submitted this request for an extension of time under § 301.9100-3 to make the election.

III.B.5.b. Promissory Notes

Notes or other claims held by the decedent are likewise included even though they are cancelled by the decedent's will.[7066]

[7066] Reg. § 20.2033-1(b).

Although for gift tax purposes a note's value generally is equal to its face amount under Code § 7872 principles,[7067] for estate tax purposes valuation discounts might apply.[7068] Reg. § 20.2031-4 (issued 6/23/1958) provides:

[7067] *Frazee v. Commissioner*, 98 T.C. 554 (1992), held that Code § 7872, not Code § 483(e) or 1274, applies in valuing a promissory note in a transaction that was part gift and part sale. See part III.B.1.c.i Gifts with Consideration – Bargain Sales.

Estate of True v. Commissioner, T.C. Memo. 2001-167, held:

> The deferred payment arrangement allowed 3 months to pass between the dates Jean True's sales were completed for tax purposes and the payment date. For this reason, respondent asserts that the deferred payment arrangement should be considered to be a loan (from Jean True to her sons) of the $13,298,978 sales price for that 3-month period. Because Jean True did not charge or receive any interest on this amount, respondent further asserts that the deferred payment arrangement was a below-market gift loan to which section 7872 applies.
>
> Petitioners argue that even if Jean True's sales were completed on the notice dates (as we have decided), section 7872 cannot apply to the deferred payment arrangement. The buy-sell agreements required Jean True's sales to be consummated within 6 months after the notice dates. As a result, if the deferred payment arrangement were a "contract for the sale or exchange of any property" to which section 483 ordinarily could apply, no portion of the sales price would be recharacterized as interest under that section. See sec. 483(a), (c)(1) (although sec. 483 generally applies to payments made under any contract for the sale or exchange of any property, it does not apply unless some contract payments are due more than 1 year after the sale or exchange). Similarly, if the deferred payment arrangement were a "debt instrument given in consideration for the sale or exchange of property" to which section 1274 ordinarily could apply, no portion of the sales price would be recharacterized as original issue discount (OID) under that section. See sec. 1274(c)(1) (although sec. 1274 generally applies to any debt instrument given in consideration for the sale or exchange of property, it does not apply unless some payments under the debt instrument are due more than 6 months after the date of the sale or exchange).
>
> Petitioners assert that because no portion of the $13,298,978 aggregate sales price would be recharacterized as interest or OID under section 483 or 1274, the deferred payment arrangement cannot be treated as a below-market loan subject to section 7872. We disagree. In *Frazee v. Commissioner*, 98 T.C. 554 (1992), we considered the relationship of sections 483, 1274, and 7872 for gift tax purposes and rejected arguments quite similar to those made by petitioners in the case at hand.
>
> The taxpayers in Frazee sold property to family members in exchange for a note. The interest rate on the note, although less than a market rate, was sufficient to avoid the recharacterization of any part of the stated principal of the note as interest under section 483. The Frazee taxpayers argued that as a result, the note could not be a "below-market loan" subject to section 7872. We disagreed. In our view, sections 483 and 1274 were enacted to ensure the proper characterization of payments as principal or interest for income tax purposes. By contrast, the key issue for gift tax purposes is the valuation of all payments (both principal and interest). See *Krabbenhoft v. Commissioner*, 94 T.C. 887, 890 (1990), *affd.* 939 F.2d 529 (8th Cir. 1991). We held in *Frazee* that sections 483 and 1274 simply were not relevant for that gift tax purpose.
>
> The Commissioner's primary position in Frazee was that the value of the intrafamily note for gift tax purposes should be its "present value" under section 7872 (i.e., a value determined by reference to the applicable Federal rate), rather than its fair market value under general tax principles (i.e., a value determined by reference to market interest rates). Although we found this position to be "anomalous" because it was contrary to the traditional fair market value approach, *Frazee v. Commissioner*, *supra* at 590, we nevertheless accepted the Commissioner's treatment of the intrafamily note as a below-market gift loan subject to section 7872. See *id.*; *cf. Blackburn v. Commissioner*, 20 T.C. 204 (1953).
>
> Petitioners correctly observe that section 7872(f)(8) provides that section 7872 does not apply to any loan to which section 483 or 1274 applies. This prohibition is not applicable to the case at

The fair market value of notes, secured or unsecured, is presumed to be the amount of unpaid principal, plus interest accrued to the date of death, unless the executor establishes that the value is lower or that the notes are worthless. However, items of interest shall be separately stated on the estate tax return. If not returned at face value, plus accrued interest, satisfactory evidence must be submitted that the note is worth less than the unpaid amount (because of the interest rate, date of maturity, or other cause), or that the note is uncollectible, either in whole or in part (by reason of the insolvency of the party or parties liable, or for other cause), and that any property pledged or mortgaged as security is insufficient to satisfy the obligation.

---

hand. Technically, neither section 483 nor section 1274 applies to the deferred payment arrangement, because the buy-sell agreements required payment to be made within 6 months after the notice dates. See sec. 483(c)(1) (sec. 483 does not apply where no payment is due more than 1 year after the sale or exchange); sec. 1274(c)(1) (sec. 1274 only applies where at least one payment is due more than 6 months after the sale or exchange).

Petitioners also observe that certain proposed section 7872 regulations state that section 7872 does not apply to any loan given in consideration for the sale or exchange of property, within the meaning of sections 483(c)(1) and 1274(c)(1), even if the rules of those sections do not technically apply by reason of safe harbors or other exceptions. See sec. 1.7872-2, Proposed Income Tax Regs., 50 Fed. Reg. 33553, 33557 (Aug. 20, 1985). We note, however, that although proposed regulations constitute a body of informed judgment on which courts may draw for guidance, see *Frazee v. Commissioner*, *supra* at 582, we accord them no more weight than a litigating position, see *KTA-Tator, Inc. v. Commissioner*, 108 T.C. 100, 102-103 (1997); *F.W. Woolworth Co. v. Commissioner*, 54 T.C. 1233, 1265-1266 (1970).

The Commissioner proposed section 1.7872-2, Proposed Income Tax Regs., *supra*, in 1985, and has never adopted it in final form. The Commissioner has since asserted that section 7872 can apply to loans given in consideration for the sale or exchange of property, in both *Frazee v. Commissioner*, *supra*, and the case at hand. Moreover, our acceptance in *Frazee* of the Commissioner's position that section 7872 applied to the intrafamily note necessarily rejected the position taken in the proposed regulation.

For all these reasons, consistent with our decision in *Frazee*, we hold that the deferred payment arrangement may be a below-market loan subject to section 7872, even though no part of the sales price would be treated as interest or OID under sections 483 and 1274.[90]

[90] The Court of Appeals for the Seventh Circuit held, in *Ballard v. Commissioner*, 854 F.2d 185 (7th Cir. 1988), *revg.* T.C. Memo. 1987-128, that a note should have no gift tax consequences where it stated interest at the "safe harbor" rate referred to by sec. 483 and no portion of the note's stated principal amount would be recharacterized as interest for that reason. In *Krabbenhoft v. Commissioner*, 94 T.C. 887 (1990), *affd.* 939 F.2d 529 (8th Cir. 1991), we reconsidered our position on the relevance of sec. 483 for gift tax purposes in light of the reversal of our Ballard decision, and decided not to follow that reversal except where required by the *Golsen* rule (see *Golsen v. Commissioner*, 54 T.C. 742 (1970), *affd.* 445 F.2d 985 (10th Cir. 1971)). Moreover, the Court of Appeals for the Tenth Circuit, to which an appeal of this case would lie, has agreed with our view, as affirmed by the Court of Appeals for the Eighth Circuit in *Krabbenhoft*, that sec. 483 is not relevant for gift tax valuation purposes. See *Schusterman v. United States*, 63 F.3d 986 (10th Cir. 1995).

[7068] Blattmachr et al, "How Low Can You Go? Some Consequences of Substituting a Lower AFR Note for a Higher AFR Note," *Journal of Taxation*, Vol. 109, No. 01 (7/2008). Informal views of another excellent commentator are in my document number 5780917. See also Letter Ruling 9240003 (valuing notes based on the borrower's ability to repay them), based on *Estate of Harper v. Commissioner*, 11 T.C. 717 (1948), *acq.* 1949-1 C.B. 2.

Citing Reg. § 20.2031-4, Rev. Rul. 67-276 provides:

> Mortgages and mortgage participation certificates come within the scope of the above regulation. The presumption that their face value is their true value governs unless the representative of the estate submits convincing evidence to the contrary.
>
> If it is contended that the actual value of mortgages or mortgage participation certificates is less than their face value, pertinent factors to be taken into consideration in fixing the correct value include the valuation of real estate and any collateral covered by the mortgages, arrears in taxes and interest, gross and net rentals, foreclosure proceedings, assignment of rents, prior liens or encumbrances, present interest yield, over-the-counter sales, bid and asked quotations, and etc. The existence of an over-the-counter market for such securities and the quotations and opinions of value furnished by brokers and real estate appraisers cannot be accepted as conclusive evidence of the value of such securities. Such sales and bid and asked quotations are merely items to be considered with other evidence in fixing values.
>
> In valuing unit mortgages consideration will be given first to the value of the property securing the mortgages, applying the same factors as are used in fixing the valuation of real estate owned in fee. Where the mortgage is amply secured, the value will be determined to be its face value plus accrued interest to the date of death. Where the security is insufficient, the mortgage will be valued upon the basis of the fair market value of the property less back taxes, estimated foreclosure expenses, and, where justified, the expense of rehabilitation. If the mortgage is not affected by moratorium laws, the mortgagee's recourse against the mortgagor personally will be taken into consideration. The valuation of such assets is a question of fact and the burden of proof is upon the estate to overcome the presumption that the face value is the true value where a lower value is sought to be established.

Citing Reg. § 20.2031-4 and Rev. Rul. 67-276, TAM 8229001 provides:

> Here the decedent had no right to the payment of principal or interest until each yearly installment became due. Similarly, the estate does not have the right to demand payment of the full face value but has only the right to the yearly installments.
>
> The effect of section 20.2031-4 is to recognize (1) that any principal amount payable in the future normally carries an interest accrual with it and (2) that when the stated interest rate on the obligation is 'fair' (equal to the current market rate of interest for such type of obligation), the total PRESENT VALUE of all payments of principal and interest will equal the principal amount of the obligation. However, if the stated rate of interest on the note is less than the current market rate of interest, the present value of the amounts payable is accordingly less.
>
> While it is true that the value of the security is an important factor in placing a value on debt obligations, the rate of return and the length of time to maturity are also important factors. When interest rates increase, the effective rate of return on existing debt obligations correspondingly decreases. Thus, the existing obligations decrease in value because their effective rate of return will be less than the rate of return on just-issued debt obligations bearing interest at the now higher rate of interest.

> The effect that changes in the market rate of interest have on the market value of debt obligations is clearly seen in the market for outstanding United States Treasury Notes or Bonds. A U.S. government bond bearing 8 per cent interest issued at par in 1978 was worth substantially less a year later, when the interest rates on newly-issued U.S. government bonds had risen to 10 per cent or higher. Moreover, the security factor for United States Bonds or Notes is considered the highest possible in the marketplace.
>
> Although there is a sentence in Rev. Rul. 67-276 that indicates a mortgage that is amply secured must be valued at face value, the sentence must be read in context with the entire Ruling and not standing alone. When so considered, we find that the meaning of Rev. Rul. 67-276 is that the proper way to value notes and mortgages is to consider all available financial data and all relevant factors affecting the fair market value. Thus, one factor alone, such as collateral, is insufficient to set a proper value on a note or mortgage. If the collateral is ample and all other factors indicate face value, then the mortgage or note must be valued at face value. Although not stated in words, Rev. Rul. 67-276 implicitly assumes that at the date of death (or alternate valuation date) the mortgage will bear an adequate interest rate, that is, approximately the current interest rate. Understood in this light, the Ruling does not and can not change the provision of section 20.2031-4 that, although there is a presumption of face value, the presumption may be rebutted by convincing evidence to the contrary. A finding of ample security, by itself alone, does not change this rule.
>
> **Conclusion**
>
> A promissory note receivable that is fully secured is not necessarily to be valued under section 2031 at face value.
>
> The value of the note depends upon an analysis of all available data and all relevant factors affecting the value. This determination is a factual one which is not made by this office.

However, discounts may generate the equivalent of taxable interest when the principal is collected. A promissory note[7069] whose principal exceeds its basis immediately after its acquisition by the taxpayer is a “market discount bond;” that excess is “market discount.”[7070]

Note that Code § 1278(a)(1)(D)(i), “In general,” provides:[7071]

> Except as otherwise provided in this subparagraph or in regulations, the term “market discount bond” shall not include any bond acquired by the taxpayer at its original issue.

[7069] Code § 1278(a)(3), “Bond,” provides:

> The term “bond” means any bond, debenture, note, certificate, or other evidence of indebtedness.

[7070] Code § 1278(a)(2)(A), “In general,” provides:

> The term “market discount” means the excess (if any) of -
> (i) the stated redemption price of the bond at maturity, over
> (ii) the basis of such bond immediately after its acquisition by the taxpayer.

[7071] The legislative history provides:

> The bill clarifies that, except as provided by statute or by regulation, no market discount is created on the original issuance of a bond.

Query whether a note involving a grantor trust that terminates by reason of the deemed owner's death is deemed to have been issued to the holder as of the deemed owner's death or whether a note held by an estate is deemed issued by the estate because the estate starts over as a new taxpayer.

Note that Code § 1278(a)(1)(D)(iv), "Treatment of certain transferred basis property," provides:[7072]

> For purposes of clause (i), if the adjusted basis of any bond in the hands of the taxpayer is determined by reference to the adjusted basis of such bond in the hands of a person who acquired such bond at its original issue, such bond shall be treated as acquired by the taxpayer at its original issue.

Code § 1276(a), "Ordinary income," provides:

> (1) *In general*. Except as otherwise provided in this section , gain on the disposition of any market discount bond shall be treated as ordinary income to the extent it does

---

Under the bill, two statutory exceptions are provided. The first exception relates to bonds that are part of an issue that is publicly offered. Because the Act provides that the issue price of publicly offered bonds (other than bonds issued for property) is the price at which a substantial amount of the bonds are sold, the OID provisions are inapplicable to a portion of the OID with respect to bonds acquired on original issue by large investors at "wholesale" prices (at deeper discounts than those available to "retail" customers). Under the bill, market discount is created on original issuance of a bond if the holder has a cost basis determined under section 1012, and such basis is less than the issue price of the bond. The difference between the holder's issue price and basis is treated as market discount.

The second statutory exception applies to a bond that is issued in exchange for a market discount bond pursuant to a plan of reorganization. This exception is intended to prevent the holder of a market discount bond from eliminating the taint of unaccrued market discount by swapping the bond for a new bond (e.g., in a recapitalization). Solely for purposes of the interest characterization rule, however, this exception is inapplicable to a bond issued in exchange for a pre-enactment market discount bond where term and interest rate of the new bond is identical to that of the old bond.

[7072] The legislative history provides:

The bill clarifies that, except as provided by statute or by regulation, no market discount is created on the original issuance of a bond.

Under the bill, two statutory exceptions are provided. The first exception relates to bonds that are part of an issue that is publicly offered. Because the Act provides that the issue price of publicly offered bonds (other than bonds issued for property) is the price at which a substantial amount of the bonds are sold, the OID provisions are inapplicable to a portion of the OID with respect to bonds acquired on original issue by large investors at "wholesale" prices (at deeper discounts than those available to "retail" customers). Under the bill, market discount is created on original issuance of a bond if the holder has a cost basis determined under section 1012, and such basis is less than the issue price of the bond. The difference between the holder's issue price and basis is treated as market discount.

The second statutory exception applies to a bond that is issued in exchange for a market discount bond pursuant to a plan of reorganization. This exception is intended to prevent the holder of a market discount bond from eliminating the taint of unaccrued market discount by swapping the bond for a new bond (e.g., in a recapitalization). Solely for purposes of the interest characterization rule, however, this exception is inapplicable to a bond issued in exchange for a pre-enactment market discount bond where term and interest rate of the new bond is identical to that of the old bond.

not exceed the accrued market discount on such bond. Such gain shall be recognized notwithstanding any other provision of this subtitle.

(2) *Dispositions other than sales, etc.* For purposes of paragraph (1), a person disposing of any market discount bond in any transaction other than a sale, exchange, or involuntary conversion shall be treated as realizing an amount equal to the fair market value of the bond.

(3) *Treatment of partial principal payments*.

(A) *In general*. Any partial principal payment on a market discount bond shall be included in gross income as ordinary income to the extent such payment does not exceed the accrued market discount on such bond.

(B) *Adjustment*. If subparagraph (A) applies to any partial principal payment on any market discount bond, for purposes of applying this section to any disposition of (or subsequent partial principal payment on) such bond, the amount of accrued market discount shall be reduced by the amount of such partial principal payment included in gross income under subparagraph (A).

(4) *Gain treated as interest for certain purposes*. Except for purposes of sections 103, 871(a) ,881, 1441, 1442, and 6049 (and such other provisions as may be specified in regulations), any amount treated as ordinary income under paragraph (1) or (3) shall be treated as interest for purposes of this title.

Given that federal[7073] and state income tax rates tend to exceed estate tax rates, one might actually pay more tax overall by pursuing this strategy – in addition to angering an IRS examiner when one takes full credit for the note for gift tax purposes and reports a lower value for estate tax purposes.

[7073] Including the Code § 1411 tax on net investment income; see part II.I 3.8% Tax on Excess Net Investment Income.

A gift[7074] or bequest[7075] of a promissory note to the borrower usually would not result in cancellation of debt income.

See also part III.B.1.a.i.(d) Refinancing or Cancelling Loans.

III.B.5.c. Income Payable to Decedent or Assets Included in Estate

Interest and rents accrued at the date of the decedent's death constitute a part of the gross estate.[7076]

Regarding dividends:

[7074] *Bosse v. Commissioner*, T.C. Memo. 1970-355. For a discussion of not only intra-family but also commercial cases treating the cancellation of loans as income-tax-free gifts, see Bittker & Lokken, ¶7.4. Spurious Cancellations of Indebtedness, *Federal Taxation of Income, Estates, and Gifts* (WG&L). What is the result when a trust holding a promissory note merges with the trust that owes the note? Although it did not address this issue, Letter Ruling 200552009 held:

> It is consistent with the Supreme Court's opinion in *Cottage Savings* to find that the interests of the beneficiaries of the New Trusts will not differ materially from their interests in Trust 4, Trust 2, Trust 3 and Trust 4 before the merger and division. Each beneficiary will continue to hold, through his or her interest in a New Trust, the same beneficial interest in each asset of Trust 4, Trust 2, Trust 3 and Trust 4 that he or she held before the merger and division, and each interest in the divided trust will contain substantially the same terms. Accordingly, the proposed trust merger and division will not result in a material difference in kind or extent of the legal entitlements, and no gain or loss is recognized on the trust merger and division by any trust or trust beneficiary for purposes of § 1001(a).

Note that the ruling addressed Code § 1001(a), regarding gain on the sale or exchange of assets, and did not address Code § 61(a)(12), Income from discharge of indebtedness.

[7075] Letter Ruling 9240003 held:

> A testamentary cancellation of any intrafamily debt is an example of the detached and disinterested generosity . . . affection, respect, admiration, charity or like impulses that characterize a gift excludable from the recipient's income. *See, Commissioner v. Duberstein*, 363 U.S. 278, 285 (1960). It is well settled that cancellation of a debt can be the means of effecting a gift. *See, e.g., Helvering v. American Dental*, 318 U.S. 322 (1943), which holds that where a creditor gratuitously forgives a debt, the forgiveness is a gift and not income. *Compare Commissioner v. Jacobson*, 336 U.S. 28 (1949), which holds that where a creditor cancels a debt involuntarily in an arm's length setting, the cancellation is income and not a gift. A testamentary cancellation of a debt owing to the decedent can similarly be the means of effecting a gift in the form of a bequest.
>
> The issue is primarily a question of fact, and under some circumstances -- for example, where donative intent is absent -- a testamentary cancellation of a note may result in discharge of indebtedness income. In some circumstances, other requirements of making a testamentary gift may not be met. *See Bosse v. Commissioner*, T.C. Memo. 1970-355, which involved, among other issues, whether certain actions and statements of the decedent effected a testamentary gift under state law. However, in this case, there is no evidence that anything other than donative intent was involved in the cancellation of the note. Therefore, the cancellation qualifies as a testamentary bequest under section 102 of the Code.
>
> Further, the estate would not realize cancellation-of- indebtedness income, because the estate was never an obligor on the note.
>
> Accordingly, the decedent's cancellation of the note was in the nature of a testamentary bequest excludable from gross income under section 102 of the Code rather than a discharge of a debt giving rise to discharge of indebtedness income under section 61(a)(12).

[7076] Reg. § 20.2033-1(b).

- Dividends declared on publicly-traded shares of stock before the decedent's death but payable to stockholders of record on a date after the decedent's death are not includible in the decedent's gross estate.[7077] However, if the stock is selling "ex-dividend" on the date of the decedent's death, the amount of the dividend is added to the ex-dividend quotation in determining the fair market value of the stock as of the date of the decedent's death.[7078]

- Dividends payable to the decedent or estate, by reason of the fact that on or before the date of the decedent's death the decedent was a stockholder of record (but which have not been collected at death), constitute a part of the gross estate.[7079] However, the dividends need to have been declared before death to be includible.[7080]

For purposes of the alternate valuation rules, Reg. § 20.2032-1(d)(4) provides:

> *Stock of a corporation*. Shares of stock in a corporation and dividends declared to stockholders of record on or before the date of the decedent's death and not collected at the date of death constitute "included property" of the estate. On the other hand, ordinary dividends out of earnings and profits (whether in cash, shares of the corporation, or other property) declared to stockholders of record after the date of the decedent's death are "excluded property" and are not to be valued under the alternate valuation method. If, however, dividends are declared to stockholders of record after the date of the decedent's death with the effect that the shares of stock at the subsequent valuation date do not reasonably represent the same "included property" of the gross estate as existed at the date of the decedent's death, the dividends are "included property", except to the extent that they are out of earnings of the corporation after the date of the decedent's death. For example, if a corporation makes a distribution in partial liquidation to stockholders of record during the alternate valuation period which is not accompanied by a surrender of a stock certificate for cancellation, the amount of the distribution received on stock included in the gross estate is itself "included property", except to the extent that the distribution was out of earnings and profits since the date of the decedent's death. Similarly, if a corporation, in which the decedent owned a substantial interest and which possessed at the date of the decedent's death accumulated earnings and profits equal to its paid-in capital, distributed all of its accumulated earnings and profits as a cash dividend to shareholders of record during

---

[7077] Rev. Rul. 54-399, citing *Estate of George McNaught Lockie v. Commissioner*, 21 T.C. 64 (1953) (a reviewed decision), *acq.* 1954-1 C.B. 5.
[7078] Reg. § 20.2031-2(i), which regulation was upheld as valid by *Estate of McNary v. Commissioner*, 47 T.C. 467 (1967). Presumably, this reference to selling ex-dividend has its roots in Rev. Rul. 54-399, which applied that rule to stock that is being traded on an exchange. If the decedent dies on a weekend and stocks began selling ex-dividend on the trading day immediately after death, the amount of the dividend is added to the post-mortem price that is being averaged. Rev. Rul. 68-610.
[7079] Reg. § 20.2033-1(b), which regulation was upheld as valid by *Estate of McNary v. Commissioner*, 47 T.C. 467 (1967).
[7080] A rule including dividends declared after death would make no sense, in that only rights that exist at death are measured. However, a very close reading of Reg. § 20.2033-1(b) is required for this result:

> Interest and rents accrued at the date of the decedent's death constitute a part of the gross estate. Similarly, dividends which are payable to the decedent or his estate by reason of the fact that on or before the date of the decedent's death he was a stockholder of record (but which have not been collected at death) constitute a part of the gross estate.

Similarly implies that the dividends are accrued the way that interest and rents were accrued. A dividend is not accrued until it is declared. Therefore, a dividend must be declared before it is includible under Reg. § 20.2033-1(b).

the alternate valuation period, the amount of the dividends received on stock includible in the gross estate will be included in the gross estate under the alternate valuation method. Likewise, a stock dividend distributed under such circumstances is "included property".

Also, where an estate holds publicly-traded stocks selling ex-dividend on the alternate valuation date, and that date comes after a declaration of dividends, but before the record date, the value of the stock includes the amount of the dividends declared.[7081]

Parts of Code § 2041, dealing with a general power of appointment causing estate inclusion, are discussed in part II.H.2.k Taxable Termination vs. General Power of Appointment vs. Delaware Tax Trap.

III.B.5.d. Farmland or Other Closely-Held Business Property

Code § 2032A allows for using a reduced value for real property used as a farm for farming purposes or used in a trade or business other than farming. The estate tax value applies for date-of-death income tax basis determinations as well.[7082]

For the interplay of Code § 2032A with marital deduction issues, see TAMs 8240015 and 8314005.[7083]

The aggregate decrease in the value of qualified real property taken into account for estate tax purposes with respect to any decedent is limited to $750,000, indexed for post-1997 inflation.[7084] The 2014 limitation was $1,090,000.[7085]

Given this limitation on the valuation reduction, if it appears that the surviving spouse's estate will (or perhaps might) be subject to estate tax, consider making the Code § 2032A election on the first spouse's estate tax return so that two Code § 2032A reductions can be made.

[7081] *Estate of Fleming v. Commissioner*, T.C. Memo. 1974-307. Rev. Rul. 60-124 held:

> … in the determination of the value of a decedent's gross estate, dividends declared before death, on stock includible in the gross estate, payable to stockholders of record after the date of the decedent's death must be considered in making an adjustment in the ex-dividend quotation of the stock at the date of the decedent's death. Such dividends may not be included in the gross estate under the alternate method of valuing the gross estate either as a separate asset or as an adjustment of the ex-dividend quoted value of the stock as of one year after the date of the decedent's death or as of some intermediate date.
>
> Under the alternate method of valuing the gross estate, stock includible in the gross estate and selling ex-dividend is to be valued at its ex-dividend quoted selling price as of one year after the date of the decedent's death or at any intermediate valuation date, increased by the amount of dividends declared on the stock during the alternate valuation period payable to stockholders of record subsequent to the date which is one year after the date of the decedent's death or such intermediate date. No part of the value so determined is deemed to be excluded property in determining the value of the gross estate.

[7082] Code § 1014(a)(3); *Van Alen v. Commissioner*, T.C. Memo. 2013-235 (beneficiaries were barred from contesting alternate valuation, especially with the estate tax statute of limitations having expired; 20% accuracy-related penalty imposed).

[7083] ACTEC Fellow Ed Hertenstein procured TAM 8314005.

[7084] Code § 2032A(a)(3).

[7085] Rev. Proc. 2013-35, Section 3.33.

However, the trade-off between a known basis reduction and a possible estate tax reduction might require a difficult judgment call.

A Code § 2032A election may be made on a late Form 706, so long as it is the first estate tax return filed for that decedent. *U.S. v. Parks*, 130 A.F.T.R.2d 2022-6492 (E.D. Mich. 11/18/2022).

III.B.5.e. Estate Tax Deferral or Financing; Tax Liens

III.B.5.e.i. Overview of Discretionary Extensions Under Section 6161

Use IRS Form 4768 to request the extensions of time to pay described below.[7086]

III.B.5.e.i.(a). Extensions for Tax Shown on the Return

Code § 6161(a)(2) provides for tax reported by the executor:

> The Secretary may, for reasonable cause, extend the time for payment of—
>
> (A) any part of the amount determined by the executor as the tax imposed by chapter 11, or
>
> (B) any part of any installment under section 6166 (including any part of a deficiency prorated to any installment under such section),
>
> for a reasonable period not in excess of 10 years from the date prescribed by section 6151(a) for payment of the tax (or, in the case of an amount referred to in subparagraph (b), if later, not beyond the date which is 12 months after the due date for the last installment).

Reg § 20.6161-1(a)(1) provides a "reasonable cause" extension for tax shown on the return:

> [An] extension of time beyond the due date to pay any part of the tax shown on the estate tax return may be granted for a reasonable period of time, not to exceed 12 months by the district director or the director of a service center, at the request of the executor, if an examination of all the facts and circumstances discloses that such request is based upon reasonable cause.

Below are examples of "reasonable cause" under Reg § 20.6161-1(a):

> *Example (1)*. An estate includes sufficient liquid assets to pay the estate tax when otherwise due. The liquid assets, however, are located in several jurisdictions and are

[7086] Although an extension of time to pay is authorized under a different statute than an extension of time to pay, they are generally requested on the same form, so a comment about an extension of time to file might be helpful. A taxpayer may request an extension of time to file using IRS Form 4768 after the deadline, if it contains a detailed explanation of why it is impossible or impractical to file a reasonably complete return by the due date, as well as good cause for not requesting the automatic extension. Reg. § 20.6081-1(c). The IRS must consider the estate's good cause explanation; it cannot just reject it out-of-hand for being late. *Estate of Paul Proske v. United States*, No. 2:09-cv-00670 (D. N.J. 5/25/2010).

> not immediately subject to the control of the executor. Consequently, such assets cannot readily be marshaled by the executor, even with the exercise of due diligence.
>
> *Example (2)*. An estate is comprised in substantial part of assets consisting of rights to receive payments in the future (i.e., annuities, copyright royalties, contingent fees, or accounts receivable). These assets provide insufficient present cash with which to pay the estate tax when otherwise due and the estate cannot borrow against these assets except upon terms which would inflict loss upon the estate.
>
> *Example (3)*. An estate includes a claim to substantial assets which cannot be collected without litigation. Consequently, the size of the gross estate is unascertainable as of the time the tax is otherwise due.
>
> *Example (4)*. An estate does not have sufficient funds (without borrowing at a rate of interest higher than that generally available) with which to pay the entire estate tax when otherwise due, to provide a reasonable allowance during the remaining period of administration of the estate for the decedent's widow and dependent children, and to satisfy claims against the estate that are due and payable. Furthermore, the executor has made a reasonable effort to convert assets in his possession (other than an interest in a closely held business to which section 6166 applies) into cash.

Reg § 20.6161-1(a)(2)(i) provides an "undue hardship" extension for tax shown on the return:

> [I]n any case where the district director finds that payment on the due date of any part of the tax shown on the return, or payment of any part of an installment under section 6166 (including any part of a deficiency prorated to an installment the date for payment of which had not arrived) on the date fixed for payment thereof, would impose undue hardship upon the estate, he may extend the time for payment for a period or periods not to exceed one year for any one period and for all periods not to exceed 10 years from the date prescribed in section 6151(a) for payment of the tax.

Reg § 20.6161-1(a)(2)(ii) defines "undue hardship" relating to tax shown on the return:

> The extension provided [for] undue hardship … will not be granted upon a general statement of hardship or merely upon a showing of reasonable cause. The term "undue hardship" means more than an inconvenience to the estate. A sale of property at a price equal to its current fair market value, where a market exists, is not ordinarily considered as resulting in an undue hardship to the estate. The following examples illustrate cases in which an extension of time will be granted based on undue hardship pursuant to this paragraph:
>
> *Example (1)*. A farm (or other closely held business) comprises a significant portion of an estate, but the percentage requirements of section 6166(a) (relating to an extension where the estate includes a closely held business) are not satisfied and, therefore, that section does not apply. Sufficient funds for the payment of the estate tax when otherwise due are not readily available. The farm (or closely held business) could be sold to unrelated persons at a price equal to its fair market value, but the executor seeks an extension of time to facilitate the raising of funds from other sources for the payment of the estate tax.

> *Example (2)*. The assets in the gross estate which must be liquidated to pay the estate tax can only be sold at a sacrifice price or in a depressed market if the tax is to be paid when otherwise due.

Reg § 20.6161-1(b) explains the procedural issues when filing the appropriate form, highlights of which include:

> …. An application for an extension of time for payment of the tax, or of an installment under section 6166 … will not be considered unless the extension is applied for on or before the date fixed for payment of the tax or installment…. The granting of the extension of time for paying the tax is discretionary with the appropriate internal revenue officer and his authority will be exercised under such conditions as he may deem advisable. However, if a request for an extension of time for payment of estate tax under this section is denied by a district director or a director of a service center, a written appeal may be made … to the regional commissioner with authority over such district director or service center director within 10 days after the denial is mailed to the executor…. When received, the appeal will be examined, and if possible, within 30 days will be denied, granted, or tentatively granted subject to certain conditions of which the executor will be notified.

The phrase "undue hardship" was in the statute when the regulations were promulgated but has since been removed. Presumably the regulations should be updated to remove the requirement of "undue hardship."

III.B.5.e.i.(b). Deficiencies Resulting from IRS Audit

Code § 6161(b)(2) provides for tax assessed by the IRS:

> Under regulations prescribed by the Secretary, the Secretary may, for reasonable cause, extend the time for the payment of any deficiency of a tax imposed by chapter 11 for a reasonable period not to exceed 4 years from the date otherwise fixed for the payment of the deficiency.

Reg § 20.6161-2 is much more stringent for tax arising from a deficiency. An extension may be granted for "undue hardship" only. Furthermore, Reg § 20.6161-2(b) provides for a more stringent definition of "undue hardship":

> The extension will not be granted upon a general statement of hardship. The term "undue hardship" means more than an inconvenience to the estate. It must appear that a substantial financial loss, for example, due to the sale of property at a sacrifice price, will result to the estate from making payment of the deficiency at the date prescribed therefor. If a market exists, a sale of property at the current market price is not ordinarily considered as resulting in an undue hardship. No extension will be granted if the deficiency is due to negligence or intentional disregard of rules and regulations or to fraud with intent to evade the tax.

The phrase "undue hardship" was in the statute when the regulations were promulgated but has since been removed. Presumably the regulations should be updated to remove the requirement of "undue hardship."

Reg § 20.6161-2(c) procedural requirements include:

> … When received, [the application for extension] will be examined, and, if possible, within thirty days will be denied, granted, or tentatively granted subject to certain conditions of which the executor will be notified. The district director will not consider an application for such an extension unless it is applied for on or before the date prescribed for payment of the deficiency, as shown by the notice and demand from the district director…. The granting of the extension of time for paying the deficiency is discretionary with the district director.

Internal Revenue Manual ("IRM") 5.5.5.5(1) requires a denial of an extension to notify the taxpayer:

> A written appeal may be made to the Examination Area Director within 10 days from the time the denial is mailed. Show the CSCO address for the Appeals office address unless the liability was created by an examination.

Whether the extension is for tax shown on the return or for a deficiency, the IRS grants the extension only one year at a time.

IRM 5.5.5.8 provides:

> (6) In addition to establishing reasonable cause, these cases require an analysis of the progress of efforts being made to borrow or liquidate assets or to otherwise pay the amounts to be extended. Some suggested additional information required in this analysis include:
>
> > a. Balance sheets listing all assets, disbursements, liabilities and earnings for the estate and relating to the prior extension period. Real estate should be listed with the value and location identified (city, county, and state).
> >
> > b. An accounting of the actions taken during the past extension period to resolve the indebtedness. Examples include marketing property, resolving suits, or seeking loans.
> >
> > c. Information on the executor's proposal to make partial payments during the extension being requested.
>
> (7) Contact the executor within 30 days of the date of the extension request to
>
> > a. advise them that you are reviewing the request,
> >
> > b. gather information to support your determination, and
> >
> > c. estimate the date of completion….
>
> (10) Most requests for an extension to pay are necessary because the estate representative or executor needs additional time to liquidate what are often very valuable properties that cannot be marketed within the 9 month period following the death of the taxpayer. Provided the executors verify that all steps necessary to sell property to pay the tax are being taken in an expeditious manner, and that all liquid assets not needed

> for the payment of anticipated administrative expenses are paid over, extensions to pay should generally be granted….
>
> (12) When evaluating extension to pay requests bear in mind that denial of the request may have adverse financial ramifications to the estate far in excess of the failure to pay penalty which will begin to accrue if the request is denied….

III.B.5.e.i.(c). Additional Extensions; Miscellaneous Rules

For additional extensions, IRM 5.5.5.3 instructs, "Evaluate progress of efforts made by the executor to borrow, liquidate assets, or otherwise pay the amount to be extended."

Code § 6161(d) provides additional rules:

> (1) *Period of limitation*. For extension of the period of limitation in case of an extension under subsection (a)(2) or subsection (b)(2), see section 6503(d).
>
> (2) *Security*. For authority of the Secretary to require security in case of an extension under subsection (a)(2) or subsection (b), see section 6165.
>
> (3) *Postponement of certain acts*. For time for performing certain acts postponed by reason of war, see section 7508, and by reason of Presidentially declared disaster or terroristic or military action, see section 7508A.

Code § 6503(d) suspends the statute of limitations while an extension is in effect. However, when a default occurs during the extension period, the statute of limitations begins to run again.[7087]

Code § 6165 provides:

> In the event the Secretary grants any extension of time within which to pay any tax or any deficiency therein, the Secretary may require the taxpayer to furnish a bond in such amount (not exceeding double the amount with respect to which the extension is granted) conditioned upon the payment of the amount extended in accordance with the terms of such extension.

However, bonds generally are not practical.

III.B.5.e.ii. Code § 6166 Deferral

For a verbal discussion of the consequences of relying on this strategy, see the first segment of my free webinar, Liens from Deferred Estate Tax; Grantor Trusts & Basis Step-Up; Gifts of Business Interests (4/24/2023), and the last segment of my free webinar, Gift Tax Return Adequate Disclosure; Constructive Dividends; Transferee Liability (7/25/2023).

[7087] *U.S. v. Johnson*, 109 A.F.T.R.2d 2012-2253 (D.C. UT) (Code § 6166 election tolled the statute of limitations for beginning an action against the estate, but a default of an installment payment stopped the tolling of the statute of limitations).

Code § 6166 allows the payment of estate tax to be deferred for certain closely-held businesses,[7088] if the value of such businesses exceeds 35% of the adjusted gross estate.[7089] For this calculation, "adjusted gross estate" means the value of the gross estate reduced by deductions under Code § 2053 or Code § 2054.[7090] Code § 2053(a) authorizes deductions for funeral expenses, administration expenses, claims against the estate, and certain debts. Claims include a pledge to the extent that either (1) the liability was contracted bona fide and for an adequate and full consideration in cash (or its equivalent) or (2) payment of the pledge would

[7088] For nuances of the ownership tests, see Gorin et al., "Internal Revenue Code Section 6166: Comments To Tax Counsel For The Senate Finance Committee," 41 *Real Property, Probate & Trust Journal* 73 (Spring 2006); see also Rev. Rul. 2006-34, which was issued after that article was published. See also Blattmachr, Gans, and Madden, Untangling Installment Payments of Estate Tax Under Section 6166, *Estate Planning Journal* (7/2009) (which discusses Rev. Rul. 2006-34). As to nuances of certain attribution rules in Code § 6166, see Letter Ruling 8428088. For a good summary of various aspects of Code § 6166, see Madden, *Tax Planning for Highly Compensated Individuals* (WG&L), ¶ 10.07 Installment Payment of Estate Taxes - Section 6166.
[7089] Code § 6166(a)(1).
[7090] Code § 6166(b)(6).

have constituted an allowable charitable deduction under Code § 2055 if it had been a bequest.[7091] Code § 6166(g) accelerates estate tax if certain changes occur post-mortem.[7092]

Failure to fully comply with ***<u>all</u>*** of the requirements for making an election on a timely filed return (including extensions) invalidates the election.[7093]

[7091] Reg. § 20.2053-5(a). Reg. § 20.2053-1(b)(2), "Bona fide requirement," provides:

(i) *In general*. Amounts allowed as deductions under section 2053(a) and (b) must be expenses and claims that are bona fide in nature. No deduction is permissible to the extent it is founded on a transfer that is essentially donative in character (a mere cloak for a gift or bequest) except to the extent the deduction is for a claim that would be allowable as a deduction under section 2055 as a charitable bequest.

(ii) *Claims and expenses involving family members*. Factors indicative (but not necessarily determinative) of the bona fide nature of a claim or expense involving a family member of a decedent, a related entity, or a beneficiary of a decedent's estate or revocable trust, in relevant instances, may include, but are not limited to, the following -

(A) The transaction underlying the claim or expense occurs in the ordinary course of business, is negotiated at arm's length, and is free from donative intent.

(B) The nature of the claim or expense is not related to an expectation or claim of inheritance.

(C) The claim or expense originates pursuant to an agreement between the decedent and the family member, related entity, or beneficiary, and the agreement is substantiated with contemporaneous evidence.

(D) Performance by the claimant is pursuant to the terms of an agreement between the decedent and the family member, related entity, or beneficiary and the performance and the agreement can be substantiated.

(E) All amounts paid in satisfaction or settlement of a claim or expense are reported by each party for Federal income and employment tax purposes, to the extent appropriate, in a manner that is consistent with the reported nature of the claim or expense.

(iii) *Definitions*. The following definitions apply for purposes of this paragraph (b)(2):

(A) Family members include the spouse of the decedent; the grandparents, parents, siblings, and lineal descendants of the decedent or of the decedent's spouse; and the spouse and lineal descendants of any such grandparent, parent, and sibling. Family members include adopted individuals.

(B) A related entity is an entity in which the decedent, either directly or indirectly, had a beneficial ownership interest at the time of the decedent's death or at any time during the three-year period ending on the decedent's date of death. Such an entity, however, shall not include a publicly-traded entity nor shall it include a closely-held entity in which the combined beneficial interest, either direct or indirect, of the decedent and the decedent's family members, collectively, is less than 30 percent of the beneficial ownership interests (whether voting or non-voting and whether an interest in stock, capital and/or profits), as determined at the time a claim described in this section is being asserted. Notwithstanding the foregoing, an entity in which the decedent, directly or indirectly, had any managing interest (for example, as a general partner of a partnership or as a managing member of a limited liability company) at the time of the decedent's death shall be considered a related entity.

(C) Beneficiaries of a decedent's estate include beneficiaries of a trust of the decedent.

[7092] Letter Ruling 201403012, allowing the reorganization of a business not to cause acceleration under Code § 6166(g), demonstrates the continued vitality of Rev. Rul. 66-62 and the legitimacy of looking to regulations under former Code § 6166A to help construe current Code § 6166. However, Letter Ruling 200613020 indicates that Code § 6166(g)(1)(D) is more favorable than the old regulations.

[7093] Reg. § 20.6166-1(b) provides:

If there is any doubt whether the estate might not qualify for a Code § 6166 deferral and the return is being extended, consider filing for an extension of time to pay as well, explaining the issue. Otherwise, when the return is filed, if the estate does not qualify for the Code § 6166 deferral then the IRS might assert penalties for late payment.[7094]

Some business owners rely on estate tax deferral for their business interests. Most of them are unaware of automatic secret liens and how the IRS' need to secure payment of estate tax may interfere with their businesses' ability to retain and expand loans or fidelity bonds. As described in part III.B.5.e.iv Federal Estate Tax Liens, Code § 6324(a)(2) imposes a secret, automatic estate tax lien against the personal assets of the trustee of a revocable trust that holds the business interest; for a probate estate, the lien attaches to the estate's property and continues to apply to that property once it is sold (with certain exception described in part III.B.5.e.iv.(b) Exceptions to the Estate Tax Lien. This lien lasts for 10 years except if and to the extent it is removed by property expressly subjected to a substitute lien. TIGTA directed the IRS to address the gap between the estate tax deferral period and the 10-year duration of the estate tax lien. Consider that the automatic or later express lien might ruin a business' ability to retain its borrowings or borrow other funds and may destroy the business - see part III.B.5.e.iv.(i) Effect of Liens on Dealings with Third Parties.

An August 2013 email from another estate planning lawyer suggested that an IRS source in Cincinnati stated that a Code § 6166 election will automatically draw an audit. Given that the number of estate tax returns reporting tax due has dramatically decreased, that suggestion is not to be taken lightly.

For a variety of issues regarding Code § 6166, see ACTEC submits a Report with recommendations to revise IRC Section 6166 and to propose the enactment of a new IRC Section 6166A to address important issues related to providing deferral treatment for federal estate tax and generation-skipping transfer tax attributable to closely held business interests (May 17, 2021). I served on the subcommittee that prepared that report.

It appears that the closely-held business interest passing to a marital deduction trust qualifies the estate for estate tax deferral, even though no estate tax is payable with respect to the

---

> *Time and manner of election*. The election provided under section 6166(a) is made by attaching to a timely filed estate tax return a notice of election containing the following information:
> (1) The decedent's name and taxpayer identification number as they appear on the estate tax return;
> (2) The amount of tax which is to be paid in installments;
> (3) The date selected for payment of the first installment;
> (4) The number of annual installments, including the first installment, in which the tax is to be paid;
> (5) The properties shown on the estate tax return which constitute the closely held business interest (identified by schedule and item number); and
> (6) The facts which formed the basis for the executor's conclusion that the estate qualifies for payment of the estate tax in installments.

Woodbury v. Commissioner, T.C. Memo. 2014-66, held that failure to comply with (5) and (6) invalidated the election. The court was not sympathetic to arguments of substantial compliance, because those provisions were essential to provide information the IRS could use to decide whether to audit the return.

[7094] The IRS attempted to impose such penalties in *Estate of John R.H. Thouron v. U.S.*, 752 F.3d 311 (3rd Cir. 2014), *rev'g* 110 A.F.T.R.2d 2012-6572 (E.D. Pa.). Applying Reg. § 301.6651-1(c)(1), the Third Circuit held that, although one cannot rely on a tax advisor to perform ministerial filing acts, a taxpayer's reliance on the advice of a tax expert may constitute reasonable cause for failure to pay by the deadline if the taxpayer can also show either an inability to pay or undue hardship from paying at the deadline.

closely-held business interest. However, given the likely tax apportionment clause, I would view subjecting the marital deduction trust to an estate tax lien would be an obvious breach of the trustee's fiduciary duties in most cases. Absent the election, the estate tax would be paid by the liquid assets, and there would be no lien. The trustee would be trying to create an investment advantage to the nonmarital assets – paying interest at the Code § 6166 rate rather than commercial borrowing – and subjecting the marital deduction assets to a risk that is easily avoidable. I don't see how the trustee can favor the nonmarital assets in this way when the decedent did not intend the marital assets to be burdened by estate tax.

III.B.5.e.ii.(a). What is a Business?

The IRS views the decedent's real property as being a closely-held business if it is used in the decedent's business or if the decedent, directly or through a company that the decedent managed and in which the decedent owned a 1% general partner interest and a 20% limited partnership interest, reasoning:[7095]

> In determining whether the activities of the decedent, partnership, LLC or corporation constitute an active trade or business, the activities of agents and employees of the decedent, the partnership, LLC or corporation are also taken into consideration. The fact that some of the activities are conducted by third parties such as independent contractors who are neither agents nor employees of the decedent, partnership, LLC or corporation, will not prevent the business from qualifying as an active trade or business so long as these third-party activities are not of such a nature that the activities of the decedent, partnership, LLC or corporation (and their respective agents and employees) are reduced to the level of merely holding investment property.
>
> Often, day-to-day real estate operations and activities are performed by independent contractors, such as property management companies. If a decedent, partnership, LLC, or corporation uses an unrelated property management company to perform most of the activities associated with the real estate interests, that fact suggests that an active trade or business does not exist.
>
> To determine whether a decedent's interest in real property is an interest in an asset used in an active trade or business, the Service will consider all the facts and circumstances, including the activities of agents and employees, the activities of management companies or other third parties, and the decedent's ownership interest in any management company or other third party. The Service will consider the following nonexclusive list of factors:
>
> - The amount of time the decedent (or agents and employees of the decedent, partnership, LLC, or corporation) devoted to the trade or business;
>
> - Whether an office was maintained from which the activities of the decedent, partnership, LLC, or corporation were conducted or coordinated, and whether the decedent (or agents and employees of the decedent, partnership, LLC, or corporation) maintained regular business hours for that purpose;

[7095] Rev. Rul. 2006-34, which was analyzed in Planning for the Payment of Estate Taxes for Illiquid Estates Owning Real Estate-The Code § 6166 Deferral, *Probate & Property* (March/April 2009). Rev. Rul. 2006-34 revoked all of Rev. Rul. 75-365 and the portion of Rev. Rul. 75-367 relating to the eight rental homes.

- The extent to which the decedent (or agents and employees of the decedent, partnership, LLC, or corporation) was actively involved in finding new tenants and negotiating and executing leases;

- The extent to which the decedent (or agents and employees of the decedent, partnership, LLC, or corporation) provided landscaping, grounds care, or other services beyond the mere furnishing of leased premises;

- The extent to which the decedent (or agents and employees of the decedent, partnership, LLC, or corporation) personally made, arranged for, performed, or supervised repairs and maintenance to the property (whether or not performed by independent contractors), including without limitation painting, carpentry, and plumbing; and

- The extent to which the decedent (or agents and employees of the decedent, partnership, LLC, or corporation) handled tenant repair requests and complaints.

No single factor is dispositive of whether a decedent's activities with respect to the real property (or the activities of a partnership, LLC, or corporation through which decedent owns the real property) constitute an interest in a closely held business for purposes of section 6166.

The IRS applied these factors as follows:

(1) In Situation 1, A provided significant services to the strip mall tenants. A personally handled the day-to-day operation, management and maintenance of the strip mall. A's activities went beyond those of a mere investor collecting profits from a passive asset. Moreover, even in situations in which A hired independent contractors to perform repairs that A could not perform personally, A was involved in the selection of the contractors and reviewed and approved the work performed. Under these circumstances, the use of independent contractors on occasions when A could not personally perform the work does not prevent A's activities from rising to the level of the conduct of an active trade or business. Thus, A's ownership of the strip mall qualifies as an interest in a closely held business for purposes of section 6166. (The result would be the same if the strip mall had instead been held in a single-member LLC owned by A, and the LLC were disregarded as an entity that is separate from its owner under §§ 301.7701-1 through 3 of the Procedure and Administration Regulations.)

(2) In Situation 2, in determining whether B was a proprietor carrying on an active trade or business with respect to B's interest in the office park, the activities of DEF Management Corporation (DEF) and its relationship with B are taken into account. DEF and its employees provided all necessary services for B's office park. B had no ownership interest in DEF. B's reliance on DEF to perform all necessary services, B's lack of any significant participation in the management or oversight of the property, and B's lack of any ownership interest in DEF are all factors that weigh heavily against a finding that the office park was used by B in an active trade or business. Thus, B was not a proprietor in an active trade or business and B's interest in the office park does not qualify as an interest in a closely held business for purposes of section 6166.

(3) In Situation 3, DEF provided all necessary services with regard to the management and maintenance of the office park, including advertising to attract new tenants, showing the property to prospective tenants, negotiating and administering leases, collecting the monthly rent, and arranging for third party independent contractors to provide all necessary services to maintain the buildings and grounds of the office park, including snow removal, security, and janitorial services. These activities are sufficient to conclude that DEF was actively managing the office park. Because B owned a significant interest in DEF, the activities of DEF with regard to the office park allow B's interest in the office park to qualify as an interest in a closely held business for purposes of section 6166.

(4) In Situation 4, the determination of whether the limited partnership was carrying on a trade or business for purposes of section 6166 is made with reference to the partnership's activities. Because the limited partnership, rather than C, owned the interest in the strip malls, the nature and level of the activities of the limited partnership must be evaluated. The limited partnership, acting through its general partner C, handled the day-to-day operations and management of the strip malls. The activities of C on behalf of the limited partnership included (either personally or with the assistance of employees or agents) performing daily maintenance of and repairs to the strip malls (or hiring, reviewing and approving the work of third party independent contractors for such work), collecting rental payments, negotiating leases, and making decisions regarding periodic renovations of the strip malls. Thus, the limited partnership carried on an active trade or business. Because the strip malls were used in carrying on the partnership's active trade or business, they are not passive assets under section 6166(b)(9) and their value is not excluded from the value of C's interest in the partnership for purposes of section 6166. C's interest in the limited partnership qualifies as an interest in a closely held business for purposes of section 6166. (Because C owned at least 20 percent of the partnership, the conclusion would be the same even if C's activities were instead performed by another employee, partner or agent of the partnership).

(5) In Situation 5, MNO was engaged in an automobile dealership business. Thus, MNO was conducting an active trade or business at the time of D's death. Consequently, D's 100 percent stock interest in MNO qualifies as an interest in a closely held business. In addition, Real Property P was used exclusively in the business of MNO under a net lease from D. As in Situation 3, because D owned a significant interest in MNO, whose activities with regard to Real Property P constituted active management, D's interest in Real Property P also qualifies as an interest in a closely held business.

I disagree with requiring the decedent to have been active to determine whether a trade or business exists. Here's a perceptive comment from a tax lawyer:[7096]

> Although section 6166 uses the term "trade or business" without the modifier "active," the IRS concluded that the provision requires an active trade or business, apparently

[7096] Peter Genz (King & Spalding, LLP), pages 9-10 of his paper for "Real Estate Trade or Business – When Does it Matter under Tax Reform?" in the Fall 2018 meeting of the Real Estate Committee of the American Bar Association's Section of Taxation.

> because section 6166(b)(9)(A) excludes the value of "passive assets" used in the trade or business from the amount of the interest in the closely held business.

Letter Ruling 201343004 approved Code § 6166 treatment for businesses that engaged in personal and real estate rental activities. Rev. Rul. 75-366 approved a crop-sharing arrangement as eligible for Code § 6166 deferral.[7097]

Letter Ruling 201928007 considered whether the activities of various operating units of a corporation ("Company 1") that reported its operating units on an annual consolidated income tax return constituted an active trade or business for purposes of Code § 6166. It analyzed Operating Unit 2, a division of Operating Unit 1, as follows:

> According to the facts provided, Operating Unit 2 is responsible for providing remarketing, management and support services regarding equipment owned by Operating Unit 1 and Division 1 (a division of Operating Unit 1), and equipment owned by outside lessors. Operating Unit 2 has Number 1 full-time-equivalent employees that are involved in management, support, remarketing, sale and re-lease of the equipment. Operating Unit 2 has Number 2 locations and Number 3 off-site warehouse maintained where activities are conducted. Most lessees and customers are secured through direct activities of Operating Unit 2, and the repair of equipment is either arranged for, performed by, or supervised by an employee of Operating Unit 2.
>
> Although Revenue Ruling 2006-34 addresses interests in real estate, not in the management of personal property, the factors in the revenue ruling are helpful in evaluating whether the employees of Operating Unit 2 are engaged in a trade or business. Operating Unit 2 maintains several offices and a warehouse from which the employees conduct business. The employees of Operating Unit 2: negotiate new leases and monitor current leases; market and sell, or re-lease, used equipment; and, store and maintain equipment for sale or re-lease. Accordingly, the activities of Operating Unit 2 constitute an active trade or business for purposes of section 6166.[1]
>
> [1] This ruling does not address whether decedent's interest in Operating Unit 2 qualifies as an interest in a closely-held business for purposes of section 6166(a)(1).

[7097] The facts were:

> The farms were operated by tenant farmers under agreements whereby the decedent received 40 percent of the crops and bore 40 percent of the expenses. The decedent had participated with the tenants in important management decisions, such as what crops to plant, what fields to plant or pasture, how to utilize the subsidy program, what steps to take as to weed control, etc. The decedent had lived several miles from the farms but had made almost daily visits to inspect and discuss operations, and occasionally delivered supplies to the tenants.

In ruling in favor of the real estate being a Code § 6166 business interest, the IRS reasoned:

> An individual is engaged in the business of farming if he cultivates, operates, or manages a farm for gain or profit, either as owner or tenant, and if he receives a rental based upon farm production rather than a fixed rental. Farming under these circumstances is a productive enterprise which is like a manufacturing enterprise as distinguished from management of investment assets.
>
> In the present case the decedent had participated in the management of the farming operations and his income was based upon the farm production rather than on a fixed rental.

It analyzed Operating Unit 3, a division of the parent corporation, as follows:

> The facts provide that employees of Operating Unit 3 are involved in day-to-day operations, management, and maintenance of commercial class properties. Operating Unit 3 has Number 4 full-time-equivalent employees that work out of company offices in City, State. The employees of Operating Unit 3: find new tenants; negotiate and execute leases; arrange for, perform, and supervise property repairs and maintenance; and, handle tenant repair and maintenance requests, and complaints. Additionally, the employees hire and supervise independent contractors for substantial repairs and capital improvements, and services such as snow removal, landscaping, security, janitorial, and cafeteria services.
>
> Applying the factors discussed in Revenue Ruling 2006-34, Operating Unit 3 has a significant number of full-time employees that are involved in the day-to-day operations, management, and maintenance of real estate. Therefore, the activities of Operating Unit 3 constitute the carrying on of a trade or business for purposes of section 6166.[2]
>
> > [2] This ruling does not address whether decedent's interest in Operating Unit 3 qualifies as an interest in a closely-held business for purposes of section 6166(a)(1).

It analyzed Operating Unit 5, which operates under a holding company, the sole member of which is the parent corporation, as follows:

> The facts given provide that the Operating Unit 5 has Number 5 full-time equivalent non-owner employees overseeing all facets of construction and supervising operations of Company 2, an independent property management firm.
>
> Applying Revenue Ruling 2006-34 to this situation, it appears that Company 2 is acting as an independent contractor of Operating Unit 5. The use of independent contractors to perform work does not prevent the business activities from rising to the level of the conduct of an active trade or business provided that the third-party activities do not reduce the activities of the corporation to merely holding investment property. From the facts provided, Operating Unit 5 involves non-owner employees of Company 1 actively overseeing construction of the subject properties and actively supervising the actions of Company 2. Therefore the activities of Operating Unit 5 constitute the carrying on of a trade or business for purposes of section 6166.[3]
>
> > [3] This ruling does not address whether decedent's interest in Operating Unit 5 qualifies as an interest in a closely-held business for purposes of section 6166(a)(1).

It analyzed Operating Unit 6, the sole member of which is the parent corporation, as follows:

> The facts presented provide that Operating Unit 6 relies on Company 3, their hotel management company, to operate and manage the subject hotel and restaurant. Operating Unit 6 has no ownership interest in Company 3. However, the facts provide that even though Company 3 operates, maintains, services, and improves the hotel, employees of Operating Unit 6 are involved in a daily basis in all aspects of the management and food service of the hotel.
>
> Applying Revenue Ruling 2006-34 to this situation, it appears that Company 3 is acting as an independent contractor of Operating Unit 6. The use of independent contractors

> to perform work does not prevent the business activities from rising to the level of the conduct of an active trade or business provided that the third-party activities do not reduce the activities of the corporation to merely holding investment property. Even though Company 3 is involved in the management of the hotel, Operating Unit 6 is not merely holding an investment property. Therefore, the activities of Operating Unit 6 constitute the carrying on of a trade or business for purposes of section 6166.[4]
>
> > [4] This ruling does not address whether decedent's interest in Operating Unit 6 qualifies as an interest in a closely-held business for purposes of section 6166(a)(1).

It appears to me that the parent corporation operated through divisions, one or more subsidiary corporations, and one or more LLCs, and the IRS did not seem to care what type of entity each subsidiary was. Although Company 3 was referred to as "their hotel management company," the ruling seemed to treat it as an independent contractor that might not have operated directly or indirectly under the parent corporation.

Outside of the Code § 6166 context, see part II.G.26.b Real Estate as a Trade or Business.

Because a promissory note does not qualify for Code § 6166 deferral, consider using life insurance when engaging in a sale to an irrevocable grantor trust.[7098]

III.B.5.e.ii.(b). Tiered Structures

In determining what is eligible for Code § 6166 deferral, the value of any interest in a closely held business shall not include the value of that portion of such interest which is attributable to passive assets held by the business.[7099] "Passive asset" means any asset not used in carrying on a trade or business.[7100]

Any "stock in another corporation"[7101] is a passive asset unless a certain holding company election is made[7102] or a certain active corporation exception applies.[7103]

Another exception might apply in the case of S corporations – an exception that might make an S corporation structure better for Code § 6166 purposes than a partnership or C corporation. It appears that the assets of a qualified subchapter S subsidiary are treated as directly owned by

---

[7098] See text accompanying fn 6491 in part III.B.2.b General Description of GRAT vs. Sale to Irrevocable Grantor Trust.
[7099] Code § 6166(b)(9)(A).
[7100] Code § 6166(b)(9)(B)(i).
[7101] By referring to another corporation, Code § 6166(b)(9)(B)(ii) seems to apply only to a corporation holding stock in another corporation and not to a partnership holding stock in a corporation.
[7102] Code § 6166(b)(9)(B)(ii) excludes from passive asset treatment stock that a Code § 6166(b)(8) election treats as held by the decedent and qualified under Code § 6166(a)(1).
[7103] Code § 6166(b)(9)(B)(iii) provides:

> *Exception for active corporations*. If—
> (I) a corporation owns 20 percent or more in value of the voting stock of another corporation, or such other corporation has 45 or fewer shareholders, and
> (II) 80 percent or more of the value of the assets of each such corporation is attributable to assets used in carrying on a trade or business,
>
> then such corporations shall be treated as 1 corporation for purposes of clause (ii). For purposes of applying subclause (II) to the corporation holding the stock of the other corporation, such stock shall not be taken into account.

its ultimate parent; see part II.A.2.d.i Benefits of Estate Planning Strategies Available Only for S Corporation Shareholders.[7104]

If one uses a tiered partnership structure, one does not receive the benefit of these safe harbors.[7105] Generally, one would want to make the case that the partnership structure was one integrated business. Query whether making that case might undermine the protection from creditors that having separate entities tends to provide.[7106] This asset protection inquiry has two aspects:

1. One is always responsible for one's own actions. If a parent actively manages its subsidiary, the parent will be responsible in tort for the parent's actions.

2. Entity structures protect one from strict liability. For example, suppose the parent is responsible for strategic management but not daily operations. Generally, the parent might be responsible for the actions of those it directly supervises if and to the extent that the parent failed to exercise sufficient care in hiring or supervising them, but the parent would not be responsible for their actions or the actions of others in the company beyond that. The parent also would not be responsible for any liabilities arising from the subsidiary's mere ownership of the property or for any of the subsidiary's contractual obligations. However, this strict liability protection might break down if the subsidiary is not run in a financially responsible way, so the parent would want to make sure that the subsidiary has sufficient capital needed to run its daily operations and fulfill its recurring obligations, as well as sufficient insurance protection.

A parent might very well be able to run its subsidiaries as part of a single strategic business operation while managing these concerns. Although this process appears manageable, I would prefer to use estate planning tools to avoid estate tax and consider insurance to fund potential estate tax payments until the estate planning tools have succeeded.

III.B.5.e.ii.(c). Terms of Extension

Generally, interest is paid on the 1st through 4th anniversary of the estate tax return due date, and interest and one-tenth of the principal are paid on the 5th through 14th anniversary of the estate tax return due date. Failure to make a payment when due terminates the election[7107] unless paid 6 months late with a penalty,[7108] and impossibility is not a defense.[7109] The election does not apply to GST tax imposed on a taxable termination.[7110] The election must be made on a timely filed return.[7111]

[7104] Especially the text accompanying fns. 96-98
[7105] Code § 6166 needs serious updating regarding its application to partnerships. See Gorin et al., Internal Revenue Code Section 6166: Comments To Tax Counsel For The Senate Finance Committee, 41 *Real Property, Probate & Trust Journal* 73 (Spring 2006).
[7106] For more on using separate entities for asset protection, see part II.F Asset Protection Planning.
[7107] Code § 6166(g)(3)(A).
[7108] Code § 6166(g)(3)(B).
[7109] *Estate of Adell v. Commissioner*, T.C. Memo. 2013-228.
[7110] Letter Ruling 200939003.
[7111] Code § 6166(d). Because the deadline is statutory, Letter Ruling 201015003 denied Code § 9100 relief on a return that was filed late, even though it held that the estate was entitled to elect special use valuation for the farm property under Code § 2032A and to have its farm property treated as a qualified family owned business interest under Code § 2057.

For adjustments on audit, see Rev. Rul. 81-294. If an estate makes a protective election but does not make a final election when audited, the protective election does not constitute a Code § 6166 election; accordingly, the IRS cannot collect tax as if the extension had been made.[7112]

If an estate overpays its non-deferred estate tax liability, the overpayment is not refunded but instead is applied to the deferred tax.[7113]

Also, if any portion of an interest in a closely held business, for which the Code § 6166 election is made, is distributed, sold, exchanged, or otherwise disposed of[7114] or money and other property attributable to such an interest is withdrawn from such trade or business, and the aggregate of such distributions, sales, exchanges, or other dispositions and withdrawals equals or exceeds 50% of the value of such interest, then the Code § 6166 extension of time for payment of tax shall cease to apply, and the unpaid portion of the tax payable in installments shall be paid upon notice and demand from the IRS.[7115] This rule does not apply to certain reorganizations,[7116] nor does it apply to a transfer of property of the decedent to a person entitled by reason of the decedent's death to receive such property under the decedent's will, the applicable law of descent and distribution, or a trust created by the decedent or to certain subsequent transfers of the property by reason of death to certain family members.[7117]

For a discussion of liens associated with Code § 6166 elections, see parts III.B.3.c.iv Liens: Selected Internal Revenue Manual Materials and III.B.3.c.iv Effect of Liens on Dealings with Third Parties.

III.B.5.e.ii.(d). Effect of Code § 6166 Election on Statute of Limitations for Collection

A Code § 6166 election, among others, suspends the statute of limitations for collecting estate tax.[7118]

If the IRS sends the taxpayer a notice that it is treating the Code § 6166 as terminated, the statute of limitations is no longer suspended.[7119]

III.B.5.e.iii. Graegin Loans

III.B.5.e.iii.(a). *Graegin* Loans: Tax Issues

In Rev. Rul. 84-75, the IRS ruled:

- If a loan is obtained to avoid a forced sale of assets, the loan is reasonably and necessarily incurred in administering the estate. Therefore, interest incurred on the loan is deductible as an expense of administration under Code § 2053(a)(2).[7120]

- However, in situations where the estate's obligation to make installment payments may be accelerated, the amount of future interest that will be paid is indefinite because a premature repayment will stop the accrual of interest. Therefore, for purposes of Code § 2053, a deduction is not allowable for the estimated amount of interest that will accrue upon funds borrowed by an executor on behalf of an estate to pay the federal estate tax if repayment of the loan could be accelerated. The interest is deductible as an administrative expense only to the extent it has accrued.

In *Estate of Graegin v. Commissioner*,[7121] a related corporation loaned money to the estate to pay estate tax, because the estate did not have sufficient liquidity to pay estate tax. It was a balloon note, payable in 15 years, which was the decedent's widow's life expectancy. The loan was not prepayable, so the Tax Court allowed the estate to deduct the entire 15-years' interest, which was payable at the then-15% prime rate. This resulted in a tremendous estate tax saving. The downside is that, during estate administration, the family member lender has interest income and the estate cannot deduct the interest for income tax purposes (because it was already deducted for estate tax purposes).[7122]

A year later, the IRS said that it will challenge deductions for balloon payments:[7123]

- when there is doubt as to the bona fide nature of the indebtedness,

---

[7120] A paper by Steve Akers and Phil Hayes of Bessemer Trust pointed out: Various cases have permitted deduction of interest on amounts borrowed to pay federal estate tax, in situations where the loan was necessary to avoid a forced sale of assets, citing *Estate of Todd v. Commissioner*, 57 T.C. 288 (1971), *acq.* 1973-2 C.B. 4; *Estate of Sturgis v. Commissioner*, T.C. Memo. 1987-415; *Hipp v. United States*, 1972-1 U.S.T.C. ¶12824 (D. S.C. 1971); *Estate of Webster v. Commissioner*, 65 T.C. 968 (1976); *Estate of Graegin v. Commissioner*, T.C. Memo. 1988-477; *Estate of Huntington v. Commissioner*, 36 B.T.A. 698, 726 (1937).

[7121] T.C. Memo. 1988-477.

[7122] Code § 642(g). If an estate incorrectly deducts the interest for income tax purposes after deducting it for estate tax purposes, that's an income tax issue that does not affect the estate tax deduction. *Estate of Stick v. Commissioner*, T.C. Memo 2010-192.

[7123] Litigation Guideline Memorandum TL-65 (1989). CC 2017-001 obsoleted all LGMs but stated:

> While LGMs are no longer directly applicable to cases handled by Chief Counsel attorneys, they can serve as useful research tools and historical records of positions previously taken by the Office of Chief Counsel on issues in litigation. Redacted versions of LGMs remain publicly available on commercial on-line services such as Lexis and WestLaw. Attorneys seeking current guidance on issues that were previously the subject of an LGM should determine whether updated guidance has been provided in the form of a Chief Counsel Notice or other Chief Counsel work products, or request formal or informal Chief Counsel advice from the Office of Associate Chief Counsel with subject matter jurisdiction over the issues.

- where the liability for interest is not certain or for a reasonably estimable amount, or
- when a convincing argument can be made that borrowing is unnecessary.[7124]

Letter Ruling 9449011 involved the following:

> D died on January 22, 1990. The Estate contained liquid assets in the form of listed stocks and bonds on various exchanges in the amount of a and cash in the amount of b. On April 22, 1991, the Estate filed its federal estate tax return (Form 706) on the extended due date. The estate tax return reflected an estate tax liability of c. An additional d was payable to the State of X as state inheritance tax. On April 15, 1991, a loan secured by certain real property of the Estate, in the amount of e, was obtained from a bank. Interest payments on the loan will be made for approximately 20 years after the payment of the estate tax and, therefore, may occur after the expiration of the statute of limitations. The loan was used to pay federal and state death taxes of D, administrative expenses and debts, and to make necessary cash distributions to beneficiaries so that the Estate could be closed. The Estate contends that it was necessary for the Estate to borrow e in order to avoid selling stocks, bonds, land, or other assets of the Estate at depressed prices to meet all of the Estate's obligations. During the year 1993, the Estate incurred and paid interest on the loan in the amount of f. The Estate has not filed and does not plan to file its fiduciary income tax return (Form 1041) for 1993 until October 15, 1994.
>
> The taxpayer requests a ruling that the interest is deductible on the 1993 income tax return provided the Estate files the statement required by section 1.642(g)-1 of the income Tax Regulations, and that the interest does not constitute nondeductible personal interest under section 163(h) of the Internal Revenue Code. Furthermore, if future interest paid on funds borrowed to pay estate taxes are not currently deducted on Form 1041, or on the returns of the beneficiaries, how will the Estate protect its right to refund of estate taxes paid (based upon future interest deductions) after the expiration of the time period prescribed by section 6511?

Letter Ruling 9449011 reasoned and held:

> Section 301.6402-2(b)(1) of the Procedure and Administration Regulations provides that no refund will be allowed after the expiration of the statutory period of limitation except upon one or more of the grounds set forth in a claim filed before the expiration of such period. The regulation requires that the taxpayer set forth the claim with sufficient detail to apprise the Internal Revenue Service of the exact basis for making the claim.
>
> Section 301.6402-2(c) of the regulations provides that claims for estate tax refunds are to be made by filing Form 843.
>
> Under section 6511(a) and section 301.6511(a)-1 of the regulations, claims for refund must generally be filed within the later of 3 years from the time the return was filed or 2 years from the time when the tax was paid.

[7124] If an estate has liquid assets sufficient to pay funeral and administration expenses, and federal and state death taxes, borrowing to pay estate tax is not necessary and therefore not deductible. *Estate of Stick v. Commissioner*, T.C. Memo 2010-192.

Therefore, in order to protect the right to a refund of estate taxes based on payments of interest after the statutory period, the taxpayer must file a Form 843, constituting a protective claim, before the expiration of the statutory period of limitation, setting forth the basis of the claim. In each succeeding year in which interest payments are made, the taxpayer must file a Form 843 setting forth the grounds for the claim, the factual basis of the claim, required verification under penalties of perjury and an appropriate reference to the original protective claim. See Rev. Rul. 83-15, 1983-1 C.B. 224.

Section 2053(a)(2) of the Code provides that the value of the taxable estate is to be determined by deducting from the value of the gross estate such amounts for administration expenses as are allowable by the laws of the jurisdiction under which the estate is being administered.

Section 20.2053-3(a) of the Estate Tax Regulations provides that the amounts deductible as "administration expenses" are limited to such expenses as are actually incurred in the administration of the decedent's estate; that is, in the collection of assets, payment of debts and distribution of property to the persons entitled to it. The expenses contemplated in the law are such only as attend the settlement of an estate and the transfer of the property of the estate to individual beneficiaries or to a trustee, whether the trustee is the executor or some other person. Expenditures not essential to the proper settlement of the estate, but incurred for the individual benefit of the heirs, legatees, or devisees, may not be taken as deductions.

[summarizing Rev. Rul. 84-75]

Rev. Rul. 77-461, 1977-2 C.B. 324, holds that payments of interest accruing after a decedent's death attributable to installment obligations contracted by the decedent during his life, the interest upon which accrued after his death, are not deductible as administration expenses under section 2053(a)(2) of the Code. Such interest relates to an obligation of the decedent that he would have been obligated to pay had the decedent lived, unrelated to the settlement of the estate and the transfer of the property of the estate to the beneficiaries. However, if the executor had obtained an extension of the decedent's obligation, in order to avoid a sacrifice sale of estate assets, any ADDITIONAL interest could be deductible as an administration expense, if local law regarded the extension as necessary to the administration of the estate, where the interest was not merely paid on account of a pre-death obligation incurred by the decedent.

The determination of whether the loan obtained by the Estate in the amount of e was in fact necessary to avoid a forced sale of assets or whether it was obtained, at least in part, to pay interest accruing after the decedent's death on obligations incurred prior to death, or otherwise for the individual benefit of the beneficiaries of the Estate, is a factual question that is within the jurisdiction of the District Director to determine. If the District Director determines that it was necessary for the Estate to borrow e to pay federal and state taxes in order to avoid a forced sale of assets, the interest on the loan is deductible as an expense of administration under section 2053(a)(2) of the Code.

Lasarzig v. Commissioner, T.C. Memo. 1999-307, held that, because the trust beneficiaries chose to distribute estate assets and secure the loan with the distributed assets, the loan benefited the trust beneficiaries and not the decedent's estate and therefore was not an administrative expense of the estate. Facts:

> The QTIP trust was obligated to pay its share of the Federal estate tax over to the estate and failed to do so because the QTIP trustee (who was also a beneficiary of the estate) made the decision that the value of the realty was depressed, and it was not a good time to liquidate. Instead, the realty was distributed to the beneficiaries, and they placed the property into their own family trusts. Thereafter, the beneficiaries continued to believe that market conditions were not right, and so they borrowed (through their family trusts) the money to pay the QTIP's share of the estate's tax burden.[4] Respondent had filed a notice of his lien in 1998, and the lien was satisfied from the proceeds of the beneficiaries' family trusts' loan at the loan settlement/closing. After the payment of the outstanding estate tax liability, there remained no disputes concerning the estate tax liability that had been reported on the estate's return. Likewise, at that juncture, there remained no assets in the estate to administer on behalf of or to distribute to the estate's beneficiaries. Under these facts, it is difficult to see how the estate could meet the requirement of section 2053 and the underlying regulations.
>
> [4] We note that it is within respondent's discretion, as provided by Congress in sec. 6161, to extend the period for payment of the tax for up to 10 years. In that regard, under the circumstances of this case, respondent was not unreasonable in the exercise of his discretion. Respondent granted five extensions, and the payment of the tax was delayed for about 5 years, which seems to be a sufficient time to raise the funds to pay an agreed tax obligation.

Two 1999 Letter Rulings allowed deductions for interest for a loan from a commercial bank (the latter guaranteed by the family business), but each qualified the deduction:[7125]

> Accordingly, in view of the terms of the loan, we conclude that a deduction may be claimed on the Form 706 for the entire amount of the post-death interest expense to be incurred by the estate, provided the expense is necessarily incurred in the administration of the estate within the meaning of section 20.2053-3(a) and is allowable under local law. Whether the interest expense will be necessarily incurred in the administration of the estate is a factual determination and we are specifically not ruling on this issue.

On the other hand, Technical Advice Memorandum 200513028 disallowed deductions for interest on a loan from a family limited partnership that held marketable securities (57.6%), real property (17.5%) and personal notes on the partnership's prior sale of real estate (24.7%).

In *Estate of Murphy v. United States*,[7126] a family limited partnership was formed with approximately $91 million of restricted publicly-traded stock, of which the decedent contributed $89 million and the general partner LLC (to which the decedent contributed 49% and two children contributed the balance) contributed approximately $2 million. The estate borrowed $11 million from the partnership to pay estate tax, committing to pay $3 million of interest. The IRS claimed that the partnership's assets were includible in the estate under Code § 2036 and disallowed the interest. The court rejected both arguments and allowed the estate to deduct the interest.

[7125] Letter Rulings 199903038 and 199952039.
[7126] 104 AFTR 2d 2009-7703 (D. Ark. 2009).

In *Estate of Black v. Commissioner,*[7127] the interest on the loan was payable in a lump sum on the due date, more than 4 years from the date of the loan, and was deducted in full on the estate tax return. The court held that a loan from a limited partnership to the estate was not "necessarily incurred in the administration of the decedent's estate":

> Even assuming equivalent income and distributions to partners between February 25, 2003, the date of the loan, and November 30, 2007, the purported due date for repayment of the loan, timely repayment by the borrowers of the $71 million loan principal out of partnership distributions (derived almost entirely from dividends on Black LP's Erie stock) was, on the date of the loan, inconceivable. Thus, the borrowers knew (or should have known) that, on the loan date, payment of the promissory note, according to its terms, could not occur without resort to Black LP's Erie stock attributable to the borrowers' class B limited partnership interests in Black LP. Our conclusion that repayment of the note necessarily would require a sale of the Erie stock attributable to the borrowers' partnership interests in Black LP is premised on the assumption that, on the date they executed the promissory note, the borrowers intended to repay the loan in full on Nov. 30, 2007. Petitioner does not argue to the contrary. He argues only that the eventual decision to refinance the loan does not alter its status as a bona fide loan.
>
> Petitioner argues that the borrowers had no right under the partnership agreement to require a distribution to them of assets (i.e., Erie stock) either as part of a pro rata distribution to partners or in partial redemption of their partnership interests. But the partnership agreement provided for the modification thereof, and a modification permitting either a pro rata distribution of Erie stock to the partners or a partial redemption of the borrowers' partnership interests would not have violated petitioner's fiduciary duties, as managing partner, to any of the partners.

Estate of Duncan v. Commissioner[7128] clarified *Black*, permitting a (formerly) revocable trust to deduct interest paid to an irrevocable trust that had identical trustees and beneficiaries. The trustees determined the interest rate by asking the corporate trustee's loan department what rate would normally be charged; the rate was above the AFR and below the prime rate. The court rejected the IRS' argument that the parties needed to negotiate the interest rate with each other, since such a negotiation would have been meaningless. The court rejected the IRS' argument that the revocable trust should have sold assets to the irrevocable trust, given their identity of interest; the court recognized that, under Illinois, the two trusts must be respected as separate, and the court refused to require a sale at the discount that would have been required. In refusing to require a sale, the court distinguished *Black*:

> [In *Black*, we] did not hold that the loan was unnecessary because the estate could have sold stock. We held the loan was unnecessary because the estate would have had to sell the stock under any circumstance. The sale of the stock was inevitable, and the estate therefore could not have entered into the loan for the purpose of avoiding that sale.

[7127] 133 T.C. 340 (2009). The taxpayer prevailed on the IRS' assertion Code § 2036 inclusion regarding the limited partnership, so in some ways the case was a taxpayer victory.
[7128] T.C. Memo. 2011-255. Carol Harrington represented the taxpayer.

Similarly, the court rejected the IRS' argument that the parties could get together and agree to prepay the note that, by its terms, was not prepayable; again, the party that had the benefit of an interest rate above or below prevailing rates would not want to give up that benefit.

In *Keller v. United States*,[7129] a family limited partnership was formed with approximately $250 million in bonds. The estate borrowed from the partnership to pay federal estate taxes, Texas inheritance taxes, and other debts and obligations arising from the partnership. The note totaled $114 million and was due approximately 8-9 years from the date the estate tax return was filed, with 5% interest. The interest payments made on the note amounted to approximately $30 million, were paid to the partnership, reported as income to the partnership, passed through to its owners, each of whom paid income tax on such amounts. The IRS claimed that the partnership's assets were includible in the estate under Code § 2036 and disallowed the interest. The court rejected both arguments and allowed the estate to deduct the interest.

In affirming the District Court, the Fifth Circuit held:[7130]

> Disregarding the Estate's remaining illiquid assets, the Government instead re-urges that the loan between the FLP and the Estate could have been characterized another way, *e.g.*, as a distribution, rendering the loan (and its interest) "unnecessary." This position, as just noted, takes *Black* too far. The Government also contends that the Estate's and FLP's common control between related entities renders any potential economic distinctions between the Estate and FLP as well as the chosen financing structure little more than a legal pretense or an indirect use. What this ignores is that after the effective transfer of the Community Property bonds to the FLP, they were no longer property of the Estate. The Estate, having realized it improperly disposed of bonds belonging to another legal entity (the FLP was actually controlled by other family members), was forced to rectify its mistake using the assets it had available — largely illiquid land and mineral holdings. In lieu of liquidating these holdings, it borrowed from the FLP. As did *Graegin*, we refuse to collapse the Estate and FLP to functionally the same entity simply because they share substantial (though not complete) common control. The district court correctly permitted a deduction for the interest on the resulting loan.

Finally, if the beneficiaries have cash sufficient to pay the interest while the estate is looking for an unrelated buyer, the estate could avoid the *Graegin* controversy and sell enough of the illiquid assets to the beneficiaries to pay the interest. One might need to place the illiquid assets in an LLC first, so that the trustee can continue to control the sale of the underlying assets; the LLC idea would not work with an S corporation, but selling nonvoting stock to the beneficiaries and having a binding shareholders' agreement would probably be sufficient to address the control concern.

Koons v. Commissioner[7131] involved what appears to be a greedy taxpayer. In 2006, an LLC owned over 70% by the decedent's revocable trust loaned the trust $10,750,000 in exchange for a term promissory note in the principal amount of $10,750,000 at 9.5% per year interest with principal and interest due in 14 equal installments of approximately $5.9 million each between 2024 and 2031 (note the 18-year deferral of any payments). The terms of the loan prohibited prepayment. The total interest component of the 14 installments was $71,419,497. The proceeds of the loan were used to make a payment toward the estate and gift tax liabilities, and

[7131] T.C. Memo. 2013-94.

the taxpayer attempted to deduct the interest. The court held that the trust would need to use LLC distributions to repay the loan and the loan would unduly prolong estate administration, so there was no point to loaning the money instead of distributing it. In affirming, the Eleventh Circuit summarized the *Graegin* line of cases:[7132]

> Interest payments are not necessary expenses where: (1) the entity from which the estate obtained the loan has sufficient liquid assets that the estate can use to pay the tax liability in the first instance; and (2) the estate lacked other assets such that it would be required to eventually resort to those liquid assets to repay the loan.

A few other cases have addressed deductions for borrowing from related parties to pay estate tax.[7133]

From a tax-planning perspective, the point to a *Graegin* loan is to obtain an immediate estate tax deduction for the entire amount of interest to be paid, without any discounting for the time value of money. Note that the interest on a *Graegin* note is taxable income, and an income tax deduction would not be allowed because the interest was used to pay taxes, making it nondeductible personal interest (although it might be considered an administration expense). The income tax deferral, compared to the immediate estate tax benefit, is what makes it attractive. On the other hand, federal and state income tax rates in the year of repayment might exceed the estate tax rate. If the interest deduction is disallowed on the estate tax return, then the lender is stuck with ordinary income with the possibility of no offsetting deduction. A *Graegin* loan might very well draw an audit and a court date, as the IRS continues to litigate these cases. Trying to mitigate the income tax inclusion of the disallowed interest is quite uncertain.[7134]

Before doing a seller-financed *Graegin* loan, consider looking for one from a bank. The lack of an intra-family transaction should reduce exposure. If one then decides that a seller-financed *Graegin* loan is desirable, one can document the reasons relative to the potential bank loan that was rejected.

[7133] *Estate of Kahanic v. Commissioner*, T.C. Memo. 2012-81 (loan by surviving spouse when estate had sufficient assets to pay tax, but they were illiquid, and lender refrained from collecting until after estate tax proceedings were concluded); *Beat v. U.S.*, 107 A.F.T.R.2d 2011-1804 (D.C. Kan.) (IRS did not object to deduction of future interest on *Graegin* loan when summary judgment was ruled upon; when it later noticed its omission, its appeal to the court was rejected rather summarily, the court holding that the loan was necessary and beneficial to the Estate); *McKee v. Commissioner*, T.C. Memo. 1996-362 (It is not our province, and we are not prepared, to second guess the business judgments of the executors, for the executors have not been shown to have acted other than in the best interests of the estate. We believe that the executors' decision not to make a section 6166 election was prudent because, among other reasons, the estate benefited from increases in value to the Company stock and, consequently, decedent's estate was in a better situation to face contingencies such as an increased estate or gift tax liability. These loans allowed the estate to pay its Federal estate obligation in full shortly after decedent's death.); *Estate of Thompson v. Commissioner*, T.C. Memo. 1998-325 (the regulations under section 2053 do not require that an estate totally deplete its liquid assets before an interest expense can be considered necessary.).

III.B.5.e.iii.(b). *Graegin* Loans: Using a Commercial Lender

Except for home mortgages and certain other transactions, commercial lenders tend to avoid fixed rate loans.

If one encounters that, consider obtaining an interest rate swap contract that allows the estate's overall interest obligation to be fixed and locked in during the desired term.[7135]

III.B.5.e.iv. Federal Estate Tax Liens

The discussion on liens below focuses on liens that are placed on transfers. This part III.B.5.e.iv includes parts:

- III.B.5.e.iv.(a) Imposition of the Estate Tax Lien

The concepts of "nominee", "transferee", and "alter ego" are independent bases for attaching the property of a third party in satisfaction of a delinquent taxpayer's liability.[7137] If the

---

[7137] *Oxford Capital Corp. v. U.S.*, 211 F.3d 280 (5th Cir. 2000), explaining:

> A nominee theory involves the determination of the true beneficial ownership of property. An alter ego theory focuses more on those facts associated with a piercing the corporate veil analysis. In contrast, a transferee theory requires (1) an intent to defraud the Internal Revenue Service as a creditor or (2) a transfer without consideration which rendered the taxpayer insolvent. These issues are fact-intensive and involve imprecise legal rules. William D. Elliot, *Federal Tax Collections, Liens and Levies* 6 9.10[2] (2nd Ed. 2000). Specific property in which a third person has legal title may be levied upon as a nominee of the taxpayer if the taxpayer in fact has beneficial ownership of the property. See, *e.g.*, *Towe Antique Ford Foundation v. Internal Revenue Service*, 791 F.Supp. 1450, 1454 (D. Mont. 1992), *aff'd* w/o opinion, 999 F.2d 1387 (9th Cir. 1993).[2] Under the alter ego doctrine, however, all the assets of an alter ego corporation may be levied upon to satisfy the tax liabilities of a delinquent taxpayer-shareholder if the separate corporate identity is merely a sham, i.e., it does not exist independent of its controlling shareholder and that it was established for no reasonable business purpose or for fraudulent purposes. See *United States v. Jon-T Chemicals*, 768 F.2d 686 (5th Cir. 1985).[3] Cause to believe that a third party is holding particular property of the taxpayer as a nominee, without cause to believe alter ego status, justifies a levy upon the property of the third party only with respect to that specific property held as a nominee.
>
> [2] The court in *Towe* listed the following factors that are generally considered in determining nominee status: (a) No consideration or inadequate consideration paid by the nominee; (b) Property placed in the name of the nominee in anticipation of a suit or occurrence of liabilities while the transferor continues to exercise control over the property; (c) Close relationship between transferor and the nominee; (d) Failure to record conveyance; (e) Retention of possession by the transferor; and (f) Continued enjoyment by the transferor of benefits of the transferred property. *Towe Antique Ford Foundation*, 791 F.Supp. at 1454 (citing *United States v. Miller Bros. Constr. Co.*, 505 F.2d 1031 (10th Cir. 1974)).
>
> [3] While adopting a totality of the circumstances test, this circuit has developed a non-exhaustive list of factors to consider: (1) the parent and subsidiary have common stock ownership; (2) the parent and subsidiary have common directors or officers; (3) the parent and subsidiary have common business departments; (4) the parent and subsidiary file consolidated financial statements; (5) the parent finances the subsidiary; (6) the parent caused the incorporation of the subsidiary; (7) the subsidiary operated with grossly inadequate capital; (8) the parent pays salaries and other expenses of subsidiary; (9) the subsidiary receives no business except that given by the parent; (10) the parent uses the subsidiary's property as its own; (11) the daily operations of the two corporations are not kept separate; (12) the subsidiary does not observe corporate formalities. See *Century Hotels*, 952 F.2d at 110 n.5 (5th Cir. 1992).

Fourth Inv. LP v. United States, 720 F.3d 1058, 1069–70 (9th Cir. 2013) provides the following factors for nominee status:

(1) whether inadequate or no consideration was paid by the nominees;
(2) whether the properties were placed in the nominees' names in anticipation of a lawsuit or other liability while the transferor remains in control of the property;
(3) whether there is a close relationship between the nominees and the transferor;
(4) failure to record the conveyances;

government asserts that a trust in which the settlor had no legal rights was really a nominee for the settlor, the nominee issues– "the taxpayer has engaged in a legal fiction by placing legal title to property in the hands of a third party while actually retaining some or all of the benefits of true ownership" - is a question of fact, especially where the trust lacked a bank account, the settlor paid expenses from his personal account, and the settlor used the trust's property.[7138] The nominee theory applies when a debtor transfers his residence to a joint revocable trust.[7139]

III.B.5.e.iv.(a). Imposition of the Estate Tax Lien

The estate tax lien has some surprising aspects that affect not only probate and trust lawyers but also real property lawyers who represent buyers of property subject to this (generally unrecorded) lien. These surprises extend to lenders who rely on such property as collateral.

If assets pass on a person's death and are included in the decedent's gross estate for federal estate tax purposes ("included property"), and the total of the included property (that is, the gross estate), reduced by certain debts, expenses, and losses, exceeds a threshold, federal estate tax is required to be paid within nine months of the decedent's death.

To ensure that the entire estate tax is paid, Code § 6324(a)(1) provides for an estate tax lien on probate property for 10 years after the decedent's death. The lien automatically attaches to all probate property not used to pay charges against the estate and its administrative expenses.[7144]

[7143] Understanding a Federal Tax Lien, found at http://www.irs.gov/Businesses/Small-Businesses-&-Self-Employed/Understanding-a-Federal-Tax-Lien.

[7144] A similar lien applies for gift tax purposes, Code § 6324(b), capping the principal of the donee's liability at the value of the gift. The donee is also liable for interest, which the Eleventh Circuit says is not

More important, this estate tax lien need not be recorded to be effective and enforceable, and no record need be kept of an estate tax lien's release.[7145] This estate tax lien (sometimes called the "secret estate tax lien") differs from the Code § 6321 general tax lien. The general tax lien attaches only when the taxpayer neglects or refuses to pay tax after demand. Reg. § 301.6321-1. The priority of Code § 6321 lien is discussed by Freyermuth, Does a Federal Tax Lien Take Priority over a Mortgagee's Lien on Rents? *Bloomfield State Bank v. United States*, *Probate & Property* (p. 58, Sept./Oct. 2011); the case is at 644 F.3d 521 (7th Cir. 2011). Code § 6321 imposes a lien upon all property and rights to property, whether real or personal, belonging to the taxpayer. A disclaimer cannot frustrate this lien. *Drye v. U.S.*, 528 U.S. 49 (1999), which included a far-reaching footnote 7:

> In recognizing that state-law rights that have pecuniary value and are transferable fall within § 6321, we do not mean to suggest that transferability is essential to the existence of property or rights to property under that section. For example, although we do not here decide the matter, we note that an interest in a spendthrift trust has been held to constitute 'property' for purposes of § 6321 even though the beneficiary may not transfer that interest to third parties. See *Bank One*, 80 F.3d, at 176. Nor do we mean to suggest that an expectancy that has pecuniary value and is transferable under state law would fall within § 6321 prior to the time it ripens into a present estate.

Code § 6321 also reaches assets held as tenants by the entirety, *U.S. v. Craft*, 535 U.S. 274 (2002); Notice 2003-60 explains how the IRS enforces liens in light of *Craft*. Update on *Craft* and Litigation of Tenancy by Entirety Property, presented at the ABA Tax/RPTE 2014 Joint Fall Meeting, explained that, on foreclosure of TBE property to satisfy a tax lien, generally the sale proceeds are divided evenly, but the non-debtor spouse can argue that TBE gave her the right to use the property for the rest of her life and that she should obtain a settlement based on actuarial values; see Thompson Coburn LLP document no. 6091970. *U.S. v. Bogart*, 125 A.F.T.R.2d 2020-378 (3rd Cir. 1/7/2020) approved the sale of property owned by debtor and debtor's spouse.

Whether the tax lien would automatically be extinguished when the debtor dies is a matter of state law. *NPA Associates, LLC, v. Estate of Cunning*, 114 A.F.T.R.2d 2014-6400 (D. V.I. 2014) (lien extinguished); *U.S. v. Mattox*, 113 A.F.T.R.2d 2014-444 (E.D. Wis.) (lien continued).

For more on foreclosure when more than one person has an interest, see part III.B.3.c.iv Effect of Liens on Dealings with Third Parties, especially fn. 7197.

---

capped at the gift's value but the Third, Fifth, and Eighth Circuits say is capped at the gift's value. *U.S. v. Marshall*, 798 F.3d 296 (5th Cir. 2015); *Baptiste v. Commissioner*, 29 F.3d 1533 (11th Cir. 1994), *Baptiste v. Commissioner*, 29 F.3d 433 (8th Cir. 1994), and *Poinier v. Commissioner*, 858 F.2d 917 (3rd Cir. 1988). *Marshall* also held that the gift tax lien applies to the income beneficiary but not the remaindermen. Code § 6324(b) uses different language than Code § 6324(a), the latter imposing a lien on the trustee, not the beneficiaries. For how Code § 6324(b) applies to indirect donees, see part III.B.1 Transfers During Life.

[7145] Internal Revenue Manual § 5.5.8, Estate Tax Liens.

The lien may also attach to both halves of community property[7146] or other joint revocable trust.[7147]

The lien applies only to property rights at the time this tax lien becomes effective. If the debtor transferred property before the lien became effective, the government cannot enforce the lien

[7146] See Code § 66 and *U.S. v. Smith*, 117 A.F.T.R.2d 2016-663 (D. Wash. 2016). In *U.S. v. McGrew*, 118 A.F.T.R.2d 2016-6149 (9th Cir. 10/17/2016), the IRS was able to satisfy ex-husband's tax debt by foreclosing on community property awarded to wife in their divorce:

> McGrew asserts that the liens which the United States seeks to foreclose do not cover the residence at this time. We disagree. The residence was the community property of McGrew and Kenneth, although it is now hers alone. In general, the whole of the community estate is liable for a debt incurred by either spouse before or during marriage. Cal. Fam. Code § 910(a); see also *Lezine v. Sec. Pac. Fin. Servs., Inc.*, 14 Cal.4th 56, 63–64, 925 P.2d 1002, 1006, 58 Cal. Rptr.2d 76, 80 (1996). That means that the community estate is liable for debts incurred by either spouse for the period preceding their separation. See Cal. Fam. Code § 910(b); *McIntyre v. United States* (*In re McIntyre*), 222 F.3d 655, 658 (9th Cir. 2000); *Babb v. Schmidt*, 496 F.2d 957, 959-60 (9th Cir. 1974).

[7147] *U.S. v. Gibbons*, 132 A.F.T.R.2d 2023-5249 (D. MA 7/20/2023), reasoning:

> "[U]nder the federal tax lien statute, state law determines what interest a taxpayer possesses with respect to property...[b]ut federal law determines *whether* that state-law-created interest constitutes `property' or `rights to property' under the federal lien statute." *United States v. Murray*, 217 F.3d 59, 63 (1st Cir. 2000) (emphasis in original) (citation omitted). In other words, the "bundle of rights" that defendant has in relation to the property depends on Massachusetts law, but "federal law determines whether this interest rises to the level of `property' or `rights to property' for purposes of the federal tax lien statute." *See id*.
>
> Defendant has an interest in the property under Massachusetts law. When a "settlor retains dominion" over property that is "at least as great as a power of appointment," that property is "considered part of his assets." *State St. Bank & Tr. Co. v. Reiser*, 7 Mass. App. Ct. 633, 637 (1979). Here, defendant deeded the property to a trust. (TAC ¶ 7). He is currently the sole beneficiary of that trust and maintains total control over the trustee's actions. (See Stipulation ¶ 10; Declaration of Trust ¶ 2.2). Thus, the trust instrument gives defendant "such extensive powers over the trust property that it [is] in effect [his] own under Massachusetts law." *See Markham v. Fay*, 74 F.3d 1347, 1356 (1st Cir. 1996).
>
> Because defendant enjoys complete control over the trust while also being "the sole beneficiary, the legal title and equitable interest...merge and thereby terminate the trust." *See id.* at 1357; *see also O'Brien v. Commissioner*, 86 T.C.M. (CCH) 461, at *7 (T.C. 2003) (holding that when "a beneficiary can force a trustee to act...the beneficiary has an interest in property subject to [f]ederal tax lien[s]"). Accordingly, under federal law, the government can enforce its tax liens against the property and seek its entire value. See *Markham*, 74 F.3d at 1364 (explaining that where a person creates a trust for his own benefit, his "creditors can reach the maximum amount which the trustee under the terms of the trust could pay to [him]"); *Murray*, 217 F.3d at 65 ("It is against public policy to permit a man to tie up his own property in such a way that he can still enjoy it but can prevent his creditors from reaching it.").
>
> Defendant, however, contends that the trust should not collapse because James Gibbons was a valid beneficiary of the trust from its inception in 2009 until he disclaimed his interest in 2022. That argument is inapposite. The degree to which the government can reach the property held in defendant's self-settled trust turns on his present interest in the trust, regardless of the existence of other beneficiaries at some earlier moment in time. *See Murray*, 217 F.3d at 65 (holding that debtor-beneficiary's present "interest in income and corpus [of a trust] constitutes property for purposes of the federal tax lien statute, even if" he could have been divested of his interest in the past). Because defendant is the only current beneficiary of the trust, and he has total control over the trustee's actions, the trust has collapsed, and the government can reach the property.

against that property unless the government first obtains a judgment that the conveyance constituted a fraudulent transfer under applicable state law.[7148]

The general tax lien arises on assessment and is effective until the assessed taxes are paid or the lien becomes unenforceable because of a lapse of time.[7149] The IRS is required to give notice and an opportunity for a hearing.[7150] In contrast, the secret estate tax lien need not be recorded and the estate need not be given notice; therefore, an executor or other persons receiving included property, either by sale, distribution, or other transfer, might not be aware that an estate tax lien exists. On the other hand, administrative expenses, being enumerated as an exception to a Code § 6324(a) lien but not a Code § 6321 lien, are subject to the Code § 6321 lien, even if arising before the Code § 6321 lien was imposed.[7151]

Also, if the estate does not have the capacity to pay the estate tax or for other reasons would like to delay payment of the tax, the executor may request an extension under Code § 6161 by filing IRS Form 4768. This extension is granted for reasonable cause for an initial period of 12 months, but additional 12-month extension requests can be granted for up to 10 years. If the estate has an interest in a closely held business and the interest exceeds 35% of the adjusted gross estate, the estate may elect to pay the estate tax on such business in installments under Code § 6166; see part III.B.5.e.ii Code § 6166 Deferral. Section 6166 extensions may lead to liens recorded under Code § 6324A.

In any event, consider that an executor who distributes assets before all tax liabilities of the estate (or includible trust) are satisfied, the executor may be personally liable for paying the estate tax.[7152]

III.B.5.e.iv.(b). Exceptions to the Estate Tax Lien

A lien will not apply the following types of purchasers or transactions:[7153]

- a purchaser of stock, bonds, or other securities who had no actual notice or knowledge of the lien at the time of the purchase;

- a purchaser of a motor vehicle who has no actual notice or knowledge of the lien at the time of the purchase and taking possession;

7148 *U.S. v. Baker*, 114 A.F.T.R.2d 2014-6158 (D.C. N.H. 2014) (under local law, divorce decree transferred all of the transferor's rights to the subject real estate). In *Baker*, the government complained that the transferor had not recorded the deed before the Code § 6321 lien was filed. Citing a First Circuit case, the court held that:

> any effect that an unrecorded property transfer has on a subsequent bona fide purchaser or creditor has no bearing on whether a grantor retains any rights to property previously conveyed for purposes of 26 U.S.C. § 6321.

The judge later awarded attorney fees to the taxpayer, holding that the government had no justification for its position. 115 A.F.T.R.2d 2015-379 (D.C. N.H. 2015).

7149 Code § 6322.

7150 Code § 6320.

7151 *U.S. v. Spoor*, 118 A.F.T.R.2d 2016-6018 (11th Cir. 10/4/2016).

7152 See fn. 7167.

7153 Code § 6324(c), incorporating by reference certain important exceptions found in Code § 6323(b).

- a purchaser of tangible personal property sold at retail in the ordinary course of business (which might be relevant to an executor who continues to operate

- a business owned by the decedent as a sole proprietor; and

- a purchaser of household goods, personal effects, or certain other tangible personal property at a "casual sale" (and not for resale) for less than $1,000, if the purchaser has no actual notice or knowledge of the lien, or that the sale is one of a series of sales.

III.B.5.e.iv.(c). Priority of the Estate Tax Lien

Liens attaching before decedent's death have priority over the estate tax lien. The estate tax lien has priority over liens that attach to included assets after the date of death (other than liens for much personal property and certain other items excluded under Code § 6323(b)).[7154] If the estate has a Code § 6166 election in place to defer estate tax on closely held business interests, and a Code § 6324A lien is recorded, the Code § 6324A lien releases the secret estate tax lien and is subordinate to all liens that attached before the Code § 6324A lien attached.[7155] Thus, included property might be subject to liens that start out junior (or subordinate) to the secret estate tax lien but are senior (that is, take priority) to the Code § 6324A lien.

However, the Code § 6324A lien is subject to the following liens, even if they would otherwise be junior to the Code § 6324A lien:[7156]

(A) Certain real property tax and special assessment liens.[7157]

(B) Certain real property subject to a mechanic's lien for repairs and improvements, unless the mechanic's lien came into existence after the IRS accelerated the deferred amount under Code § 6166(g).

(C) Certain real property construction or improvement financing agreement giving rise to a security interest, whether such security interest came into existence before or after the tax

---

[7154] However, if real estate was subject to a mortgage at the decedent's death and a bona fide purchaser buys the property after death with knowledge of the secret estate tax lien, the purchaser steps into the senior secured creditor's shoes to the extent that the purchase price discharged the senior debt, if the state law principle of equitable subrogation applies. *Spear v. U.S.*, 111 A.F.T.R.2d 2013-1064 (D. Ariz.).

[7155] See part III.B.3.c.iv Liens: Selected Internal Revenue Manual Materials.

[7156] Code § 6324A(d)(3).

[7157] Referring to Code § 6323(b)(6), which refers to:

> With respect to real property, as against a holder of a lien upon such property, if such lien is entitled under local law to priority over security interests in such property which are prior in time, and such lien secures payment of—
>
> (A) a tax of general application levied by any taxing authority based upon the value of such property;
>
> (B) a special assessment imposed directly upon such property by any taxing authority, if such assessment is imposed for the purpose of defraying the cost of any public improvement; or
>
> (C) charges for utilities or public services furnished to such property by the United States, a State or political subdivision thereof, or an instrumentality of any one or more of the foregoing.

lien was filed, unless the security interest came into existence after the IRS accelerated the deferred amount under Code § 6166(g).[7158]

Note that the above exceptions are more narrow than the exceptions to a Code § 6324(a) lien. Administrative expenses, being enumerated as an exception to a Code § 6324(a) lien but not a Code § 6324A lien, are subject to the Code § 6324A lien, even if arising before the Code § 6324A lien was imposed.[7159]

As described further below, the estate tax lien has a 10-year duration. After it expires, the IRS must rely on the general tax lien. The general tax lien's priority is not based on date of death; instead, its priority is based on notice required under Code § 6323. As to Code § 6323, I.R.M. 5.17.13.3(1) provides:

> The Federal Priority Statute does not apply if, before the insolvency proceeding begins, another person has obtained an interest in the property that would prevail over the federal tax lien under IRC § 6323. *United States v. Estate of Romani*, 523 U.S. 517 (1998).
>
> a. If the interest of a creditor prevails over the federal tax lien under IRC § 6323(a), (b), (c), or (d), then the federal claim does not have priority over the creditor's interest.
>
> b. Under IRC § 6323(a), the following creditors prevail unless the IRS has filed a Notice of Federal Tax Lien: (a) purchasers, (b) holders of security interests, (c) mechanic's lienors, and (d) judgment lien creditors. Generally, creditors meeting the requirements in IRC § 6323(a), (b), (c), or (d), will have a higher priority claim than the IRS if the creditor's interest arises prior to the insolvency proceeding and prior to the filing of the Notice of Federal Tax Lien. See Note, below.
>
> c. In *Estate of Romani*, the Supreme Court held that a judgment lien creditor who recorded its liens on real property before the IRS filed its Notices of Federal Tax Lien prevailed over the IRS's tax claims in an insolvent decedent's estate case.

[7158] Code§ 6323(c)(3), which provides:

For purposes of this subsection—

(A) *Definition*. The term real property construction or improvement financing agreement means an agreement to make cash disbursements to finance—

(i) the construction or improvement of real property,

(ii) a contract to construct or improve real property, or

(iii) the raising or harvesting of a farm crop or the raising of livestock or other animals.

For purposes of clause (iii), the furnishing of goods and services shall be treated as the disbursement of cash.

(B) *Limitation on qualified property*. The term qualified property, when used with respect to a real property construction or improvement financing agreement, includes only—

(i) in the case of subparagraph (A)(i), the real property with respect to which the construction or improvement has been or is to be made,

(ii) in the case of subparagraph (A)(ii) , the proceeds of the contract described therein, and

(iii) in the case of subparagraph (A)(iii), property subject to the lien imposed by section 6321 at the time of tax lien filing and the crop or the livestock or other animals referred to in subparagraph (A)(iii).

[7159] *U.S. v. Spoor*, 118 A.F.T.R.2d 2016-6018 (11th Cir. 10/4/2016).

d. The general rule is that if the creditor would prevail against the IRS under IRC § 6323 outside of an insolvency, it will also prevail against the IRS in the insolvency.

e. Under *Estate of Romani*, many priority disputes in insolvency proceedings will be resolved by determining lien priorities under IRC § 6323.

Note: The *Romani* case applies only where the Government is relying on a claim for which a lien arose under IRC § 6321 and the competing interest is one identified in § 6323. In *Law Offices of Jonathan A. Stein v. Cadle Company*, 250 F.3d 716 (9th Cir. 2001), the Service levied the compensation of the president and CEO of an insolvent company. The company ignored the levy and continued to pay the president. The Service then sued the company to enforce the levy, and obtained a judgement under IRC § 6332(d). A third party also obtained a judgement against the company. The company then received a damages award to which the Service and the third party both claimed priority. In the ensuing interpleader proceeding, the Government claimed priority under 31 USC § 3713. The third party claimed priority by virtue of a judgement lien under IRC § 6323. The district court held for the Government under 31 USC § 3713, and the appellate court affirmed, finding that under *Romani*, the judgement lien would have priority if the United States were relying on claim for which a tax lien arose under IRC § 6321. However, in this case, the IRS did not have a federal tax lien claim against the company, so section 6323 did not apply. The Government won because section 3713 gave its claim priority over the third party's judgement lien.

In re: Estate of Frederick Alan Simmons, 120 A.F.T.R.2d ¶ 2017-5109 (D. IN 7/31/2017), held that, even though administrative expenses had higher priority under applicable state law, Code § 6323 did not give administrative expenses priority, so the Code § 6323 tax lien came first. Rev. Rul. 80-112 provides:

FACTS.

An individual died in September 1978, leaving property insufficient to pay taxes owed the United States for which it had no lien and other debts including funeral and administrative expenses, doctor's bills from the decedent's last illness, and wages due a household employee.

The state in which the decedent resided provides that a reasonable one-year family allowance be paid out of a decedent estate.

Under the laws of the state, claims against the estate of a deceased debtor are to be paid in the following order: administration expenses, funeral expenses, costs of last illness, family allowances, wages of household employees, and all other claims.

LAW AND ANALYSIS.

Section 3466 of the Revised Statutes (31 U.S.C. section 191, 1970) provides that whenever any person indebted to the United States is insolvent, or whenever the estate of any deceased debtor, in the hands of the executors or administrators, is insufficient to pay all the debts due from the deceased, the debts due to the United States shall be first satisfied.

Funeral and administrative expenses and the one-year family allowance provided by state law are under state law not debts of the decedent, but are charges against the property of the decedent to be deducted before the payment of debts. Costs of the decedent's last illness and the wages of household servants are debts from the decedent.

HOLDING.

The claims against the decedent's estate for funeral and administrative expenses and the family allowance have priority over federal tax claims of the government for which it has no lien. However, such federal tax claims are superior to claims against a decedent's estate for doctor's bills from the decedent's last illness and wages due a household employee.

Karl v. Rettig, 131 A.F.T.R.2d 2023-XXXX (E.D. Va. 6/27/2023), denied the IRS' motion to dismiss the following assertion of priority over the IRS' estate tax lien (refences to paragraphs I of the complaint omitted):

Plaintiff Karl is an attorney who previously represented Linda J. Solomon ("Solomon") in employment litigation against the United States Department of Agriculture ("USDA")…. Solomon then allegedly breached the contract she had with Karl and refused to pay him $739,670 2 as owed for legal fees, $8,281.76 as owed in costs, and by not having the settlement amount paid into Karl's attorney trust account.

Karl asked the district court to impose an equitable lien on the settlement proceeds, but the court rejected that request because the District of Columbia has no statutory lien provision. Instead, the district court suggested Karl file suit in D.C. Superior Court, which he then did.. After Solomon failed to show up at the first two trial dates, she died on her way to the third trial. A representative for the Estate was appointed, and the D.C. Superior Court ultimately entered judgment in the amount of $747,951.76 in Karl's favor in March 2019, and in November 2019 the court ordered that the judgment "shall bear interest at the legal rate from March 14, 2019." Karl filed a copy of the judgment in Fairfax County Circuit Court in May 2019 and the post-judgment interest award in November 2021.

The Estate is currently being administrated by the Commissioner of Accounts of the Circuit Court of Fairfax County (the "Commissioner") in accordance with Virginia law. The Commissioner filed a report on January 24, 2023 finding that Karl's claim against the estate did not constitute an attorneys' fee lien or judgment creditor's lien, and he determined the IRS had priority over Karl's claim with respect to any taxes owed. Karl filed his objections to the report, which are now pending before the Fairfax County Circuit Court.

On January 6, 2023, Karl filed a three Count Complaint to establish the priority of his judgment lien over any federal tax lien, asserting federal question jurisdiction under 28 U.S.C. § 1331 based on federal the Tax Lien Act, 26 U.S.C. § 6323 and the full faith and credit clause of the U.S. Constitution. More specifically, in Court One, Karl seeks relief under the Tax Lien Act, 26 U.S.C. § 6323(a), which provides in relevant part as follows:

> The lien imposed [in favor of the United States] by section 6321 shall not be valid as against any purchaser, holder of a security interest, mechanic's lienor, or judgment lien creditor until notice thereof which meets the requirements of subsection (f) has been filed by the Secretary.

26 U.S.C. § 6323(a). Section 6321, referenced therein, states:

> If any person liable to pay any tax neglects or refuses to pay the same after demand, the amount (including any interest, additional amount, addition to tax, or assessable penalty, together with any costs that may accrue in addition thereto) shall be a lien in favor of the United States upon all property and rights to property, whether real or personal, belonging to such person.

26 U.S.C. § 6321. In support of this claim, Karl contends that (1) he qualifies as a judgment lien creditor under § 6323(a); (2) before any notice of tax lien by the IRS was filed, he filed notice of his judgment and interest with the Fairfax County Circuit Court Clerk, and therefore met the requirements of § 6323(f), as required in § 6323(a); and (3) he is entitled to priority over the IRS. In Count Two, Karl alleges that, in any event, he is entitled to super priority over an IRS tax lien under § 6323(b)(8), which provides as follows:

> Even though notice of a lien imposed by section 6321 has been filed, such lien shall not be valid ... [w]ith respect to a judgment or other amount in settlement of a claim or of a cause of action, as against an attorney who, under local law, holds a lien upon or a contract enforceable against such judgment or amount, to the extent of his reasonable compensation for obtaining such judgment or procuring such settlement, except that this paragraph shall not apply to any judgment or amount in settlement of a claim or of a cause of action against the United States to the extent that the United States offsets such judgment or amount against any liability of the taxpayer to the United States.

26 U.S.C. § 6323(b)(8). In Court Three, Karl alleges that the judgment he obtained in the D.C. Superior Court has priority over any federal tax lien under the Full Faith and Credit Clause.

III.B.5.e.iv.(d). Ten-year Duration of Automatic Estate Tax Lien

Code § 6324(a)(1) provides that the estate tax lien applies for 10 years from the date of death, unless estate tax is paid in full sooner or becomes unenforceable by reason of the lapse of time. Most courts follow the reasoning of *United States v. Cleavenger*,[7160] which held that litigation concerning enforceability of the lien must be completed within 10 years of the decedent's death or the IRS loses the ability to enforce the secret estate tax lien. The court held that the IRS should process a general tax lien if it wants to maintain a lien on unpaid estate taxes. Courts generally follow the *Cleavenger* case.[7161]

But, in *United States v. Saleh*,[7162] the court sharply disagreed with *Cleavenger*'s analysis of the secret estate tax lien and held that the IRS could extend the estate tax lien by suing for payment

---

[7160] 325 F.Supp. 871 (N.D. Ind. 1971), *aff'd* 517 F.2d 230 (7th Cir. 1975).
[7161] See *New England Acceptance Corp. v. United States*, 35 F.Supp.2d 53, 55–56 (D.N.H. 1997).
[7162] 514 F.Supp. 8 (D.N.J. 1980).

of taxes, even if that required the lien to run past the 10 years. Similarly, in *United States v. Warner*,[7163] the court reasoned that if Code § 6502, which states that an assessed tax may be collected by levy or court proceedings as long as the proceedings or levy is instituted within 10 years after the assessment, is satisfied, the IRS can enforce the lien even if the proceedings extend beyond 10 years after the decedent's death.

Thus, depending on the jurisdiction, an estate may become encumbered by the secret estate tax lien for a period well past the 10-year time frame expressed in the literal language of Code § 6324.

III.B.5.e.iv.(e). Which Estates Are Affected by the Estate Tax Lien?

Code § 6324 applies to all included property, whether passing through probate or otherwise. But whether a property is held in a probate estate or passes outside of probate is an important distinction.

Probate Assets

Under Code § 6324(a)(2), the estate tax lien automatically attaches to any included property that is transferred from a probate estate, whether to a beneficiary or purchaser. As a result, if a person purchases probate property that is subject to the secret estate tax lien, whether or not that person is aware of it, the purchased or transferred property is still subject to the lien in that person's possession. Moreover, as described above, the secret estate tax lien is superior to the interests of the purchaser or lender if the lender's security interest arises after the decedent's death. The government may seize the encumbered property and sell it to recover any unpaid taxes.[7164] Code § 6324 "provides for the substantive liability of the transferees of estates with respect to the estate tax without regard to State law."[7165] The latter includes surviving joint tenants who contributed nothing toward the purchase of the joint property.[7166]

Although Code § 6324(a)(1) places a 10-year limit on its lien, Code § 6324(a)(2) does not expressly refer to a limit. However, the IRS views the Code 6324(a)(2) lien as having the same limit; see part III.B.5.e.iv.(h) Liens: Selected Internal Revenue Manual Materials.

Under 31 U.S.C. § 3713(b), the executor of a decedent's estate is liable for paying a creditor or making a distribution before paying any claim of the U.S. government, including estate taxes, unless the payment is permitted under another federal law.[7167] The executor, however, would not be liable for a bona fide sale, because the sale proceeds are subject to the same rules.

[7167] *U.S. v. Estate of Reitano*, 114 A.F.T.R.2d 2014-5919 (D. Mass. 2014), citing *United States v. Renda*, 709 F.3d 472, 480 notes 9-10 (5th Cir. 2013), and *United States v. Coppola*, 85 F.3d 1015, 1020 (2nd Cir. 1996), held that the following three elements are required to prosecute a 31 U.S.C. § 3713(b) claim:

If an executor makes a written request to be discharged of personal liability for payment of estate taxes under Code § 2204 and the IRS does not respond within nine months or if the discharge is granted, the executor or personal representative is no longer personally responsible for payment of the tax.[7168] The release of the executor does not release the estate tax lien on the estate's assets, but the lien will not apply to property transferred to a purchaser

---

(1) A fiduciary of the debtor or the debtor's Estate transferred assets of the debtor or the Estate;
(2) At the time of the transfer, the debtor or the Estate was insolvent or was rendered insolvent by the transfer; and
(3) Before making the transfer, the fiduciary knew of a debt due the United States, or had notice of facts that would lead a reasonably prudent person to inquire as to the existence of such a debt.

The executor, McNicol, essentially admitted that these elements were present. The court described her defense:

> McNicol does not contest the elements, but instead argues that family allowances and funeral and administrative expenses take priority over plaintiff's claim. The trouble with this argument, however, is that the statute penalizes the transfer of the assets. Had McNicol left the assets in the estate and paid family allowances and expenses therefrom, this might be a different case.[8] But that did not happen. McNicol transferred the shares of stock to herself, and at that moment, she violated the statute. Summary judgment is proper on Count 2.[9]
>
> [8] Of course, I take no position on whether the allowances and expenses McNicol identifies do, in fact, take priority over a federal tax debt.
>
> [9] Plaintiff requests an award of prejudgment interest on McNicol's liability in Count 2, a matter which, it agrees, is left to my discretion… (citing *United States v. Golden Acres, Inc.*, 702 F.Supp. 1097, 1109 (D. Del. 1988)). I decline to award interest.

In affirming *Reitano*, *U.S. v. McNicol*, 118 A.F.T.R.2d 2016-5150 (1st Cir. 2016), *cert. denied* 1/9/2017, acknowledged that family allowances and administrative expenses may take priority over federal tax obligations but held that any such expenditures were not substantiated:

> We do not gainsay that a personal representative of an estate that is indebted to the United States for unpaid taxes may nonetheless use estate assets to defray certain types of expenses without contravening the statutory priority. The IRS itself acknowledges that there are exceptions to the priority created by section 3713(a) for family allowances and administrative expenses (such as expenses incurred for the general welfare of creditors, expenses incurred to collect and preserve assets, court costs, and funeral expenses). See *Internal Revenue Manual*, 34.4.1.7 (Aug. 11, 2004). The case law reinforces this view. See *Estate of Jenner v. C.I.R.,* 577 F.2d 1100, 1106 (7th Cir. 1978); *Schwartz v. C.I.R.*, 560 F.2d 311, 314 n.7 (8th Cir. 1977); *Abrams v. United States*, 274 F.2d 8, 12 (8th Cir. 1960).
>
> Despite this promising provenance, however, the appellant's argument for an equitable exception fails. Even if we assume that an equitable exception to the priority statute may exist — a matter on which we take no view — the appellant's prospects would not improve.
>
> As a threshold matter, the summary judgment record flatly contradicts the appellant's assertion that she transferred the stock to herself for the purpose of paying administrative expenses of the estate.

Administrative expenses, being enumerated as an exception to a Code § 6324(a) lien but not a Code § 6321 or 6324A lien, are subject to the Code § 6321 or 6324A lien, even if arising before the Code § 6321 or 6324A lien was imposed. *U.S. v. Spoor*, 118 A.F.T.R.2d 2016-6018 (11th Cir. 10/4/2016). Following *Coppola*, *United States v. Read*, 2016 WL 310721, 117 A.F.T.R.2d 2016-541 (D. Conn. 2016), awarded prejudgment interest from the dates on which the trustee made distributions, knowing of the tax debt to the United States.

The IRS has the burden of proving all three elements, and the fiduciary may use equitable apportionment contribution rights as assets in determining insolvency. *Singer v. Commissioner*, T.C. Memo. 2016-48. See also *United States v. Tyler*, 528 F.App'x 193, 200-02 (3d Cir. 2013), citing *Coppola*.

[7168] For details about Code § 2204 discharge, see part III.A.6 Post-Mortem Trust and Estate Administration.

or holder of a security interest. Instead, the lien will apply to the consideration received from the purchaser or holder.[7169]

Nonprobate Assets

Trustees of trusts included in the decedent's estate and other recipients of nonprobate included property may have personal liability under not only 31 U.S.C. § 3713(b)[7170] but also Code § 6324(a)(2); not all courts agree that assets held in a revocable trust at death are subject to Code § 6324(a)(2).[7171] Code § 6324(a)(2), "Liability of transferees and others," provides:

> If the estate tax imposed by chapter 11 is not paid when due, then the spouse, transferee, trustee (except the trustee of an employees' trust which meets the requirements of section 401(a)), surviving tenant, person in possession of the property by reason of the exercise, nonexercise, or release of a power of appointment, or beneficiary, who receives, or has on the date of the decedent's death, property included in the gross estate under sections 2034 to 2042, inclusive, to the extent of the value, at the time of the decedent's death, of such property, shall be personally liable for such tax. Any part of such property transferred by (or transferred by a transferee of) such spouse, transferee, trustee, surviving tenant, person in possession, or beneficiary, to a purchaser or holder of a security interest shall be divested of the lien provided in paragraph (1) and a like lien shall then attach to all the property of such spouse, transferee, trustee, surviving tenant, person in possession, or beneficiary, or transferee of any such person, except any part transferred to a purchaser or a holder of a security interest.

Thus, among others affected by the above, when the settlor of a revocable trust dies, the trustee becomes a personal guarantor of estate tax, even if the trust's assets decrease in value without any fault of the trustee. The trustee is not the only guarantor - *U.S. v. Paulson*,

---

[7169] Code § 6324(a)(3).

[7170] See text accompanying fn. 7229. See fn. 7167 for the requirements to make a claim under 31 U.S.C. § 3713(b).

[7171] Code § 6324(a)(2) applies to property included in the gross estate under sections 2034 to 2042. Relying on Rev. Rul. 75-553, *U.S. v. Johnson*, 118 A.F.T.R.2d 2016-6781 (D.C. UT 12/1/2016), reversing under a motion for reconsideration its prior decision under 112 A.F.T.R.2d 2013-5474 (D.C. UT), held that assets held in a revocable trust at death pass under Code § 2033, not Code §§ 2036-2038; *U.S. v. Johnson*, 121 A.F.T.R.2d 2018-341 (D.C. UT 2018) awarded attorney fees to the taxpayer when the IRS claimed that trustees couldn't have received valid discharge of personal liability under Code § 2204 as result of furnishing Code § 6324A special lien because they didn't use certain application (see fn 6194). Rev. Rul. 75-553 held that the trustee of a revocable trust, which trust passed to the grantor's estate at death, was not subject to Code § 6324(a)(2):

> Although sections 2036, 2037, and 2038 of the Code include in a decedent's gross estate the value of any interest in property transferred by the decedent, in trust or otherwise, where a life estate, reversionary interest, or power to alter, amend or revoke is retained by the decedent, these provisions of the Code do not become operative unless someone other than the decedent receives a beneficial interest in the transferred property. The transfer of property to a trustee acting as agent for the transferor, without a third party receiving any interest in the property, would not fall within the scope of sections 2036, 2037, and 2038. In the instant case the trust corpus is payable to the decedent's estate and is property of the decedent within the meaning of section 2033 and is includible in the gross estate only under that section.

It is odd that a revocable trust pouring into the grantor's estate is not be treated the same as a revocable trust that does not pour into the decedent's estate or a revocable trust that receives assets from the estate.

131 A.F.T.R.2d 2023-1743 (9th Cir. 5/17/2023) (majority opinion), described the case that came to the court and its conclusion:

> Allen Paulson died with an estate valued at nearly $200 million, with most of his assets placed in a living trust. But years later more than $10 million in estate taxes, interest, and penalties remained unpaid. The United States of America (the United States or the government) sued several of Paulson's heirs - John Michael Paulson, James D. Paulson, Vikki E. Paulson, Crystal Christensen, and Madeleine Pickens - alleging that they controlled the trust, as trustees, or received estate property, as transferees or beneficiaries, and thus are personally liable for the estate taxes under § 6324(a)(2) of the Internal Revenue Code, 26 U.S.C. § 6324(a)(2). The United States also alleged that Vikki Paulson and Crystal Christensen, as co-trustees of the living trust, were liable for unpaid estate taxes under section 19001 of the California Probate Code.
>
> As relevant to this appeal, the district court granted in part Vikki Paulson's Crystal Christensen's, and Madeleine Pickens's motions to dismiss, concluding that they were not liable for the estate taxes under § 6324(a)(2) as trustees, transferees, or beneficiaries, and later ruled on several motions for summary judgment. Based on the reasoning in its order granting the motions to dismiss in part, the court ruled in favor of Madeleine Pickens and James Paulson on the United States' remaining claims under § 6324(a)(2), concluding that they were not personally liable for the estate taxes. The court entered summary judgment in favor of the United States on its claims under the California Probate Code. The United States appeals the rulings in favor of the defendants on the § 6324(a)(2) claims, and Vikki Paulson and Crystal Christensen cross-appeal the judgment holding them liable for the unpaid estate taxes under section 19001.[1] We have jurisdiction over these appeals under 28 U.S.C. § 1291.
>
>> [1] The district court concluded that John Michael Paulson was liable for the unpaid estate taxes as executor and trustee of the living trust, but concluded that he had successfully discharged his liability for the estate taxes under 26 U.S.C. §§ 2204. The United States does not dispute that finding on appeal.[7172] Therefore, only its claims against James Paulson, Vikki Paulson, Crystal Christensen, and Madeleine Pickens are at issue.
>
> We hold that § 6324(a)(2) imposes personal liability for unpaid estate taxes on the categories of persons listed in the statute who have or receive estate property, either on the date of the decedent's death or at any time thereafter, subject to the applicable statute of limitations. We further hold that the defendants were within the categories of persons listed in § 6324(a) when they had or received estate property, and thus are liable for the unpaid estate taxes as trustees and beneficiaries.[7173] Therefore, we reverse the district court's judgment in favor of the defendants on the United States' claims under § 6324(a)(2), and remand to the district court with instructions to enter judgment in favor of the government on these claims with any further proceedings necessary to determine the amount of each defendant's liability for the unpaid taxes. Because our conclusion on

[7172] [my footnote:] For a Code § 2204 discharge, see text accompanying fn 7183 in part III.B.5.e.iv.(g) How to Avoid the Pitfalls of the Estate Tax Lien, which also explains how John Michael Paulson (court also used the shortened "Michael Paulson").

[7173] [my footnote:] This analysis is a separate issue from what is described in part III.B.5.e.v Transferee Liability.

> the federal tax claims arising from the Internal Revenue Code resolves this matter, we do not reach the parties' dispute over the interpretation of the California Probate Code.

Before reviewing the majority's reasoning, let's add some color to the case's setting. The dissent criticized the IRS' handling of this case:

> In this case, the estate elected to defer payments over fourteen years. But the government failed to use the options available to protect its unsecured interests in deferred payments. *See supra*, at 59. It also failed to hold Michael Paulson, the trustee of the decedent's trust on the date of the decedent's death, personally liable for the estate taxes due, *United States v. Paulson*, 445 F.Supp.3d 824, 831 (S.D. Cal. 2020), even though such liability may extend after the expiration of the ten-year estate tax lien provided for in § 6324(a)(1). *See, e.g.*, Internal Revenue Manual 5.5.8.3 (June 23, 2005) (stating that 26 U.S.C. §§ 6502 applies to assess personal liability under § 6324(a)(2)); 26 U.S.C. §§ 6502(a) (providing for ten-year period after assessment of taxes for collection); *Id*. § 6503(d) (tolling ten-year period when 26 U.S.C. §§ 6166 election is made).
>
> To compensate for its failures to use the available statutory options to collect estate taxes, the government here adopted a novel reading of § 6324(a)(2). Although the accepted reading of this language (as noted in *Garrett*, 67 T.C.M. (CCH) at *14) is that it imposes personal liability for estate taxes on any person who receives (or has) property on the decedent's date of death, the government for the first time reads this language as imposing liability on a person "who receives" property of the estate at any time, even years after the decedent's death. Under this interpretation, the government calculates the estate tax based on the value of property on the date of decedent's death, and then imposes personal liability for this tax on a person who receives the property years later. This means that the individual's tax liability may be completely disproportionate to the value of the property when the individual eventually receives it.

The Ninth Circuit opened its analysis:

> Section 2001 of the Internal Revenue Code imposes a tax on a decedent's taxable estate, which the executor is required to pay. 26 U.S.C., §§ 2001(a), 2002. Section 6324, in turn, operates to protect the government's ability to collect estate and gift taxes. See 26 U.S.C. §§ 6324(a); see also *United States v. Vohland*, 675 F.2d 1071, (9th Cir. 1982) ("[Section] 6324 is structured to assure collection of the estate tax."). To this end, the statute imposes a lien on the decedent's gross estate for the unpaid estate taxes in § 6324(a)(1) and imposes personal liability for such taxes on those who receive or have estate property in § 6324(a)(2).10 26 U.S.C. and §§ 6324(a)(1) and (2); *see also United States v. Geniviva*, 16 F.3d 522, 524 (3d Cir. 1994) (explaining that § 6324(a)(2) "affords the Government a separate remedy against the beneficiaries of an estate when the estate divests itself of the assets necessary to satisfy its tax obligations").
>
> The statutory provision at issue here, § 6324(a)(2), as stated in its title, imposes personal liability on "transferees and others" who receive or have property from an estate. The statute provides that:
>
>> If the estate tax imposed by chapter 11 is not paid when due, then the spouse, transferee, trustee (except the trustee of an employees' trust which meets the requirements of section 401(a)), surviving tenant, person in possession of the

> property by reason of the exercise, nonexercise, or release of a power of appointment, or beneficiary, *who receives, or has on the date of the decedent's death*, property included in the gross estate under sections 2034 to 2042, inclusive, to the extent of the value, at the time of decedent's death, of such property, shall be personally liable for such tax.

26 U.S.C. §§ 6324(a)(2) (emphasis added). The question before us is whether the phrase "on the date of the decedent's death" modifies only the immediately preceding verb "has," or if it also modifies the more remote verb, "receives."

The United States argues the limiting phrase "on the date of decedent's death" modifies only the immediately preceding verb "has," and not the more remote verb "receives." Therefore, in its view, the statute imposes personal liability on those listed in the statute who (1) receive estate property at any time on or after the date of the decedent's death, or (2) have estate property on the date of the decedent's death. Thus, it contends, § 6324(a)(2) imposes personal liability for the unpaid estate taxes in this case on successor trustees and beneficiaries of the living trust, including those who have or received estate property after the date of decedent Allen Paulson's death.

The defendants, in contrast, argue that the limiting phrase "on the date of the decedent's death" modifies both the immediately preceding verb "has," and the more remote verb "receives." Thus, under their interpretation, the statute imposes personal liability for the unpaid estate taxes only on those who receive or have property included in the gross estate on the date of the decedent's death. But those who receive property from the estate at any point after the date of the decedent's death have no personal liability for the unpaid estate taxes.

We conclude that the most natural reading of the statutory text, and other indicia of its meaning, supports the United States' interpretation. Therefore, we hold that § 6324(a)(2) imposes personal liability for unpaid estate taxes on the categories of persons listed in the statute who have or receive estate property, either on the date of the decedent's death or at any time thereafter, subject to the applicable statute of limitations.

The Ninth Circuit described the argument that its holding may generate an unfair liability and dismissed that concern:

The defendants' second argument also fails. The defendants correctly state that the statutory language imposes estate tax liability "to the extent of the value, at the time of the decedent's death, of such property." *Id*. § 6324(a)(2). The modifier "at the time of the decedent's death" applies to "the extent of the value." Id. This language plainly means that tax liability is calculated based on the value of the estate property at the time of decedent's death. *Id*. As the government acknowledges, this provision favors the taxpayer by limiting liability for any unpaid estate taxes to the value of the property at the time of the decedent's death, even if the property increases in value after the decedent's death.[19] *See id*. Thus, the statutory language anticipates, and allows, a potential windfall for a person who receives estate property that increases in value after the date of the decedent's death.

[19] In its briefing, the government stated that the "property is valued 'at the time of the decedent's death,'" and that "language simply caps potential liability under

§ 6324(a)(2) by preventing liability from exceeding the value of the non-probate property at the time of the decedent's death."

The defendants, however, dispute that Congress could have also anticipated that estate property could depreciate after the date of the decedent's death and thus potentially result in tax liability for the recipient that exceeds the property's value.[20] The defendants argue that an interpretation of § 6324(a)(2) that would allow the government to impose personal liability for the estate taxes "for a greater amount of money than they ever held," would lead to "a nonsensical result."[21] But "[t]o avoid absurdity, the plain text of Congress's statute need only produce 'rational' results, not 'wise' results." *Lopez*, 998 F.3d at 438 (citing *Hokulani Square*, 776 F.3d at 1088). Thus, a statute's text may lead to results that are "not wise," and that we may even consider "harsh and misguided," but a statute is not absurd if "it is at least rational." *Hokulani Square*, 776 F.3d at 1088 (rejecting the argument that bankruptcy code provision was absurd because whether trustee received a fee for his services or worked for free turned on trivialities). And "the bar for 'rational' is quite low." *Lopez*, 998 F.3d at 438 (citing *Griffin*, 458 U.S. at 575–76).

[20] If, as the defendants suggest, estate property continued to depreciate after the transferee or other beneficiary accepted it, such that the tax liability eventually exceeded the value of the property received, that risk of loss would apply equally to those who receive estate property on the date of the decedent's death and to those who receive estate property after the date of the decedent's death. There is nothing about the risk of accepting property that may decline in value that would apply unfairly to those who receive such property after the date of the decedent's death.

[21] The hypotheticals defendants assert to support their arguments are speculative and are not supported by the record. For example, they argue that the value of the estate assets here "almost certainly" declined because the estate included "uniquely depreciative horses in the Trust's possession." But this argument does not account for the living trust provisions mandating that "upon the [decedent's] death" the trustee "shall sell promptly the entire interest of the trust" in certain assets, including "all horses."

This is not a situation where it is "quite impossible" that Congress could have intended the result. See *Lopez*, 998 F.3d at 438 (citation omitted). Here, Congress clearly could have anticipated that the value of estate property could change after the date of the decedent's death—either by increasing or decreasing in value—and thus could have anticipated that the value of some estate assets could depreciate below the amount of the estate tax liability. Indeed, as discussed more fully below, Congress included several provisions in the tax code that mitigate the risk that a transferee's, beneficiary's, or other person's tax liability could exceed the value of the property they received, including: 26 U.S.C. §§ 2001 (tax rate based on a percentage of the taxable estate),[22] § 2002, 26 C.F.R. § 20.2002-1 (executor's duty to pay the estate tax before distributing estate property and liability for failing to do so), § 2518 (disclaimer), and § 6502(a)(1) (statute of limitations).

[22] The taxable estate is determined by deducting from the value of the gross estate the deductions provided in Title 26, Part IV. 26 U.S.C. §§ 2051.

And while it is “not our job to find reasons for what Congress has plainly done,” *Lopez*, 998 F.3d at 447 (M. Smith, J., concurring) (internal quotation marks and citation omitted), Congress rationally could have concluded that such risk is acceptable or is effectively mitigated by other provisions of the tax code, and thus is outweighed by the benefit of ensuring the collection of estate taxes. This is not an irrational tax policy. Indeed, we have previously recognized that “[§] 6324 is structured to assure collection of the estate tax.” *Vohland*, 675 F.2d at 1076. Moreover, even if it were to conclude that such a policy is “odd,” or “not wise,” *Lopez*, 998 F.3d at 447 (M. Smith, J., concurring) (citation omitted), or simply unfair, we cannot rewrite the statute to advance a different policy, *id*. at 440 (majority opinion). See also *Hokulani Square*, 776 F.3d at 1088 (“The absurdity canon isn’t a license for us to disregard statutory text where it conflicts with our policy preferences”). And if Congress determines that its tax policy leads to unintended or unfair results, it is for Congress, not the courts, to rewrite the tax code. See *Crooks*, 282 U.S. at 60; *Griffin*, 458 U.S. at 576. Therefore, we conclude that applying the rule of the last antecedent to § 6324(a)(2) does not result in an absurd interpretation of the statute….

But our conclusion—that this is not the “exceptional” case where we can invoke the absurdity canon to reject the interpretation of a statute that is most consistent with its text, structure, punctuation, and other indicia of meaning—does not mean that the defendants’ “the sky is falling”[23] arguments are based on anything other than remote hypotheticals. And even if the defendants could demonstrate that applying § 6324(a)(2) to those who receive estate property after the date of the decedent’s death could result in what they characterize as an “absurd situation,” that situation will not arise here.[24]

[23] “Chicken Little,” Merriam-Webster.com Dictionary, https://www.merriam-webster.com/dictionary, last visited May 10, 2023.

[24] When Madeleine Pickens received assets from the estate, including two residences, personal property, and cash, the value of those assets exceeded the estate tax liability. Indeed, the government asserts that when Madeleine Pickens received this property it was worth $19 million, and Vikki Paulson and Crystal Christensen assert it was worth $42 million. Madeleine Pickens does not dispute these valuations. Crystal Christensen received a non-depreciating bequest of cash, and the trustee distributed $990,125 to her. And even if Vikki Paulson and Crystal Christensen can establish that the estate’s tax liability exceeded the value of the estate assets when they became trustees, they cannot establish that it is absurd or unfair to impose tax liability on successor trustees because, as the terms of the living trust make clear, trustees serve only if they are “willing.”

As an initial matter, before those who receive estate property could be subjected to tax liability that exceeds the value of the property they received, all the following events, some of which are remote and unlikely, must occur.

First, the property must have depreciated after the date of the decedent’s death to the point that it is worth less than the tax liability, which is calculated as a percentage of the amount of the taxable estate.[25] See 26 U.S.C. §§ 2001 (setting rate schedule of 18% to 40%, depending on the amount of the taxable estate).

[25] For example, in this case, at the time of Allen Paulson’s death, although his estate reported a gross taxable estate of $187,729,626, his net taxable estate was reported

at a substantially lower amount, $9,234,172, and the tax liability was initially reported as $4,459,051. After the IRS successfully asserted a deficiency, the Tax Court determined that the estate owed an additional $6,669,477 in estate taxes. Thus, the tax liability was a fraction of the gross taxable estate.

Second, the executor must have failed to pay the estate tax before distributing estate property. See 26 U.S.C., §§ 2001(a), 2002; *id*. § 6324(a)(2) (imposing personal liability on transferee and others when "estate tax imposed by chapter 11 is not paid when due"); 26 C.F.R. § 20.2002-1 (imposing personal liability on executor for distributing any portion of the estate before all estate tax is paid).

Third, the estate must have "divest[ed] itself of the assets necessary to satisfy its tax obligations," *Geniviva*, 16 F.3d at 524, thus defeating the lien for estate taxes under that would apply under § 6324(a)(1).

Fourth, the statute of limitations must not have expired by the time the property is distributed or the government attempts collection. See 26 U.S.C. §§ 6502(a)(1).

Fifth, a transferee, beneficiary, or other recipient of the estate property must not have disclaimed or refused the property. See 26 U.S.C. §§ 2518; 26 C.F.R. § 25.2518-2.[26]

[26] A disclaimer must be in writing, made within nine months of the transfer creating the interest or when the recipient reaches age 21, whichever is later, and before the transferee accepts any of the interest or its benefits. 26 U.S.C. §§ 2518(b). The regulations further explain that the nine-month period for making a disclaimer "generally is to be determined with reference to the transfer creating the interest in the disclaimant." 26 C.F.R. § 25.2518-2(c)(3)(i). For transfers made by a decedent at death, the transfer creating the interest occurs on the date of the decedent's death. *Id*.

Sixth, the government must successfully seek to impose tax liability on a transferee, beneficiary, or other recipient of estate property in an amount that exceeds the value of the property they received.

Focusing on the final factor - whether the government would later seek to impose tax liability that exceeds the value of the property received and would be successful in advancing that argument - we rely on the government's avowals in its briefing and at oral argument that estate tax liability cannot exceed the value of the property received. Specifically, the government asserted in its briefing that the language in § 6324(a)(2) that the estate property is valued at the time of the decedent's death, "does not expose a person to liability that exceeds the value of the property that he or she personally had or received." The government further emphasized this point, explaining that: "[i]nstead, a person will be liable under § 6324(a)(2) only to the extent that he or she actually 'receives' or 'has' non-probate property, viz. , the person's liability is capped at the value of the property had or received."[27]

[27] To support its position, the government cites *United States v. Marshall*, 798 F.3d 296, 315 (5th Cir. 2015) (holding that a donee's personal liability for gift tax under § 6324(b) "is capped by the amount of the gift"). Although the language of these subsections of § 6324 differ, with subsection (a)(2) limiting personal liability for estate taxes "to the extent of the value, at the time of the decedent's death," 26 U.S.C. §§ 6324(a)(2), and subsection (b) limiting gift tax liability "to the extent of the value of

such gift," *id*. § 6324(b), estate and gift taxes "are in pari materia and must be construed together." *Sanford v. Comm'r*, 308 U.S. 39, 44 (1939); see also *Chambers v. Comm'r*, 87 T.C. 225, 231 (1986) (same). Thus, while the government's citation to Marshall is not authoritative, it does provide persuasive support for the government's position.

These representations, coupled with the doctrine of judicial estoppel, provide additional safeguards against the hypothetically unfair application of personal liability under § 6324(a)(2), which the defendants posit. Although the application of judicial estoppel is discretionary, it could be applied to bar the government from later arguing, in this case or a future case, that it can recover more than the value of the property that the taxpayer received.[28] See *New Hampshire v. Maine*, 532 U.S. 742, 750 (2001) (explaining that judicial estoppel "is an equitable doctrine invoked by a court at its discretion" (internal quotation marks and citation omitted)). The doctrine exists to "to protect the integrity of the judicial process by prohibiting parties from deliberately changing positions according to the exigencies of the moment."[29] *Id*. at 749-50 (internal quotation marks and citations omitted).

[28] We have long recognized that "[t]he application of judicial estoppel is not limited to bar the assertion of inconsistent positions in the same litigation, but is also appropriate to bar litigants from making incompatible statements in two different cases." *Hamilton v. State Farm Fire & Cas. Co.*, 270 F.3d 778, 783 (9th Cir. 2001) (citations omitted).

[29] Importantly, judicial estoppel differs significantly from other estoppel doctrines, such as equitable estoppel. *See Teledyne Indus., Inc. v. NLRB*, 911 F.2d 1214, 1219 (6th Cir. 1990) ("Although each of these doctrines deals with the preclusive effect of previous legal actions, the similarity ends there."). "Judicial estoppel exists to protect the courts from the perversion of judicial machinery through a party's attempt to take advantage of both sides of a factual issue at different stages of the proceedings." *Id*. at 1220 (internal quotation marks and citation omitted). "In contrast, equitable estoppel serves to protect litigants from unscrupulous opponents who induce a litigant's reliance on a position, then reverse themselves to argue that they win under the opposite scenario." Id. (citation omitted). And while the Supreme Court has explained, in the context of equitable estoppel, that "it is well settled that the Government may not be estopped on the same terms as any other litigant," *Heckler v. Cmty. Health. Servs. of Crawford Cnty., Inc.*, 467 U.S. 51, 60 (1984), judicial estoppel may be applied to prevent the government from asserting inconsistent legal arguments, *United States v. Liquidators of Eur. Fed. Credit Bank*, 630 F.3d 1139, 1147-49 (9th Cir. 2011) (holding that judicial estoppel barred the government from arguing that defendant could not raise legal claims challenging forfeitability in ancillary proceedings, after earlier arguing that defendant could raise their arguments during ancillary proceedings).

The Court has identified three non-exclusive factors that should "inform" a court's decision whether to apply judicial estoppel: (1) "a party's later position must be 'clearly inconsistent' with its earlier position"; (2) "the party has succeeded in persuading a court to accept that party's earlier position, so that judicial acceptance of an inconsistent position in a later proceeding would create 'the perception that either the first or the second court was misled'"; and (3) "the party seeking to assert an inconsistent position would derive an unfair advantage or impose an unfair detriment on the opposing party if not estopped." *Id*. at 750-51 (internal quotation marks and citations omitted).

If these considerations were applied to the government's representations here - that § 6324(a)(2) does not allow the government to impose personal liability for unpaid estate taxes in an amount that exceeds the value of the property received - judicial estoppel could be applied to prevent the government from taking a contrary position in later litigation. First, such a position would be contrary to the government's position in this case. Second, the government has succeeded in persuading us to accept its position, and judicial acceptance of an inconsistent position in a later proceeding would create the impression that either we, or the later court, were misled. Third, allowing the government to take a contrary position in later litigation would unfairly prejudice the taxpayers in the subsequent litigation, who may have relied on the government's position, and would also prejudice the second court. See *Rissetto v. Plumbers & Steamfitters Local 343*, 94 F.3d 597, 604 (9th Cir. 1996) (explaining that "the interests of the second court are uniquely implicated and threatened by the taking of an incompatible position").

Moreover, there are cases that, while not directly addressing the issue before us now, include statements that lend support to the government's argument that it does not seek to impose liability for estate taxes that exceed the value of the property received. See *Geniviva*, 16 F.3d at 523 (construing § 6324(a)(2) and noting that "[t]his section provides that if estate taxes are not paid when due, the beneficiaries are liable up to the amount received from the estate"); *Schuster v. Comm'r*, 312 F.2d 311, 315 (9th Cir. 1962) (considering § 827(b), a predecessor statute that included the same language as § 6324(a)(2), and explaining that the statute imposed some limitations on a transferee's liability because "it requires that a deficiency be due from the estate, and that his [or her] liability therefor is limited to the value of the estate corpus which he [or she] received").

Finally, defendants have not identified, and our research has not uncovered, any case in which the government has attempted to impose personal liability for estate taxes that exceeded the value of the property received. The absence of any case law on this point supports the conclusion that this situation has never been litigated because the government has never taken this position, which in turn, supports the conclusion that it is unlikely that the government will attempt to assert this argument in future litigation.

Thus, we conclude that applying the rule of the last antecedent does not lead to absurd results, but instead results in the most natural reading of the statute, consistent with its structure and context….

The defendants also argue that to interpret the statute we must consider its purpose and intent. Madeleine Pickens argues that "the purpose of [§] 6324(a)(2) is to provide the Government with the same avenue to collect taxes from non-probate property that it has with respect to probate property." She reasons that just as probate property must "pass[] through the hands of the executor," the "beneficiaries of a decedent's trust can only take possession of trust property after it has passed through the hands of the trustee." Thus, she concludes that the government's interests "are fully protected when [§] 6324(a)(2) imposes personal liability on a trustee of the decedent's trust who distributes property to a trust beneficiary without first paying the tax."

But nothing in the statutory text supports her argument that Congress's purpose in enacting §6324(a)(2) was to impose personal liability for unpaid estate taxes on those persons, "including trustees," who "stand in the same position as the executor." The statute does not impose personal liability for unpaid estate taxes based on the existence or exercise of a fiduciary duty to the estate.[30] Instead, § 6324(a)(b) imposes personal liability, based on receipt or possession of property from the gross estate, on the categories of persons listed in the statute, and that list does not include executors or administrators. And while the list includes trustees, it also includes transferees, spouses, beneficiaries, and others who do not act as fiduciaries or administrators of the estate. 26 U.S.C. §§ 6324(a)(2). We therefore find no basis to conclude that personal liability for unpaid estate taxes on non-probate property under § 6324(a)(2) is intended to mirror an executor's liability for distributions of probate property.

[30] Indeed, other sections of the tax code and regulations address the collection of taxes from fiduciaries. See 26 U.S.C. §§ 6901 (providing methods of collection of taxes from transferees and fiduciaries); 26 C.F.R. § 20.2002-1 (explaining the liability of executors, administrators, and others).

The Ninth Circuit continued:

Our holding that § 6324(a)(2) imposes personal liability on those listed in the statute, who have or receive estate property on or after the date of the decedent's death, does not completely resolve this matter. We must determine whether the defendants fall within the categories of persons listed in the statute and are thus liable for the unpaid estate taxes.

A

The government argues that the defendants are liable under the statute as trustees, transferees, and beneficiaries. Vikki Paulson and Crystal Christensen acknowledge that they are successor trustees, and James Paulson has not submitted a brief contesting the district court's finding that he was a successor trustee. Thus, these defendants do not dispute that, if § 6324(a)(2) applies to those who receive or have estate property after the date of the decedent's death, they are liable as "trustees" under § 6324(a)(2).

We therefore conclude that James Paulson, Vikki Paulson, and Crystal Christensen are liable, as trustees, for the unpaid estate taxes on property from the gross estate, held in the living trust, "to the extent of the value, at the time of the decedent's death, of such property." 26 U.S.C. §§ 6324(a)(2). But, as previously discussed and as conceded by the government, see *supra* Section III.C.2.b, that liability is capped at the value of estate property in the living trust at the time of Allen Paulson's death, and each defendants' liability cannot exceed the value of the property at the time that they received or had it as trustees.

B

The government also argues that the ordinary meaning of "beneficiary" includes "trust beneficiaries" and therefore Crystal Christensen and Madeleine Pickens are liable as beneficiaries under § 6324(a)(2) for the unpaid estate taxes.[33] These defendants acknowledge that they are "trust beneficiaries," but they argue that they are not "beneficiar[ies]," as that term is used in § 6324(a)(2). Instead, they argue that "beneficiary" in § 6324(a)(2) has a narrow meaning and applies only to life insurance beneficiaries.[34]

[33] Because we conclude that Crystal Christensen and Madeleine Pickens are liable for the unpaid estate taxes as beneficiaries under § 6324(a)(2), we need not address whether they are also liable as "transferees," as that term is used in the statute.

[34] As we discuss later, infra, at n.36, Madeleine Pickens acknowledges that beneficiaries may also include beneficiaries of annuity payments.

Because the statute does not define "beneficiary," "we look first to the word's ordinary meaning." *See Schindler Elevator Crop. v. United States*, 563 U.S. 401, 407 (2011) (citing *Gross v. FBL Fin. Servs.*, 557 U.S. 167, 175 (2009) ("Statutory construction must begin with the language employed by Congress and the assumption that the ordinary meaning of that language accurately expresses the legislative purpose" (internal quotation marks omitted)); *Asgrow Seed Co. v. Winterboer*, 513 U.S. 179, 187 (1995) ("When terms used in a statute are undefined, we give them their ordinary meaning"). At this first step, we conclude that dictionary definitions support the government's broad interpretation, rather than the defendants' narrow interpretation limiting liability to insurance beneficiaries. See Beneficiary, BLACK'S LAW DICTIONARY (11th ed. 2019) (defining "beneficiary" as "[s]omeone who is designated to receive the advantages from an action or change; esp., one designated to benefit from an appointment, disposition, or assignment (as in a will, insurance policy, etc.), or to receive something as a result of a legal arrangement or instrument," and "[s]omeone designated to receive money or property from a person who has died"); see also Beneficiary, AMERICAN HERITAGE DICTIONARY (5th ed. 2018) ("One that receives a benefit" or "the recipient of funds, property, or other benefits, as from an insurance policy or trust"); Beneficiary , WEBSTER'S NEW WORLD COLLEGE DICTIONARY (5th ed 2014) ("[A]nyone receiving benefit" or "a person named to receive the income or inheritance from a will, insurance policy, trust, etc...."); Beneficiary , WEBSTER'S NEW WORLD DICTIONARY (4th ed. 2003) ("[A]nyone receiving or to receive benefits, as funds from a will or insurance policy...."); Beneficiary, 2 OXFORD ENGLISH DICTIONARY (2d ed. 1989) ("[O]ne who receives benefits or favours; a debtor to another's bounty...."). Therefore, we conclude that the ordinary meaning of "beneficiary" includes a "trust beneficiary."

C

But we must also consider whether "there is any textual basis for adopting a narrower definition" of "beneficiary." See *Schindler*, 63 U.S. at 409; *see also* SCALIA & GARNER, supra, at 70 ("One should assume the contextually appropriate ordinary meaning unless there is reason to think otherwise. Sometimes there is reason to think otherwise, which ordinarily comes from context." (emphasis in original)). The government argues that the *text* of § 6324(a)(2) does not indicate that "beneficiary" has a narrower meaning than its ordinary meaning. The defendants, however, argue that the *context and structure* of the statute support a narrower interpretation.

The defendants rely on two cases interpreting predecessor versions of the statute, *Higley v. Commissioner*, 69 F.2d 160 (8th Cir. 1934), and *Englert*, 32 T.C. 1008 (1959), and two cases applying the reasoning of these earlier cases to interpret § 6324(a)(2), *Garrett v. Commissioner*, T.C. Memo. 1994-70 (1994), and *Johnson*, 2013 WL 3924087 (D. Utah 2013). As we explain next, we are not persuaded by these cases, or the defendants' arguments, that the structure or context of the statute support a narrow interpretation that overcomes the ordinary meaning of beneficiary.

We start with *Higley v. Commissioner*, in which the Eighth Circuit interpreted the word "beneficiary" in § 315(b) of the Revenue Act of 1926. 69 F.2d at 162. The text of this predecessor statute, however, differs significantly from the text of § 6324(a)(2), and so § 315(b)'s relevance to our analysis is limited. Section 315(b) provided:

> If (1) *the decedent makes a transfer, by trust or otherwise*, of any property in contemplation of or intended to take effect in possession or enjoyment at or after his death...or (2) *if insurance passes under a contract executed by the decedent in favor of a specific beneficiary*, and if in either case the tax in respect thereto is not paid when due, then *the transferee, trustee, or beneficiary shall be personally liable* for such tax[.]

Id. (quoting 26 U.S.C. §§ 1115(b) (emphasis added)). As the court recognized in its analysis of the statute, § 315(b) expressly addressed two types of property dispositions: (1) "transfers," including "trusts," and (2) "insurance," and imposed liability on the "transferee, trustee, or beneficiary." *Id*. Indeed, the statute specifically referred to "insurance...in favor of a specific beneficiary." *Id*. The court concluded that this structure meant that the word "trustee" was "employed in connection with trust only," and the word "beneficiary" "applies only to insurance policy beneficiaries." *Id*.

But this direct textual and structural correlation between (1) dispositions by "transfers" and" trusts" to the liability of a "transferee" or "trustee," and (2) dispositions of "insurance...in favor of a specific beneficiary" to the liability of a "beneficiary," is not present in § 6324(a)(2). We therefore conclude that the court's analysis in *Higley*, based on the text and structure of § 315(b), does not support the defendants' narrow interpretation of "beneficiary" in § 6324(a)(2).

We next consider *Englert v. Commissioner*, in which the Tax Court interpreted another predecessor statute, § 827(b) of the Internal Revenue Code of 1939, as amended by the Revenue Act of 1942. 32 T.C. at 1012-13, 1015. The structure of this predecessor statute also differs from § 6324(a)(2). Section 879(b), in relevant part, provided:

> If the tax herein imposed is not paid when due, then the spouse, transferee, trustee, surviving tenant, person in possession of the property by reason of the exercise, nonexercise, or release of a power of appointment, or beneficiary, who receives, or has on the date of the decedent's death, property included in the gross estate under section 811(b), (c), (d), (e), (f), or (g), to the extent of the value, at the time of the decedent's death, of such property, shall be personally liable for such tax.

Id. at 1017, n.4 (quoting 26 U.S.C. §§ 827(b)).

As the Tax Court noted, § 827(b) "names six classes of persons who, ...may be personally liable for the unpaid tax." *Id*. at 1012. These six classes - (1) spouse, (2) transferee, (3) trustee, (4) surviving tenant, (5) person in possession, and (6) beneficiary - correspond directly to, and in the same order as, the property included in the gross estate in §§ 811 (b), (c), (d), (e), (f), or (g). *Id*. at 1012, 1016 ("In a single sentence of section 827(b) it is provided that there may be liable six classifications of persons who hold property includible in the estate under six specific subsections of section 811 of the Code.").

The court stated its belief that Congress "studiously chose a classification applicable to each of such subsections and included them in section 827(b) in the same order as the related property interests appeal in subsections (b) through (g), inclusive, of section 811." *Id*. at 1016. Applying this reasoning, and as petitioner argued, the court concluded that a person liable under the statute as a beneficiary would be limited to the beneficiary of a life insurance policy under § 811(g). See *id*. at 1013, 1016.

But § 6324(a)(2) does not include § 827(b)'s precise correspondence between categories of liable persons and types of property. As the defendants acknowledge, the statute now lists six categories of liable persons, but then incorporates nine categories of properties included in the gross estate. The defendants argue that these changes to the text and structure of the statute do not change the analysis, the differing statutory provisions are "substantially the same," and the differences in the text should be considered "minor adjustments." We are not persuaded by these arguments.

As an initial matter, in *Englert*, the tax court found compelling the direct correlation of the six categories of persons liable to the six categories of property included in the gross estate, and concluded it was the result of Congress's "studious[] cho[ice.]" *Id*. at 1016. That direct correlation is not present in § 6324(a)(2) and we cannot simply brush aside the differences in the statute's structure and text.[35] But even more importantly, § 6324(a)(2) differs substantively from its predecessor statutes by incorporating § 2039, which includes in the gross estate "an annuity of other payment receivable by any beneficiary," thus explicitly applying the word "beneficiary" beyond life insurance beneficiaries.[36] Therefore, the court's reasoning in Englert does not provide a textual or structural basis for us to conclude that the word "beneficiary" in § 6324(a)(2) should be limited to beneficiaries of life insurance.

[35] Madeleine Pickens suggests that Congress was aware of Englert when it enacted § 6324(a)(2) and if it had intended to change the meaning of the text "it would have stated as much explicitly." But *Englert* was decided in 1959, five years after Congress enacted § 6324(a)(2). See Internal Revenue Code of 1954, § 6324, 68A stat. i, 780 (1954).

[36] Madeleine Pickens acknowledges that although "prior cases have held that the term 'beneficiary' in section 6324(a)(2) means only the beneficiary of life insurance proceeds, the addition of section 2039 and its incorporation into section 6324(a)(2) likely means that a beneficiary of annuity payments would also be considered a 'beneficiary' under section 6324(a)(2)." She recognizes this is a "substantive" difference. But she suggests this is not important to our interpretation of the statute because "that question was not before the District Court, is not before this Court, and need not be decided in order to dispose of the appeal." We disagree. This substantive difference between the statutes is highly relevant and important to their interpretation.

Despite the textual and structural differences between § 6324(a)(2) and its predecessor statutes, the defendants rely on two more recent cases, *Garrett* and *Johnson*, to argue that the reasoning of *Higley* and *Englert* "apply with equal force" to § 6324(a)(2). In *Garrett*, the court applied the reasoning of *Higley* and *Englert* to conclude that the word "beneficiary" in § 6324(a)(2) refers only to life insurance beneficiaries.[37] *Garrett*, T.C. Memo. 1994-70 at *12-*14. But the court did not provide any analysis of the text or structure of § 6324(a)(2), and instead concluded that it found "nothing in the current statutory language that would warrant a more expansive definition of 'beneficiary' or [a]

> departure from earlier precedent under section 827(b)." *Id*. at *14. This conclusion is refuted by the substantive differences between the predecessor statutes, § 315(b) and § 827(b), and the current statute, § 6324(a)(2), including the current statute's explicit expansion of the meaning of the word beneficiary through the incorporation of § 2039….
>
> > [37] In *Johnson*, the court simply adopted the reasoning of *Garrett*, without any additional analysis, 2013 WL 3924087, at *8; we therefore reject its conclusions for the same reasons we reject the reasoning of *Garrett*.
>
> We conclude that the ordinary meaning of beneficiary, which includes trust beneficiaries, applies to § 6324(a)(2), and we are not persuaded that the structure or context of the statute, or policy considerations, require a narrower interpretation as the defendants argue. Moreover, applying the presumption of consistent usage further supports our conclusion that the term beneficiary in the tax code includes trust beneficiaries. Therefore, we conclude that Crystal Christensen and Madeleine Pickens are liable for the unpaid estate taxes under § 6324(a)(2) as beneficiaries. However, the liability of each of these defendants cannot exceed the value of the estate property at the time of decedent's death, or the value of that property at the time they received it.

The Ninth Circuit held:

> Because § 6324(a)(2) imposes personal liability for unpaid estate taxes on the categories of persons listed in the statute who receive or have estate property, either on the date of the decedent's death or at any time thereafter, subject to the applicable statute of limitations, and the defendants were within the categories of persons listed in the statute when they received or had estate property, we conclude that they are liable for the unpaid estate taxes as trustees and beneficiaries. We therefore reverse the district court's judgment in favor of the defendants on the United States' claims under § 6324(a)(2), and remand to the district court with instructions to enter judgment in favor of the government on these claims with any further proceedings necessary to determine the amount of each defendant's liability for the unpaid taxes.

On June 30, 2023, Defendants-Appellees Vikki E. Paulson and Crystal Christensen submitted a Petition for Rehearing En Banc.[7174]

This case is not the first to impose a Code § 6324(a)(2) lien on beneficiaries. See text accompanying fns 7224-7228 in part III.B.5.e.v.(b) Transferee Liability Extends Past Original Estate Tax Lien. However, it is the first to say that a person who does not directly receive property upon the decedent's death (or was in possession when the decedent died) is subject to the Code § 6324(a)(2) lien. Of course, it is only the Ninth Circuit's opinion; how other courts would rule may vary. For example, the District Court in *Johnson* held that assets held in a revocable trust at the time of the grantor's death are not considered to have passed to the trustee at death and therefore the trustee is not subject to Code § 6324(a)(2).

The estate tax lien does not continue to apply to included property that is transferred by the trustee or other recipient if the transfer is to a purchaser or holder of a security interest, but a lien is then imposed on all the property of the trustee or other nonprobate recipient who

[7174] Ninth Circuit's docket for case #: 21-55197.

transferred the included property. A recipient of includible life insurance is also liable under Code § 6324(a)(2).[7175]

Furthermore, under Code § 6324(a)(2) proceeds from the sale of included property are subject to the estate tax lien as if the proceeds were included property (a "like" lien).

III.B.5.e.iv.(f). Divestment of Lien Property and Release of Liens

A seller cannot give clear title to property encumbered by the secret estate tax lien until the lien is discharged or released.   A taxpayer may request that certain property be discharged from the lien by filing IRS Form 4422[7176] with the IRS if:[7177]

- the remaining property in the estate has a value that is double the amount owed to the IRS,
- the government receives a payment equal in amount to the value of the property requested to be discharged,
- the government does not have a valuable interest in the specific property, or
- the sale proceeds are to be substituted for the discharged property.

In all of these cases, the property that is discharged is no longer subject to the secret estate tax lien. A like lien, however, may attach to any proceeds from the sale or transfer of the discharged property.

Also, Code § 6325(a) mandates that a lien must be released when:

- the liability assessed has been fully satisfied,
- the liability has become legally unenforceable (the time has expired within which the IRS can enforce the lien, for example), or
- a bond has been furnished by the payee guaranteeing payment.

If any of these conditions is met and the lien is released, the property is no longer subject to the lien. Note that, unlike the situation in which certain property has been discharged, when the estate tax lien is released under Code § 6325(a), the entire estate (not just certain items) is free of the secret estate tax lien.

Thus, if the estate tax is unpaid, generally four ways exist to divest included property of the estate tax lien even though the estate is subject to the estate tax:

[7175] *Baptiste v. Commissioner*, 29 F.3d 1533 (11th Cir. 1994) (life insurance beneficiary liable and must pay interest), *aff'g* T.C. Memo. 1992-198 (life insurance beneficiary liable) and 100 T.C. 252 (1993) (recipient also liable for interest).
[7176] For the time frame for filing Form 4422, see text accompanying fn. 7188, found in part III.B.5.e.iv.(g) How to Avoid the Pitfalls of the Estate Tax Lien.
[7177] Code § 6325(b).

- Included property that is used to pay for estate expenses and other amounts owed by the estate will not be subject to the lien.[7178]

- Nonprobate property transferred to a purchaser or holder of a security interest is no longer subject to the lien, although a like lien attaches to all of the transferor's property.[7179]

- The lien is divested from included property that is probate property and has been transferred to a purchaser of probate property if the personal representative has been discharged of personal liability under Code § 2204, although a like lien attaches to the proceeds of the sale.[7180]

- Property that has been discharged under Code § 6325(a) is no longer subject to the lien.

III.B.5.e.iv.(g). How to Avoid the Pitfalls of the Estate Tax Lien

Ideally, an executor or trustee should not distribute or sell property included in the gross estate until the IRS has issued a "closing letter" or generated a transcript stating that the estate tax has been satisfied and the matter is closed.[7181] At this point, the estate tax lien is removed if the estate tax has been paid,[7182] although no official record verifies its release.

Although it will not release the estate tax lien, an executor (and a trustee who is an executor within the meaning of Code § 2203) should ordinarily submit a written request to the IRS for an assessment of the estate tax due and to be discharged of personal liability under Code § 2204. Reg. § 20.2204-1, "Discharge of executor from personal liability," provides (highlighting added):

> (a) *General rule*. The executor of a decedent's estate may make written application to the applicable internal revenue officer with whom the estate tax return is required to be filed, as provided in §20.6091-1, for a determination of the Federal estate tax and for a discharge of personal liability therefrom. Within 9 months after receipt of the application, or if the application is made before the return is filed then within 9 months after the return is filed, the executor will be notified of the amount of the tax and, upon payment thereof, he will be discharged from personal liability for any deficiency in the tax thereafter found to be due. If no such notification is received, the

[7178] Code § 6324(a)(1).
[7179] Code § 6324(a)(2).
[7180] Code § 6324(a)(3).
[7181] Notice 2017-12 states:

> Estates and their authorized representatives may request an account transcript by filing Form 4506-T, Request for Transcript of Tax Return. Currently, Form 4506-T can be filed with the IRS via mail or facsimile (per the instructions on the form). Although account transcripts for estate tax returns are not currently available through the IRS's online Transcript Delivery System, the IRS website, www.irs.gov, will have current information should an automated method become operational. To allow time for processing the estate tax return, requests should be made no earlier than four months after filing the estate tax return.
> For those who wish to continue to receive estate tax closing letters, estates and their authorized representatives may call the IRS at (866) 699-4083 to request an estate tax closing letter no earlier than four months after the filing of the estate tax return.

See also https://www.irs.gov/businesses/small-businesses-self-employed/transcripts-in-lieu-of-estate-tax-closing-letters,the 4/27/2023 version of which contained detailed instructions how to get a transcript.
[7182] The executor may request a duplicate receipt as an official record that an estate tax payment was made. Code § 6314(b) and Reg. § 301.6314-1. I am unaware of any form, so presumably a letter to the IRS would suffice.

executor is discharged at the end of such 9 month period from personal liability for any deficiency thereafter found to be due. The discharge of the executor from personal liability under this section applies only to him in his personal capacity and to his personal assets. The discharge is not applicable to his liability as executor to the extent of the assets of the estate in his possession or control. Further, the discharge is not to operate as a release of any part of the gross estate from the lien for estate tax for any deficiency that may thereafter be determined to be due.

(b) *Special rule in the case of extension of time for payment of tax*. In addition to the provisions of paragraph (a) of this section, an executor of the estate of a decedent dying after December 31, 1970, may make written application to be discharged from personal liability for the amount of Federal estate tax for which the time for payment has been extended under § 6161, 6163, or 6166. In such a case, the executor will be notified of the amount of bond, if any, to be furnished within 9 months after receipt of the application, or, if the application is made before the return is filed, within 9 months after the return is filed. The amount of any bond required under the provisions of this paragraph shall not exceed the amount of tax the payment of which has been extended. Upon furnishing the bond in the form required under §301.7101-1 of this chapter (Regulations on Procedure and Administration), or upon receipt of the notification that no bond is required, the executor will be discharged from personal liability for the tax the payment of which has been extended. If no notification is received, the executor is discharged at the end of such 9 month period from personal liability for the tax the payment of which has been extended.

Reg. § 20.2204-2, "Discharge of fiduciary other than executor from personal liability," provides (highlighting added):

(a) A fiduciary (not including a fiduciary of the estate of a nonresident decedent), other than the executor, who as a fiduciary holds, or has held at any time since the decedent's death, property transferred to the fiduciary from a decedent dying after December 31, 1970, or his estate, may make written application to the applicable internal revenue officer with whom the estate tax return is required to be filed, as provided in § 20.6091-1, for a determination of the Federal estate tax liability with respect to such property and for a discharge of personal liability therefrom. The application must be accompanied by a copy of the instrument, if any, under which the fiduciary is acting, a description of all the property transferred to the fiduciary from the decedent or his estate, and any other information that would be relevant to a determination of the fiduciary's tax liability.

(b) Upon the discharge of the executor from personal liability under § 20.2204-1, or, if later, within 6 months after the receipt of the application filed by a fiduciary pursuant to the provisions of paragraph (a) of this section, such fiduciary will be notified either (1) of the amount of tax for which it has been determined the fiduciary is liable, or (2) that it has been determined that the fiduciary is not liable for any such tax. The fiduciary will also be notified of the amount of bond, if any, to be furnished for any Federal estate tax for which the time for payment has been extended under § 6161, 6163, or 6166. The amount of any bond required under the provisions of this paragraph shall not exceed the amount of tax the payment of which has been so extended. Upon payment of the amount for which it has been determined the fiduciary is liable, and upon furnishing any bond required under this paragraph in the form specified under §301.7101-1 of this chapter (Regulations on Procedure and

> Administration), or upon receipt by the fiduciary of notification of a determination that he is not liable for such tax or that a bond is not required, the fiduciary will be discharged from personal liability for any deficiency in the tax thereafter found to be due. If no such notification is received, the fiduciary is discharged at the end of such 6 months (or upon discharge of the executor, if later) from personal liability for any deficiency thereafter found to be due. The discharge of the fiduciary from personal liability under this section applies only to him in his personal capacity and to his personal assets. The discharge is not applicable to his liability as a fiduciary (such as a trustee) to the extent of the assets of the estate in his possession or control. Further, the discharge is not to operate as a release of any part of the gross estate from the lien for estate tax for any deficiency that may thereafter be determined to be due.

Given that it seems to me that the IRS rarely responds within the 9-month or 6-month deadlines highlighted in Reg. §§ 20.2204-1 and 20.2204-2, sending a letter requesting the Code § 2204 discharge seems an effective way to protect an executor or other fiduciary. In *U.S. v. Paulson*, 131 A.F.T.R.2d 2023-1743 (9th Cir. 5/17/2023), the IRS assumed – and the Ninth Circuit accepted – that a Code § 2204 discharge eliminated Code § 6324 liens to the extent that they arose solely from a person's status as an executor or other fiduciary.[7183] The lower court - District Court for the Southern District of California – explained how that trustee protected himself in *U.S. v. Paulson*, 445 F.Supp.3d 824 (2020):

> Plaintiff contends that though Michael Paulson was discharged from personal liability arising out of his position as Executor, he was not discharged from personal liability arising out of his role as Trustee of the Living Trust pursuant to 26 U.S.C. § 2204. (Doc. No. 191-1 at 12.) However, Michael Paulson argues that he followed all of the required procedures to be discharged as both executor of the Estate and trustee of the Trust. (Doc. No. 189-1 at 6.)
>
> Section 2204 states:
>
>> ((a)) General Rule.—If the executor makes written application to the Secretary for determination of the amount of the tax and discharge from personal liability therefor, the Secretary (as soon as possible, and in any event within 9 months after the making of such application, or, if the application is made before the return is filed, then within 9 months after the return is filed, but not after the expiration of the period prescribed for the assessment of the tax in section 6501) shall notify the executor of the amount of the tax. The executor, on payment of the amount of which he is notified ... and on furnishing any bond with may be required for any amount ... shall be discharged from personal liability for any deficiency in tax ...
>>
>> ((B)) Fiduciary other than the executor.—If a fiduciary other than the executor makes written application to the Secretary for determination of the amount of any estate tax for which the fiduciary may be personally liable, and for discharge from personal liability therefor, the Secretary upon the discharge of the executor from personal liability under subsection (a), or upon the expiration of 6 months after the making of such application by the fiduciary, if later, shall notify the fiduciary (1) of the amount of such tax for which it has been determined the fiduciary is liable, or (2) that it has

[7183] See text accompanying fn 7172 in part III.B.5.e.iv.(e) Which Estates Are Affected by the Estate Tax Lien?

> been determined that the fiduciary is not liable for any such tax. Such application shall be accompanied by a copy of the instrument, if any, under which such fiduciary is acting, a description of the property held by the fiduciary, and such other information for purposes of carrying out the provisions of this section as the Secretary may require by regulations....

26 U.S.C. § 2204(a), (b).

The crux of the issue here is whether Michael Paulson followed the procedures outlined above to be discharged of personal liability arising out of his role as Trustee of the Living Trust. Plaintiff argues that Michael Paulson failed to follow these procedures.

Prior to 1970, Section 2204 was titled "Discharge of Executor from Personal Liability," and in fact, only allowed for the executor to discharge their personal liability. United States Statutes at Large, Pub. L. No. 91-614, 84 Stat. 1836. In 1970, however, it was re-titled "by striking out 'EXECUTOR' in the heading of such section and inserting in lieu thereof 'FIDUCIARY.'" *Id*. Subsection (b) was added to allow fiduciaries to apply for discharge of liability. It is not clear to the Court that the congressional intent by adding subsection (b) was that Congress recognized that there are instances where a fiduciary, such as a trustee, administering the trust continue to remain personally liable for tax even though the executor of the estate may have been discharged from personal liability as a result of filing of an application for discharge under Section 2204 as Plaintiff asserts in its opposition. (Doc. No. 191-1 at 14.) Accordingly, this argument regarding congressional intent is unpersuasive.

Plaintiff asserts that Michael Paulson did not submit any written application in his capacity as a fiduciary other than the executor. (Doc. No. 191-1 at 14.) Specifically, Plaintiff points to the following facts: Michael Paulson signed the letter as "J. Michael Paulson, Co-Executor of the Will of Allen E. Paulson, Deceased"; he did not sign the letter personally or in all capacities; and he requested nine months as described for executors under Section 2204(a) rather than the six-month time frame for fiduciaries. (*Id*. at 15-16.)

As Michael Paulson points out, in contrast to Plaintiff's arguments that none of the procedures were followed, the letter sent to the IRS tells a different story. First, the title of the letter is "Request for discharge of fiduciaries from personal liability." (Doc. No. 189-1 at 8.) The plural form of fiduciary may indicate that Michael Paulson sought to be discharged as a trustee and executor. Second, the letter enclosed (1) a copy of Federal Form 4768; (2) co-executor's Section 6166 election for deferral of federal estate tax; and (3) co-executor's request for discharge from personal liability pursuant to I.R.C. Section 2204. (Doc. No. 172 at 21.) As to the request for discharge, the letter is not specific as to whether Michael Paulson was requesting discharge under parts (a) or (b) or both of Section 2204. (*Id*.) Further, requesting the longer time frame of nine months was likely appropriate as it encompassed both the time frame to be discharged as a fiduciary and as an executor.

26 U.S.C. § 2204 does not specify how Michael Paulson was to sign the letter. Plaintiff produces no case law to support its position that the way in which Michael Paulson signed the letter only exhibits that he signed it only as an executor. Michael Paulson argues that he signed using the term "Co-Executor" as a way to identify Michael Paulson's title in a manner consistent with his title appearing on the federal estate tax

return. (Doc. No. 189-1 at 11.) Currently, there is no authority that requires specific format, form or wording to make an application for discharge. See *United States v. Johnson*, 224 F.Supp.3d 1220, 1237 (D. Utah 2016) ("*Johnson II*"), reversed on other grounds *United States v. Johnson*, 920 F.3d 639 (10th Cir. 2019). However, Plaintiff argues that Michael Paulson signed various documents in different capacities and sometimes would sign the same document multiple times in his differing capacities. (Doc. No. 191-1 at 19-21.) There is no such requirement, however, how to sign the letter nor is there a requirement that Michael Paulson was supposed to provide two letters to the IRS.

Plaintiff argues that *Johnson II* clearly treated the discharge provisions of Section 2204(a) and (b) separately. *Id*. at 1237. However, it is unclear how the district court in Johnson II treated those two provisions separately. The district court did not address Section 2204(b) and the defendants in that case were offered a special lien under Section 6324A, which is not at issue in the instant litigation. Accordingly, the Court find this argument unpersuasive.

Further, it is stipulated that

> Mr. Loeb would testify that the letter was prepared based upon a Loeb & Loeb form document, the purpose of which is to begin the nine-month period within which the IRS has to issue a notification of the estate tax due or suffer the consequence of losing the right to impose personal liability upon persons acting in any and all fiduciary roles at the time the letter is sent ... It was (and remains) his belief that such a letter operates to discharge an executor/trustee such as Michael Paulson both in his capacity as a co-executor and as a trustee.

(Doc. No. 188 ¶ 16.) However, Plaintiff argues that intent does not matter. (Doc. No. 191-1 at 18.) Plaintiff argues that the IRS cannot be expected to infer intent from a letter that does not mention the Living Trust. (*Id*. at 18-19.) Further, Plaintiff points to the fact that Mr. Loeb entitled the letter "Co-Executor's Request for Discharge from Personal Liability Pursuant to I.R.C. Section 2204" and did not mention Michael Paulson's capacity as a trustee. (*Id*. at 21.)

However, the Living Trust, not the Estate, held all of the assets at the time of the letter. There was not a separate a tax return for the Living Trust. The Living Trust, therefore, was to make the payments on the tax obligations of the Estate. Further, the subject line of the letter read: "Request for discharge of fiduciaries from personal liability." (Doc. No. 111-10 at 7.) Logically, the Court finds that Michael Paulson was seeking to discharge his personal liability as trustee of the Living Trust.

Further, the IRS never contacted Michael Paulson regarding any confusion over the letter. In fact, the IRS never responded to the letter. The IRS is "to notify the fiduciary (1) of the amount of such tax for which it has been determined the fiduciary is liable, or (2) that it has been determined that the fiduciary is not liable for any such tax." 26 U.S.C. § 2204. If there was any confusion, Plaintiff argues that the IRS should have alerted the fiduciary that he remained liable for the full amount of "any estate tax for which the fiduciary may be personally liable." The Court agrees. Plaintiff should not have waited twelve years to raise this issue in litigation….

> Based on the foregoing, the Court ORDERS Michael Paulson to be discharged of personal liability under 26 U.S.C. § 2204 as a trustee of the Allen E. Paulson Living Trust.

Filing IRS Forms 4810 and 5495 will help discharge the executor from liabilities relating to not only estate tax but also gift and income tax. Although Form 5495 could also include income tax returns, that applies for purposes of Code §§ 2204, 6905 and not necessarily for purposes of 31 U.S.C. § 3713(b); filing Form 4810 lets the executor know whether any outstanding income or gift tax liabilities are owed. Form 5495 may be used to acquire a Code § 2204 discharge, but a letter is also acceptable;[7184] I specifically refer to both subsections (a) and (b) of Code § 2204 when I draft the letter if a revocable trust is involved. As to tax liabilities, if the executor knows that some amount of tax is due, the executor needs to find out the finally determined amount of liabilities to make sure that they are paid in full; the executor cannot just assume that the executor's lawyer (even one who has received all IRS notices) would let the executor know about any tax liabilities that are due.[7185] Ironically, the executor is not necessarily able to file or defend audits of gift tax[7186] or income tax returns.[7187]

[7184] In addition to the *Paulson* 2020 District Court opinion above, see text accompanying fn 5191 in part III.A.6 Post-Mortem Trust and Estate Administration.

[7185] *U.S. v. Shriner*, 2014 WL 992300, 113 A.F.T.R.2d 2014-1360 (D.C. MD) (holding executors liable under 31 U.S.C. § 3713(b) for making distributions before all debts owed the U.S. have been fully repaid). See fn. 7167 for the requirements to make a claim under 31 U.S.C. § 3713(b).

[7186] See fn 7051 in part III.B.4 Adequate Disclosure on Gift Tax Returns.

[7187] *Sander v. Commissioner*, T.C. Memo. 2022-103, held that the trustee of a decedent's revocable trust was not authorized to act regarding the decedent's income tax matters:

> The question of whether Leda was authorized to file a Petition on behalf of Sandra depends on whether state law authorizes her to file a Petition for Sandra. See Rule 60(c); *Fehrs v. Commissioner*, 65 T.C. 346, 349 (1975); *Estate of Peterson v. Commissioner*, 45 T.C. 497, 500 (1966). Leda has the burden of proving that she was so authorized. See *Fehrs*, 65 T.C. at 348.

Further below, the court concluded that state law did not authorize her involvement on behalf of ter probate estate and continued:

> … "trust property" is not directly involved in this case. This case involves then redetermination of the income tax deficiencies of Sandra for the 2013 and 2014 tax years. See § 6214(a). As part of the decision about the deficiencies, the Court would necessarily redetermine Sandra's tax liabilities for those years. See § 6211. To then collect these liabilities from the Sandra E. Sander Lifetime Trust, the IRS would need to invoke transferee liability concepts and show that the Sandra E. Sander Lifetime Trust is a liable transferee of Sandra. But such liability is a "secondary liability." Steve R. Johnson, Unfinished Business on the Taxpayer Rights Agenda: Achieving Fairness in Transferee Liability Cases, 19 Va. Tax. Rev. 403, 409 n.28 (2000). To allow the Sandra E. Sander Lifetime Trust to litigate this case merely because of its secondary liability would elevate that entity over all other persons who might be held secondarily liable for the income tax liabilities.[9]
>
> > [9] Leda makes the following contention: "Except for the assets of Sandra's Living Trust [*i.e.*, the Sandra E. Sander Lifetime Trust] there are no assets to pay Sandra's potential 2013 and 2014 income tax liabilities." The record does not prove this statement. Leda testified that, by the time of our hearing, there were no assets in her mother's name. But even if that were so, the income tax liabilities can be collected from any person to whom Sandra's assets were transferred after the income tax liabilities arose.
> >
> > The assets from which the IRS can collect the 2013 and 2014 income tax liabilities are not limited to the assets held by Sandra at the time of our motions hearing. The IRS can assert theories of transferee liability to collect the 2013 and 2014 income tax liabilities from persons to whom Sandra transferred her assets after the liabilities arose. See Michael I. Saltzman & Leslie Book, *IRS Practice and Procedure* 17.01 (rev. 2d ed. 2018) (describing theories of transferee liability,

If the estate tax has not been paid in full, included property needs to be sold, and none of the exceptions described in Code § 6323(b) will apply, the executor or trustee should request that the lien be released and applied to substituted property. See generally the IRS pages, Understanding a Federal Tax Lien and Sell Real Property of a Deceased Person's Estate. IRS Publication 783 instructs us how to file IRS Form 4422 to apply for a discharge of an estate tax lien (or IRS Form 14135 for other tax liens); submit Form 4422 at least 45 days before the transaction date that the certificate of discharge is needed.[7188] As discussed further above, however, the remaining assets are still encumbered by the lien.

When going after an estate, the IRS considers not only how much the estate can pay but also how much liability the executor has. *Estate of Kwang Lee v. Commissioner*, T.C. Memo. 2021-92, approved the IRS' actions described below:

> In December 2016, the estate submitted Form 433-A, Collection Information Statement for Wage Earners and Self-Employed Individuals, which showed that the estate's only asset was a checking account with a balance of $182,941. The estate also submitted an OIC in the same amount to the Appeals Office settlement officer (SO) assigned to the estate's CDP case. In reviewing the estate's OIC and upon the advice of respondent's Collection Division and Office of Chief Counsel, the SO determined that: (1) the IRS could potentially collect the distributed amounts from Mr. Frese using a fiduciary liability

---

> including liabilities enforced under the procedures of section 6901); *id*. 17.02[2] (explaining that a requirement for transferee liability under section 6901 is that "the taxpayer/transferor is liable for a tax both at the time of the transfer and at the time the transferee liability is asserted"). Sandra's 2013 and 2014 income tax liabilities arose on April 15, 2014 and 2015, respectively, the dates that the returns were due. See §§ 6151(a), 6072(a). If she transferred property after these respective dates, the recipients of the property are potentially liable for income tax for the respective tax years under the principles of transferee liability. The record is unclear as to what assets Sandra owned when the 2013 and 2014 income tax liabilities arose and to whom she transferred them. It is therefore speculative to conclude that there is no transferee other than the Sandra E. Sander Lifetime Trust from whom the IRS can collect the 2013 and 2014 income tax liabilities. We do not imply that such a conclusion would be relevant.
>
> Leda also contends that any payment of the income tax liabilities for 2013 and 2014 will be made from the Sandra E. Sander Lifetime Trust. This contention is based on Leda's testimony that, as trustee of the Sandra E. Sander Lifetime Trust, she will direct the trust to pay any income tax liabilities. Leda may well intend to direct the Sandra E. Sander Lifetime Trust to pay the income tax liabilities. But this unenforceable intention is insufficient to protect the legal rights of other parties. If we were to grant Leda's Motion for Substitution and therefore allow her to litigate the amounts of the income tax liabilities, our decision about the amounts of the income tax liabilities would be binding on any persons against whom the IRS might assert transferee liability. See *Krueger v. Commissioner*, 48 T.C. 824, 829-30 (1967).

However, *Galloway v. Commissioner*, 103 T.C. 700 (1994) took a different approach, based on state law:

> California is one of many States that have adopted simplified procedures for administration of estates when a formal probate proceeding is not necessary. See, *e.g.*, Cal. Prob. Code secs. 13000-13660 (West 1991); *Pitner v. United States*, 388 F.2d 651, 655 (5th Cir. 1967). We discern no reason why heirs of a decedent should be required to choose between costly probate proceedings or cumbersome joinder of all beneficiaries in order to maintain a proceeding in this Court. Rule 60(c) and all other Rules of this Court "shall be construed to secure the just, speedy, and inexpensive determination of every case." Rule 1(b). Given the authority by Cal. Civ. Proc. Code sec. 377.33, supra, we will make an order appointing Armijo as a special administrator of decedent's estate solely for purposes of this action. Respondent's Motion to Dismiss for Lack of Jurisdiction shall be denied. Based on respondent's concession,

[7188] The time framework is from the Instructions for Completing Form 4422 (Rev. 2-2018) (I visited 7/2/2023).

> theory under 31 U.S.C. sec. 3713 and from the beneficiaries as transferees under section 6324(a)(2); (2) the period of limitations to collect from both Mr. Frese and the beneficiaries remained open; and (3) these potentially collectible amounts had to be included in the estate's reasonable collection potential (RCP) calculation for purposes of reviewing the estate's OIC per Internal Revenue Manual pt. 5.8.4.3.(Apr. 30, 2015). Including the distributed amounts in the RCP formula yielded a collection potential that exceeded the estate's unpaid estate tax liability. Consequently, the SO rejected the estate's OIC and sustained the filing of the notice of Federal tax lien. As part of the summary report attached to the notice of determination, the SO noted that he had "verified the requirements of any applicable law or administrative procedure were met" and confirmed through IRS records that all required notices were properly issued to the estate.

Finally, if for compelling reasons an executor or trustee decides to make distributions before discharge or release under Code § 6325, the executor or trustee probably should seek indemnification from the beneficiaries. However, as a practical matter, indemnification is only as good as the executor's/trustee's ability to collect from the beneficiaries, which may be beyond the executor's/trustee's control. On the other hand, if the estate/trust passes in trust (a "downstream trust") and the executor/trustee serves as trustee of each downstream trust, then the executor/trustee should be able to enforce the indemnification agreement.

CCA 202142010 pointed out that a closing letter does not have the binding effect of a closing agreement:

> We agree with your conclusion that the issuance of a Letter 627 to [Redacted Text] does not preclude the IRS from examining the return.
>
> There is no legal prohibition on the IRS's examination of the return. There was no examination of the return (either original or supplemental) for purposes of section 7605(b) and, by extension, Rev. Proc. 2005-32. Prior to the issuance of the opening letter to the estate, the IRS never inspected [Redacted Text] books of account (nor did the IRS even request such records); thus, the prohibition of "only one inspection" in section 7605(b) does not apply. Rather, the IRS accepted the return as filed, issued a refund, and sent a Letter 627. Acceptance of a return as filed does not constitute an examination. See Rev. Proc. 2005-32, § 4.03(1)(a) (looking at a return is not an examination). The minimal contacts/communications between the IRS and here easily fall into the category of "narrow, limited contacts between the Service and a taxpayer that do not involve the Service inspecting the taxpayer's books of account" that do not constitute an examination or inspection. See Rev. Proc. 2005-32, §§ 4.03, 4.03(1).
>
> In response to the opening letter, [Redacted Text] attorney contends that the IRS has not followed the reopening procedures in Rev. Proc. 2005-32, § 5. However, these procedures apply only to the reopening of a closed examination. See Rev. Proc. 2005-32, § 5.01 (the IRS "will not reopen a case closed after examination to make an adjustment to liability unfavorable to the taxpayer unless" at least one of three criteria is met) (emphasis added); see also Treas. Reg. § 601.105(j) (same). Because there was no examination in the first place, the opening letter is not a reopening of a closed examination.
>
> The prior advice from P&A that a Letter 627 is not a closing agreement supports our conclusion here that the IRS is not legally prohibited from examining the return.

It is the IRS's business decision to determine the factors that should or must be considered when examining a return that was previously accepted as filed. That said, there's a consideration about IRM 4.25.14.8.1 and Letter 627 that we'd like to discuss with you. Please let [Redacted Text] know your availability for this and next week and we will send a meeting invitation.

III.B.5.e.iv.(h). Liens: Selected Internal Revenue Manual Materials

IRM 5.1.19.1.1 points out:

> Each tax assessment has a Collection Statute Expiration Date (CSED). Internal Revenue Code section 6502 provides that the length of the period for collection after assessment of a tax liability is 10 years. The collection statute expiration ends the government's right to pursue collection of a liability.

IRM 5.5.7.11,[7189] "Liens on Estate Tax Liabilities," explains:

(1) The chart below provides information on liens associated with estate tax, the assets they encumber, and the duration of the liens.

Lien:	**Attaches to:**	**Duration:**
IRC 6324(a)(1) Estate Tax Lien	If there is an estate tax return filing requirement, this unrecorded lien attaches to all assets includable in the decedent's gross estate, plus any appreciation on those assets.	Lien goes into effect at the date of the decedent's death, and it lasts for ten years from date of death. Nothing extends the duration of the lien.
IRC 6324(a)(2) "Like Lien" for Estate Tax	When a recipient of **non-probate** property transfers that property to a purchaser or security interest holder, the transferred property is divested of the IRC 6324(a)(1) estate tax lien, and an IRC 6324(a)(2) "like lien" then attaches to all the transferee's other property. This lien is not recorded.	The "like lien" arises when the transfer to the purchaser or security interest holder occurs. The duration of the "like lien" is the same as an estate tax lien which is ten years from date of death. Nothing extends the duration of the lien.
IRC 6321 Assessment Lien	Assets that were in the probate estate at the date of the tax assessment. Does not attach to non-	Arises on date of assessment and remains until the liability is satisfied or the collection statute expires.

[7189] The link was not working when I tried. Go to IRM 5.5.7 Collecting Estate Tax and drill down.

Lien:	Attaches to:	Duration:
	probate assets even if they were included in the gross estate. To compete against other creditors, a Notice of Federal Tax Lien (NFTL) can be recorded in the name of the taxpayer estate.	
IRC 6324A, Special lien for estate tax deferred under IRC 6166	Specific property described in the lien agreement (Form 13925). Form 668-J, Notice of Federal Estate Tax Lien Under Internal Revenue Code Section 6324A, is recorded on the property listed on the Form 13925 lien agreement.	Coincides with the CSED.
IRC 6324B, Special lien for additional estate tax attributable to farm, etc. valuation, created by the IRC 2032A special use valuation election	Specific property designated in the lien agreement on Schedule A-1 of Form 706. Form 668-H, Notice of Federal Estate Tax Lien Under Internal Revenue Code Section 6324B, is recorded on the property that qualified the estate for the IRC 2032A election.	The lien is created when an estate makes an IRC 2032A election, and it continues until one of the following occurs: • The IRS has confirmed that no event occurred to trigger the tax during the ten year period following the decedent's death; or • If the additional estate tax is triggered and assessed on Form 706-A, United States Additional Estate Tax Return, the lien continues until the tax is paid or through the Form 706-A collection statute expiration date (CSED).

(2) The assessment lien under IRC 6321 and the estate tax lien under IRC 6324(a)(1) are not exclusive of each other. They are independent and cumulative. The IRC 6324(a)(1) estate tax lien is broader than the IRC 6321 assessment lien because an assessment lien only attaches to probate property, but the estate tax lien attaches to both probate and non-probate property that is includable in the gross estate. See IRM 5.5.7.11.1 for a discussion of the estate tax lien. See IRM 5.5.7.11.3 for a discussion of the IRC 6321 assessment lien.

(3) Collection action on the IRC 6324A lien due to an IRC 6166 election and on the IRC 6324B lien due to an IRC 2032A election are discussed in IRM 5.5.6, Collection on Accounts with Special Estate Tax Elections. These Notices of Federal Estate Tax Liens are not on the Automated Lien System (ALS) since they are manually prepared and manually released because they are property specific. If the collection statute is suspended or extended, these liens do not need to be refiled since there is no refiling date on the recorded documents.

IRM 5.5.7.11.1, "Estate Tax Lien," explains:

(1) An unrecorded IRC 6324(a)(1) estate tax lien attaches to all property included in the gross estate for ten years from the date of the decedent's death. An assessment, notice, or demand are not necessary to create the lien. The estate tax lien only pertains to Form 706 and Form 706-NA estate tax. It does not pertain to Form 1040, Form 941, Form 1041, or any other tax owed by the decedent or by the decedent's estate.

(2) Features of the IRC 6324(a)(1) estate tax lien include the following:

- Lien arises at the date of death of the decedent and attaches to all the estate assets even if the estate tax return is not filed.
- Lasts for ten years from the date of decedent's death. Nothing can extend the duration of this lien.
- The lien attaches automatically to all the assets includable in the estate. This includes both probate and non-probate assets.
- The estate tax lien is unrecorded.
- Since the lien attaches automatically, and it is not recorded, the estate does not receive Collection Due Process (CDP) or Collection Appeals Program (CAP) rights on this lien.

(3) When there is an estate tax return filing requirement, the IRC 6324(a)(1) estate tax lien attaches to all the estate assets includable in the decedent's gross estate no matter how the assets were titled at date of death. This includes any assets in the name of the decedent, assets held in a revocable trust created by the decedent, and the decedent's interest in assets owned jointly with right of survivor.

(4) The IRC 6324(a)(1) estate tax lien attaches to the extent of the current value of the property. The property may appreciate or depreciate after the date of the decedent's death.

(5) The estate tax lien is inferior to superpriority liens described in IRC 6323(b), Validity and Priority Against Certain Persons, such as mechanics liens and ad valorem property tax liens. It is also inferior to pre-existing encumbrances that were in effect at date of death such as mortgages or pledges that attached to assets during the decedent's lifetime.

(6) If **probate** property is transferred, sold, or encumbered by the executor, the IRC 6324(a)(1) estate tax lien will continue to encumber the property unless the lien expires, or the estate receives a discharge of the property from the lien.

This description is consistent with case law as well.[7190]

IRM 5.5.7.11.1.1, "Exceptions to Estate Tax Lien," explains:

(1) In certain circumstances, the estate tax lien may be divested from assets used for the payment of charges against the estate and expenses of administration allowed by any court having jurisdiction over the estate. Review court records for such orders and consult with Counsel, if necessary, if you need assistance with determining if this applies in your case. The decision by an executor to use estate assets to pay expenses of administration does not divest those assets of the estate tax lien unless approved by a court.

(2) An executor can request a discharge from personal liability under IRC 2204 by making written application for determination of the amount of the tax and discharge from personal liability. See IRM 5.5.7.22.3.2, Estate Tax Liability of Fiduciary, for more information on an IRC 2204 discharge of fiduciary from personal liability. If the executor that was granted an IRC 2204 discharge from personal liability transfers property to a purchaser (i.e., by selling the property for fair market value) or to a security interest holder (i.e., by encumbering the property and removing the recipient's equity), and the tax due as originally reported on the estate tax return was paid, the IRC 6324(a)(1) estate tax lien will be divested from the asset. The estate tax lien will then attach to the consideration received from the purchaser or holder of the security interest so that the IRS can collect from these proceeds to pay any examination assessments. See IRC 6324(a)(3), Continuation after discharge of fiduciary.

IRM 5.5.7.11.1.2, "Discharge of Property from Estate Tax Lien," explains:

(1) An executor can apply for a discharge of property from **estate tax lien** by submitting Form 4422, Application for Certificate Discharging Property Subject to Estate Tax Lien, with the documents listed in the instructions on Form 4422.

(2) The Advisory Estate Tax Lien Group processes estate tax lien discharge requests, provides conditional commitments to discharge property from federal estate tax lien, and issues Form 792, U.S. Certificate Discharging Property Subject to Estate Tax Lien. If the sale of property occurred prior to June 2016, the discharge application may also have been processed by Estate and Gift Examination since they were previously working some discharge of property from estate tax lien requests.

(3) Determine if a discharge of property from the estate tax lien was issued by the IRS by doing the following:

- Check public records for a copy of the recorded discharge document.

[7190] *United States v. Vohland*, 675 F.2d 1071 (9th Cir. 1982); *United States v. Estate of Young*, 592 F.Supp. 1478 (E.D. Pa. 1984); *Metz v. United States*, 933 F.2d 802 (10th Cir. 1991).

- Contact the Advisory Estate Tax Lien Group for copies of any discharge applications, or case activity may be documented in the case history on Integrated Collection System (ICS).

- A copy of the discharge document may be with the estate tax return if the discharge was provided by Estate and Gift Examination.

- Request copies of discharge documents from the estate executor or representative.

(4) If **probate** property included in the gross estate is transferred to a purchaser (i.e., by selling the property for fair market value) or to a security interest holder (i.e., by encumbering the property and removing the equity), and the estate did not receive a discharge of property from the estate tax lien, the IRC 6324(a)(1) estate tax lien will continue to attach to the property. In that case, collection by levy or seizure can be pursued against the property. Secure or summons for copies of closing documents from the title company when pursuing a seizure of property that was not discharged from the estate tax lien. Typically, if the title company has issued a title policy, they will pay the sale proceeds to the IRS to clear the title. If necessary, a suit to foreclose the tax lien can be referred through Advisory and Counsel to request Department of Justice to enforce the government's lien position.

(5) An estate does not need to request a discharge of property from estate tax lien when **non-probate property** is transferred to a purchaser (i.e., by selling the property for fair market value) or security interest holder (i.e., by encumbering the property and removing the equity). Non-probate property is automatically divested of the IRC 6324(a)(1) estate tax lien when it is transferred to a purchaser or security interest holder, and a "like lien" is then created on the personal assets of the recipient of the non-probate property. See IRM 5.5.7.11.2, IRC 6324(a)(2) Like Lien.

IRM 5.5.7.11.1.3, "Estate Tax Lien Expiration," explains:

(1) The IRC 6324(a)(1) estate tax lien expires ten years from the decedent's date of death and cannot be extended or suspended. All enforcement action (seizure, sale, levy) and litigation against estate assets based on the estate tax lien must be completed before the expiration of the lien.

(2) If the estate tax lien expires, collection action based on the IRC 6321 assessment lien may still be possible.

IRM 5.5.7.11.2, "IRC 6324(a)(2) Like Lien," explains:

(1) Non-probate property may be part of the gross estate assets. This includes property that passed directly to a specified person by designation or by operation of law. It also includes property the deceased taxpayer had transferred prior to death that is includable in the decedent's gross estate under IRC 2034 to IRC 2042, inclusive, such as property the decedent transferred to a trust and retained a power or interest.

(2) If the recipient of non-probate property transfers property includable in the decedent's gross estate to a purchaser (i.e., by selling the property for fair market value) or to a security interest holder (i.e., by encumbering the property and

removing the recipient's equity), the transferred property is divested of the IRC 6324(a)(1) estate tax lien, and an unrecorded IRC 6324(a)(2) "like lien" then attaches to all the personal assets of the recipient that sold or encumbered the property.

Note: In addition to the "like lien" created under IRC 6324(a)(2), this Internal Revenue Code section also creates a personal liability of the recipient of non-probate assets to the extent of the date of death value of the asset received by the recipient. See IRM 5.5.7.22.3.1, Estate Tax Liability of Transferees.

(3) The IRC 6324(a)(2) "like lien" expires ten years from the decedent's date of death. This lien cannot be suspended or extended. The government can take administrative enforcement action using the IRC 6324(a)(2) "like lien", or the government can file a suit to collect on this lien. See IRM 5.5.7.22.1.4, Seizure and Levy Based on IRC 6324(a)(2) Like Lien, and see IRM 5.5.7.22.4, Preparing Suit Referrals on Estate Tax.

Thus, nonprobate assets are not subject to the same hazards as probate estates. However, those who receive nonprobate assets, including the trustees of revocable trusts, are in peril, as shown in the language I highlighted above.

IRM 5.5.7.11.3, "Estate Tax IRC 6321 Assessment Lien," explains:

(1) After the estate tax has been assessed, notice and demand is given, and there is a neglect or refusal to pay, the IRC 6321 assessment lien arises and attaches to the probate assets in the estate at the time of assessment. The unrecorded IRC 6324(a)(1) estate tax lien operates separately and independently of the IRC 6321 assessment lien. If the IRC 6324(a)(1) estate tax lien expires, the IRS can still use the IRC 6321 assessment lien to collect the liability. The IRC 6324(a)(1) estate tax lien and the IRC 6321 assessment lien are cumulative. The IRS has the right to use either lien to collect on an estate tax liability. See IRM 5.5.7.11.1 for a discussion of the IRC 6324(a)(1) lien.

(2) If there is a neglect or refusal to pay, a Notice of Federal Tax Lien (NFTL) may be filed to protect the interest of the government against purchasers and other creditors. The NFTL should only include the name of the estate, and it should not include the name of the executor. Filing the NFTL will put other creditors, potential buyers, transferees, and title companies on notice of unpaid estate tax. The IRS may lose its lien priority in assets between the expiration of the IRC 6324(a)(1) estate tax lien and the filing of the IRC 6321 assessment lien. See IRM 5.12.1, Lien Program Overview, and IRM 5.17.2, Federal Tax Liens, for more information on the IRC 6321 assessment lien.

(3) NFTLs must be filed in the proper jurisdiction to protect the government's interest against other creditors. State law dictates the place of filing. See IRM Exhibit 5.12.7-2, State and Territory Filing Locations.

(4) The IRC 6321 assessment lien applies for ten years from the date of assessment unless an event occurs to suspend or extend the collection statute. A NFTL can be refiled if the collection statute has been suspended or extended. See IRM 5.5.7.6,

Collection Statute Expiration Dates, for more information on actions that suspend or extend the collection statute on estate tax cases.

(5) Administrative levy or seizure may be taken to enforce the lien when a NFTL has been filed. For judicial enforcement, a suit to foreclose the IRC 6321 assessment lien may be referred to Department of Justice. See IRM 5.17.12, Investigations and Reports, IRM 5.5.7.22.4, Preparing Suit Referrals on Estate Tax, IRM 25.3.2, Suits by the United States, and Knowledge Management Litigation for more information on suits.

(6) If the estate is selling an asset subject to the IRC 6321 assessment lien, the estate may apply for a discharge of the property from the lien by completing Form 14135, Application for Certificate of Discharge of Property from Federal Tax Lien. The Advisory Estate Tax Lien Group handles any lien discharges on Form 706 or Form 706-NA estate tax liabilities.

Let’s take a moment to compare liens resulting from Code § 6166 to Code § 6324(a) liens:

- The Code § 6324(a) lien is very strong. However, as an unrecorded lien, it is not likely to impair assets as a practical business matter until creditors request a representation that no liens are on property included in the decedent’s gross estate. When switching from a lender who made a loan before death to refinance with a new lender after death, one should have the first lender assign its loan to the new lender, hoping that the underlying security interest’s priority over the Code § 6324(a) will survive the change.

- Code § 6324A liens on Code § 6166 property cause the Code § 6324(a) lien to be released from that particular property.[7191] Procedurally, this occurs when the property is listed on a recorded IRS Form 668-J.[7192] Recording the § 6324A lien also discharges the executor or other fiduciary.[7193] Code § 6324A liens are not valid against a purchaser, holder of a security interest, mechanic’s lienor, or judgment lien creditor until notice of the lien is filed.[7194]

A TIGTA report on Code § 6166 liens made the following general comment:[7195]

> The IRS needs to enhance its current process to ensure a bond or an I.R.C. § 6324A special lien is obtained and filed in all I.R.C. § 6166 installment cases in which the IRS determines that there is a credit risk to the Federal Government and all special liens are appropriately monitored and tracked. Where an estate has elected to pay the estate tax attributable to its interest in a closely held business in installments over a period of up to 14 years under I.R.C. § 6166, the IRS could be left without lien protection for 4 years or more if a bond or an I.R.C. § 6324A special lien is not obtained and recorded with the appropriate local government office before the 10-year period of the general estate tax lien expires.

[7191] Code § 6324A(d)(4); IRM 5.5.8.5(4)(d).
[7192] IRM 5.5.8.1(4)(b).
[7193] Reg. § 20.2204-3; IRM 5.5.8.5(4)(e).
[7194] Reg. § 20.6324A-1(c)(2). Once filed, the notice of lien remains effective without being refiled. *Id.*
[7195] http://www.treas.gov/tigta/auditreports/2007reports/200730174fr.pdf.

TIGTA acknowledged the *Roski* case:

> As a result of the Treasury Inspector General for Tax Administration's prior report, the IRS began instituting procedures to require a bond or an I.R.C. § 6324A lien from all estates making I.R.C. § 6166 elections. However, in *Estate of Roski v. Commissioner*, 128 T.C. No. 10 (April 12, 2007), the Tax Court held that the IRS may not require a bond or I.R.C. § 6324A special estate tax lien in every case but may determine on a case-by-case basis whether credit risks justify requiring security to protect the Federal Government's interest in the deferred estate tax. Accordingly, a bond or special lien may no longer be required in every case.

Note that the emphasis is on being unprotected after the Code § 6324 10-year lien has expired. Since the 10-year lien is unrecorded, it poses less of a problem regarding adverse publicity - third parties who see a Code § 6324A recorded tax lien might jump to the unwarranted conclusion that the business is in trouble.

Notice 2007-90 announced that procedural changes would be made regarding liens securing Code § 6166 elections. These were integrated into the Internal Revenue Manual on June 1, 2010.

IRM 5.5.7.6.2, "CSED - IRC 6166 Deferred Tax," explains:

> (1) An estate may make an IRC 6166 election for an extension of time to pay estate tax that is attributable to an interest in a closely held business when the estate files a timely Form 706, United States Estate (and Generation-Skipping Transfer) Tax Return, or on a Form 706 examination assessment. The IRC 6166 election allows for the deferral of payment of estate tax when an estate has an interest in a closely held business or businesses that exceeds 35% of the adjusted gross estate assets. Estates must meet certain criteria, as approved by an Estate & Gift (E&G) examiner, to be granted the IRC 6166 election.
>
> (2) The IRC 6166 election typically allows for an estate to pay up to four years in annual interest only installments then up to ten years of annual principal and interest installments. Some IRC 6166 elections are for shorter periods as determined by an E&G examiner. See IRM 5.5.6, Collection on Accounts with Special Estate Tax Elections, and IRM 5.5.8, Advisory Responsibilities for Processing Estate Tax Liens, for more information on IRC 6166 Elections.
>
> (3) The collection statute that is based on the assessment of tax is suspended while an IRC 6166 election is in effect. See IRC 6503(d), Suspension of running of period of limitations, Extensions of time for payment of estate tax. However, the statute on the unrecorded IRC 6324(a) estate tax lien is not suspended when the IRC 6166 election is in effect. See IRM 5.5.7.11.1, IRC 6324(a)(1) Estate Tax Lien, for a discussion of this lien.
>
> (4) Some indicators on Integrated Data Retrieval System (IDRS) that an estate had been granted an IRC 6166 election include the following:
>
> - If Submission Processing correctly identifies the IRC 6166 election, the account will have a payment indicator 1, which restricts the account and places it in Status 14. This payment indicator is on TXMOD and shown as **PYMT-IND>1**.

- If Submission Processing did not input **PYMT-IND>1**, Campus E&G will input a TC 488 to put the account into status 14.

- Accounts with annual TC 340 assessments of interest with associated TC 290 assessments.

- Accounts that were in status 14 on IDRS. However, this can also be an indicator of an IRC 6161, Extension of Time for Paying Tax.

- TXMOD history with statements such as "6166 SETUP" , "To 6166" , "Default 6166" , or "950-H Letter."

- TC 489 input on IDRS. This is the date that the IRC 6166 election went into default.

- TC 582 input with the note "Special Lien."

(5) The estate may have an IRC 6166 election on all the estate tax due or on only a portion of the estate tax due. For the portion of tax that the estate does not have an IRC 6166 election, the tax is due by the return due date.

(6) Form 4349, Computation of Estate Tax Due with Return and Annual Installment, is completed by Estate & Gift (E&G) Examination, Campus E&G, or IRS Independent Office of Appeals. It will show the amount of tax that was deferred under IRC 6166, and the amount of tax that was not deferred. Campus E&G may have this information on their database, Advisory Estate Tax Lien Group may have this information, or the form may be with the tax return. To contact Campus Examination E&G on IRC 6166 accounts, see IRM 4.25.2.9.6.2(1), Payoff Requests, for their e-mail information. To contact Advisory Estate Tax Lien Group, see Knowledge Management Advisory Estate Tax Lien Group. To order a copy of the estate tax return, see IRM 5.5.7.8, Ordering Estate Tax Returns.

(7) An estate can request an IRC 6161 extension of time for paying tax on an IRC 6166 installment payment for up to one year at a time. Both the IRC 6166 election and the IRC 6161 election suspend the collection statute. When more than one action suspends the running of the collection statute, and the suspensions overlap, the collection statute is suspended only once. See IRM 5.1.19.3, Case Actions That Can Suspend And/Or Extend A CSED. In these situations, the calculation of the CSED should be based on the time that the estate had the IRC 6166 election since the IRC 6161 extension of time to pay the annual installment would overlap with the IRC 6166 election.

(8) To update the CSED on Integrated Collection System (ICS), see IRM 5.5.7.6, Estate Tax Collection Statute Expiration Date.

Additional explanations are in IRM 5.5.7.6.2.1, "CSED - All Tax Deferred Under IRC 6166," and IRM 5.5.7.6.2.2, "Multiple CSEDs - Tax Deferred Under IRC 6166 and Tax Non-Deferred."

Below are details from IRM 5.5.6, "Collection on Accounts with Special Estate Tax Elections," June 19, 2013, which I last checked April 2, 2023.

IRM 5.5.6.2, “IRC Section 6166,” explains:

(1) IRC section 6166 provides an extension of time to pay Form 706 estate tax in **annual** installments. Generally the maximum amount of time for payment of deferred tax is 10 years. The executor may select a shorter period, in which case the deferment will be the period selected. It allows executors a fourteen year period to pay estate tax attributable to an estate’s interest in a closely held business. It grants the estate a deferral period to make “interest only” payments for the first four years. The first tax payment along with interest payment is due on the 5th anniversary of the due date of the return. See IRM 4.25.2.1.10, *IRC Section 6166 Interest-Only Installment Payment Period - General Process*.

(2) The IRC section 6166 estate tax installment plans are approved by Exam Estate & Gift Specialty Tax. The Estate & Gift Tax Campus unit will make a preliminary determination if the estate qualifies for the installment payment privilege. This election should not be confused with the one year IRC section 6161, Extensions of Time to Pay Estate Taxes, which are approved by Advisory (see IRM 5.5.5). Collection function does not have authority to approve deferred installments plans under IRC section 6166.

(3) The election to pay in installments must be made on a timely filed Form 706 on page 2, Part 3 Elections by the Executor, Line 3 and by attaching a notice of election to the return containing the information specified in Treas. Reg. § 20.6166-1(b). Late filing of the return invalidates the election. However, if a return is timely filed without the election but an amended return containing the election is filed within 6 months of the **unextended** due date of the Form 706, the election is considered timely.

(4) If the deferred tax due is the result of an examination deficiency, the estate must make the election within 60 days after issuance of notice and demand.

IRM 5.5.6.3, “Qualification for IRC 6166,” explains:

(1) The criteria for qualifying for installment payments are:

- Decedent was a citizen or resident of the United States on the date of death.
- The Value of interest in closely held business must exceed 35 percent of the adjusted gross estate.
- The return is **timely** filed and the IRC section 6166 election request was included on the **timely** filed return or an amended return within 6 months of the **unextended** due date of the return.

(2) An interest in closely held business is defined as:

- A proprietorship that carries on a trade or business.
- An interest in a partnership that carries on a trade or business. Deceased partner’s interest that is included in the gross estate must be 20 percent or more of the total capital interest in the partnership or the partnership has 45 or fewer partners.

- Stock in a corporation carrying on a trade or business if 20 percent or more of the value of voting stock of the corporation is included in the gross estate, or the corporation has 45 or fewer shareholders.

(3) For more details on qualification see IRC section 6166 or IRM 4.25.2.1.6, *Estate Installment Privileges under IRC Section 6166*.

(4) IRC section 6166(h) provides for the election to defer the deficiency tax resulting from an examination, if the estate is not already making payments under IRC section 6166. The IRC section 6166(h)(2) election must be made within 60 days of the issuance of the notice and demand. The deficiency is prorated per the formula in IRC section 6166(a). The estate cannot defer more than the deficiency. The estate may not elect to defer any portion of a deficiency that was due to negligence, intentional disregard of rules and regulations, or fraud with intent to evade tax.

(5) IRC section 6166(e) provides for the proration of deficiency installments if the estate is paying in installments under IRC section 6166 when the assessment is made. The part of the deficiency attributable to the closely-held business shall be prorated and added to the installments. The deficiency portion of an installment that is due and payable when the deficiency assessment is made shall be paid upon notice and demand.

(6) **Non-deferred tax** must be paid by the return due date, unless the estate has an extension of time to pay under IRC section 6161. If the estate does not pay the non-deferred tax, procedures in IRM 4.25.2.1.9, *Estate Qualifies for IRC Section 6166 Election and Fails to Pay or Underpays the Non-Deferred Tax*, will be taken by the Estate & Gift Tax Campus unit.

(7) These accounts can be identified on IDRS by status 14 or transaction code (TC) 488. The TC 488 indicates the account is in installment and/or manual billing and updates the module to status 14.

IRM 5.5.6.4, “Acceleration of IRC 6166 Tax Payments,” explains:

(1) IRC section 6166(g)(1) provides for acceleration of installments. The balance of installments are accelerated upon notice and demand if:

- any portion of an interest in the qualifying business is distributed, sold, exchanged or otherwise disposed of, or money or property attributable to the interest is withdrawn from the business and the aggregate of such distributions, withdrawals, etc. equals or exceeds 50 percent of the value of the entire interest, measured at the value reported on the Form 706 or as adjusted. Dispositions are cumulative, so a record should be kept of dispositions.

- the estate fails to make all of an annual installment payment within 6 months of the due date.

- The election may be terminated because the estate fails to provide security (lien or bond) to the Service for tax due, if the Service has determined that security is necessary. The Service may make this determination at the time of the estate’s IRC section 6166 election or it may make the determination at some point during the IRC section 6166 installment agreement. Most likely this will happen when the estate has failed to pay after requesting an extension of an annual installment payment or when the Service determines that the underlying business may be in financial difficulty.

(2) When accelerated, the estate will be sent a series of letters from the Advisory Estate Tax Lien group and the Campus concerning termination and demand for the tax due. Advisory procedures are explained in IRM 5.5.8.5, *Special Lien Under IRC § 6324A for Estate Tax Deferred under IRC Section 6166*, and Campus procedures in IRM 4.25.2.1.16, *Miscellaneous IRC Section 6166 Campus Termination Issues*.

(3) Copies of termination letters provide a payoff of the full amount of tax due to a specified date. This payoff can be used for collection purposes until the estate provides a date it will pay the account in full. Since the account was in Status 14, the campus will need to provide a payoff when necessary. Advisory should also have copies of termination letters in their case files and copies of liens, bonds or financial information secured from the estate.

(4) Once an account has been accelerated, it cannot be reinstated for reasonable cause. An account can be reinstated only if a valid extension of time to pay (under IRC section 6161) has been filed for the amount in question prior to the due date or the account was erroneously accelerated due to a processing error. A processing error is one in which a timely payment was treated as late or posted to the wrong account or type of tax. These errors should be rare and an account should be reinstated only if it meets these guidelines. Neither Examination nor Collection has the authority to request reinstatement of an account other than in the above circumstances.

IRM 5.5.6.5, “Tax Court Cases,” explains”:

(1) A balance due account may be assigned to the field while the estate is appealing allowance of the IRC section 6166 election. IRC section 7479 does not prevent collection of the tax while the taxpayer is appealing the Secretary’s determination regarding the estate’s section 6166 election to the Tax Court.

(2) Section 7421(a) generally prevents any court from stopping collection unless one of the exceptions applies. An exception applies if the taxpayer has not yet been given an opportunity for hearing under section 6330, or if the taxpayer has timely requested a hearing. Except in cases of jeopardy, levy is prohibited until the taxpayer is issued a notice giving the taxpayer a right to a hearing to contest levy and the taxpayer fails to make a timely hearing request. Levy is also prohibited during a timely requested hearing and judicial review of the determination resulting from that hearing. During the administrative hearing or court proceeding, the Tax Court may permit levy under section 6330(e)(2) if liability is not at issue and the Service shows good cause. Good cause exists when the Service shows that the taxpayer is maintaining the hearing or proceeding for purposes of delay, the taxpayer is raising frivolous arguments, or the government will be harmed by the suspension. In this regard, special attention should be given to whether the levy suspension will harm the government’s ability to enforce its Section 6324 lien rights before they expire.

(3) Section 7485 allows for collection of an amount determined as a deficiency while a Tax Court decision is being appealed to the Circuit Court unless the taxpayer posts a bond.

(4) Should you receive an account to collect estate taxes and the IRC 6166 election is either in Appeals or Tax Court for reconsideration, consult with the Counsel attorney assigned the case to determine if collection can proceed or should be withheld.

(5) Counsel should consider whether the underlying tax amount is in dispute, how much time remains on the IRC section 6324(a) lien and collection potential on remaining estate assets when providing guidance concerning continuation of collection.

IRM 5.5.6.6, "Special Liens and Bonds for IRC 6166," explains:

(1) The laws granting the estate tax installment election provide the Service certain options to secure eventual payment. These options include:

a. Requiring the estate to furnish a performance bond in an amount equal to the estate tax and interest being deferred. Bonds must be renewed annually and documentation provided to the Service verifying renewal.

b. Allowing the estate to substitute the bond with the filing of a special lien under IRC section 6324A (Form 668-J) pledging their right, title, and interest to specific property to the government.

(2) The Advisory Estate Tax Lien group is responsible for making determinations concerning securing special election liens or bonds to protect the Governments interest during the extended deferral period. See IRM 5.5.8.5.1, *Advisory Bond/Lien Determinations for Estate Tax Deferred under IRC Section 6166*.

(3) For IRC section 6166 elections, the Form 668-J *Notice of Federal Estate Tax Lien Under Internal Revenue Laws*, is secured and recorded by Advisory. The Form 13925, IRC Section 6324A Lien Agreement Form, reflects specific property that is pledged as collateral, the value, encumbrances and parties who consented to the lien. This lien is not recorded on the Automated Lien System (ALS) since the CSED is extended beyond the normal 10-year expiration date. A TC 582 may be on the account to reflect a lien has been recorded. You may find information in the ICS case history of Advisory actions.

LIEN	**ATTACHES**	**DURATION**
Section 6324A for Section 6166 extended payout cases.	Specific property described in the lien agreement (Forms 13925 or on 668-J)	Coincides with CSED. Must be recorded.

(4) There will not be a IRC section 6324A lien in every case where the Service has agreed to a IRC section 6166 installment election. The Service will make a determination after the election whether it will need security based on the facts and circumstances of each case. The Service may require the estate to secure a bond. The estate may elect the IRC section 6324A lien in lieu of securing a bond.

(5) The IRC 6324A lien is a consensual lien. Therefore, the estate does not have CDP rights. A bond may be substituted for the lien. See IRM 5.5.8.5.1, *Advisory Bond/Lien Determinations for Estate Tax Deferred under IRC Section 6166*.

(6) When the election has been terminated and the tax accelerated, collection action may be taken on the asset pledged on this lien agreement. Advisory can provide copies of their lien case files to assist with collection of the tax due. Advisory will also provide the lien release when necessary. To determine the duration of the lien, the CSED is extended for the period of time that the tax was deferred, including any extensions to pay that may have been granted.

(7) If the property described on Form 668-J is insufficient to pay the estate tax in full, then any other property that remains attached by the IRC section 6324(a) lien (including the like lien) and/ or the IRC section 6321 liens are subject to enforcement action. Distributees of the estate property also may he held liable as transferees.

See F.A.A. 20070801F regarding how the IRS expects this security interest to be established with respect to a partnership or LLC interest. Also note that a protective election does not toll the statute of limitations under Code § 6502 if the taxpayer does not finalize the Code § 6166 election on audit; see fn. 7112.

IRM 5.5.6.7, "Collection Statute Expiration Date," explains:

(1) **Always** check the Collection Statute Expiration Date (CSED) when working estate tax accounts. IDRS does not accurately reflect the CSED when multiple assessments are involved or when an IRC section 6166 election has been granted.

(2) For accounts with an approved IRC section 6166 election, the CSED is suspended for the period during which payment of the tax is deferred, see IRC section 6503(d). **However, running of the IRC section 6324(a) estate tax lien is not suspended.**

(3) Generally the additional time to add to the CSED is the period of time between the input of the TC 488 and the TC 489. If there is no TC 488 on the account use the date the status 14 was input, found in the TXMOD history.

(4) If an extension to pay under IRC section 6161 was granted for the annual installment due under IRC section 6166, the extended time for payment would also be calculated into the CSED.

(5) It is possible to have multiple CSEDs if a TC 300 was assessed and a portion or all of the deficiency was deferred under IRC section 6166. If it was deferred add in the time payment was deferred - which will be different for the TC 150 and the TC 300. Determine if the payments received paid off the TC 150 (deferred) amount - in that case you would only have to deal with the CSED on the TC 300.

(6) Any tax due that was not deferred under IRC section 6166 will have a different CSED date. The Form 4349, Computation of Estate Tax Due With Return and Annual Installment, will show what tax was deferred under IRC section 6166. The E&G Campus unit may have this information on its database or the form may be with the tax return.

Note: In some instances the deferred amount may change due to an Appeals or Tax Court decision. The E&G Campus unit should have the most current information on the deferred amount since they prepare the annual installment billings.

(7) TC 520's input as a result of CDPs or OICs filed can extend CSEDs. The following transaction Codes for judgment/litigation also impact CSEDs:

- TC 520 with closing code 70 through 75 does not suspend the CSED.
- TC 520 with closing code 76 through 81 and closing code 84 suspends the CSED

See IRM 5.1.19, *Collection Statute Expiration*, for additional information.

(8) Once you determine the correct CSED, document your ICS history with the new CSED and how you arrived at the date. Be sure that the module is also updated on ICS.

IRM 5.5.6.8, "Payoffs," explains:

(1) Payoffs for IRC section 6166 accounts will need to be secured from the Campus E&G unit. Once an account goes into status 14 you can no longer get a payoff through IDRS. If IDRS reflects manual assessments of penalty and interest, accrued penalties and interest need to be computed. For campus contacts see: http://mysbse.web.irs.gov/Collection/toolsprocesses/EstateTax/EstateTax/default.aspx

(2) After an IRC section 6166 account is accelerated the Campus closes their case file. Partial information regarding these accounts are maintained on their database. The Campus may need to secure additional information from the collection case file or order their closed file in order to provide a payoff.

(3) Copies of termination letters issued by the Campus provide a payoff of the full amount of tax due to a specified date. This payoff can be used for collection purposes until the estate provides a date it will pay the account in full. Advisory should also have copies of termination letters in their case files and copies of liens, bonds or financial information secured from the estate.

(4) Once the status 14 is input, FTP and interest need to be calculated and manually input. The last TC 340 on the account will reflect to what date the interest has been updated. When a collection account assigned to the field is paid in full the revenue officer is required to request input of the penalties and interest to the date of payment to prevent refunds.

(5) The manual assessment can be requested on Form 3244 when posting funds received or if the funds have posted request the assessment on Form 4844.

(6) Submit a Form 4844, *Request for Terminal Action*, to the CCP Fort to request assessment of accruals once the balance due is paid. If there is a TC 421 beginning with a DLN 17 on the account, send your request to the Cincinnati CCP Unit at *SBSE CCP Exam Cincinnati. If the return has not been examined, send your request to CCP Fort in Philadelphia.

(7) Do not abate penalties or interest assessments made by the Campus in accordance with their IRM provisions - unless you verify there was a Service error.

IRM 5.5.6.8.1, "Interrelated Payoff Computation," explains:

(1) When computing payoffs on estate tax accounts, be aware that the estate may qualify for an interrelated payoff computation.

(2) When Form 706 is filed, deductions against the gross estate have been claimed for the expenses incurred in administering the estate. After the return has been filed, additional expenses may be incurred for which the estate can claim a deduction by filing an amended return. Such expenses include attorney fees, accounting fees, interest due on state estate tax liabilities unpaid at the time returns are filed, and state death tax credits that have been paid in installments. Allowable expenses are explained in IRC section 2053.

(3) Any additional deductions, including interest as a debt, must be requested in writing by the estate or by submitting a supplemental return. On a balance due account, interest as a debt may be limited to only the interest that has been paid, instead of all interest that is due.

(4) If all or a portion of the estate tax has been deferred under IRC section 6166, the estate may request a recomputation of the tax due based on allowed additional expenses. The supplemental return with documented expenses must be provided to the E&G 6166 unit at the Campus in order to do the interrelated computation with special software and provide a payoff.

(5) Tax decreases on amended and/or interrelated computations, will not be input without the taxpayer's agreement and/or payment in full per the new computation.

(6) Until a determination on a supplemental return is made by the Campus, the tax is still due.

IRM 5.5.6.9, "Working A Terminated IRC 6166 Account," explains:

(1) When conducting your initial analysis of the account check TXMOD for the following:

- check the last TC 340, interest was assessed to this date only
- is there a TC 582 lien indicator or a TC 360 for a lien fee? (is it an IRC section 6321 lien or IRC section 6324A lien – you may see "special lien" indicated. Check ICS history, archive history, or with Advisory for previous action on the account.
- How much time, if any, remains on the IRC section 6324 (a) lien? During the time the taxes were in status 14 the 10-year estate tax lien continued to run.
- check for TC 468, status 14 input and TC 488/489, compute the CSED and document the CSED date in your ICS history

- check for transaction codes and TXMOD/ENMOD history for appeals, penalty abatement requests, amended returns, etc. (educate yourself on what happened with this account before it came to you – it will help you make future decisions)

(2) Secure copies of the following documents:

- letters from Campus/Advisory terminating the election (Letter 950-H or I, Letter 6335-F for balance due amounts – see IRM 5.5.8.5, IRM 4.25.2.1.15 and 4.25.2.1.16 concerning IRC 6166 procedures)

- any related appeals or Tax Court decision or settlement (is it pending or resolved?)

- liens filed by Advisory to determine what property was pledged as collateral on deferred tax due (Form 668-J and Form 13925) and any correspondence pertinent to collection of the tax due

- copy of any bond secured by Advisory

(3) As part of your collection investigation:

- Research the status of the business – is it sold, bankrupt, expanding and funds went elsewhere? Investing funds hoping for big payback later? Do an internet search for information on the business. The estate had a large interest in a closely held business to qualify for this election.

- Determine if the business was sold – if so did IRS receive any of the sale proceeds? If not where are the sale proceeds? (if more than fifty percent of the closely held business was sold the election is terminated)

- Find out where funds used to make installments payments were coming from? (may provide a potential levy source)

- Contact Advisory, their case file may have financial information on the business and/or estate assets used for lien collateral evaluation. Secure and review this information for collection potential.

- Secure the 706 return. Campus and/or Advisory may be able to provide partial copies of the 706 return, until you receive the entire tax return for review.

- Determine if the executor or other fiduciary received a discharge of liability under IRC section 2204. The application for discharge and the letter granting it, should be attached to the Form 706.

(4) If a special lien was secured:

- collateral listed on 668-J lien and/or Form 13925 will provide legal description of property pledged as collateral for tax due – this is the asset to pursue for collection of tax due;

- determine the current status of property pledged as collateral;

- make demand for payment, the amount in the Letter 6335-F may be used until the estate requests a payoff, send pre-levy notice if there is seizure potential.

(5) If a special lien was not secured:

- Was a section 6165 bond provided?
- What is date of death – did the IRC section 6324(a) lien expire?
- Was an IRC section 6321 lien recorded? What does it attach to?
- What estate assets remain to collect from?
- If property was sold, was a discharge of the property from any liens recorded?
- Contact executor and/or responsible parties to pay installment payments, demand payment, determine what remains to collect from
- Consider transferee against those who received estate assets or fiduciary liability against those that were liable to pay installments (see 6166 election information in the 706 return or to whom letters were sent from the Campus for annual installments)

(6) After conducting your fact finding, contact the estate representative and determine how the estate will pay the tax due.

IRM 5.5.8.5 and its subparts were last revised December 16, 2022, based on my review on April 3, 2023.

IRM 5.5.8.5, "Collateral from Estates with IRC 6166 Elections," explains:

(1) The IRC 6166 election allows an extension of time to pay estate tax that is attributable to an interest in a closely held business. To qualify, at least 35% of the assets in the gross estate must consist of an interest in a closely held business or businesses. Estate and Gift (E&G) examiners make determinations if estates qualify for this special election. With this election, most estates will make four annual payments of interest only then they will make ten annual payments of principle and interest. In these cases, the first annual payment is due a year after the due date of the return. Subsequent payments are due each year thereafter until the account is paid in full. Estates can also elect to pay the deferred tax in a shorter period. An estate with an IRC 6166 election may qualify for a reduced interest rate under IRC 6601(j).

(2) Some estates, such as estates in which the IRC 6166 qualifying asset is an interest in a holding company, may only qualify to pay their tax for a shorter period. For these estates, they must begin paying their annual installments on the principle, plus interest, immediately. They do not get the additional four years to make only interest payments.

(3) For the tax that is reported on Form 706, the IRC 6166 election must be made with a timely filed estate tax return. Late filing of the return invalidates the election. If the tax

that qualifies for the IRC 6166 election is the result of an examination deficiency, the estate must make the IRC 6166 election within 60 days after issuance of notice and demand for the additional tax.

(4) The portion of the tax that is owed due to the examination deficiency will be prorated (subject to the limitations of section 6166(a)(2)) as if the election had been made with a timely filed return. The estate must pay the past due installments, and they must pay future annual installments in order to keep the IRC 6166 election.

(5) When an estate has an IRC 6166 election, Campus E&G puts the account into status 14 on Integrated Data Retrieval System (IDRS) which keeps the account out of collection status.

(6) Campus E&G monitors estates with IRC 6166 elections. They send annual bills to the estate along with a Certificate of Unchanged Status. The estate must sign the Certificate of Unchanged Status to annually certify if there has been a disposition of 50% or more of the IRC 6166 qualifying assets. Such a disposition would cause the IRC 6166 election to go into default. Campus E&G confirms that the annual IRC 6166 payments are made. If the estate doesn't make their payments, Campus E&G will send a series of bills which allow the estate at least six months to make the installment before the election goes into default. If the estate still does not pay, Campus E&G will terminate the IRC 6166 election, and the full tax liability will be immediately due.

(7) Under IRC 6503(d) the collection statute is suspended for the period during which payment of the tax is deferred under IRC 6166. However, running of the unrecorded IRC 6324(a) estate tax lien is not suspended. See IRM 5.5.8.3, General Estate Tax Lien under IRC 6324(a).

(8) When the examining office determines that an estate is eligible for the IRC 6166 extension of time to pay estate tax that is attributable to an interest in a closely held business, a case is referred to Advisory to contact the estate to request a surety bond or a consent to the creation and filing of a Notice of Federal Estate Tax Lien. The origin of the referral depends on which unit approved the IRC 6166 election or accepted the return as filed with the election:

- If the return was accepted as filed or surveyed before assignment to E&G Examination, the referral will come from Campus E&G. They will hold the original estate tax return for 90 days after their referral in case Advisory needs additional information from the return.

- If the return was examined or surveyed by E&G Examination, the referral will come from E&G Examination.

- If the final tax was determined by IRS Independent Office of Appeals or in Tax Court, the referral will come from Appeals Account and Processing Support (APS).

(9) The following items will be included with the referral:

a. Pages 1, 2, and 3 of Form 706 and schedules A, B, F, & G with any attachments, including other pertinent schedules listing assets or encumbrances.

b. Form 4349, Computation of Estate Tax Due With Return and Annual Installment.

c. Form 1273, Report of Estate Tax Examination Changes, and Form 6180, Line Adjustments - Estate Tax, if the estate tax return was examined.

d. The examiner's narrative report of examination changes (Form 886-A, Explanation of Items, or similar documentation) if the estate tax return was examined.

e. Form 2848, Power of Attorney and Declaration of Representative, if applicable.

f. IRC 6166 election and attachments to the election.

g. List of all the businesses that qualified the estate for the IRC 6166 election as shown on the estate tax return including the business name and employer identification number (EIN). This information may be provided separately or on the related estate tax return schedule where the business is listed.

(10) Advisory will open a Non-Field Other Investigation (NFOI) 195, 668J Lien (IRC 6166), on Integrated Collection System (ICS) when they receive a referral due to an IRC 6166 election.

(11) Advisory will contact the estate's executor or power of attorney within 60 days of receipt of the referral package to request the estate to voluntarily provide collateral during the IRC 6166 payment period. Collateral is requested to protect the government with an asset to collect on if the IRC 6166 election goes into default. The estate can provide a surety bond, or they can provide a consent to the creation and filing of an IRC 6324A lien by providing a signed Form 13925, Notice of Election and Agreement to Internal Revenue Code (IRC) 6324A Lien.

(12) In some cases, the estate may respond that no collateral should be required because the government is not at risk during the IRC 6166 payment period. If that occurs, or if the estate does not respond to Advisory's request for collateral, see *IRM 5.5.8.5.1*, Risk Reviews on Estates with IRC 6166 Elections, for procedures to follow.

(13) Key elements of the consent to the creation and filing of the IRC 6324A Notice of Federal Estate Tax Lien, include the following:

- To agree to the Notice of Federal Estate Tax Lien, the estate must provide Form 13925, Notice of Election and Agreement to Internal Revenue (IRC) 6324A Lien. The agreement must list the specific property that will be subject to the Notice of Federal Estate Tax Lien, and it must be signed by all individuals with an interest in the designated property.

- Any property may be listed on Form 13925 to consent to the filing of a Notice of Federal Estate Tax Lien. The property may, or may not, be part of the estate assets.

- Although real property is preferred, any property, either real or personal, with equity equal to the deferred taxes plus interest, that can be expected to survive the deferral period, may be designated in the agreement.

  Note: Even though the property offered by the estate as security for the Notice of Federal Estate Tax Lien may be, if necessary, difficult to enforce against (such as stock in a closely held corporation), distrainability is not a factor in determining the adequacy of the value of the property offered. If the requirements under IRC 6166(a)(1) as to the value of the property have been met, and the asset is expected to survive through the deferral period, whatever property the estate offers as security for the lien is acceptable.

- By signing Form 13925, the owners of the property agree to the filing of a lien on the property included in the lien agreement. Form 668-J, Notice of Federal Estate Tax Lien Under Internal Revenue Code Section 6324A, is then recorded listing the property from the lien agreement.

- Any property that is part of the decedent's gross estate that is part of the lien agreement and described on the recorded Notice of Federal Estate Tax Lien is no longer subject to the unrecorded IRC 6324(a)(1) estate tax lien.

- The lien agreement must include the contact information for a designated agent. That individual is responsible for notifying the IRS if there is any change to the property that qualified the estate for the IRC 6166 election or to the asset that is being used as collateral for the Form 668-J Notice of Federal Estate Tax Lien.

- Filing of the Notice of Federal Estate Tax Lien acts as a discharge of personal liability of the executor or fiduciary under IRC 2204 on the IRC 6166 qualifying tax. See 26 CFR 20.2204-3.

(14) If the estate provides a lien consent form other than Form 13925, Advisory will consult with Area Counsel for the state of the decedent's last domicile for approval of the alternate lien consent form. Area Counsel can also be consulted when unusual assets are pledged on Form 13925, such as art or collectibles.

(15) The IRS may file a Notice of Federal Estate Tax Lien Under Internal Revenue Code Section 6324A on shares of stock. If possible, the IRS should take possession of the certificates to protect the government's lien interest. See IRM 5.6.1, Collateral Agreement and Security Type Collateral, for guidance on collateral.

(16) The IRC 6324A Notice of Federal Estate Tax Lien is property specific. The property to which the Notice of Federal Estate Tax Lien attaches should be listed in detail on Form 668-J or as an attachment to Form 668-J.

(17) If the real or personal property subject to the Notice of Federal Estate Tax Lien is held by an entity other than the estate, then the entity name should be identified on the Notice of Federal Estate Tax Lien under the owner's name so that the lien is

properly indexed in the public records. The owner/entity's taxpayer identification number should not be included on the Notice of Federal Estate Tax Lien.

(18) Form 13925 must be signed by all individuals with an interest in the designated property (whether or not in possession) which will be described on the Notice of Federal Estate Tax Lien.

(19) If the asset is owned by a partnership, LLC, corporation, trust, etc., Advisory must request and review documents that confirm the names of the individuals that can pledge property and have authority to act on behalf of the entity to confirm all these individuals signed Form 13925. If the estate does not provide these documents, or the individuals with authority to pledge property do not sign Form 13925 agreeing to the filing of the Notice of Federal Estate Tax Lien, the IRS will not accept that asset as collateral.

(20) The IRS may file a Notice of Federal Estate Tax Lien that attaches to an interest in a corporation, partnership, limited liability company (LLC), or trust. However, caution should be exercised. The Notice of Federal Estate Tax Lien attaches to whatever rights the interest entails. If those rights do not include the right to sell the interest, the IRS will be unable to sell the interest. The IRS may be left with whatever rights to payment, distributions, or liquidation that the interest includes. On the other hand, if the interest includes the right to sell the interest, the IRS can also sell the interest (upon termination of the IRC 6166 election), if the interest is marketable. Oftentimes there are restrictions on the transfer of such interests. For example, a partnership agreement, LLC agreement, or state law may contain provisions as to the manner in which a decedent's interest is handled upon death, or there may be a restriction to encumber property owned by the partnership or LLC. General guidance on ownership of LLCs, operating agreements, documents that outline ownership, and authorities of LLC members is in IRM 5.1.21, Collecting from Limited Liability Companies.

(21) If the property to which the Notice of Federal Estate Tax Lien attaches is an interest in a corporation, partnership, LLC, or trust, etc., the recorded Notice of Federal Estate Tax Lien should include a description of the covered property as the interest in the entity, the nature of the interest, and the address of the entity.

(22) For state and territory filing locations, see IRM Exhibit 5.12.7-2, State and Territory Filing Location. Multiple Notices of Federal Estate tax Liens may need to be filed in different filing locations if there is more than one asset provided as collateral and those assets are in different locations. The location to file the Notice of Federal Estate Tax Lien is the one office within the state, as designated by the laws of such state, in which the property subject to the lien is situated. See IRC 6323(f):

- For personal property owned by a corporation, partnership, trust, etc., the property will be deemed to be the place at which the principal executive office of the entity that owns the assets is located. It is the place where the major management decisions are made. Do not confuse the principal executive office with the principal place of business. See IRM 5.12.7.10, Filing the Notice of Federal Tax Lien.

- For personal property that is an interest in a corporation, partnership, LLC, trust, etc., the filing location is deemed to be situated at the residence of each of the individuals that own the interest. If the estate has not yet distributed the property, then the location for filing the Notice of Federal Estate Tax Lien is the decedent's last address and the executor's residence.

(23) If the estate provides signed Form 13925 agreeing to the filing of a Notice of Federal Estate Tax Lien, Advisory must verify the value of the asset pledged as collateral and determine if there are any encumbrances on the property to confirm there is sufficient equity to cover the deferred tax and interest. Advisory may utilize sources such as appraisals, Accurint, UCC filings, public records, etc. to verify the asset value and encumbrances. Advisory may also request for the estate to provide verification of the value of an asset or verify encumbrance information (including title reports, owner and encumbrances reports, etc.). Advisory will document the ICS history with their analysis of equity in the collateral. See IRC 6324A(b)(2), Maximum value of required property.

(24) Once Advisory has determined that all required information has been provided to file Form 668-J, Notice of Federal Estate Tax Lien Under Internal Revenue Code Section 6324A, they will follow the procedures in IRM 5.5.8.5.4, Processing of Lien Form 668-J and Form 668-K, to file the lien.

(25) If the estate provides a completed Form 13925, Advisory will send a copy of the lien agreement to Campus E&G for association with their IRC 6166 file.

(26) If, at any time, the value of the property covered by the agreement becomes less than the IRC 6166 qualifying tax, plus interest, the IRS can require the addition of property to the agreement. Advisory will send Letter 4346, Additional Collateral. If the estate does not provide the additional collateral within 90 days, Advisory will notify Campus E&G to terminate the IRC 6166 election. See IRC 6324A(d)(5), Additional lien property required in certain cases.

(27) If the executor chooses to provide a bond as collateral, see IRM 5.6.1.3.1, Bonds, for information regarding bond requirements. If needed, Advisory may consult with Counsel to draft and review the bond agreement. Advisory will follow the procedures in IRM 5.6.1, Collateral Agreement and Security Type Collateral, to process the bond which will be held in the Advisory safe for safekeeping.

IRM 5.5.8.5.1, "Risk Reviews on Estates with IRC 6166 Elections," explains:

(1) If the estate declines to provide a bond or consent to a Notice of Federal Estate Tax Lien, or the estate does not respond to Advisory's request for collateral, Advisory will conduct a risk analysis to determine if the IRS should require collateral. Advisory will document the Integrated Collection System (ICS) history regarding the estate's refusal. If possible, Advisory will secure a written statement from the estate as to their reasons for refusing to provide collateral.

(2) When an IRC 6166 extension of time to pay estate tax that is attributable to an interest in a closely held business election is granted, the IRS can require an estate to provide a bond if the government is at risk during the deferral period. However, the estate can choose to provide a consent to the filing of an estate tax lien, in lieu of the

bond, by completing Form 13925 and providing the required information as described in IRM 5.5.8.5, Collateral from Estates with IRC 6166 Elections. Advisory will determine whether a bond should be required by an estate based on a review and analysis of applicable factors listed below and any other relevant facts and circumstances. This is not an exclusive list:

Factor	**Information to consider**	**Examples of Information to Review**
Duration and stability of the closely held business	Determine the likelihood of the success and survival of the closely held business through the deferral period. Consider the following: • Nature of the closely held business. • Assets in the closely held business. • Age of the business. • Relevant market factors that will impact the future success of the business. • Recent financial history. • Continuity and stability of the management of the business. • Determine whether the decedent owned a majority or minority interest in the business. If the decedent owned a minority interest, the financial information pertaining to the business may not be as relevant because the estate may not force distributions to pay the estate tax. In this case, consider if there are other assets in the estate and other income available to pay the estate tax.	• Appraisals, financial statements, and Securities and Exchange Commission (SEC) filings. • Information regarding any outstanding liens, judgments, and pending or anticipated lawsuits. • Other claims against the business. • The estate may use an affidavit or other document to provide this information.
Ability to timely pay the annual installments	This factor considers how the estate expects to be able to make the annual payments of tax and interest as due, and the objective likelihood of realizing that expectation. Facts relevant to this factor may include the following: • Nature of the significant assets and liabilities of the business. • Type of debts (subordinated, related party, guaranteed, payment terms).	• Assets that may be liquidated to pay the installments. • Income as shown on the business income tax return. Secure a copy of the return or review information from Integrated Data Retrieval System (IDRS).

Factor	Information to consider	Examples of Information to Review
	• The cash flow of the business (both historical and anticipated) to determine if funds will likely be available to pay future deferred tax installments. • Consider prior IRC 6161 extension of time to pay requests. If a request was made on an IRC 6166 installment, or if multiple requests were made on tax that was not deferred under IRC 6166, this may indicate an inability to pay. See IRM 5.5.5. Processing Estate and Gift Tax Extensions. • Advanced payments on the principle installments may indicate an ability to pay. • If the decedent had less than 100% interest in a business entity, only consider the decedent's percent interest when reviewing financial statements of the closely held business to determine the estate's ability to pay. For example, if the decedent had a 50% interest in a corporation, only consider 50% of the net income of the corporation.	• Income and expense statements of the closely held business and/or estate. • If the estate is holding a cash reserve to have funds available for future installments, review bank records, brokerage accounts, etc., to confirm this information.
Compliance history	Addresses the compliance history of the business and the estate with all federal tax payment and tax filing requirements to determine whether the business, its management, and the executor respect and comply with all tax requirements on a regular basis. The relevance of the closely held business's filing and payment compliance is proportional to the estate's ownership interest and control of the business.	Conduct a compliance check on Integrated Data Retrieval System (IDRS) for tax filing and payment compliance of the estate, related trusts, and closely held business entities.

(3) The following internal sources may provide sufficient information for Advisory to make a risk determination. If additional information is needed, Advisory can request

the estate to provide further information. The Advisor will document the ICS case history to address all items that were reviewed and the findings from the review:

Item to Review:	**Include:**
Documents from the lien referral package that was provided to Advisory	• Employer identification numbers of the closely held businesses to conduct a compliance check • Type of IRC 6166 qualifying closely held business and valuations to determine duration and stability of the closely held business • Any other sources of payment available to the estate that can be used to pay the annual installments • Any other documents in the case file that provide information on the duration/stability of the closely held business, ability to make annual installment payments, or compliance history
Prior case activity	• Prior Form 4768 requests for extension of time to pay estate tax to determine if additional time has previously been requested to pay the tax. More than one request may indicate the estate has had difficulty paying the tax in the past. Look for IDRS transaction codes 468 and review the prior Integrated Collection System (ICS) case history. • Prior lien discharge and subordination applications to determine remaining estate assets and to confirm there has not been a disposition of 50% or more of the IRC 6166 qualifying assets since that would cause the election to default. • Any other documentation in the history related to the duration and stability of the closely held business, the compliance history, and the estate's ability to timely pay the deferred tax payments.
IDRS to check estate's compliance history	Check the following for compliance with filing and/or payment requirements: • Annual IRC 6166 installment payments. • Estate tax that did not qualify for the IRC 6166 election. • Form 709 gift tax. • Any pre-death liabilities such as Form 1040, trust fund recovery penalty assessments, and sole-proprietorship business returns. • Form 1041 for income reported on an estate or trust, if applicable. If there are assets on Form 706, Schedule G, the estate may have assets held in a trust which may indicate a Form 1041 filing and paying requirement. • Any returns associated with the closely held business such as Form 1120, Form 1120S, Form 1065, Form 940, Form 941, or other returns.
Available public records	• Internet search of the closely held business for indications of stability or insolvency of the business • Secretary of State and UCC filings, if available online, to ensure the business is still active and for possible creditor information • Accurint which may have information on corporate filings, business search, asset information, court bankruptcy, civil court, official records, and sometimes credit information

Item to Review:	Include:
	• County public real estate or official records, if they are available online, for liens, judgements, litigation, assets, and/or claims against the estate or business

(4) If additional information is necessary, Advisory will send a request to the estate for any additional items needed to determine whether the government is at risk during the deferral period to make a risk determination. Information requested from the estate may include copies of tax returns, financial statements, list of assets and encumbrances, status of litigation, and any other information Advisory determines is needed to conduct a risk review. The estate may also submit any additional documentation they believe will support their position that collateral should not be required.

(5) Advisory will document the case file history with their findings to include the following:

a. A brief history outlining the taxpayer's response to the request for a bond or lien consent.

b. List factors and information considered in the risk analysis to determine if collateral should be required during the deferral period.

c. If collateral is required, Advisory will provide a detailed explanation regarding why a bond was required to protect the government's interest and the amount of the required bond. The explanation should address the factor or factors that Advisory relied upon when they determined that the government is at risk during the deferral period.

d. If collateral is not required, Advisory will provide a detailed explanation why the government is not at risk during the deferral period based on the risk factors of compliance, ability to pay the annual installments, and duration/stability of the closely held business with a summary of why no collateral should be required based on each of these factors.

(6) After Advisory has made their risk determination, Advisory will send Letter 4283, Notification Regarding Internal Revenue Code Section 6166 Security Requirement. The Advisory manager must sign Letter 4283. When preparing the letter, Advisory will select one of the optional paragraphs:

- Optional paragraph (1) will be selected to notify the estate that no bond is required. This paragraph also notifies the estate that the IRS may conduct a future review of financial information, and that a bond may still be required in the future, or

- Optional paragraph (2) to notify the estate that a bond is required after reviewing the information provided by the estate, or

- Optional paragraph (3) to notify the estate that a bond is required because the estate did not provide the information requested by Advisory to make a risk determination.

(7) If optional paragraph (1) is selected, Advisory will close the non-field other investigation (NFOI) 195, 668J Lien (IRC 6166), on ICS, and they will open a NFOI 196 Special No Lien case. Advisory will input an initial follow-up date for six years from the return due date to make an updated risk analysis. See *IRM 5.5.8.5.3*, Monitoring Accounts During the Deferral Period, for actions required to conduct periodic review of these cases.

(8) If optional paragraph (2) or (3) is selected, Advisory will include Form 13925, Notice of Election and Agreement to Internal Revenue Code (IRC) 6324A Lien, with Letter 4283. The estate has 30 days to respond when the IRS requires a bond. The estate can also provide a consent to an IRC 6324A lien in lieu of providing a bond. Advisory will input a follow-up date on ICS to monitor the case for a response to Letter 4283 and will maintain a copy of the letter in the case file.

(9) After the 30-day period on Letter 4283 expires, if the estate still refuses to provide a bond or lien consent, Advisory will prepare Letter 950-I, Preliminary Internal Revenue Code Section 6166 Determination Letter, which must be signed by the group manager. Letter 950-I notifies the estate of its right to appeal the determination that a bond is required. The letter will be sent by certified mail and a copy will be maintained in the case file along with a notation in the case history of the date the letter is sent. Advisory will schedule a follow-up date on ICS to monitor the case for a response to Letter 950-I. An appeal of the determination must be postmarked by the deadline on Letter 950-I for the appeal to be timely. If the deadline is on a Saturday, Sunday, or federal holiday, the deadline is the next following business day.

(10) If the estate does not appeal the preliminary determination within the 30-day appeal period, or if the estate sends an untimely post-marked protest, Advisory will provide a memorandum to Campus Estate and Gift (E&G), with a copy of Letter 950-I, requesting termination of the IRC 6166 election. Advisory will request that Campus E&G also send Letter 6335-F, Notice of IRC 6166 Denial or Termination, to the estate via certified mail, with return receipt requested, as a demand letter for payment. Letter 6335-F will include the current balance due as calculated by Campus E&G. Advisory will monitor the account for the termination of the IRC 6166 election. Once Advisory confirms the election has been terminated, they can close their NFOI 195, 668J Lien (IRC 6166), on ICS. The Advisory manager may notify a Field Collection revenue officer manager of the tax due to request revenue officer case assignment. While there is a balance due, Advisory will maintain a case file since the file may contain documents to assist the revenue officer with collection of the tax.

(11) If the estate submits an Appeal, Advisory will date stamp the protest and document in the case file history that the protest was received. If the protest contains new issues to consider in the risk analysis, Advisory will determine the validity of the new issues. If Advisory disagrees with the estate on the new issues, they will prepare a response to the protest to include the determination reached on the new issues. Advisory will send the response to the protest to the estate and will include it in the package to be transmitted to IRS Independent Office of Appeals (Appeals). Advisory

will forward the following items to Appeals within 30 days from the postmark date of the protest letter:

a. Letter 4283, Notification Regarding Internal Revenue Code Section 6166 Security Requirement

b. Documentation considered in analyzing whether the bond or lien was required

c. Letter 950-I, Preliminary Internal Revenue Code Section 6166 Determination Letter

d. Protest letter with any attachments

e. Advisory response to the protest letter if new issues were addressed

f. Case file history

g. Any pertinent correspondence with the taxpayer

h. Any documents considered in the risk analysis

(12) Advisory will send the appeal package with Form 3210, Document Transmittal, to Appeals. The location to route the package is located on the IRS Independent Office of Appeals Website. Advisory will notify E&G Campus by secure e-mail that a protest has been forwarded to Appeals so that Letter 6335-F is not sent prematurely.

(13) Advisory will input a 90-day follow-up. If no response is received, Advisory will check the status of the appeal on the Appeals Centralized Database System (ACDS). If there is no record on the system, Advisory may contact *AP Inquiries for information.

(14) IRS Independent Office of Appeals will send the case file with the Appeals Case Memorandum (ACM) to Advisory once a decision is final. If they allow the election to continue because they have determined the government is not at risk during the deferral period, Advisory will notify Campus E&G that Appeals has determined the estate is entitled to the election. Advisory will then close the NFOI 195, 668J Lien (IRC 6166), on ICS, and they will open a NFOI 196, Special No Lien Case.

(15) If Appeals determines that the election should be terminated because the government is at risk during the deferral period, and collateral wasn't provided, Advisory will notify Campus E&G to terminate the IRC 6166 election as described in (10) in this IRM section.

IRM 5.5.8.5.2, "Miscellaneous Documentation From Campus or Appeals" (07-24-2018), provides procedures when a scheduled payment is not made timely.

IRM 5.5.8.5.3, "Monitoring Accounts During The Deferral Period" (07-24-2018), explains (yellow highlights are mine):

(1) Informational documents received from the E&G Campus should be reviewed within 30 days of receipt. The advisor's evaluation of impact or harm to the Government's

interest should be documented in the ICS history. This documentation may dictate frequency of monitoring an account.

(2) Notice of late installment payments, preliminary IRC 6166 election terminations or extensions to pay on IRC 6166 installment payments (see IRM 5.5.5.5) should be considered as a factor in lien determination and monitoring. Accounts should be re-evaluated if any of the above actions occur.

(3) Encumbrances must be checked to determine adequacy of collateral. The advisor may use sources such as Accurint, Secretary of State, UCC filings, etc. to verify encumbrances.

(4) All IRC 6166 accounts will be re-evaluated six years into the deferral period. Schedule a follow up through the ICS system. Advisors will consider the factors described in *IRM 5.5.8.5.1* and should also look at subsequent actions below to determine if additional action should be taken to protect the Government's interest:

a. What assets have been distributed?

b. Has the estate distributed, sold, exchanged, or otherwise disposed of 50 percent or more of the value of the estate's interest in the closely held business?

c. What assets have been discharged or subordinated?

d. Has the estate made installment payments timely and in the full amount due?

e. Has the estate requested extensions to pay installments?

f. Has the estate defaulted on other financing?

g. Has the estate made additional payments toward the tax liability?

h. Does the closely held business appear to be financially stable and able to make future installment payments?

i. Is the estate in compliance with filing and paying requirements?

(5) Annual monitoring, considering the above factors should be conducted as the Service nears expiration of the IRC 6324(a) lien. Each year that Advisory conducts a review, the Advisor must document their analysis and recommendations to adequately protect the Government's interest. As the Service gets closer to expiration of the IRC 6324(a) lien, the advisor must consider securing a "replacement lien" (IRC 6324A lien or bond) to cover the additional deferral period and the amount of deferred tax due in order to protect the Government's interest.

(6) Advisory **must be aware** that if a determination is made that the government is at risk of not collecting the remaining tax due, appropriate action (for example, a bond or lien or enforced collection action) **must be taken and completed prior to expiration of the IRC 6324(a) lien.** Consideration must be given to allow time for the executor to exhaust any allowable appeals and potential litigation time if the estate petitions the Tax Court under IRC 7479. If the account is accelerated, this

process generally requires a minimum of six months to be completed. Timeframes of acceleration, appeals and litigation must be considered in order to complete collection actions prior to expiration of the IRC 6324(a) lien.

(7) If the advisor determines that a lien is required the advisor will send the executor Letter 4283. Follow procedures in *IRM 5.5.8.5.1*

(8) In consideration of accounts where the estate has been in compliance with timely payment of installments, as the Service gets closer to expiration of the IRC 6324(a) lien, the advisor must consider securing a “replacement lien” (IRC 6324A lien or bond) to cover the additional deferral period and the amount of deferred tax due in order to protect the Government’s interest.

(9) Advisory must ensure annually that the value of the collateral securing the lien is equal to the outstanding IRC 6166 balance on the account. In accordance with the Form 13925, the designated agent is required to send current valuation information annually with respect to the pledged property listed in the agreement. If the executor has provided an IRC 6324A lien, Advisory must review the annual valuation information report from the designated agent to confirm that the value of the collateral securing the lien is equal to the outstanding IRC 6166 balance on the account. If the financial information is not received from the designated agent, the Advisor may contact the designated agent to request that information.

(10) Advisory will use Letter 4345, Collateral Valuation, to request current valuation information with respect to property pledged on the lien agreement.

(11) Advisory will use Letter 4346, Additional Collateral, as notice and demand for additional collateral to secure the special lien.

Thus, starting 6 years into the deferral period and annually after that, the IRS considers the need for replacing the secret Code § 6324 lien with an express Code § 6324A lien.

Additional IRM guidance includes:

- IRM 5.5.8.5.4, “Processing of Lien Form 668-J and Form 668-K” (07-24-2018)
- IRM 5.5.8.5.5, “Requesting Payoffs for Lien Form 668-J” (07-24-2018)
- IRM 5.5.8.5.6, “Processing Requests for Release, Discharge of Property From, or Subordination of IRC 6324A Form 668-J” (03-01-2006)

When negotiating with the IRS, one might consider requesting a delay in recording a Code § 6324A tax lien until closer to when the 10-year period expires, if publicity is a concern. Sometimes, however, a recorded Code § 6324A lien is more favorable for the taxpayer - unlike the Code § 6324 lien, it is junior to post-mortem liens placed on property before the Code § 6324A lien.

Also, if imposing an IRS lien would impair the business' ability to earn the money necessary to pay the tax, the IRS must consider whether imposing the lien is penny-wise and pound-foolish.[7196]

III.B.5.e.iv.(i). Effect of Liens on Dealings with Third Parties

If ownership of a business is subjected to an IRS lien, the owners may violate loan covenants as guarantors of the business' line of credit or other borrowings. Furthermore, a trustee on whom the secret estate tax lien is imposed – generally for 10 years from the date of death – will need to disclose the liens when applying for credit (loans or loan guarantees). Some businesses require fidelity bonds (for example, a construction company), rely on a line of credit to finance inventory, or simply have long term loans from the purchase of buildings or equipment, and the acceleration of payment obligations or other loss of credit may ruin the business.

If a loan is being refinanced with a new lender and the lender's security interest arose before the decedent's death, so that it is senior to the IRS' automatic lien, consider having the original lender assign that senior security interest to maintain its priority over the estate tax lien.

Franchise agreements tend to restrict transfer of ownership and might look unfavorably upon liens.

Also, generally the IRS may force the sale of real property a debtor owns as a co-tenant, even if the co-tenant is innocent;[7197] if property is held as tenants by the entirety, the innocent party should consider whether she is entitled to more than half of the property.[7198] However, a court

---

[7196] *Alessio Azzari, Inc. v. Commissioner*, 136 T.C. 178 (2011) (Code §§ 6159, 6320, 6323, and 6325).

[7197] *U.S. v. Adent*, 821 F.3d 911 (7th Cir. 2016), in allowing such a sale, held:

> The United States Supreme Court addressed the issue of an innocent third-party interest in the context of a forced sale in *United States v. Rodgers*, 461 U.S. 677 (1983). There, the Supreme Court found that the plain language of § 7403 contemplates the sale of the entire property, including innocent third-party interests in that property, and that the Supremacy Clause precludes protection of innocent third-party interests via state law. *Id.* At 693–94, 703–04. Further, § 7403 protects an innocent third party's interest by providing for distribution of the proceeds from the court-ordered sale to the innocent third party to compensate them for their interest. *Id….*
> Additionally, the Supreme Court provided a non-exhaustive list of four factors to consider when an innocent third party has an interest in the property to be sold, recognizing that financial compensation may not always be a completely adequate substitute for a roof over one's head. *Id.* at 704. These factors include: (1) the prejudice to the government's interest as the result of a partial, rather than a total, sale; (2) whether the third party with a non-liable separate interest in the property would, in the normal course of events ... have a legally recognized expectation that that separate property would not be subject to forced sale by the delinquent taxpayer or his or her creditors; (3) the prejudice to the third party as the result of a total sale; and (4) the relative character and value of the non-liable and liable interests held in the property. *Id.* at 710–11….
> The other *Rodgers* factors also weigh in favor of the government. Derek, the non-delinquent co-owner of Parcel B, has no legally recognized expectation that his interest would not be subject to a forced sale due to Leonard's delinquency. Also, the prejudice to Derek as the result of a sale is minimal; Derek does not reside in Parcel B, so dislocation is not a consideration. After the sale, Derek will be compensated for his half interest. Further, Derek may bid on Parcel B at the foreclosure auction, either to gain the property outright or to attempt to increase the final sale price. Finally, the relative character and value of the non-liable and liable interests does not weigh in any party's favor. The non-liable interest of Derek is equal to the liable interest of Leonard.

[7198] See article on procedures developed in light of *Craft*, cited in part III.B.3.c.iv Imposition of the Estate Tax Lien.

may consider imposing a rent obligation rather than requiring a sale.[7199] Ideally, the parties would present evidence whether the property can be partitioned without reducing the value of the government's proceeds – rather than selling the whole thing and paying the government its share; however, a lack of that showing is neutral, and other factors may prevail.[7200]

As described above, the estate tax lien is imposed automatically as of the owner's death on the assets that the owner holds. One might consider placing the assets in a holding company so that the lien will be imposed on the holding company rather than the business assets. On the other hand, using a holding company may reduce or eliminate the estate's ability to obtain an automatic deferral of estate tax under Code § 6166.[7201]

When the IRS seeks to obtain an express lien under Code § 6324A to secure Code § 6166 payments, the estate can select the security to be provided.[7202] When doing so, the estate might consider which property causes the least disruption with existing lenders or others with whom one does business and also reduces the cost of keeping the IRS updated.

III.B.5.e.iv.(j). Wrongful Levy

If a levy has been made on property or property has been sold pursuant to a levy, any person (other than the person against whom is assessed the tax out of which such levy arose) who claims an interest in or lien on such property and that such property was wrongfully levied upon may bring a civil action against the U.S. in a federal district court.[7203] This action may be brought without regard to whether such property has been surrendered to or sold by the IRS.[7204] If the IRS sold the property, a junior lienholder may sue the U.S. to receiver any surplus sale proceeds.[7205]

Oxford Capital Corp. v. U.S., 211 F.3d 280 (5th Cir. 2000), held:

> The elements of a wrongful levy action under section 7426 are well settled - to establish a wrongful levy claim a plaintiff must show (1) that the IRS filed a levy with respect to a taxpayer's liability against property held by the non-taxpayer plaintiff, (2) the plaintiff had an interest in that property superior to that of the IRS and (3) the levy was wrongful. See *Texas Commerce Bank-Fort Worth v. United States*, 896 F.2d 152, 156 (5th Cir. 1990). To prove that a levy is wrongful, (1) a plaintiff must first show some interest in the property to establish standing, (2) the burden then shifts to the IRS to prove a nexus between the property and the taxpayer, and (3) the burden then shifts back to the plaintiff to prove the levy was wrongful, *e.g.*, that the property in fact did not belong to the taxpayer. See *Century Hotels v. United States*, 952 F.2d 107, 109 (5th Cir. 1992).
>
> The Fifth Circuit, joined by the majority of the other circuits addressing the issue, has held that the IRS must prove a nexus between the property levied upon and the taxpayer by substantial evidence while a minority of circuits have required only proof by a

[7199] *U.S. v. Cardaci*, 119 A.F.T.R.2d 2017-1735 (3rd Cir. 5/08/2017).
[7200] *U.S. v. Dase*, 125 A.F.T.R. 2d 2020-1079 (D. Alabama 2/27/2020) (approving sale where debtor resided in the property but co-tenant did not).
[7201] See Code § 6166(b)(8), (9) and part III.B.5.e.ii Code § 6166 Deferral.
[7202] For the taxpayer's choices, see part III.B.3.c.iv Liens: Selected Internal Revenue Manual Materials.
[7203] Code § 7426(a)(1). See Langstraat, Coyne, and Palmer, Third parties' right to sue on erroneous levies, 125 *Journal of Taxation* 30 (July 2016).
[7204] Code § 7426(a)(1).
[7205] Code § 7426(a)(2).

preponderance of the evidence. See, *e.g.*, *LiButti v. United States*, 107 F.3d 110, 118 (2nd Cir. 1997) ("If the government satisfied that substantial evidence burden, meaning that the evidence was "considerably more than a preponderance but less than clear and convincing proof" the plaintiff would have the "ultimate burden" to prove that the levy was wrongful.") (citing *Century Hotels*, 952 F.2d at 109). The policy behind requiring such a heightened standard of proof is that the government has unique access to the information it used as a basis for its levy and, after an opportunity to fully develop the factual record, fairness mandates that the government come forward with substantial evidence of the connection between the property levied upon and the taxpayer. See *Valley Finance, Inc. v. United States*, 629 F.2d 162, 171 n. 19 (D.C. Cir. 1980) ("Considerations of fairness impel us to conclude that once the factual record has been fully developed over time...the government must establish its asserted nexus between taxpayer and a third party by substantial evidence."); *Flores v. United States*, 551 F.2d 1169, 1175-76 (9th Cir. 1977) ("Principles of fair play and common sense dictate the result which we reach.").

If a person whose account was levied for the debt of another person seeks a Taxpayer Assistance Order through the Taxpayer Advocate Service, that process tolls the statute of limitations for suing the IRS (5th Cir. divided panel).[7206]

U.S. v. Firestone, 131 A.F.T.R.2d 2023-1983 (D. WA 6/12/2023) explains:

The Federal Debt Collection Procedures Act ("FDCPA"), 28 U.S.C. §§ 3001–3308, establishes standards and procedures for the collection of debt owed to the United States. One available post-judgment remedy under FDCPA is a writ of execution: "All property in which the judgment debtor has a substantial nonexempt interest shall be subject to levy pursuant to a writ of execution." 28 U.S.C. § 3203(a); see Fed. R. Civ. P. 69(a)(1) ("A money judgment is enforced by a writ of execution, unless the court directs otherwise.").

Under FDCPA, "property" is broadly defined: "any present or future interest, whether legal or equitable, in real, personal (including choses in action), or mixed property, tangible or intangible, vested or contingent, wherever located and however held (including community property and property held in trust (including spendthrift and pension trusts))," with narrowly defined exceptions. 28 U.S.C. § 3002(12); see *United States v. Nat'l Bank of Com.*, 472 U.S. 713, 720 (1985) (observing that broad property language in statutes governing tax liens "reveals on its face that Congress meant to reach every interest in property that a taxpayer might have"); *United States v. Bourseau*, No. C03-0907, 2009 WL 1072036, at *2 (S.D. Cal. Aug. 20, 2009) ("The sheer breadth of the definition reflects an effort to encompass any substantial interest a debtor has that might satisfy the judgment owed to the United States."). A debtor may claim statutory exemptions for their property. See 28 U.S.C. §§ 3202(d)(1), 3014.

U.S. v. Firestone, 131 A.F.T.R.2d 2023-1983 (D. WA 6/12/2023) explains:

… "The FDCPA provides no time limit for the collection of debts by writ of execution." *United States v. Gianelli*, 543 F.3d 1178, 1183 (9th Cir. 2008) (holding that FDCPA preempts California state law precluding enforcement of a restitution judgment after 10 years); see also *United States v. Pierce*, 231 B.R. 890, 893 (E.D.N.C. 1998) ("[T]his

[7206] *Rothkamm v. U.S.*, 802 F.3d 699 (5th Cir. 2015).

> silence cannot be construed as unintentional, but rather as the intention for execution procedures to track the indefinite life of a judgment in favor of the [Government].”). Therefore, the instant matter is not barred by a statute of limitations.

III.B.5.e.iv.(k). Effect on Trust of Federal Tax Lien Against Beneficiary

A federal tax lien against a beneficiary on the beneficiary’s interest in the trust might very well disrupt trust administration in a big way, which a law review article explains.[7207] *Duckett v. Enomoto*, 117 A.F.T.R.2d 2016-1358 (D. AZ 2016), held that a federal tax lien attached to the following beneficial interest:

> The Trustee shall pay to DENNIS MASAKI ENOMOTO so much or all of the net income and principal of the trust as in the sole discretion of the Trustee may be required for support in the beneficiary’s accustomed manner of living, for medical, dental, hospital, and nursing expenses, or for reasonable expenses of education, including study at college and graduate levels. Any income not so paid shall be accumulated and added to the principal of such trust at the end of the trust’s tax year. In the Trustee’s sole discretion and to the extent the Trustee deems advisable, the Trustee may consider or disregard the funds available to the beneficiary from other sources or the duty of anyone to support the beneficiary. Should the principal of the trust drop below $10,000, the Trustee shall distribute the balance of the principal, together with the undistributed income therefrom to DENNIS MASAKI ENOMOTO.

The case considered various possible beneficial interests. Footnote 1 suggested:

> For a more thorough discussion of beneficiary rights in trust assets for purposes of the federal tax lien, see 4 William D. Elliott, *Federal Tax Collections, Liens & Levies* ¶ 9.09[3][j] (2016 update) and sources cited therein.

Determining his bundle of rights:

> Trusts of this nature—directing payment under a general standard while leaving specific calculations to the trustee—are sometimes referred to as discretionary support trusts or hybrid trusts. *See* Evelyn Ginsberg Abravanel, *Discretionary Support Trusts*, 68 Iowa L. Rev. 273, 277-80 (1983). As with traditional support trusts, the trustee must pay Dr. Enomoto in accordance with an ascertainable standard. But as with traditional discretionary trusts, the trustee’s determination of exactly how much payment is required is reviewable only for abuse of discretion. The result is essentially a traditional support trust, but with deferential judicial review. That is, a trustee applying the payment standard in Ms. Enomoto’s testamentary trust has more leeway than a trustee applying the equivalent standard in a traditional support trust. *See id.* at 290. Thus, Dr. Enomoto’s right to the trust funds is a *right to payments the withholding of which would constitute an abuse of discretion in applying an ascertainable standard*.

[7207] Camp, Protecting Trust Assets from the Federal Tax Lien, *Estate Planning & Community Property Law Journal*, Vol. 1, p. 295, 2009, Texas Tech Law School Research Paper No. 2010-09, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1424666&http://www.actec.org/private/committees/ShowMinutes.asp?MinID=748.

Although state laws might indicate that an interest in a trust is not a property interest because they want to avoid creditor attachment, this court reasoned:

> The question whether a state-law right constitutes 'property' or 'rights to property' is a matter of federal law. *United States v. Nat'l Bank of Commerce*, 472 U.S. 713, 727 (1985). The statute itself provides little guidance on the matter. It merely imposes a lien on all property and rights to property, whether real or personal, belonging to the delinquent taxpayer. 26 U.S.C. § 6321. It does not define the terms property or rights to property….
>
> The Supreme Court has provided some limited direction. In determining whether a federal taxpayer's state-law rights constitute 'property' or 'rights to property,' '[t]he important consideration is the breadth of the control the [taxpayer] could exercise over the property.' *Drye v. United States*, 528 U.S. 49, 61 (1999) (quoting *Morgan v. Com'r of Internal Revenue*, 309 U.S. 78, 83 (1940)) (alterations in original).

The court held:

> … although Dr. Enomoto is the trust's sole beneficiary, the parties have not adequately briefed the trust consequences of his death[4] and the trust does not permit him to unilaterally terminate the trust and retain all assets. Therefore it is less clear whether Dr. Enomoto's right extends to all the trust funds.
>
> [4] The only relevant assertion from either party is a sentence in Dr. Enomoto's Reply brief: Pursuant to A.R.S. § 14-2604(A), at Dr. Enomoto's decease, the remaining Trust assets would pour back into the residuary under the Will, to be distributed to the other two beneficiaries (Dr. Enomoto's sisters). (Doc. 74 at 4.) The sentence is not followed by any citation to authority.
>
> For this reason, the IRS' summary judgment motion will be (1) granted to the extent it seeks a judgment that the federal tax lien attaches to Dr. Enomoto's right to the trust funds but (2) denied without prejudice to the extent it seeks a transfer of those funds to the United States. More evidence would be necessary to justify the latter conclusion. *See Taylor*, 254 F.Supp. At 758 (allowing additional hearings or proceedings to effectuate foreclosure of federal tax lien); *accord Magavern*, 415 F.Supp. at 221 (holding federal tax levy valid but stating determination of the actual amount of trust income and/or principal reached by the levy must await trial).
>
> Admittedly, this outcome is somewhat unsatisfactory. Both parties have advanced simpler, more practicable positions: the IRS says it is entitled to all the trust funds, and Dr. Enomoto says it is not entitled to any. But both of these positions oversimplify the facts and the law. In reality, Dr. Enomoto's right to the trust funds gives him enough control to trigger tax lien attachment, but it is too circumstance-dependent to allow enforcement of the lien as to any specific amount on the current record.

The IRS asked the court to amend its judgment in light of the court's comments about the consequences of death not having been adequately briefed, but in an order dated June 6, 2016 (docket no. CV-14-01771-PHX-NVW), the court rejected the request, saying, The mention of inadequate briefing was not an invitation for more briefing, any more than a D on a student's report card is an invitation for extra-credit work. However, the court appeared receptive to additional enforcement action:

> On the last page of its reply in support of its present motion, the IRS refers to evidence of Dr. Enomoto's current needs and living demands. (Doc. 100 at 11.) This is a step in the right direction. As the Court noted in its judgment, the IRS's lien is enforceable as to the amount to which [Dr.] Enomoto's right extends, i.e., the amount the trustee's withholding of which would be an abuse of discretion in applying the trust's standard of payment. (Doc. 96 at 1.) Evidence of Dr. Enomoto's overall financial situation is the sort of evidence that might show that the trustee's withholding of payment would be an abuse of discretion. Such evidence might support a separate motion to order one or more distributions to the United States. (*Id.* at 2.) That motion would be a motion to enforce the judgment, not a motion to alter or amend the judgment.

The Arizona statute stated that a creditor may not compel distribution that is subject to a trustee's discretion but does not state that a beneficial interest does not constitute an interest in property or an enforceable right. Whether a federal court would respect the latter declaration or would disregard it and look to the beneficiary's rights was not discussed.

In an earlier iteration of the case, 116 A.F.T.R.2d 2015-6788, the IRS asked the court to attach funds in an estate before the estate had distributed them to the testamentary trust in which the debtor had an interest. The court refused, because the testamentary trust had not yet been funded (emphasis in the original):

> The IRS summary judgment motion does not fully appreciate the fact that the funds are not yet held in trust. Instead, the IRS claims this case is on point with *United States v. Delano*, 182 F.Supp.2d 1020, 1023 (D. Colo. 2001). (Doc. 48 at 11.) But the issue in *Delano* was whether a testamentary trust beneficiary's interest in the trust constituted property for federal tax purposes. 182 F.Supp.2d at 1021. Here, the issue is whether a testamentary trust beneficiary's interest in funds *designated to the trust but held by the personal representative* constitutes property for federal tax purposes. Whatever Dr. Enomoto's interest in the Trust, it does not extend to funds outside the Trust.

Delano, also found at 88 A.F.T.R.2d 2001-7071, found an interest in a discretionary trust:

> The court rejects the argument that the sole and absolute discretion given the Co-Trustees permits discretion to make no payments. See Co Trustees' Mot. At 5. In this trust instrument, the word shall directly precedes the word pay while the sole and absolute discretion follows so much of the income or principal, or both. Accordingly, the court concludes that the settlor intended the trustees' discretion to relate only to the amount of the payment and whether it came from trust income, principal, or both. The court finds nothing in this interpretation which is either internally inconsistent or contrary to law or public policy. Furthermore, this interpretation is in accord with the construction applied by other courts. See *Magavern v. United States*, 550 F.2d 797, 801 (2nd Cir. 1977) (concluding that the language Trustee shall pay over or use, apply and expend whatever part or all of the net income or principal creates a property right, not a discretionary trust, because it does not give [the trustee] the authority to deny a particular beneficiary anything at all); *La Salle Nat'l Bank v. United States*, 636 F.Supp 874, 876 (N.D. Ill. 1986) (concluding that the word shall indicated the settlor's intent that the trustee was obligated to pay); *United States v. Taylor*, 254 F.Supp. 752, 755-56 (N.D. Cal. 1966) (determining that the discretionary language related only to the trustees' determination of the amounts to be payed); *State ex rel. Sec'y of Soc. Rehab. & Servs. v. Jackson*, 822 P.2d 1033, 1038-39 (Kan. 1991) (concluding that the instrument which contained both mandatory and discretionary

> language did not create a discretionary trust because the mandatory language controlled the distribution and the discretionary language controlled only the amount and timing of the payments).
>
> The Co-Trustees further argue that when discretion is tied to a determination of need, a trustee may, in his discretion, determine that no funds are needed. See *Myers v. Kansas Dep't of Soc. & Rehab. Servs.*, 866 P.2d 1052, 1057 (Kan. 1994) (determining that where disbursement is tied to a discretionary determination of need, the trustee has no duty to pay a specific sum or any sum at all). And see *Texas Commerce Bank Nat'l Ass'n v. United States*, 908 F.Supp 453, 458-59 (S.D. Tx 1995) (interpreting similar language as creating a discretionary trust). Although the court finds the *Myers* analysis compelling, the court is not persuaded that Anna Delano intended her trust provision be so construed.
>
> The language of the Anna Delano Trust is distinguishable from the trust in *Myers* in two important ways. First, the Anna Delano Trust expressly authorizes the Trustee to disregard the beneficiary's financial need. See Will at Art. IV 4.2(a) (My Trustee may, but need not, consider all funds known to my Trustee to be available to him.) (Ex. A to Co-Trustees' Mot.) Based upon this language and the entire will instrument, the court concludes that Anna Delano did not intend her Trustee to withhold all payments if he determined that the beneficiary did not need the funds. Second, the court notes that the *Myers* Trustee was an independent professional entity. Where, as here, the settler names the sole beneficiary as Co-Trustee, it is far less compelling that a discretionary determination of need would result in no payment at all. *Cf. Jones*, 812 P.2d at 1156-57 (reasoning that a beneficiary's satisfaction is highly speculative because he cannot force the trustee to pay income or principal); *Texas Commerce Bank Nat'l Ass'n*, 908 F. Supp. at 458 (finding a pure discretionary trust based on the reasoning that where property is given to trustees to be applied, in their discretion, to the use of a third person, no interest goes to the third person until the trustees have exercised this discretion) (emphasis added). Where a Trustee exercises discretion for his own benefit rather than that of a third party, the beneficiary's satisfaction is no longer highly speculative.

In *U.S. v. Hovnanian*, 130 A.F.T.R.2d 2022-6796 (D. N.J. 12/27/2022), the beneficiary Shant owed $16M+ of tax after the IRS busted his tax shelters. His mother gifted a home to a trust that he had created for his children. The court held that the trustee held the home as nominee for Shant, enabling the government to place a lien on the home:

> In its Motion for Partial Summary Judgment against Pachava, the Government argues that, given the facts of this case, it is seeking a determination that Pachava is Shant's nominee and that the tax liens assessed against him consequently attach to the Navesink Property. (Gov. Moving Br. against Pachava at 4.) To that extent, the Government argues that Pachava simply held title of the Navesink Property and Shant actually had control over the property, as evidenced by him paying the property's bills, living on the property, and being the decisionmaker for anything that had to do with the property. (*Id*. at 2.)
>
> "When there is a tax lien on a taxpayer's property, the Government may seek to satisfy it by levying upon property the taxpayer controls." *United States v. Patras*, 544 F. App'x 137, 140 (3d Cir. 2013). When the "Government seeks to reach" real property, the Court must determine what rights the taxpayer has in such property to determine if it is subject to the lien. *Drye v. United States*, 528 U.S. 49, 58 (1999). If the property is under the

control of a third party found to be the delinquent taxpayer's nominee or alter ego, it can be subject to a tax lien. *G.M. Leasing Corp. v. United States*, 429 U.S. 338, 350–51 (1977). A third party is a taxpayer's nominee where "the taxpayer has engaged in a legal fiction by placing legal title to property in the hands of [that] third party while actually retaining some or all of the benefits of true ownership." *Patras*, 544 F.App'x at 141 (citing *Holman v. United States*, 505 F.3d 1060, 1065 (10th Cir. 2007)); see also *Fourth Inv. LP v. United States*, 720 F.3d 1058, 1066 & n.3 (9th Cir. 2013).

As laid out in *Patras*, the test for a nominee relationship under both federal and New Jersey law is generally set out with six factors:

(1.) Whether the nominee paid adequate consideration for the property;

(2.) Whether the property was placed in the nominee's name in anticipation of a suit or other liabilities while the taxpayer continued to control...the property;

(3.) The relationship between the taxpayer and the nominee;

(4.) The failure to record the conveyance;

(5.) Whether the property remained in the taxpayer's possession; and

(6.) The taxpayer's continued enjoyment of the benefits of the property.

Hovnanian, 2019 WL 1233082, at *7–8 (quoting *Patras*, 544 F. App'x at 141–42). These factors should not be applied rigidly or mechanically. *In re Richards*, 231 B.R. 571, 579 (E.D. Pa. 1999). The overarching key to the nominee test is determining if a party exercises "active" or "substantial" control over the property. *In re Richards*, 231 B.R. at 579. If a taxpayer is the true owner of the property, that property is subject to the tax lien.

At this juncture, it is worth noting that Pachava's Opposition brief is identical to the one that it filed for its Motion for Summary Judgment against the Government. For this reason, the Court will address both Pachava's Opposition and its Motion for Summary Judgment together. Defendant Pachava first argues that "the IRS's theory of the case is that the real property transactions wherein the Properties were transferred to the Pachava Asset Trusts were the result of fraudulent conveyances." (Pachava Opp'n to Gov. Motion at 18; Pachava MSJ at 16.) Pachava goes on to argue that the Government's claims fall under the New Jersey's Fraudulent Transfer Act ("FTA"), which has a four-year statute of limitations and the Government has waited beyond those four years to file its claim, thus precluding them from pursuing the nominee lien. (*Id*. at 19-20; *Id*. at 16-17.) Although the Government never asserts any alter ego liability in its Motion for Partial Summary Judgment, Pachava argues that the Government's alter ego claim fails. Defendant next argues that the nominee claim fails because "Shant was never in title to the Properties, and a 'federal tax lien does not arise or attach to property in which a person has no interest under state law.'" (*Id*. at 22-23; *Id*. at 19-20.)

Pachava also adopts faulty arguments that Shant does not satisfy the *Patras* factors. (*Id*. at 32; *Id*. at 29.) It claims the first factor is not satisfied because "the property never belonged to the taxpayer." (*Id*.; *Id*.) The second factor is not met because the second factor relates to the transfer of property by the transferor, not the transferee, such that the analysis would be that Shant's parents were the persons seeking to avoid a claim.

(Id. at 33; Id. at 30.) According to Pachava, the third factor is not met because the analysis looks at the relationship between the nominee and the transferor and there is no relationship between Shant's mother and the Pachava Trust. (*Id*.; *Id*.) Lastly, factor four is not satisfied because the conveyance was recorded and factors five and six are not met because there is no showing that Shant lived at the Navesink Property. (*Id*.; *Id*.) Based on these arguments, Pachava argues that the Government's Motion for Partial Summary Judgment against Pachava should be denied, and instead Pachava's Motion for Summary Judgment should be granted.

Pachava's arguments are largely mistaken. "While related, the concepts of 'nominee[,]' 'transferee[,]' and 'alter ego' are independent bases for attaching the property of a third party in satisfaction of a delinquent taxpayer's liability." *E.g.*, *Oxford Cap. Corp. v. United States*, 211 F.3d 280, 284 (5th Cir. 2000). Although a nominee has "true beneficial ownership of property," a fraudulent transfer seeks to avoid a transfer made to generally hinder, delay, or defraud creditors. Id. The Government can enforce its liens against the taxpayer's property, including property held by a nominee or alter ego. *Hovnanian*, 2022 WL 909868 [129 AFTR 2d 2022-1288], *3 ("the right to foreclose on these liens extends to property held by third parties who are 'acting as a nominee or alter ego....'") (quoting *United States v. Wunder*, Civ. No. 16-9452, 2019 WL 2928842, *4 (D.N.J. July 8, 2019), *aff'd*, 829 F. App'x 589 (3d Cir. 2020)). That said, the Government did not need to - nor did it - bring any claims under alter ego liability or the FTA. Thus, the statute of limitations with respect to the FTA and the arguments against alter ego liability are misplaced.

Pachava's arguments that the nominee claims are insufficient are also mistaken. Pachava seems to conflate the plain language of the rule set forth in Patras. For example, factor one asks whether the nominee - in this case, Pachava - paid adequate consideration, not the taxpayer as Pachava asserts. *Patras*, 544 F. App'x at 142. As for the second factor, courts are clear that the proper analysis is whether the nominee purchased the property in anticipation of a suit or other liabilities and nothing to do with the transferor, as Pachava claims. *Id*. Pachava also misapplies the third Patras factor because the rule clearly states that the Court needs to consider "the relationship between the taxpayer and the nominee", not the taxpayer and the transferor as argued by Pachava. *Id*. at 141 (emphasis added). Accordingly, the Court rejects Pachava's arguments.

Turning to the *Patras* factors themselves, the first, second, and fourth factors focus on the mechanics of the transfer and, for the reasons set forth below, they favor a conclusion that Pachava was just Shant's nominee. The first factor is satisfied because it is undisputed that the transfer from Shant's mother to Pachava was only for one dollar (Gov. Pachava SUMF ¶ 20;) - clearly, a nominal amount. (Ex. 101, Deed, at 1.) See *Coles v. Osback*, 92 A.2d 35, 36 (N.J. Super. Ct. App. Div. 1952) (holding that the first factor was satisfied because the sale price of the property was below market value). Moreover, the second factor is satisfied because it is likewise undisputed that the Hovnanians recorded the transfer of the Navesink Property after Shant lost a case before the United States Tax Court with regard to his tax liabilities (Ex. 101, Deed, at 1; Gov. Pachava SUMF ¶ 17). See *id*. (holding that the second factor was satisfied after the debtor placed the property in his son's name after suit was filed against him). As for the fourth factor, the conveyance was recorded, which does militate against finding Pachava is a nominee, but this factor alone is not dispositive. *Patras*, 544 F. App'x at 142. See also *Gilchinsky v. National Westminster Bank N.J.*, 732 A.2d 482, 491 (N.J.

1999) (lack of concealment was "only marginally relevant" in NJFTA case); *In re Richards*, 231 B.R. 571, 579 (E.D. Pa. 1999) (according the fact that the transfer was recorded "relatively little weight"). On balance, factors one, two, and four (and the relevant undisputed evidence before the Court) therefore favor a conclusion that Pachava is a mere nominee.

Patras factors three, five and six examine the relationship between the nominee and taxpayer, as well as whether the taxpayer retained possession and enjoyed the benefits and bore the burdens of owning the property. *Patras*, 544 F. App'x at 141. Factor three looks at the relationship between the taxpayer and the nominee. Here, factor three is satisfied because Shant is so closely intertwined with everyone involved in Pachava. Namely, Shant "was the one who settled the Pachava Trust," "his mother contributed the property," his wife at the time served as the original trustee, his cousin followed his wife as trustee following the divorce, "his sister [currently] serves as trustee, and his children are the sole beneficiaries." (Pachava Dep. at 27:21-25.) *Hovnanian*, 2019 WL 1233082, at *6. Factors five and six look at whether the property remained in the taxpayer's possession, and whether the taxpayer's continued to enjoy the benefits of the property. As proof of factors five and six, the Government's evidence includes unrebutted deposition testimony it elicited from Shant's wife at the time, Hilde Jenssen ("Hilde Dep.", ECF No. 122-9), and corroborated by deposition testimony from, Jennifer Generoso, a corporate designee-witness for Morgan Stanley, the firm that managed Pachava's financial account ("Generoso Dep.", ECF No. 122-5). Specifically, Hilde's testimony was that the Navesink Property was Shant's primary residence starting in 2008 where he, she, and their children all resided2 (Hilde Dep. 19:5-17; "Generoso Dep.", ECF No. 122-5, at 10:4-25), Shant did not pay rent while residing there (id. at 20:9-11), and he paid for all of the property's expenses (id. at 19:18-21:13; "Gandolfo Dep.", ECF no. 122-7, at 53-5–54:9). See *Patras*, 511 F. App'x at 142 (fifth factor satisfied because it was established that the defendant resided in the property uninterrupted and without a lease to support his assertion that payments he was making constituted rent).

In summation, the undisputed record indicates that: the transfer was made for minimal consideration (factor one), the transfer happened after Shant lost a case before the United States Tax Court (factor two), Shant had a close relationship via familial relations with each of the trustees (factor three), and the property remained in Shant's possession as it was his primary residence for the time in question (factors five and six). This is consistent with the Government's position that Pachava is a mere nominee. See *Jugan v. Friedman*, 646 A.2d 1112, 1119 (N.J. Super. Ct. App. Div. 1994) (a debtor's wife was a nominee because the debtor had transferred the property at issue to his wife (factor 3) without receiving any consideration (factor 1) for the purpose of evading his creditors (factor 2) while continuing to control and enjoy the benefits of the property (factors 5 and 6)); *Coles*, 92 A.2d at 38-40 (a son was the nominee owner of property for the benefit of his parents (factor 3), who lived there (factors 5 and 6); that the sale price of the property was below market value (factor 1); and that the debtor placed the property in his son's name after suit was filed against him (factor 2)); *Sweney v. Carroll*, 178 A. 539, 542-44 (N.J. Ch. 1935) (considering similar factors); *cf. Holman*, 505 F.3d at 1065 (a third party is a nominee where the taxpayer retains the benefit of ownership); *Shades Ridge Holding Co. v. United States*, 888 F.2d 725, 728-29 (11th Cir. 1989) (weighing similar factors to determine "who has 'active' or 'substantial' control" (citation omitted).

For these reasons, the Court concludes that there is no genuine dispute that the Pachava Trust is Shant's nominee and Shant is the beneficial owner of the Navesink

> Property - effectively subjecting the Navesink Property to the tax lien. Accordingly, the Court will grant the Government's Motion for Partial Summary Judgment against the Pachava Asset Trust and deny Defendant Pachava's Motion for Summary Judgment.

Disturbing is that the trust was treated as nominee when the debtor's mother – not the debtor – contributed the home to the trust. I did not see anything in the facts indicating that the debtor had paid for the home to which his mother had title. That the debtor originally settled the trust does not make the debtor the settlor with respect to the home – an issue that does not appear to have been addressed. On the other hand, the debtor was manipulating all sorts of asset transfers, so the court might not have given much credence to the mother's ownership before the home was conveyed to the trust. Furthermore, the court described the trust as being for the benefit of the debtor's children, and the debtor and his wife lived in the home without paying rent to the trust.

III.B.5.e.iv.(l). Code §§ 6324(a)(1), 6324(a)(2) and Collection Due Process (CDP) Rights

PMTA 2013-014 provides the IRS' position:

> **ISSUE**
>
> Whether collection due process (CDP) rights must be given to a transferee of a taxable estate when the Service seeks to levy or seize property to enforce either the general estate tax lien arising under I.R.C. § 6324(a)(1), or the "like lien" described in section 6324(a)(2)?
>
> **CONCLUSION**
>
> The transferee is not entitled to CDP rights under either scenario. This is a change from our prior position.
>
> **LAW AND ANALYSIS**
>
> Section 6324(a)(1) establishes a federal tax lien upon the property included in the gross estate of a decedent for 10 years after the decedent's date of death. The gross estate includes probate and non-probate property. Non-probate property is the property described in sections 2034-2042. The section 6324(a)(1) estate tax lien remains on all property included in the gross estate unless it is replaced by a section 6324(a)(2) like lien, or attached to other property under section 6324(a)(3). Non-probate property in the hands of a trustee or transferee is encumbered by the estate tax lien and the Service may levy upon the property to collect unpaid estate tax based on the lien. If the transferee transferred the non-probate property to a purchaser or the holder of a security interest, the section 6324(a)(1) lien is divested from that property and a section 6324(a)(2) like lien is created upon all of the transferee's other property, including after-acquired property. Section 301.6324-1(a)(2)(ii); *United States v. Chapel Chase Joint Venture, Inc.*, 753 F.Supp. 179 (D. Md. 1990).
>
> Section 6324(a)(2) provides another means of estate tax collection. This provision imposes personal liability for any estate tax not paid when due, up to the value of the property received (as of the date of death), on a trustee or transferee who receives on the date of death non-probate property included in the gross estate of the decedent. The personal liability under section 6324(a)(2) is a separate liability of the transferee, not the estate tax liability. See *Baptiste v. Commissioner*, 29 F.3d 1533, 1541 (11th Cir. 1994).

Section 6324(a)(2) does not create a lien upon the transferee's property to collect the personal liability.

The Service possesses two options to collect personal liability from a transferee under section 6324(a)(2). The Service may use the transferee liability procedures provided by section 6901 to assess and collect a transferee liability in the same manner as the estate tax liability. In the alternative, the Service may file a suit under section 7402 in a United States district court. See *United States v. Russell*, 461 F.2d 605, 606 (10th Cir. 1972); *United States v. Degroft*, 539 F.Supp. 42, 44-45 (D. Md. 1981).

If there is a section 6324(a)(1) estate tax lien or a section 6324(a)(2) like lien attached to the property against which the Service would like to pursue administrative collection, the Service is not first required to pursue a section 6901 assessment or court proceeding to impose personal liability on a transferee. The IRS can enforce these liens through the use of a levy or seizure issued in the name of the estate against property subject to that tax lien in the hands of the transferee. This action is authorized by section 6331(a) and section 301.6331-1(a).

Under section 301.6330-1(b)(2) Q&A B5, persons who hold property subject to a section 6324(a)(1) lien or section 6324(a)(2) like lien are not entitled to a CDP notice and hearing prior to or after levy. This provision is intended to cover all transferees of property subject to a federal tax lien. The regulation takes the position that the only persons entitled to CDP notices and hearings are "taxpayers." See Section 301.6330-1(a)(3) Q&A A1. This interpretation is based on the legislative history of the IRS Restructuring and Reform Act of 1998, and is consistent with sections 6320 and 6331(a), which Congress contemplated would operate in tandem with section 6330. Transferees are not taxpayers under section 6324; the estate is the taxpayer. Personal liability does not become a "tax" liability for purposes of section 6330 subject to administrative collection action until assessed through the section 6901 procedures. See Section 6901(a). The basis for collection from the transferee's assets is the enforcement of the estate tax lien or the like lien attached to those assets, not the collection of the personal liability. In this circumstance, the transferee is not a "taxpayer" under the CDP regulations. As such, a transferee is not entitled to a CDP notice or hearing when the Service seeks to levy or seize distributed property subject to the estate tax lien. Similarly, a transferee is not entitled to a CDP notice or hearing when the Service seeks to levy on the transferee's other property subject to the like lien. A CDP notice does need to be given to the taxpayer (estate) before the levy on assets in the hands of the transferee to which the estate tax lien or like lien attaches.

In prior advice issued by this office in 2001, before the final CDP regulations were adopted by the Department of Treasury, we concluded that a CDP notice must be provided to a transferee when levying based upon the like lien that arises under section 6324(a)(2) upon transfer of non-probate property by the initial transferees described in section 6324(a)(2) to a purchaser or security interest holder. Upon such transfer, the estate tax lien is divested from the transferred property and a like lien arises and attaches to all other property of the initial transferee.

We concluded in 2001 that a levy based upon the like lien was distinguishable from a levy on property received subject to the section 6324(a)(1) estate tax lien because the Service could levy any of the transferor's property, including after-acquired property. In this respect, we concluded that providing CDP rights in the "like lien" scenario would be more justifiable. For example, the transferor may be able to propose collection alternatives regarding which property should be levied. In addition, we reasoned that levies based upon the like lien should be treated consistently with levies based upon transferee assessments under section 6901 and the resulting section 6321 federal tax lien, where the assessed party would be a "taxpayer" entitled to CDP rights. Because section 6901 and section 6324(a)(2) are different mechanisms to collect the same transferee liability, it would arguably be equitable to provide CDP rights in both cases.

We have reconsidered our 2001 advice and now conclude that our prior position was incorrect. We mischaracterized the like lien as a mechanism analogous to transferee liability under section 6901 for the purpose of collecting personal liability of the transferee. Rather, the section 6324(a)(2) like lien is not independent of, and is merely a substitute for, the section 6324(a)(1) estate tax lien. Neither the Code nor the regulations explicitly address this issue, but a plain meaning construction of the phrase supports the conclusion that the like lien of section 6324(a)(2) is identical to the special estate tax lien created in section 6324(a)(1).[1] See Armstrong v. Commissioner, 114 T.C. 94, 101 (2000) (estate lien and like lien are "identical"). See also United States v. Rotherham, 836 F.2d 359 (7th Cir. 1988) (discussing the relationship between the general tax lien of section 6321 and the special estate tax liens created in section 6324(a)(1) and (a)(2)). Accord Beaty v. United States, 90-1 USTC ¶ 60,004 (E.D. Tenn. ¶1989) and United States v. Warner, 85-2 USTC ¶ 13,641 (S.D. N.Y. 1985).

[1] As a result, the section 6324(a)(1) estate tax lien and section 6324(a)(2) like lien have the same collection statute of limitations period: ten years from the decedent's date of death. The collection statute of limitations for collecting the personal liability of the transferee, on the other hand, under section 6901 or by district court suit, is ten years from the date of assessment of the personal liability or assessment of the estate tax liability, respectively. See Section 6502(a)(1); *Degroft*, 539 F.Supp. at 44.

The legislative history of section 6324(a)(2) supports this conclusion. Section 315(a) of the Revenue Act of 1926 provided that "[u]nless the tax is sooner paid in full, it shall be a lien for ten years upon the gross estate of the decedent... ." P.L. 68-176. The first sentence of section 315(b) of the Act provided that if property was transferred by a decedent (A) by trust or otherwise, in contemplation of or intended to take effect at or after his or her death, or (B) to a beneficiary under a life insurance contract, and the estate tax is not paid when due, the transferee, trustee or beneficiary "shall be personally liable for such tax, and such property... shall be subject to a like lien equal to the amount of such tax." *Id*. The second sentence of section 315(b) directed that "[a]ny part of such property described in the first sentence sold by the transferee or trustee to a bona fide purchaser for adequate and full consideration in money or money's worth shall be divested of the lien and a like lien shall then attach to all the property of such transferee or trustee... ." When the Internal Revenue Code of 1939 was enacted, section 827(a) and (b) of the Code incorporated all of section 315(a) and (b) of the Revenue Act of 1926.[2] P.L. 76-1.

[2] Section 827(b) was also amended to add other pieces of non-probate property to the existing list.

Section 827(b) was subsequently amended by the Revenue Act of 1942. Section 827(a) and (b), as amended by the Revenue Act of 1942, was the predecessor to current section 6324(a)(1) and (a)(2). See *Armstrong v. Commissioner*, 114 T.C. 94, 101 (2000). Section 411 of the Revenue Act of 1942 amended section 827(b) to eliminate "and such property... shall be subject to a like lien equal to the amount of such tax."[3] P.L. 77-743. The second sentence was amended to add a specific reference to the estate tax lien provided in section 827(a) but otherwise remained unchanged: “Any part of such property sold... shall be divested of the lien provided in section 827(a) and a like lien shall then attach to all property” of the transferee. *Id*. The Senate report describing changes made to the 1939 Code explains that the reference to the estate tax lien imposed by section 827(a) in the second sentence made the reference to like lien in the first sentence unnecessary, and therefore the reference to the like lien was eliminated. S. Rep. No. 69-52, Part 1, page 38. The reference to the like lien in the first sentence would only be unnecessary if such lien was identical or equivalent to the section 827(a) general estate tax lien. If the like lien eliminated from the first sentence of section 827(b) was identical or equivalent to the section 827(a) estate tax lien, then it is reasonable to conclude that Congress intended the like lien attached to all of the transferee’s property, described in the second sentence of section 827(b), also to be identical or equivalent to the estate tax lien. Accordingly, the like lien described in section 6324(a)(2) on all of the transferee’s property is for the collection of the estate tax, rather than the transferee’s personal liability.

[3] Section 411 of the Revenue Act of 1942 also amended section 827(b) to replace the list of non-probate property with citations to newly added Code provisions describing the non-probate property.

Under this analysis, the section 6324(a)(2) like lien is for the in rem collection of the estate tax from property subject to the lien, and not for collection of the transferee’s personal liability. The estate tax lien shifts to other property, but the estate remains the only taxpayer. The transferee under section 6324(a)(2) is not the taxpayer, but is holding property subject to the tax lien for collection of another person’s (the estate’s) taxes. Under the CDP regulations, the transferee would not be a “taxpayer” entitled to CDP rights.

We recognize that the section 6324(a)(2) like lien is different from other types of tax liens because it attaches to property other than that transferred by the taxpayer estate, including wages, bank accounts and after-acquired property. It is true that the transferor, if given CDP rights, would be able to propose alternatives to collection from certain types of property. However, although not entitled to CDP rights, such party would be entitled to collection appeal program (CAP) rights to propose collection alternatives and raise any other issues pertaining to the levies or proposed levies. IRM 8.24.1.2 (10-01-2012). For other issues that could be raised in CDP, such as the underlying tax liability, it would be counterintuitive to offer CDP rights to a non-taxpayer. If the estate tax were assessed from the estate tax return, for example, nothing would preclude the transferee given CDP levy rights from contesting that estate tax liability. See section 6330(c)(2)(B). Furthermore, a transferee has the ability to prevent imposition of the like lien by not selling or encumbering the estate assets prior to satisfaction of the estate tax.

It is possible that a party in possession of non-probate property subject to the estate tax lien may not be aware of this unrecorded lien and may, therefore, also be unaware of the imposition of the like lien upon the sale or further encumbrance of the non-probate property. In this respect, the party whose property is subject to a like lien is really no different than a purchaser of or holder of security interest in probate property encumbered by an unrecorded estate tax lien who is unaware of that lien. See section 6324(a)(3); *United States v. Vohland*, 675 F.2d 1071, 1075 (9th Cir. 1982) (estate tax lien remained attached to probate property sold to purchaser without notice of lien when fiduciary of estate had not received a section 2204 discharge at time of sale). It is not disputed that a purchaser or security interest holder under those circumstances would not be entitled to CDP rights prior to or after levy.

For these reasons, a transferee of non-probate property is not entitled to a CDP notice or hearing prior to or after levy upon property subject to either the section 6324(a)(1) estate tax lien or the section 6324(a)(2) like lien. Under the CDP regulations, parties holding property subject to a federal tax lien are not "taxpayers" entitled to CDP rights. As this is a change from our prior advice in 2001, [Redacted Text] [Redacted Text] [Redacted Text].

III.B.5.e.v. Transferee Liability

This part III.B.5.e.v describes liability that arises when the IRS assesses a beneficiary or other transferee under Code § 6901.

In addition to the discussion of this part III.B.5.e.v, Code § 6324(a)(2) provides remedies against beneficiaries in certain situations; see *U.S. v. Paulson*, 131 A.F.T.R.2d 2023-1743 (9th Cir. 5/17/2023), excerpts from which are in the text accompanying and following fn 7173 in part III.B.5.e.iv.(e) Which Estates Are Affected by the Estate Tax Lien? The Ninth Circuit pointed out that a beneficiary may avoid transferee liability by disclaiming; see part III.B.3.e Disclaimers. The Ninth Circuit did not mention the impracticality of the beneficiary of a QTIP trust disclaiming.[7208] Moving beyond the QTIP scenario, does the Ninth Circuit's view on disclaimers mean the executor or other fiduciary has a duty to notify all beneficiaries - no matter how remote - that they should consider disclaiming in case the estate tax situation unexpectedly blows up? On the other hand, if the liability is limited to the bequeathed property's value at the time of distribution to the beneficiary (which is my best guess of the *Paulson* majority's intent), then disclaiming would seem to be an overreaction.

Although a Code § 6324(a)(2) transferee is also a transferee under Code § 6901(h), courts have held that Code § 6324 liability arises automatically – that no assessment is required to impose that liability. Courts and the IRS view Code § 6324 liability as a secret, automatic lien. For probate property, Code § 6324(a)(1) provides that the lien arises as of the date of the decedent's death. For nonprobate property, the lien appears to arise whenever the transferee receives the property, which may be the date of the decedent's death or sometime later.

A trustee or other fiduciary can protect his/her/its assets by seeking Code § 2204 relief, which is described in part III.A.6 Post-Mortem Trust and Estate Administration. That relief is relatively easy to get and can protect the trustee or other fiduciary starting just a few years after the decedent's death. Given that under *Paulson* a beneficiary is subject to liability automatically and immediately when first coming into possession of included property, an executor or other fiduciary might consider not making any distribution to a beneficiary until the fiduciary is highly confident that no estate tax is owed – either because of confidence in values being well below the estate tax threshold (or not subject to being challenged above the estate tax return value, because they are easy-to-value assets) or because a closing letter or estate tax transcript shows that the IRS contemplates no further action.

Given that beneficiaries apply for credit – whether as business owners (not only as borrowers themselves but also as guarantors of business loans or surety bonds required for some businesses to survive), home purchasers, or consumers – the need to disclose liabilities can be

[7208] See text accompanying and immediately preceding fn 7011 in part III.B.3.e.i Disclaimers – Code and Regulations.

a very serious matter. With Code § 6324(a)(2) not requiring an IRS assessment, each beneficiary of an estate that is subject to estate tax has at least a contingent liability that may need to be disclosed to the credit provider. The IRS can go after any beneficiary who possesses or has received property actual passing or deemed to pass from the decedent, and the beneficiary has the burden of recovering from others their respective fair share of any tax, interest, and penalties. Thus, tax apportionment is important in determining beneficiaries' rights against each other but does not – as a technical matter – affect how much the IRS can collect from each beneficiary. A beneficiary's right to recover from others may be strong or weak - depending on the other beneficiaries' financial posture and ability to hide assets:

- A beneficiary may need to disclose this contingent liability and explain to the credit provider how much out-of-pocket risk the beneficiary has. See part III.B.5.e.iv.(i) Effect of Liens on Dealings with Third Parties. *Paulson* held that "the liability of each of these defendants cannot exceed the value of the estate property at the time of decedent's death, or the value of that property at the time they received it," which presumably means the lesser of those two amounts.

- If a beneficiary receives a distribution of property included in the estate of a decedent, where estate tax is or may be due, when applying for credit presumably the beneficiary should include at least a contingent liability when listing the property as an asset.

- If a downstream trust is a beneficiary, presumably the trustee should consider seeking Code § 2204 relief to protect the trustee from the IRS. When the trust makes a distribution to a beneficiary, presumably the trustee should inform the beneficiary that the distribution triggers the liability and that the liability may prospectively impair all of the beneficiary's assets to the extent of any unpaid estate tax, interest, and penalties.

For information beyond what is in my materials below, see "The Devil is in the Details: Important Tax Administration and Procedural Rules for Estate Planners," Chapter 9 of the 2015 Heckerling Institute on Estate Planning.

III.B.5.e.v.(a). General Rules Regarding Transferee Liability

Generally, income tax, estate tax, and gift tax liabilities are assessed, paid, and collected in the same manner and subject to the same provisions and limitations as in the case of the taxes with respect to which the liabilities were incurred.[7209]

The IRS may assess an initial transferee's liability within one year after the expiration of the period of limitation for assessment against the transferor.[7210] The IRS may assess the liability of a transferee of a transferee, within one year after the expiration of the period of limitation for assessment against the preceding transferee, but not more than three years after the expiration of the period of limitation for assessment against the initial transferor.[7211] However, if, before the expiration of the period of limitation for the assessment of the liability of the transferee, a court proceeding for the collection of the tax or liability in respect thereof has been begun against the initial transferor or the last preceding transferee, respectively, then the period of

[7209] Code § 6901(a)(1).
[7210] Code § 6901(c)(1).
[7211] Code § 6901(c)(2).

limitation for assessment of the liability of the transferee expires one year after the return of execution in the court proceeding.[7212]

The IRS may assess a fiduciary not later than one year after the liability arises or not later than the expiration of the period for collection of the tax in respect of which such liability arises, whichever is later.[7213]

"Transferee" includes donee, heir, legatee, devisee, and distributee, and with respect to estate taxes, also includes any person who, under Code § 6324(a)(2), is personally liable for any part of such tax.[7214] "Distributee" includes the distributee of an estate of a deceased person, the shareholder of a dissolved corporation, the assignee or donee of an insolvent person, the successor of a corporation, a party to a reorganization as defined in Code § 368, and all other classes of distributees.[7215] When assets pass in trust by reason of death, the trustee has Code § 6324(a)(2) personal liability, and generally the beneficiaries do not[7216] (the latter being a conclusion that was undermined by *U.S. v. Paulson*, 131 A.F.T.R.2d 2023-1743 (9th Cir. 5/17/2023), which is found in the text accompanying and following fn 7173 in part III.B.5.e.iv.(e) Which Estates Are Affected by the Estate Tax Lien?).

Whether a person is liable under state law is determined independently of whether the person is a transferee under federal law. Similarly, fraudulent transfer remedies under Code § 6901 are based on state law fraudulent transfer remedies.

As to liability under state law being determined independently of whether the person is a transferee under federal law, see *Frank Sawyer Trust of May 1992 v. Commissioner*, 712 F.3d 597 (1st Cir. 2013); *Starnes v. Commissioner*, 680 F.3d 417 (4th Cir. 2012); *Diebold Foundation, Inc v. Commissioner*, 736 F.3d 172 (2nd Cir. 2013); *Salus Mundi Foundation v. Commissioner*, 776 F.3d. 1010 (9th Cir. 2014) (shareholders had constructive knowledge of the fraudulent tax avoidance scheme at issue; series of transactions collapsed; shareholders made a fraudulent conveyance under state law), following *Diebold* and *rev'g* T.C. Memo. 2012-61. On remand, *Frank Sawyer Trust of May 1992 v. Commissioner*, T.C. Memo. 2014-59, held that, under Massachusetts law, a good-faith transferee of a fraudulent transfer was liable only to the extent that the fair market value of what it received exceeded the price that it paid; the taxpayer obtained additional relief (that did not change the reasoning of that case) at T.C. Memo. 2014-128.

All the sparring described in this footnote is described by *Alterman Trust v. Commissioner*, T.C. Memo. 2015-231 (12/1/2015):

> The fact patterns of these cases are similar. Someone sells an interest in a corporation for a good price; the corporation doesn't pay its taxes; and the Internal Revenue Service (IRS) goes after the former shareholder for the taxes.
>
> The outcomes of these cases vary. Many taxpayers have prevailed at the trial court, but many of those taxpayers have seen their victories turned to defeat on appeal.[2] The IRS

[7212] Flush language at the end of Code § 6901(c)(1) and (2).
[7213] Code §6901(c)(3).
[7214] Code § 6901(h).
[7215] Reg. § 301.6901-1(b).
[7216] See fn. 7171, found in part III.B.5.e.iv.(e) Which Estates Are Affected by the Estate Tax Lien? Thus, trustees of revocable trusts need to do everything in their power to make sure estate taxes are paid, because they are personally on the hook.

has likewise prevailed at the trial court, and its victories have uniformly survived appeal.[3] Rarest of all is the taxpayer victory that survives appeal.[4]

[2] *Slone v. Commissioner*, ___ F.3d ___, 2015 WL 5061315 (9th Cir. Aug. 28, 2015), vacating and remanding T.C. Memo. 2012-57; *Salus Mundi Found. v. Commissioner*, 776 F.3d 1010 (9th Cir. 2014), *rev'g and remanding* T.C. Memo. 2012-61; *Diebold Found., Inc. v. Commissioner*, 736 F.3d 172 (2d Cir. 2013), *vacating and remanding Salus Mundi Found. v. Commissioner*, T.C. Memo. 2012-61; *Frank Sawyer Trust of May 1992 v. Commissioner*, 712 F.3d 597 (1st Cir. 2013), *rev'g and remanding* T.C. Memo. 2011-298.

[3] For a recent example, see Feldman v. Commissioner, 779 F.3d 448 (7th Cir. 2015), *aff'g* T.C. Memo. 2011-297.

[4] *Starnes v. Commissioner*, 680 F.3d 417 (4th Cir. 2012), *aff'g* T.C. Memo. 2011-63.

But each case stands on its own. Outcomes are determined by the facts of each specific case and what is established by the record.[5]

[5] See, *e.g.*, *Holden v. Commissioner*, T.C. Memo. 2015-83, at *2 n.2; *Holden v. Commissioner*, T.C. Memo. 2015-131, at *2 n.1 (noting that separate cases involving the same taxpayer and issues each turn on the facts established by the record in each separate case); see also *Feldman v. Commissioner*, T.C. Memo. 2011-297, 2011 WL 6781006, at *17 (noting different outcomes in *Midco* cases because of the distinct facts and circumstances of each case).

Slone v. Commissioner, 788 F.3d 1049 (9th Cir. 8/29/2015), set forth the Ninth Circuit's test:

> The question before us is whether the Slone Broadcasting shareholders can be held liable for taxes on Slone Broadcasting's sale of assets to Citadel because the shareholders were transferees of the proceeds of that sale.
>
> Under 26 U.S.C. § 6901, the Commissioner can assess tax liability against a taxpayer who is the transferee of assets of a taxpayer who owes income tax. *Salus Mundi Found. v. Comm'r*, 776 F.3d 1010, 1017 (9th Cir. 2014). Tax liabilities on transferred assets shall, with certain exceptions, be assessed, paid, and collected in the same manner and subject to the same provisions and limitations as in the cases of taxes with respect to which the liabilities were incurred. 26 U.S.C. § 6901.
>
> While federal law provides the procedure for collecting tax liabilities from a transferee, state law answers the question whether the alleged transferee is substantively liable for the tax. *Comm'r v. Stern*, 357 U.S. 39, 44–45 (1958). Therefore, in order to impose tax liability on a transferee, a court must engage in a two-pronged inquiry, see *Salus Mundi*, 776 F.3d at 1018 (citing *Stern*, 357 U.S. at 42, 44–45), which is sometimes called the *Stern* test. The first prong asks: is the party a transferee under § 6901 and federal tax law? *Id.* Under federal law, a transferee is defined as including a donee, heir, legatee, devisee, [or] distributee. 26 U.S.C. § 6901(h). Treasury regulations further define the term transferee to include the shareholder of a dissolved corporation. 26 C.F.R. § 301.6901-1(b).

> The second prong of the *Stern* test asks: is the party substantively liable for the transferor's unpaid taxes under state law? *Salus Mundi*, 776 F.3d at 1018. The test for this second prong depends on the law of the state where the transfer occurred. See, *e.g.*, *id.* (Under the [New York Uniform Fraudulent Conveyance Act], a party seeking to recharacterize a transaction must show that the transferee had actual or constructive knowledge of the entire scheme that renders [its] exchange with the debtor fraudulent.) (alterations in original) (quoting *Diebold Found., Inc. v. Comm'r*, 736 F.3d 172, 184–85 (2d Cir. 2013)). The two *Stern* test prongs are separate and independent inquiries. *Salus Mundi*, 776 F.3d at 1012.

Slone continued:

> Although we have not previously considered how a court should analyze a transaction for purposes of transferee liability under § 6901, both the Supreme Court cases, and our own precedent, require us to look through the form of a transaction to consider its substance.

Slone concluded:

> We cannot resolve this dispute because the tax court failed to apply the correct legal standard for characterizing the stock sale transaction for the purposes of federal transferee liability. The court did not address either the subjective or objective factors we apply in characterizing a transaction for tax purposes, as it failed to make any finding on whether the shareholders had a business purpose for entering into the stock purchase transaction other than tax avoidance, or whether the stock purchase transaction had economic substance other than shielding the Slone Broadcasting shareholders from tax liability. Instead, the tax court focused its factual inquiry and analysis on factors that might be relevant to the second prong of the Stern test for assessing transferee liability, whether a party is substantively liable for the transferor's unpaid taxes as a matter of state law. For instance, the tax court's findings that the shareholders had not orchestrated the asset sale and the stock sale as a single scheme for tax evasion purposes, that Fortrend and its third-party service provider were legitimate players in the debt collection industry, and that the shareholders had no reason to believe that Fortrend was using illegitimate tax evasion methods and had no duty to inquire further all relate to the question whether the shareholders lacked actual or constructive knowledge of the entire tax evasion scheme that rendered their transaction with Fortrend fraudulent under state law. See *Salus Mundi*, 776 F.3d at 1020. But the tax court did not use these factual findings to analyze the shareholders' liability under the applicable state law; it instead concluded, based on these findings, that the form of the stock sale should be respected for the shareholders' transferee status under the first prong of the *Stern* test. This was an error.
>
> Because the tax court applied the wrong legal standard to the question of transferee liability, it failed to make findings relating to the relevant factors for determining whether the Commissioner could properly disregard the form of the transaction. The tax court should make these determinations in the first instance. See *Lewis v. Comm'r*, 560 F.2d 973, 978 (9th Cir. 1977) (reversing and remanding when the tax court did not make proper factual findings). On remand, the tax court should make the findings necessary to apply the Stern test correctly. Under the first prong of this test, the tax court should apply the relevant subjective and objective factors to determine whether the Commissioner erred in disregarding the form of the transaction in order to impose tax

> liability on the shareholders as transferees under § 6901. Under the second prong of the Stern test, the tax court should analyze whether the shareholders are liable under state law for Slone Broadcasting/Arizona Media's unpaid tax liability. See *Salus Mundi*, 776 F.3d at 1018, 1020. The tax court may begin its analysis with either prong. The Commissioner may hold the shareholders liable as transferees under § 6901 only if both prongs of the Stern test are satisfied. See *id.* [5]
>
> [5] Costs are awarded to the Commissioner.

On remand, *Slone v. Commissioner*, T.C. Memo. 2016-115, addressed the second prong to determine whether the taxpayers were substantively liable for the transferor's unpaid taxes under state law. The court held that Arizona law required the IRS to prove that the taxpayers had actual or constructive knowledge of the entire scheme, and the IRS proved neither. After determining that the form of the stock sale must be respected, the court applied the UFTA to the transaction to determine whether the taxpayers may be held substantively liable for the corporation's unpaid taxes under Arizona law. The court held that the taxpayers did not commit either constructive or actual fraud under Arizona fraudulent transfer law.

Swords Trust v. Commissioner, 142 T.C. No. 19 (2014), rejected the IRS' proposed approaches:

> Respondent urges the Court to adopt the following two-step analysis to determine whether petitioner trusts, as transferees from Davreyn, are liable for Davreyn's unpaid tax: (1) analyze whether the subject transactions are recast under Federal law, here primarily the Federal substance over form doctrine, and then (2) apply State law to the transactions as recast under Federal law. One or more transactions are recast or otherwise disregarded under the Federal substance over form doctrine where the transactions, taken as a whole, show that the transactions are shams or have no purpose, substance, or utility apart from their anticipated tax consequences. … The effect of this doctrine is that the substance and not the form of the transactions determines their tax consequences…. Alternatively, respondent contends, petitioner trusts, as transferees from Davreyn and without regard to the Federal law characterization of the transactions, are liable for Davreyn's debts under applicable State law or State equity principles. Petitioner trusts argue that they are not liable for Davreyn's tax liability because, they contend, (1) the transactions may be recast only under applicable State law, which does not provide for any such recast, and (2) respondent failed to show that they are liable for Davreyn's debts under applicable State law or State equity principles….
>
> In the setting at hand, respondent bears the burden of establishing that the … State's highest Court, would apply a substance over form doctrine to recast the series of transactions as a transfer between each of petitioner trusts and Davreyn.
>
> Respondent has failed to establish that an independent basis exists under applicable State law or State equity principles for holding petitioner trusts liable for Davreyn's unpaid tax. Accordingly, we hold that section 6901 does not apply to these cases.

These cases seem inconsistent with *Slone v. Commissioner*, which held that form over substance applies to Code § 6901 and held that:

> when the Commissioner claims a taxpayer was the shareholder of a dissolved corporation for purposes of 26 C.F.R. § 301.6901-1(b), but the taxpayer did not receive a liquidating distribution if the form of the transaction is respected, a court must consider the relevant subjective and objective factors to determine whether the formal transaction had any practical economic effects other than the creation of income tax losses.

Following this evolution of case law, *Tricarichi v. Commissioner*, T.C. Memo. 2015-201 reasoned and held

> In performing this substance over form inquiry, the Ninth Circuit does not engage in a rigid two-step analysis. Rather, it focuses holistically on whether the transaction had any practical economic effects other than the creation of income tax losses. *Id.* (quoting *Reddam*, 755 F.3d at 1060). Following a commonsense review of the transaction, if the court concludes that the transaction lacks a nontax business purpose, has no economic substance, and was entered into solely to generate illegitimate tax benefits, the Commissioner may disregard the form the parties have selected and tax the transaction on the basis of its underlying economic substance. *Id.* at __, 2015 WL 5061315, at *5-*6.
>
> For the reasons discussed previously, we find that the transaction by which Nob Hill purchased petitioner's West Side stock relied on sham transactions, had no economic substance, had no bona fide business purpose, and was entered into solely to evade West Side's Federal and Ohio tax liabilities. See *supra* p. 40 and note 11 and pp. 41-55. We therefore disregard the form of the transaction and find that petitioner in substance was a direct recipient of West Side's cash, *i.e.*, as a distributee, the shareholder of a dissolved corporation, or the assignee … of an insolvent person. Sec. 6901(h); sec. 301.6901-1(b), Proced. & Admin. Regs. In any of those capacities, he was a transferee of West Side within the meaning of section 6901.

Stuart v. Commissioner, 144 T.C. 235 (2015), followed *Swords Trust* in rejecting the IRS' two-step approach but nevertheless found a fraudulent transfer under state law and upheld imposition of transferee liability. The Eighth Circuit reversed, holding that the Tax Court should have considered whether the stock sale should be recharacterized under state law, 841 F.3d 777 (8th Cir. 2016). The Eighth Circuit remanded to the Tax Court for consideration of whether the IRS is entitled to a full recovery from the former shareholders as transferees under Nebraska law.

As to fraudulent transfer remedies under Code § 6901 being based on state law fraudulent transfer remedies, see *Schussel v. Werfel*, 758 F.3d 82 (1st Cir. 2014); *Alterman Trust v. Commissioner*, T.C. Memo. 2015-231. In *Alterman Trust*, based on detailed analysis of Florida's Uniform Fraudulent Transfer Act, the court held:

> The Commissioner seeks to impute transferee liability to petitioners for taxes that went unpaid by a corporation in which they previously owned an interest. Petitioners took steps to ensure those taxes would get paid. The corporation itself remained solvent even after the shareholders sold their interests, leaving the Commissioner to argue that petitioners should be liable under a transferee of a transferee theory. But the Commissioner failed to show that any of the transferors were insolvent at any of the relevant times.

The IRS is not required to pursue collection efforts against one transferee before seeking to collect from another transferee.[7217]

III.B.5.e.v.(b). Transferee Liability Extends Past Original Estate Tax Lien

In *United States v. Kulhanek*,[7218] the decedent died in 1991, and the estate tax return was due in 1992. The estate tax return made a Code § 6166 election to defer estate tax. In 1999, the closely-held business sold all of its assets, making all of the estate tax due upon the IRS' notice and demand.[7219] The IRS sued the transferees in 2008. The transferees argued that the action was for collection of estate tax and was untimely, because it was brought more than ten years after date of death.[7220] The U.S. District Court held that the collection action was timely, because it was a transferee liability case,[7221] not an estate tax collection case, and was brought less than ten years[7222] after the event that accelerated payment of the estate tax.[7223]

Thus, transferees of estates that have made Code § 6166 elections might be liable until as long as 24 years and 9 months after death (ten years after the fourteen-year deferral under Code § 6166 of taxes due nine months after death).

Similarly, in *Mangiardi v. Commissioner*,[7224] the IRS gave an estate six annual Code § 6161 extensions of time to pay estate tax on the grounds of hardship. Concerned that the ten-year statute of limitations under Code § 6324(a)(1) was coming up, the IRS granted the seventh request of time, but only for a couple of months, explaining:

> The extension to pay is only being allowed until 12/5/2004 because, if the liability is not paid in full by that date, the IRS will begin making transferee assessments against the heirs of the estate that received assets and have not paid to the IRS their portion of the estate tax and interest owed. We can not provide any additional time because we must ensure that the transferee assessments are made prior to the assessment expiration date to make those assessments.

The IRS sent a notice of intent to levy to the estate when the estate did not meet the deadline. When appealing the notice of intent to levy, the estate claimed that the IRS was precluded from collecting the estate tax liability from beneficiaries because the time for making a transferee assessment under Code § 6901 had expired. Thus, the estate suggested an offer-in-

---

[7217] *Tricarichi v. Commissioner*, T.C. Memo. 2015-201 (10/14/2015) held:

> Transferee liability is several under section 6901. *Alexander v. Commissioner*, 61 T.C. 278, 295 (1973); *Cullifer v. Commissioner*, T.C. Memo. 2014-208, at *74 (same). It is well settled that a transferee is severally liable for the unpaid tax of the transferor to the extent of the assets received and other stockholders or transferees need not be joined. *Estate of Harrison v. Commissioner*, 16 T.C. 727, 731 (1951) (citing *Phillips v. Commissioner*, 283 U.S. 589 (1931) (construing predecessor statute)). In the event that one transferee is called upon to pay more than his pro rata share of the tax, he is left to his rights of contribution from the other transferees. *Id.*

[7224] T.C. Memo. 2011-24.

compromise in which the estate would offer a reduced amount based on doubt as to collectability of the remaining assets in the revocable trust.

Although the IRS originally thought it needed to make transferee assessments against the beneficiaries, before the Code § 6901 assessment expiration date, it never made those assessments and later asserted that a Code § 6901 assessment against transferees was not required before personal liability could be imposed under Code § 6324(a)(2).

The Tax Court ruled that it could not evaluate the legitimacy of the IRS' denial of the Code § 6161 extension, although it seemed to view the IRS' actions as pretty lame. However, that issue was moot because the court issued its judgment after the latest date for a Code § 6161 extension, so the court did not further address that issue.

The court pointed out that the Third and Tenth Circuit Courts of Appeals have held that the IRS may collect estate tax from a transferee pursuant to Code § 6324(a)(2) without a prior assessment against the transferee under Code § 6901[7225] and that the Tax Court has found those cases to be persuasive and well-reasoned.[7226] However, the court noted, "We also sympathize with the beneficiaries of decedent's estate in that years later they find themselves at risk of forfeiting their inheritance without prior notice, especially after respondent had ample opportunity to make assessments against them." Nevertheless, the court sustained the levy as lawful.

Regarding the offer-in-compromise:

> Petitioner offered the remaining assets in the estate (approximately $700,000) as an offer-in-compromise; however, respondent determined petitioner's reasonable collection potential to be at least $3 million given that the beneficiaries received $3,433,007 in IRA distributions. Because petitioner did not offer an acceptable amount, respondent did not abuse his discretion in rejecting petitioner's offer-in-compromise.

Thus, the court sustained the IRS' proposed collection actions. Then, when a beneficiary of the IRA challenged the IRS' collection efforts against her, a U.S. District Court upheld the IRS' action.[7227]

Another Code § 6166 case gave the following explanations:[7228]

> Upon an initial reading, section 6901 appears to mandate how the IRS may assess and collect taxes from those personally liable under section 6324(a)(2). The Tenth Circuit, however, has stated that section 6901 is only one method of collecting against transferees because "the collection procedures of § 6901 are cumulative and alternative—not exclusive or mandatory." [citing *Russell* - see fn. 7225]. As a result, "an individual assessment under 26 U.S.C. § 6901 is not a prerequisite to an action to impose transferee liability under 26 U.S.C. § 6324(a)(2)." [citing *Geniviva* - see fn. 7225]

[7228] *U.S. v. Johnson*, 109 A.F.T.R.2d 2012-2253 (D.C. UT).

> …. Tenth Circuit precedent is clear that as long as the period of time is open for collecting against an estate, it is open for collecting against a section 6324(a)(2) Distributee.

That case also held that refunding agreements (agreements with beneficiaries to pay estate tax) do not relieve the executor from liability for having made a distribution before estate tax is paid:[7229]

> One of section 3731's purposes is to provide a clear path for recourse when a representative distributes assets of an estate before paying estate taxes. Were courts to excuse personal representatives from liability when they secure contribution agreements, the Government would have to bring an action in contract, prove it is a third-party beneficiary of the agreement, and then establish its right of contribution. Section 3713(b) is designed to avoid such complications. It provides a straightforward way to collect unpaid taxes from the very individuals who dispersed the estate's assets without having satisfied the tax liability. In this case, the individuals who distributed the Estate's assets accepted the risk that the Heirs may fail to pay the tax. The Personal Representative, rather than the Government, is in the best position to seek reimbursement from the individuals who accepted the assets with a deferred obligation to pay the tax. The court therefore concludes the Government has stated a cognizable claim under section 3713(b) and denies the motion to dismiss this cause of action.

For more information, see "The Devil is in the Details: Important Tax Administration and Procedural Rules for Estate Planners," Chapter 9 of the 2015 Heckerling Institute on Estate Planning.

[7229] In an amended opinion at 112 A.F.T.R.2d 2013-5474, the court reaffirmed its holding, In this case, the individuals who distributed the Estate's assets accepted the risk that the Heirs may fail to pay the tax. Now that the risk has been realized, the Government may proceed on its claim against the Personal Representatives. See fn. 7167 for the requirements to make a claim under 31 U.S.C. § 3713(b).

III.B.5.e.v.(c). Transferee's Inability to Contest the Merits of the Assessment

Collection due process (CDP) rights[7230] do not apply to a transferee of a taxable estate when the IRS seeks to levy or seize property to enforce either the general estate tax lien arising under Code § 6324(a)(1) or the "like lien" described in Code § 6324(a)(2).[7231]

[7230] Reg. § 301.6330-1(e)(3), Q&A-E2 provides:

> Q-E2. When is a taxpayer entitled to challenge the existence or amount of the tax liability specified in the CDP Notice?
>
> A-E2. A taxpayer is entitled to challenge the existence or amount of the underlying liability for any tax period specified on the CDP Notice if the taxpayer did not receive a statutory notice of deficiency for such liability or did not otherwise have an opportunity to dispute such liability. Receipt of a statutory notice of deficiency for this purpose means receipt in time to petition the Tax Court for a redetermination of the deficiency determined in the notice of deficiency. An opportunity to dispute the underlying liability includes a prior opportunity for a conference with Appeals that was offered either before or after the assessment of the liability. An opportunity for a conference with Appeals prior to the assessment of a tax subject to deficiency procedures is not a prior opportunity for this purpose.

Lander v. Commissioner, 154 T.C. No. 7 (2020), quoted this regulation and stated:

> In *Lewis v. Commissioner*, 128 T.C. 48, 61 (2007), the Court upheld an earlier version of this regulation as a reasonable interpretation of section 6330 in the context of the assessment and collection of a tax not subject to the deficiency procedures. The Courts of Appeals that have reviewed the regulation have reached the same conclusion. See *Our Country Home Enters., Inc. v. Commissioner*, 855 F.3d 773, 787 (7th Cir. 2017), *aff'g* 145 T.C. 1 (2015); *Keller Tank Servs. II, Inc. v. Commissioner*, 854 F.3d 1178, 1199 (10th Cir. 2017); *Iames v. Commissioner*, 850 F.3d 160, 164 (4th Cir. 2017) ….
>
> The record shows that petitioners were fully engaged with [the Appeals Officer], that he reviewed the evidence and arguments that they presented to him, and that in the end petitioners enjoyed a full and fair opportunity to challenge their underlying tax liability before the Appeals Office during the course of the audit reconsideration process. Under the circumstances the Court is satisfied that the Appeals Office correctly determined, within the context of the collection review process, that petitioners had an opportunity to dispute their tax liability within the meaning of section 6330(c)(2)(B).[10]
>
> [10] Petitioners are not left without an opportunity for judicial review. Petitioners may pay the tax, file a claim for refund, and if that claim is denied, file a refund suit in a Federal District Court or the Court of Federal Claims. See sec. 7422(a).

[7231] Program Manager Technical Assistance (PMTA) 2013-014 (7/10/2013). This was a change from the IRS' previous position. The IRS' reasoning explains various parties' rights in proceedings:

> …the section 6324(a)(2) like lien is for the in rem collection of the estate tax from property subject to the lien, and not for collection of the transferee's personal liability. The estate tax lien shifts to other property, but the estate remains the only taxpayer. The transferee under section 6324(a)(2) is not the taxpayer, but is holding property subject to the tax lien for collection of another person's (the estate's) taxes. Under the CDP regulations, the transferee would not be a taxpayer entitled to CDP rights.
>
> We recognize that the section 6324(a)(2) like lien is different from other types of tax liens because it attaches to property other than that transferred by the taxpayer estate, including wages, bank accounts and after-acquired property. It is true that the transferor, if given CDP rights, would be able to propose alternatives to collection from certain types of property. However, although not entitled to CDP rights, such party would be entitled to collection appeal program (CAP) rights to propose collection alternatives and raise any other issues pertaining to the levies or proposed levies. IRM 8.24.1.2 (10-01-2012). For other issues that could be raised in CDP, such as the underlying tax liability, it would be counterintuitive to offer CDP rights to a non-taxpayer. If the estate tax were assessed from the estate tax return, for example, nothing would

Only the estate itself, and not an interested third party, may contest the tax assessment.[7232]

For more information, see "The Devil is in the Details: Important Tax Administration and Procedural Rules for Estate Planners," Chapter 9 of the 2015 Heckerling Institute on Estate Planning.

III.B.5.e.vi. "String Provisions" of Code §§ 2035, 2036, 2038, and 2042

Code § 2035, "Adjustments for certain gifts made within 3 years of decedent's death," provides:

> (a) *Inclusion of certain property in gross estate*. If -
>
> > (1) the decedent made a transfer (by trust or otherwise) of an interest in any property, or relinquished a power with respect to any property, during the 3-year period ending on the date of the decedent's death, and
> >
> > (2) the value of such property (or an interest therein) would have been included in the decedent's gross estate under section 2036 , 2037 , 2038 , or 2042 if such transferred interest or relinquished power had been retained by the decedent on the date of his death,
>
> the value of the gross estate shall include the value of any property (or interest therein) which would have been so included.
>
> (b) *Inclusion of gift tax on gifts made during 3 years before decedent's death*. The amount of the gross estate (determined without regard to this subsection) shall be increased by the amount of any tax paid under chapter 12 by the decedent or his

---

> preclude the transferee given CDP levy rights from contesting that estate tax liability. See section 6330(c)(2)(B). Furthermore, a transferee has the ability to prevent imposition of the like lien by not selling or encumbering the estate assets prior to satisfaction of the estate tax.
>
> It is possible that a party in possession of non-probate property subject to the estate tax lien may not be aware of this unrecorded lien and may, therefore, also be unaware of the imposition of the like lien upon the sale or further encumbrance of the non-probate property. In this respect, the party whose property is subject to a like lien is really no different than a purchaser of or holder of security interest in probate property encumbered by an unrecorded estate tax lien who is unaware of that lien. See section 6324(a)(3); *United States v. Vohland*, 675 F.2d 1071, 1075 (9th Cir. 1982) (estate tax lien remained attached to probate property sold to purchaser without notice of lien when fiduciary of estate had not received a section 2204 discharge at time of sale). It is not disputed that a purchaser or security interest holder under those circumstances would not be entitled to CDP rights prior to or after levy.
>
> For these reasons, a transferee of non-probate property is not entitled to a CDP notice or hearing prior to or after levy upon property subject to either the section 6324(a)(1) estate tax lien or the section 6324(a)(2) like lien. Under the CDP regulations, parties holding property subject to a federal tax lien are not taxpayers entitled to CDP rights.

[7232] *U.S. v. Cowles-Reed*, 114 A.F.T.R.2d 2014-5612 (9th Cir. 2014) (designated not for official publication) (surviving joint tenant from whom the IRS seeks to collect estate tax as a transferee); *Greenoak Holdings Limited v. Commissioner*, 143 T.C. 170 (2014) (offshore trust), the latter holding:

> We hold that a person, other than the taxpayer, who alleges an ownership interest in property which the Commissioner seeks to levy upon is not entitled to receive a notice of intent to levy and is not able to seek judicial review in this Court pursuant to a notice of determination issued to a delinquent taxpayer. Accordingly, we lack jurisdiction under section 6330(d) to hear petitioners' appeal.

estate on any gift made by the decedent or his spouse during the 3-year period ending on the date of the decedent's death.

(c) *Other rules relating to transfers within 3 years of death*.

(1) For purposes of -

(A) section 303(b) (relating to distributions in redemption of stock to pay death taxes),

(B) section 2032A (relating to special valuation of certain farms, etc., real property), and

(C) subchapter C of chapter 64 (relating to lien for taxes),

the value of the gross estate shall include the value of all property to the extent of any interest therein of which the decedent has at any time made a transfer, by trust or otherwise, during the 3-year period ending on the date of the decedent's death.

(2) *Coordination with section 6166*. An estate shall be treated as meeting the 35 percent of adjusted gross estate requirement of section 6166(a)(1) only if the estate meets such requirement both with and without the application of subsection (a).

(3) *Marital and small transfers*. Paragraph (1) shall not apply to any transfer (other than a transfer with respect to a life insurance policy) made during a calendar year to any donee if the decedent was not required by section 6019 (other than by reason of section 6019(2)) to file any gift tax return for such year with respect to transfers to such donee.

(d) *Exception*. Subsection (a) and paragraph (1) of subsection (c) shall not apply to any bona fide sale for an adequate and full consideration in money or money's worth.

(e) *Treatment of certain transfers from revocable trusts*. For purposes of this section and section 2038, any transfer from any portion of a trust during any period that such portion was treated under section 676 as owned by the decedent by reason of a power in the grantor (determined without regard to section 672(e)) shall be treated as a transfer made directly by the decedent.

See parts III.C Code § 2036, III.D Code § 2038, and II.Q.4.i.ii Summary of Estate Tax Rules Governing Life Insurance Payable to a Business Entity (Code § 2042).

Estate of Lillian L. Halpern v. Commissioner, T.C. Memo. 1995-352, held:

For it to make sense, we must interpret section 2038(a)(1) to require that the transfer of which it speaks have happened before (or at any rate not later than) the existence at death or relinquishment of the decedent's power and be from the decedent's own property. The structure of subtitle B — Estate and Gift Taxes — requires the contrary interpretation that sections 2038 and 2041 are mutually exclusive: sections 2035 through 2038 all concern transfers made by the decedent from the decedent's property during life. 5 Bittker & Lokken, *Federal Taxation of Income, Estates and Gifts*, par. 126.1, at 126-3, par. 128.1, at 128-4 (2d ed. 1993). Section 2041 has always been taken to be the section of subtitle B that has to do with the powers of a grantee, as opposed to a grantor, as sections 2036 through 2038 have to do with the powers of a grantor. Dukeminier & Johanson, *Wills, Trusts, and Estates* 985 (4th ed. 1990). Sections 2036, 2037, and 2038 are all ultimately descended from the same provision in the 1916 estate tax statute that included in the gross estate any transfer by trust or otherwise "intended to take effect in possession or enjoyment at or after death". Revenue Act of 1916, ch. 463, sec. 202(b), 39 Stat. 777-778; Bittker & Clark, *Federal Estate and Gift Taxation* 204-205, 247, 299 (6th ed. 1990).[10] This ancestor subsection was held not to apply to interests subject to an exercised general power of appointment in *United States v. Field*, 255 U.S. 257, 264 (1921).[11] Since the predecessor of current section 2041 was extended to cover all general powers of appointment in 1942, respondent seems never to have argued until now — and courts never to have held — that section 2038 applies to a transfer that was not from the decedent's own property.[12] We regard respondent's insistence on amending her answer to include section 2041 as an alternative ground for her determination as a confession of lack of confidence in her section 2038 argument. For all these reasons, we hold that the mere fact that property has been transferred through the exercise or release of a general power of appointment does not make that property subject to section 2038.

[10] The omission of a provision for general powers of appointment was quickly repaired, but in a different subsection. Revenue Act of 1918, ch. 18, sec. 402(e), 40 Stat. 1097-1098; Bittker & Clark, *Federal Estate and Gift Taxation* 383 (6th ed. 1990). The powers covered by the current secs. 2036-2038 remained in a separate ancestor subsection, sec. 402(c). It is interesting to note that sec. 202(b) of the Revenue Act of 1916, ch. 463, 39 Stat. 777-778, and sec. 402(c) of the Revenue Act of 1918, 40 Stat. 1097, while they did not cover general powers of appointment, did cover transfers made "in contemplation of death", the ancestor of the current sec. 2035. Bittker & Clark, *Federal Estate and Gift Taxation* 195-196 (6th ed. 1990). Subsecs. (c) and (e) of sec. 402 of the Revenue Act of 1918 were separated by subsec. (d) on joint interests (already present in the Revenue Act of 1916 as sec. 202(c)), just as secs. 2035-2038 (now joined by sec. 2039 on annuities, a new kind of transfer from the grantor) are now separated from sec. 2041 by the current section on joint interests, sec. 2040. All of this supports the view that the subject matters of secs. 2038 and 2041 are mutually exclusive.

[11] The issue of whether it would also apply to an unexercised power of appointment seems never to have arisen, which is to be expected, inasmuch as the tainted transfer presupposed by sec. 2038 would presumably not arise without the exercise of the power.

[12] The Commissioner has on one occasion, in *Ellis v. United States*, 280 F.Supp. 786, 788 (D. Md. 1968), argued in the alternative for the application of sec. 2036 (pertaining to interests with retained life estate) to part of a trust established by the decedent's grandmother in which the decedent had a life estate and the general power of appointment over which decedent had released (partially, but sufficiently for sec. 2041). The Commissioner's first argument in that case was for the application of sec. 2033. The court properly rejected both arguments. "The provisions of section 2041 as to partial release would be rendered meaningless if a general power

> of appointment that had been properly limited could be taxed under section 2033 or section 2036." *Id.* at 795.

Reg. § 20.2041-1(b)(2), "Relation to other sections," provides:

> For purposes of §§ 20.2041-1 to 20.2041-3, the term "power of appointment" does not include powers reserved by the decedent to himself within the concept of sections 2036 through 2038. (See §§ 20.2036-1 to 20.2038-1.) No provision of section 2041 or of §§ 20.2041-1 to 20.2041-3 is to be construed as in any way limiting the application of any other section of the Internal Revenue Code or of these regulations. The power of the owner of a property interest already possessed by him to dispose of his interest, and nothing more, is not a power of appointment, and the interest is includible in his gross estate to the extent it would be includible under section 2033 or some other provision of part III of subchapter A of chapter 11. For example, if a trust created by S provides for payment of the income to A for life with power in A to appoint the remainder by will and, in default of such appointment for payment of the income to A's widow, W, for her life and for payment of the remainder to A's estate, the value of A's interest in the remainder is includible in his gross estate under section 2033 regardless of its includibility under section 2041.

However, subject to any contrary savings clause, presumably the holder of a power to amend a trust or of a power of appointment could grant the settlor a general power of appointment.

III.B.5.f. State Death Taxes

III.B.5.f.i. State Death Tax - Generally

ACTEC's web page includes a chart maintained by former ACTEC president Charles "Skip" Fox, https://www.actec.org/resources/state-death-tax-chart.

For nonresidents, assume that the exemption is pro-rated compared to the entire taxable estate and then applied to property located in that estate.

As of 10/13/2020, the chart showed the following states imposed estate tax, with exemption levels following:

- Connecticut 2020: $5.1 million; 2021: $7.1 million; 2022: $9.1 million;2023: federal exemption for deaths on or after January 1, 2023 – all capped at estates of approximately $129 million.
- D.C. $5.6 million adjusted for inflation retroactive to January 1, 2018
- Hawaii $5 million adjusted for inflation retroactive to January 1, 2018; 20% rate for estates over $10 million
- Illinois $4 million, with separate state QTIP election, the latter confirmed by 35 ILCS 405/2(b-1).
- Maine $5.8 million – explained as federal exemption for decedents dying on or after January 1, 2016

- Maryland $5 million <u>not</u> adjusted for inflation
- Massachusetts $1 million
- Minnesota $3 million
- Nebraska county inheritance tax only
- New Jersey inheritance tax only
- New York $5 million adjusted for inflation
- Oregon $1 million
- Pennsylvania inheritance tax only, with separate state QTIP election
- Rhode Island $1.5 million indexed for inflation
- Vermont $5 million in 2021+
- Washington $2 million indexed for inflation

III.B.5.f.ii. State Death Tax – Business Entity Issues

Generally, an interest in a business entity is intangible personal property and is sitused to the owner's domicile. Generally, any property the business entity holds in another state would generate state income tax but not state estate tax.

However, some states purport to look through a business entity for state estate tax purposes. See below. Whether these states' laws are constitutional has not necessarily been tested. Morrow, Blattmachr and Shenkman, "Using Decanting and BDOT Provisions to Avoid a Peppercorn of Income Potentially Triggering State Income Tax on a Trust's Entire Income," *Steve Leimberg's Income Tax Planning Email Newsletter* Archive Message #205 (15-Sep-20) includes:

> Maine and Connecticut, for example, are trying to impose a state estate tax on real estate sitused in state even if it is owned in an LLC considered as intangible personal property of a non-resident decedent.[13]
>
> > [13] 36 M.R.S. § 4104, discussed in Maine Revenue Services' Estate Tax FAQ #9. Connecticut General Statues 12-391(e)(2)(B).
> >
> > [14] In *First National Bank v. Maine*, 284 U.S. 312, 52 S. Ct. 174, 76 L. Ed. 313 (U.S. 1932), the Supreme Court denied Maine the ability to levy an estate tax on a Massachusetts resident decedent who had owned stock in a Maine corporation that owned assets in Maine, under the due process clause of the Fourteenth Amendment to the Constitution. This case was overruled by *State Tax Comm'n of Utah v. Aldrich*, 316 U.S. 174 (1942), where the Court found that the state of incorporation also had enough nexus to levy an estate tax on the stock of a non-resident decedent who had owned stock in a corporation incorporated there (Utah). The Court's rationale for overruling *First National Bank v. Maine* completely focused on the laws of the state of

> incorporation (Utah in the latter case) creating the existence of the corporation, the nature and extent of the rights of the corporation and its shareholders and the legal protections Utah afforded as the state of incorporation – where the corporation owned property was not even mentioned, not even in the concurring opinion. Thus, following *Aldrich*, if someone places Maine or Connecticut real estate or other tangible property in an entity incorporated in the same state, those states could Constitutionally levy an estate tax at the shareholder/member's death. This begs the question – can Maine and Connecticut (or any other state with an estate tax) Constitutionally tax a non-resident decedent owning an LP/LLC/corporation that in turn owns property there, but that is NOT incorporated in that state (unlike Aldrich), without violating due process jurisprudence? Probably not, but it may in turn depend on whether the entity is required to register, or has registered, as a foreign entity, which states often require for entities that transact business in state (even if this rule may often be ignored). See *e.g.*, Uniform Limited Liability Company Act, § 902, § 905. The Court in *Aldrich* stated that a state that "has extended benefits or protection, or … can demonstrate "the practical fact of its power" or sovereignty as respects the shares, may likewise constitutionally make its exaction [*i.e.* estate tax]." An out-of-state LLC owning a vacation home would typically not be "transacting business" and therefore not be required to register as a foreign entity, but an LLC owning property used in business would be, and an LLC owning investment property could be, depending on the level of activity. *Id* at § 905(10) and comments. Wouldn't it be wise, considering the above two cases, for anyone with a potentially taxable estate owning vacation or passive investment property in a different state with an estate tax such as Maine or Connecticut, to own the property through an entity incorporated in a state without an estate tax?

For more constitutional issues, see part II.G.3 State Income Taxation (which includes resources as to issues other than income tax) and II.J.3.e.ii When a State Can or Does Tax a Trust's Income (which is focused on state income tax but can be relevant for estate tax purposes).

The list of states below is not intended to be comprehensive; it's just responses I have seen to this question generally.

III.B.5.f.ii.(a). Connecticut

Connecticut General Statues Chapter 217, "Estate Tax," is found at https://www.cga.ct.gov/current/pub/chap_217.htm.

Section 12-391(e)(2) provides:

> For a nonresident estate, the state shall have the power to levy the estate tax upon all real property situated in this state and tangible personal property having an actual situs in this state. The state is permitted to calculate the estate tax and levy said tax to the fullest extent permitted by the Constitution of the United States.

III.B.5.f.ii.(b). Maine

Maine Revenue Services, "Estate Tax FAQ," provides at https://www.maine.gov/revenue/faq/estate-tax#Q9 (Rev. 02/26/15):

9. **Maine property in a trust, LLC or pass-through entity is included in the estate of a nonresident decedent. What Maine property held by the trust, LLC or pass-through entity is sourced to Maine under 36 M.R.S. § 4104?**

Generally, Maine property held by a pass-through entity is sourced to Maine, if included in a nonresident decedent's estate, and:

1) The entity does not carry on a business for the purpose of profit and gain;

2) The ownership of the property in the entity was not for a valid business purpose; or

3) The property was acquired by other than a bona fide sale for full and adequate consideration and the decedent retained a power with respect to or interest in the property that would bring the real or tangible personal property located in this state within the decedent's adjusted federal gross estate.

See MRS Rule 603 for further, more comprehensive, information.

MRS Rule 603, "Maine Estate Tax After 2012," is found at https://www.maine.gov/revenue/sites/maine.gov.revenue/files/inline-files/Rule6032016-05-24.pdf, with Rule 603.01.B, "Pass-through entity," providing:[7233]

> "Pass-through entity" means a trust, a corporation that for the applicable tax year is treated as an S corporation under the Code or a general partnership, limited partnership, limited liability partnership, limited liability company or similar entity, that for the applicable tax year is not taxed as a C corporation for federal tax purposes.

III.B.5.f.ii.(c). Massachusetts

On November 24, 2020, a Massachusetts attorney I respect answered an inquiry, "Massachusetts Real Property in an LLC," as follows:

> So far as we can predict, the Massachusetts DOR currently does not seek to include real property situated in Massachusetts which is owned through an LLC as Massachusetts real estate subject to Massachusetts estate tax when owned by a non-Massachusetts resident; the LLC interests are treated as intangible personal property for Massachusetts estate tax purposes and not subject to Massachusetts estate tax is when owned by a nonresident.
>
> Note, however, that because the LLC interests are not includable for Massachusetts estate tax purposes, no Massachusetts estate tax return is required to be filed, and, therefore, there is no statute of limitations on the DOR's ability to seek to collect tax in the future in the event that the DOR decides to look through the entity and seek to collect tax on the value of the underlying real property. In 1986, proposed regulations were prepared that would have allowed such taxation of real property owned by Massachusetts partnerships owned by nonresident individuals; those regulations still exist but have never been finalized; Limited Liability Companies were not yet in use and are not mentioned in these regulations.

[7233] Rule 603.01, "Definitions," begins with, "The following definitions apply with respect to this rule and 36 M.R.S., Chapter 577, except as the context may otherwise require."

> We recommended, if your client decides to utilize an LLC as a vehicle to hold title to Massachusetts real estate, she planned to establish a multimember LLC in order that the LLC not be a disregarded entity for federal tax purposes.

III.B.5.f.ii.(d). Minnesota

2020 Minnesota Statutes § 291.005 (https://www.revisor.mn.gov/statutes/cite/291.005) provides in subsection (8):

> For a nonresident decedent with an ownership interest in a pass-through entity with assets that include real or tangible personal property, situs of the real or tangible personal property, including qualified works of art, is determined as if the pass-through entity does not exist and the real or tangible personal property is personally owned by the decedent. If the pass-through entity is owned by a person or persons in addition to the decedent, ownership of the property is attributed to the decedent in proportion to the decedent's capital ownership share of the pass-through entity.

It further provides in subsection (9):

> (9) "Pass-through entity" includes the following:
>
> (i) an entity electing S corporation status under section 1362 of the Internal Revenue Code;
>
> (ii) an entity taxed as a partnership under subchapter K of the Internal Revenue Code;
>
> (iii) a single-member limited liability company or similar entity, regardless of whether it is taxed as an association or is disregarded for federal income tax purposes under Code of Federal Regulations, title 26, section 301.7701-3; or
>
> (iv) a trust to the extent the property is includable in the decedent's federal gross estate; but excludes
>
> (v) an entity whose ownership interest securities are traded on an exchange regulated by the Securities and Exchange Commission as a national securities exchange under section 6 of the Securities Exchange Act, United States Code, title 15, section 78f.

Query what happens when a pass-through entity holds an interest in such property through another pass-through entity rather than directly.

Minnesota Department of Revenue Notice # 17-05, "Estate Tax – Pass-Through Entities – Calculation of Minnesota Gross Estate," is found at https://www.revenue.state.mn.us/revenue-notice/17-05-estate-tax-pass-through-entities-calculation-minnesota-gross-estate.

III.B.5.f.ii.(e). Oregon

On November 13, 2020, an Oregon attorney I respect answered an inquiry, "Oregon Fellows: Single Member LLC and Oregon Estate Tax," responding that holding an Oregon vacation residence in “a single member LLC will permit his estate to avoid Oregon estate tax on the value of the Oregon property.” This is confirmed by a comment in part III.B.5.f.ii.(f) Washington.

III.B.5.f.ii.(f). Washington

On October 22, 2020, an Oregon attorney I respect (who lives across the river from Washington) answered an inquiry, “State Estate Tax on Pass-Thru Owning Property in That State,” responding:

> Oregon and Washington honor entities such as LLCs and do not treat the underlying real estate as a tangible asset of the decedent. For Washington, this is a new policy starting 6/1/20.

The next day, a Spokane, Washington attorney responded:

> Actually Washington law has long provided that ownership interests in business entities (pass through or not) are treated as intangible personal property located in the state of the decedent’s domicile. But several years ago DOR slipped into the instructions to the return a provision that such would be the case only if the entity had a “business purpose”, and that the location of the underlying real estate would control if there was no business purpose. There was simply no authority for that position, and I suspect most practitioners ignored it when it was in their clients’ best interest to do so. What changed June 1 of this year is DOR announce that it had abandoned that business purpose test.

III.B.5.f.iii. Moving Property Outside of State Estate Tax System

If the pass-through entity is taxed as a partnership, the entity might distribute the property to its owners – usually on an income tax-free basis. See part II.Q.8.b.i Distribution of Property by a Partnership.

Once the property is outside of the entity, consider transferring using a leveraged estate planning technique. See part III.B.2 Irrevocable Grantor Trust Planning, Including GRAT vs. Sale to Irrevocable Grantor Trust.

If that planning doesn’t seem to work, consider trying to freeze the value. See parts II.Q.7.h.viii Value Freeze as Conservative Alternative and II.E.7 Migrating into Partnership Structure.

Also consider borrowing all of the equity out of the entity. See part II.H.10 Extracting Equity to Fund Large Gift, which applies to more than just gifting.

III.B.5.g. Preserving Income Tax Benefits from Estate Tax Audits

An IRS audit (examination) may increase a taxable estate by increasing value or through inclusion described in part III.B.5.e.vi “String Provisions” of Code §§ 2035, 2036, 2038, and 2042, which is further described in parts III.C Code § 2036, III.D Code § 2038, and II.Q.4.i.ii Summary of Estate Tax Rules Governing Life Insurance Payable to a Business Entity (Code § 2042).

When an audit disregards an entity and includes that entity's assets in the decedent's gross estate, those assets directly get a basis step-up.[7234]

When a business interest is included in the gross estate, see part II.Q.8.e.iii Inside Basis Step-Up (or Step-Down) Applies to Partnerships and Generally Not C or S Corporations, which explains when an entity's assets get a basis step-up, as described in part II.Q.8.e.iii.(a) Illustration of Inside Basis Issue.

- If a partnership interest is included in the gross estate, the partnership's assets can get a basis step-up through part II.Q.8.e.iii.(c) When Code § 754 Elections Apply; Mandatory Basis Reductions When Partnership Holds or Distributes Assets with Built-In Losses Greater Than $250,000.

- If S corporation stock is included in the gross estate, consider whether you can find any help from part II.H.8.a Depreciable Real Estate in an S Corporation – Possible Way to Replicate Effect of Basis Step-Up If the Stars Align Correctly, which is found in part II.H.8 Lack of Basis Step-Up for Depreciable or Ordinary Income Property in S Corporation; Possible Way to Attain Basis Step-Up.

Suppose Decedent died December 1, 2022 and the estate tax return, which ordinarily would have been due August 1, 2023, is extended by 6 months to February 1, 2024. The statute of limitations for auditing the estate tax return would ordinarily run February 1, 2027. The IRS can audit the return before then, and if the case goes to court then it might not conclude until much later than that.

Suppose further that, after December 1, 2022, Decedent's (formerly) revocable trust sells or depreciates or amortized (or would have depreciated or amortized) an asset that was directly or indirectly included in Decedent's gross estate – whether the estate tax return claimed that inclusion or an IRS audit or court decision determined that inclusion. Code § 1016(a)(2) reduces an assets basis by the amount of depreciation or amortization allowable, even if the taxpayer did not actually deduction the depreciation or amortization, so preserving the right to deduct these items is as important as (but generally of a smaller magnitude than) claiming basis on the sale of an asset.

If a taxpayer cannot yet amend an income tax return with Form 1040-X (or other relevant form),[7235] then consider filing a protective claim for refund. IRS Publication 556 describes the process:[7236]

> **Protective claim for refund.** If your right to a refund is contingent on future events and may not be determinable until after the time period for filing a claim for refund expires, you can file a protective claim for refund. A protective claim can be either a formal claim or an amended return for credit or refund. Protective claims are often based on current litigation or expected changes in the tax law, other legislation, or regulations. A protective claim preserves your right to claim a refund when the contingency is resolved.

[7234] See fn 5695 in part II.Q.8.e.iii.(b) Transfer of Partnership Interests: Effect on Partnership's Assets (Code § 754 Election or Required Adjustment for Built-in Loss).
[7235] https://www.irs.gov/forms-pubs/about-form-1040x (last checked 1/8/2023).
[7236] https://www.irs.gov/publications/p556#en_US_201312_publink1000177001 (last checked 1/8/2023).

A protective claim does not have to state a particular dollar amount or demand an immediate refund. However, to be valid, a protective claim must:

- Be in writing and be signed,
- Include your name, address, social security number or individual taxpayer identification number, and other contact information,
- Identify and describe the contingencies affecting the claim,
- Clearly alert the IRS to the essential nature of the claim, and
- Identify the specific year(s) for which a refund is sought.

Generally, the IRS will delay action on the protective claim until the contingency is resolved. Once the contingency is resolved, the IRS may obtain additional information necessary to process the claim and then either allow or disallow the claim.

Mail your protective claim for refund to the address listed in the instructions for Form 1040X, under Where To File.

If a partnership interest is includible in a decedent's gross estate, check to see whether this partnership and every partnership in which it directly or indirectly has interest has made a Code § 754 election and is aware of the need to protect the right to make further adjustments. See part II.Q.8.e.iii.(c) When Code § 754 Elections Apply; Mandatory Basis Reductions When Partnership Holds or Distributes Assets with Built-In Losses Greater Than $250,000. In fact, each decedent's estate, revocable trust, etc. is required to notify the partnership of the decedent's death.[7237]

When an amended return can't generate tax fairness, a taxpayer may seek the relief described in part II.G.4.m Fixing Unfair Income Tax Results. However, *O'Neill Trust v. Commissioner*, T.C. Memo. 2022-108,[7238] gave the taxpayer no relief because the taxpayer failed to preserve its rights.

III.B.5.h. Penalties for Failure to File Estate Tax Return

U.S. v. Boyle, 469 U.S. 241, 246 (1985), held that a taxpayer cannot rely on an expert as to the deadline for filing a tax return:

> We need not dwell on the similarities or differences in the facts presented by the conflicting holdings. The time has come for a rule with as "bright" a line as can be drawn consistent with the statute and implementing regulations.[6] Deadlines are inherently arbitrary; fixed dates, however, are often essential to accomplish necessary results. The government has millions of taxpayers to monitor, and our system of self-assessment in the initial calculation of a tax simply cannot work on any basis other than one of strict filing standards. Any less rigid standard would risk encouraging a lax attitude toward

[7237] See fns 5716-5717 and accompanying text in part II.Q.8.e.iii.(d) Code § 743(b) Effectuating Code § 754 Basis Adjustment on Transfer of Partnership Interest.
[7238] For relevant excerpts from the case, see part II.G.4.m.i Code § 1341 Claim of Right Deduction.

filing dates.[7] Prompt payment of taxes is imperative to the government, which should not have to assume the burden of unnecessary ad hoc determinations.[8]

[6] The administrative regulations and practices exempt late filings from the penalty when the tardiness results from postal delays, illness, and other factors largely beyond the taxpayer's control. See supra, at 2-3, and n. 1. The principle underlying the IRS regulations and practices—that a taxpayer should not be penalized for circumstances beyond his control—already recognizes a range of exceptions which there is no reason for us to pass on today. This principle might well cover a filing default by a taxpayer who relied on an attorney or accountant because the taxpayer was, for some reason, incapable by objective standards of meeting the criteria of "ordinary business care and prudence." In that situation, however, the disability alone could well be an acceptable excuse for a late filing.

But this case does not involve the effect of a taxpayer's disability; it involves the effect of a taxpayer's reliance on an agent employed by the taxpayer, and our holding necessarily is limited to that issue rather than the wide range of issues that might arise in future cases under the statute and regulations. Those potential future cases are purely hypothetical at the moment and simply have no bearing on the issue now before us. The concurring opinion seems to agree in part. After four pages of discussion, it concludes:

> "Because the respondent here was fully capable of meeting the required standard of ordinary business care and prudence, we need not decide the issue of whether and under what circumstances a taxpayer who presents evidence that he was unable to adhere to the required standard might be entitled to relief from the penalty." Post, at 4.

This conclusion is unquestionably correct. See also, e.g., *Reed v. Ross*, __ U.S. __, __, n. 5 (1984); *Heckler v. Day*, __ U.S. __, __, nn. 33 and 34 (1984); *Kosak v. United States*, __ U.S. __, __, n. 8 (1984); *Bell v. New Jersey*, __ U.S. __, __, n. 4 (1983).

[7] Many systems that do not collect taxes on a self-assessment basis have difficulties in administering tax collection. See J. Wagner, France's Soak-the-Rich Tax, Congressional Quarterly (Editorial Research Reports), Oct. 12, 1982; Dodging Taxes in the Old World, Time, Mar. 28, 1983, p. 32.

[8] A number of courts have indicated that "reasonable cause" is a question of fact, to be determined only from the particular situation presented in each particular case. See, e.g., *Estate of Mayer v. Commissioner*, 351 F.2d 617, 617 (CA2 1965) (per curiam), *cert. denied*, 383 U.S. 935 (1966); *Coates v. Commissioner*, 234 F.2d 459, 462 (CA8 1956). This view is not entirely correct. Whether the elements that constitute "reasonable cause" are present in a given situation is a question of fact, but what elements must be present to constitute "reasonable cause" is a question of law. See, e.g., *Haywood Lumber & Mining Co. v. Commissioner*, 178 F.2d 769, 772 (CA2 1950); *Daley v. United States*, 480 F. Supp. 808, 811 [45 AFTR2d 80-1717] (ND 1979). When faced with a recurring situation, such as that presented by the instant case, the Courts of Appeals should not be reluctant to formulate a clear rule of law to deal with that situation.

Congress has placed the burden of prompt filing on the executor, not on some agent or employee of the executor. The duty is fixed and clear; Congress intended to place upon the taxpayer an obligation to ascertain the statutory deadline and then to meet that deadline, except in a very narrow range of situations. Engaging an attorney to assist in the probate proceedings is plainly an exercise of the "ordinary business care and prudence" prescribed by the regulations, 26 CFR §301.6651-1(c)(1) (1984), but that does not provide an answer to the question we face here. To say that it was "reasonable" for the executor to assume that the attorney would comply with the statute may resolve the matter as between them, but not with respect to the executor's obligations under the statute. Congress has charged the executor with an unambiguous, precisely defined duty to file the return within nine months; extensions are granted fairly routinely. That the attorney, as the executor's agent, was expected to attend the matter does not relieve the principal of his duty to comply with the statute.

This case is not one in which a taxpayer has relied on the erroneous advice of counsel concerning a question of law. Courts have frequently held that "reasonable cause" is established when a taxpayer shows that he reasonably relied on the advice of an accountant or attorney that it was unnecessary to file a return, even when such advice turned out to have been mistaken. See, e.g., *United States v. Kroll*, 547 F.2d 393, 395-396, (CA7 1977); *Commissioner v. American Association of Engineers Employment, Inc.*, 204 F.2d 19, 21 (CA7 1953); *Burton Swartz Land Corp. v. Commissioner*, 198 F.2d 558, 560 (CA5 1952); *Haywood Lumber & Mining Co. v. Commissioner*, 178 F.2d 769, 771 (CA2 1950); *Orient Investment & Finance Co. v. Commissioner*, 166 F.2d 601, 603 (CADC 1948); *Hatfried, Inc. v. Commissioner*, 162 F.2d 628, 633-635 (CA3 1947); *Girard Investment Co. v. Commissioner*, 122 F.2d 843, 848 (CA3 1941); *Dayton Bronze Bearing Co. v. Gilligan*, 281 F. 709, 712 (CA6 1922). This Court also has implied that, in such a situation, reliance on the opinion of a tax advisor may constitute reasonable cause for failure to file a return. See *Commissioner v. Lane-Wells, Co.*, 321 U.S. 219 (1944) (remanding for determination whether failure to file return was due to reasonable cause, when taxpayer was advised that filing was not required).[9]

[9] Courts have differed over whether a taxpayer demonstrates "reasonable cause" when, in reliance on the advice of his accountant or attorney, the taxpayer files a return after the actual due date but within the time the advisor erroneously told him was available. Compare *Sanderling, Inc. v. Commissioner*, 571 F.2d 174, 178-179 (CA3 1978) (finding "reasonable cause" in such a situation); *Estate of Rapelje v. Commissioner*, 73 T.C. 82, 90 n. 9 (1979) (same); *Estate of DiPalma v. Commissioner*, 71 T.C. 324, 327 (1978) (same), acq., 1979-1 Cum. Bull. 1; *Estate of Bradley v. Commissioner*, 33 TCM 70, 72-73 (1974) (same) *aff'd* 511 F.2d 527 (CA6 1975), with *Estate of Kerber v. United States*, 717 F.2d 454, 454-455, and n. 1 (CA8 1983) (per curiam) (no "reasonable cause"), *cert. pending*, No. 83-1038; *Smith v. United States*, 702 F.2d 741, 742 (CA8 1983) (same); *Sarto v. United States*, 563 F.Supp. 476, 478 [(ND Cal. 1983) (same). We need not and do not address ourselves to this issue.

When an accountant or attorney advises a taxpayer on a matter of tax law, such as whether a liability exists, it is reasonable for the taxpayer to rely on that advice. Most taxpayers are not competent to discern error in the substantive advice of an accountant or attorney. To require the taxpayer to challenge the attorney, to seek a "second opinion," or to try to monitor counsel on the provisions of the Code himself would nullify the very purpose of seeking the advice of a presumed expert in the first place. See

> *Haywood Lumber*, 178 F.2d, at 771. “Ordinary business care and prudence” does not demand such actions.
>
> By contrast, one does not have to be a tax expert to know that tax returns have fixed filing dates and that taxes must be paid when they are due. In short, tax returns imply deadlines. Reliance by a lay person on a lawyer is of course common; but that reliance cannot function as a substitute for compliance with an unambiguous statute. Among the first duties of the representative of a decedent’s estate is to identify and assemble the assets of the decedent and to ascertain tax obligations. Although it is common practice for an executor to engage a professional to prepare and file an estate tax return, a person experienced in business matters can perform that task personally. It is not unknown for an executor to prepare tax returns, take inventories, and carry out other significant steps in the probate of an estate. It is even not uncommon for an executor to conduct probate proceedings without counsel.
>
> It requires no special training or effort to ascertain a deadline and make sure that it is met. The failure to make a timely filing of a tax return is not excused by the taxpayer’s reliance on an agent, and such reliance is not “reasonable cause” for a late filing under §6651(a)(1).

Leighton v. U.S., 155 Fed. Cl. 543 (Ct. Fed. Cl. 2021), denied the government’s motion to dismiss the taxpayer’s claim for refund of a penalty for late filing of an estate tax return when the income tax preparers had not informed the executor of the decedent’s prior gift tax returns, so that the executor’s tax advisor did not know that adjusted taxable gifts had pushed the estate above filing levels (highlighting below is mine):

> **i. Reasonable Cause**
>
> Before discussing whether the Executor’s pleadings establish a viable claim, the Court will briefly discuss what constitutes “reasonable cause.” I.R.C. § 6651(a) specifies that penalties shall not be imposed if the failure to timely file the return at issue is due to reasonable cause and not willful neglect. The implementing regulation provides: “If the taxpayer exercised ordinary business care and prudence and was nevertheless unable to file the return [or pay the tax] within the prescribed time, then the delay is due to a reasonable cause.” Treas. Reg. § 301.6651-1(c)(1).
>
> “Reasonable cause” is interpreted to “make the absence of fault a prerequisite to avoidance of the [failure-to-file and failure-to-deposit] penalt[ies].” *Boyle*, 469 U.S. at 246 n.4. Taken together with the requirement that the failure not be due to “willful neglect,” the taxpayer seeking a refund must allege that its untimely filing or payment “was the result neither of carelessness, reckless indifference, nor intentional failure.” *Id*. Essentially, a failure to file must have been “beyond the taxpayer’s control” in order to avoid penalty. *Id*. at 248 n.6. “Reasonable cause” must be shown by demonstrating “the taxpayer exercised ordinary business care and prudence” but was nevertheless unable to file the return or pay the tax within the prescribed time. Treas. Reg. § 301.6651-1(c)(1). The taxpayer’s claim must not be based on mere negligence, nor forgivable mistake, but must allege compliance was thwarted by events beyond the taxpayer’s control. *All Stacked Up Masonry, Inc.*, 150 Fed. Cl. at 548.
>
> Other provisions of IRS regulations state that “[t]he determination of whether a taxpayer acted with reasonable cause...is made on a case-by-case basis, taking into account all

pertinent facts and circumstances." Treas. Reg. § 1.6664-4(b)(1). The regulations further state that "[c]ircumstances that may indicate reasonable cause and good faith include an honest misunderstanding of fact or law that is reasonable in light of all of the facts and circumstances, including the experience, knowledge, and education of the taxpayer." *Id*. The regulations advise that "[r]eliance on an information return or on the advice of a professional tax advisor or an appraiser does not necessarily demonstrate reasonable cause and good faith[,]" unless, "under all the circumstances, such reliance was reasonable and the taxpayer acted in good faith." *Id*.

ii. Adequate Pleading of Reasonable Cause

The Court must now decide if the Executor's pleading, when taken as true, could plausibly establish reasonable cause for the estate's belated tax filing. The United States argues that this belated filing was unreasonable at every turn - Mr. Allen's advice was unreasonable, Executor's reliance on the advice was unreasonable, and the unavailability of the tax information itself was unreasonable. (See generally Def.'s Mot.). Each of those arguments is based on the finding that someone, somewhere should have known about the 2012 gift tax form. As explained below, the Court is not able to make that decision at this nascent stage of litigation.

When evaluating whether reasonable cause exists, the Federal Circuit focuses its analysis of whether the advice was that of a competent and independent professional advisor on several factors. Those factors include: (1) whether "the advice was based on all pertinent facts and circumstances and the law as it relates to those facts and circumstances"; (2) whether the advice was based on any "unreasonable factual or legal assumptions," or "unreasonably [relied] on the representations, statements, findings, or agreements of the taxpayer or any other person"; and (3) whether the taxpayer's reliance on the advice was "objectively reasonable." *Stobie Creek Invs. LLC v. United States*, 608 F.3d 1366, 1381 (Fed. Cir. 2010). Whether these factors are present in each situation is a question of fact, but what elements must be present to constitute reasonable cause is a question of law. *Estate of Liftin*, 111 Fed. Cl. at 13 (citing 26 U.S.C.A. §§ 6651(a)(1)). Generally, a taxpayer may establish reasonable cause for failing to file a timely return to avoid penalty by establishing reasonable reliance on the advice of an accountant or attorney, even if it is later established that such advice was erroneous or mistaken. *Thomas v. Comm'r*, 82 T.C.M. (CCH) 449 (T.C. 2001), 2001 WL 919858 (citing 26 U.S.C. §§ 6651(a)(1)).

The United States argues that the advice that Executor received pertaining to whether he needed to file an estate tax return was objectively unreasonable. (Def.'s Mot. at 10). First, the United States asserts that Mr. Allen's advice was not "based on all the pertinent facts and circumstances" because that advice did not account for the 2012 gifts made by the Decedent. (*Id*. at 11). This circular argument is unavailing. A finding for the United States on this point would also mean that missing information could never constitute reasonable cause because advice would necessarily not be based on all pertinent facts and circumstances. As such, this argument is not a valid reason for dismissal.

The United States goes on to argue that Mr. Allen's tax advice was unreasonable because his "blind faith in JDJ Services regarding the Decedent's lifetime gifts" does not constitute due diligence. (*Id*. at 11, 12). The Federal Circuit has found that a failure to perform due diligence amounts to unreasonable reliance on the statements of others.

Russian Recovery Fund Limited v. United States, 851 F.3d 1253 (Fed. Cir. 2017). *Russian Recovery Fund* involved a situation where the plaintiff's outside accounting firm "did no independent investigation into the factual accuracy of the information that [a related individual] supplied." 851 F.3d at 1269. The facts differ from this case because, in *Russian Recovery Fund*, the taxpayer provided its tax preparation firm with a "self-interested" version of the relevant facts "orchestrated by [the taxpayer] to achieve a desired result and were not critically evaluated by [the tax preparer]." *Id*. (quoting *Russian Recovery Fund Ltd. v. United States*, 122 Fed. Cl. 600, 622 (2015)). In this situation, the Amended Complaint enumerates various steps taken in coordinating the estate, including an exchange of a questionnaire about the valuation of the estate. (Am. Compl. at 3-4). At this stage, the Court must accept as true that the steps outlined in the pleadings were taken to their most reasonable extent. Requiring a more detailed recount of those events runs counter to this Court's well-established pleading standards. Tax advisors cannot reasonably give advice on unavailable information. While the Court accepts as true that Mr. Allen's investigation did not reveal the existence of the 2012 trusts, without more evidence, the Court is unable to discern whether that factual investigation constituted reasonable due diligence.

The United States goes on to argue that, because Executor is the sole party responsible for the belated filings, he therefore cannot demonstrate reasonable reliance on the advice of his agent. (Def.'s Mot. at 14-15). Taxpayers are free to hire an agent of their choosing in the preparation of their taxes, but that does not relieve the taxpayer of its legal obligations under the tax code, and any carelessness, reckless indifference, or intentional failure by the taxpayer's agent or employee is attributable to the taxpayer. See *Boyle*, 469 U.S. at 250. Further, reliance on advisors is generally an insufficient excuse for relief from the late-filing and late-payment penalties because filing and payment deadlines are unambiguous. *Id*. at 249. The Boyle Court recognized other scenarios which could establish reasonable cause. For instance, the Supreme Court held that taxpayers may reasonably rely on advice concerning whether - but not when - a return must be filed. 469 U.S. at 250-51, see also *Carmean v. United States*, 4 Cl. Ct. 181, 185 (1983) ("[W]hen there is no question that a return must be filed, the taxpayer has a personal, non-delegable duty to file the return when due."). In the scenarios contemplated by *Boyle*, the Supreme Court does not address misapprehensions of fact or the responsibility of taxpayers in tendering relevant information to their tax advisors. The question that is left open is whether reasonable cause can be established when, as in this case, the taxpayer and its agents act on incorrect information.

A taxpayer has acted reasonably when they have "exercised ordinary business care and prudence...." I.R.M.4 § 20.1.1.3.2.2.3. Ultimately it is the duty of a taxpayer to provide the information available to agents authorized in preparation of their taxes, thus the Court must examine whether the position taken by the taxpayer is reasonable. It is a pillar of the tax code that a taxpayer is expected to file a timely return based on the best information available and then file an amended return if necessary. See *Thomas*, 82 T.C.M. (CCH) 449. As a general rule, a taxpayer is not obliged to share details with a tax preparer that a reasonably prudent taxpayer would not know; neither is the taxpayer obligated to share details that he himself would neither know nor reasonably should know are relevant. *Pankratz v. Comm'r of Internal Revenue*, 121 T.C.M. (CCH) 1178 (T.C. 2021) (citing 26 C.F.R. § 1.6664-4(c)(1)(i)). In determining whether a taxpayer's behavior was reasonable, important considerations, however, include "[w]hy the records were unavailable and what steps were taken to secure the records," "[w]hen and how the taxpayer became aware that [it] did not have the necessary records," whether "other means were explored to secure needed information," whether "the taxpayer contacted the IRS for instructions on what to do about missing information," and the effort expended to obtain the missing information. I.R.M. § 20.1.1.3.2.2.3. The determination of whether a taxpayer acted with reasonable cause and in good faith is a factual issue. Treas. Reg. § 1.6664-4(b)(1). If a taxpayer fails to disclose a fact that it reasonably should know that would affect the tax treatment of an item, then the taxpayer cannot be considered to have relied in good faith upon the preparer's advice. *Neonatology Associates, P.A. v. C.I.R.*, 115 T.C. 43, Tax Ct. Rep. Dec. (RIA) 115.5, 2000 WL 1048512 (2000), *decision aff'd*, 299 F.3d 221, (3d Cir. 2002).

There is no dispute that the Decedent's lifetime gifts impacted whether an estate tax return was required and that Mr. Allen acted promptly once he obtained a copy of the 2012 gift tax return. Thus, the inquiry as to whether the Executor acted reasonably is largely dependent on the availability of the missing 2012 gift tax return. The United States argues that the 2012 gift tax return was in Freshwater's possession all along, thus it should have also been reasonably known by the Executor. This involves a factual inquiry beyond the record before the Court. The Amended Complaint alleges that the Executor made a diligent effort to identify lifetime gifts made by the Decedent, including making inquiries to Freshwater. What were the circumstances surrounding the gift tax form? Was it misfiled, intentionally hidden, willfully ignored? The Court is unclear at what point the availability of the document and exhaustive searching becomes enough to rise to the level of reasonable cause for a late filing. The specific details surrounding the inquiries to Freshwater are not pled before the Court, nor are they required at this stage. Whether those inquiries were actually diligent presents a question of fact not suitable at the dismissal stage. At this point, the Amended Complaint alleges sufficient facts to raise an expectation that discovery may reveal evidence to support the Executor's allegations.

The United States' arguments fail because each of them presupposes that one or more of the parties should have known that the estate's valuation went beyond the threshold for filing an estate tax form. The marrow of the Executor's case cannot be summarily described as "bad tax advice," but instead as advice without all pertinent information and based on a misapprehension of fact. Therefore, the United States' arguments can be affirmed or negated by answering a single question: should the Executor or his tax advisors have known about the Decedent's funded trusts prior to their unveiling in 2019? There is simply not enough information to answer that question. At the pleading stage, the Court must take the Executor's allegations as true and view them in the light most favorable to him. To the extent the United States dispute these allegations, that is a factual inquiry not suitable for resolution on a motion to dismiss.

III.B.6. Marital Deduction Considerations and Related Planning

A gift to a spouse did not qualify for the marital deduction when all parties expected the spouse to make a subsequent gift, the spouse was not a permitted transferee and the transfer to the spouse was not consented to, and the affected partnership return did not report the spouse as an owner for even one day. *Smaldino v. Commissioner*, T.C. Memo. 2021-127.

III.B.6.a. Trusts Qualifying for the Marital Deduction

In most cases, a marital trust should authorize the surviving spouse to direct the trustee to make the property productive.

Buy-sell agreements can ruin the marital deduction if they have the effect of transferring property away from the surviving spouse for less than adequate and full consideration.

The spouse must be entitled to income for life and must be the sole person who may receive principal during the spouse's life (subject to the surviving spouse having an inter vivos power of appointment for a general power of appointment marital deduction trust under Code § 2056(b)(5)). "Among the powers which if subject to reasonable limitations will not disqualify the interest passing in trust" is "the power to apply the income or corpus for the benefit of the spouse."[7239] Thus, to provide asset protection from creditors (to the extent available) and for distributions upon the spouse's incapacity, a marital deduction trust may provide language authorizing payments to or for the benefit of the spouse.[7240]

III.B.6.b. Discount Planning Related to Marital Deduction Trusts

Marital trusts are included in the surviving spouse's gross estate at the surviving spouse's death. A QTIP trust is included under Code § 2044; however, their assets are not aggregated with the surviving spouse's other assets.[7241] For example, suppose a QTIP trust owned 30% of the voting stock of a corporation, and the surviving spouse owned 40% of the voting stock outright. Even though 70% of the voting stock is included in the surviving spouse's gross estate, each block is valued separately as stock that lacks control.

Contrast this with a general power of appointment trust, which is included in the surviving spouse's gross estate under Code § 2041. Assets included under Code § 2041 are aggregated with other assets. In the example above, if the marital trust were a general power of appointment trust instead of a QTIP trust, the surviving spouse's gross estate would be deemed to own a controlling 70% voting bloc.

If the spouses have a high degree of trust in each other, the author tends to include in a QTIP trust a 5% withdrawal right exercisable only during a limited duration each year (two weeks, for example). The enables the surviving spouse to withdraw stock and make gifts without having to justify a principal encroachment. If the surviving spouse dies during the period in which the surviving spouse can withdraw 5%, the withdrawal right is considered a general power of

---

[7239] Reg. § 20.2056(b)-5(f)(4).

[7240] Rev. Rul. 85-35 approved a marital deduction for the following situation:

> State X has a statute that provides that the trustee has the discretion to pay any sum distributable to a beneficiary under legal disability, without liability to the trustee, by paying the sum to the beneficiary or by paying the sum for the use of the beneficiary either to a legal representative appointed by the court, or if none, to a relative.
>
> A similar provision relating to trustee powers appeared in the trust instrument, which also specifically requires the trust income to be paid at least annually to the spouse, legal representative, or relative of the spouse. Further, the fiduciary standards imposed by state X prevent the abuse of the powers by the trustee and constrain the conduct of any third party distributee.

Estate of Whiting v. Commissioner, T.C. Memo. 2004-68, held that, although a disability clause permitted accumulation of income, that clause was superseded by the marital deduction savings clause. Letter Ruling 201117005 approved a marital deduction in which the trustee could pay or apply for the benefit of the spouse, as well as having some elaborate unitrust options. Letter Ruling 8901008 45 denied a marital deduction when the trustee was to distribute as much income as the trustee deemed necessary and prudent. Thus, all of the income must be distributed annually, but distributions may be in the form of paying the spouse's bills or paying to others who must spend it for the spouse's benefit. Highlighted excerpts of all of the above are in Thompson Coburn LLP doc. no. 6507787.

[7241] See part II.O.2, Spousal Issues in Buy-Sell Agreements and Related Tax Implications, footnote 3792.

appointment, with all the negative consequences described above, but only with respect to 5% of the trust. If the withdrawal right lapses, the lapse is not treated as a release of a general power of appointment, and the entire trust retains its QTIP segregation for estate valuation purposes.

Another strategy a surviving spouse can use is to sell a voting interest to a credit shelter trust. If the surviving spouse is a beneficiary of the credit shelter trust, consider having the trust overpay for the voting stock, documenting the transaction as part sale, part distribution. This should preclude the IRS from successfully arguing that the surviving spouse made a gift to the trust (if the IRS were to successfully revalue the stock as worth more than what the surviving spouse thought it was worth); such a gift could create future Code § 2036 inclusion issues.

III.B.6.c. Irrevocable Inter Vivos QTIP Trust

An irrevocable inter vivos QTIP trust can also come in handy when one spouse wants to leave the business directly to children instead of to the other spouse. Suppose Husband has $1 million in cash or marketable securities, and Wife owns the closely-held business. Husband transfers that to an irrevocable inter vivos QTIP trust for wife where Wife is the trustee and has a special power of appointment. After recapitalizing the corporation into voting and nonvoting stock, Wife sells voting stock with an estimated fair market value for $600,000 to the trust in exchange for $1 million. The sale should not be not subject to income tax.[7242] The $400,000 excess of value over purchase price is a distribution from the trust to Wife. If the IRS audits the transfer, it can increase the voting stock's value to as much as $1 million before considering any adverse estate tax consequences under Code §§ 2036 and 2038.[7243]

An inter vivos QTIP trust can also come in handy when transferring assets shortly before death. Code § 1014(e) prevents a basis step-up when one spouse gives assets to another within one year of the donee's death.[7244] Whether an outright sale from the surviving spouse to the almost-deceased spouse works depends on whether the treatment of a sale between spouses as a transfer by gift under Code § 1014 applies for purposes of Code § 1014(e)(1)(A). However, a sale to an inter vivos QTIP trust that is deemed owned by the grantor who is the soon-to-be surviving spouse, can convincingly prevent Code § 1014(e) from applying:

- If Code § 1014(e)(1)(A) looks to transfers for income tax purposes, then nothing has happened at the time of the sale (disregarded transaction rather than transfer by gift), so Code § 1014(e)(1)(A) would not apply. Disregarding the sale for income tax purposes is founded on Rev. Rul. 85-13 and confirmed by Letter Ruling 200408015.[7245]

[7242] For more details on the tax treatment, see part III.B.2.i.xv Sale to Trust Created by Spouse.
[7243] An adverse tax consequence could occur if wife did not receive adequate and full consideration for the stock she transferred to the trust.
[7244] For more on Code § 1014(e), see Letter Rulings 9026036, 9321050, 200210051 and 200101021 and read Siegel, "Section 1014(e) and Gifted Property Reconveyed in Trust," 27 *Akron Tax Journal* 33 (2012). Generally, if the decedent sets up a trust for the person who transferred property to the decedent within one year before the decedent's death, the basis step-up would be disallowed to the extent of the value of the transferor's beneficial interest. For valuing a beneficial interest, see parts III.B.1.b Transfers for Insufficient Consideration, Including Restructuring Businesses or Trusts and III.B.7.d Code § 2702 Overview.
[7245] Letter Ruling 200408015 is discussed further in fn. 7398, found in part III.B.7.d Code § 2702 Overview.

- If Code § 1014(e)(1)(A) looks to transfers for state law purposes, then Code § 1041 would not apply because that is an income tax rule and does not change the status for state law purposes. For state law purposes, the sale to the QTIP trust is a sale, not a gift. Therefore, Code § 1014(e)(1)(A) would not apply.

Also, after the donee spouse dies, if the property passes back to a trust for the grantor, then the trust is deemed owned by the grantor for income tax purposes; if this trust is outside of the estate tax system at that time, then one has a powerful tool – a trust outside of the estate tax system that is taxed to the original grantor (so long as the donee spouse did not exercise a general power of appointment,[7246] which is unlikely to be present in a QTIP trust).[7247]

When an inter vivos QTIP trust holds stock in an S corporation, consider making an ESBT election while both spouses are living.[7248]

III.B.6.d. Divorce as an Opportunity to Transfer

Code § 2516, "Certain property settlements," protects certain transfers that are solely between spouses from gift tax consequences:

> Where a husband and wife enter into a written agreement relative to their marital and before such agreement is entered into (whether or not such agreement is approved by the divorce decree), any transfers of property or interests in property made pursuant to such agreement -
>
> (1) to either spouse in settlement of his or her marital or property rights, or
>
> (2) to provide a reasonable allowance for the support of issue of the marriage during minority,
>
> shall be deemed to be transfers made for a full and adequate consideration in money or money's worth.

The modification of a qualifying decree outside of that 3-year period may be respected.[7249]

[7246] Reg. § 1.671-2(e)(5), which is reproduced in fn 6620 in part III.B.2.h.i Who Is the Grantor.

[7247] See Gans, Blattmachr & Zeydel, "Supercharged Credit Shelter Trust," 21 *Prob. & Prop.* 52 (July/Aug. 2007).

[7248] See part III.A.3.a.iii Steps an S Corporation Might Take to Avoid a Trust Falling Short, especially fns. 5881-5882.

[7249] Letter Ruling 201901003 held:

> In this case, the divorce of A and B occurred less than 1 year before Stipulation and Order 1 was entered by Court. Therefore, stipulations governing Property under Stipulation Order 1 are within the purview of section 2516. Accordingly, transfers that A and B make pursuant to Stipulation and Order 1 are deemed made for full and adequate consideration in money or money's worth and, thus, are not subject to the gift tax.
>
> The purchase price stipulated in Stipulation and Order 2 is consistent with the purchase stipulated in Stipulation and Order 1. Both Stipulation and Order 1 and Stipulation and Order 2 call for the transfer of a one-half interest in Property in exchange for a purchase price equal to one-half of the fair market value of Property, calculated after A and B share equally the cost of paying off the mortgage and the costs related to maintenance, upkeep, remediation and repair of Property. Court entered Stipulation and Order 2 to effectuate, under changed circumstances, transfers

However, including children or others as transferees generates a gift from the spouse whose marital rights are foregone in exchange for including the children or other transferees.[7250] Bequests to non-spouse beneficiaries pursuant to a prenuptial agreement are not deductible claims against the estate.[7251]

Code § 2702 has complementary rules.[7252]

The resulting legal obligation can be a deductible claim against the estate of an owner who was legally bound to make such a transfer.[7253]

See also parts III.B.7.b.iv Divorce Planning to Avoid Code § 2701 and II.O.2.b Divorce – Income Tax Issues Relating to Buy-Sell Agreements.

On the other end, Rev. Rul. 69-347 held that the date of marriage is the effective date of a gift of property made pursuant to a legally enforceable antenuptial agreement:

> In 1965, a taxpayer and his intended wife entered into a written antenuptial agreement which provided that, in consideration of the marriage and the wife's relinquishment of her marital rights in her husband's property, the husband would pay her a fixed amount per year beginning one year after the date of their marriage and continuing for twenty years thereafter or until the wife's death, whichever event occurred first. The taxpayer and his wife were married in 1966 and the husband made the first payment in 1967.
>
> Although antenuptial agreements are enforceable under state law when consummated by marriage, 3 Williston on Contracts, section 270B (3d ed.1959), transfers made pursuant to such agreements are not made for an adequate and full consideration in money or money's worth within the meaning of section 2512(b) of the Internal Revenue Code of 1954. Commissioner v. William H. Wemyss, 324 U.S. 303 (1945), Ct. D. 1634, C.B. 1945, 416. Such consideration as love and affection, promise of marriage, or relinquishment of dower or other marital rights is to be wholly disregarded and the entire value of the property transferred constitutes a gift. Section 25.2512-8 of the Gift Tax Regulations.
>
> Section 2501 of the Code imposes a tax on the transfer of property by gift by any individual. The gift tax is not imposed upon the receipt of property by the donee, nor is it

---

> contemplated in Stipulation and Order 1 to resolve ultimate ownership of Property. Therefore, section 2516 is applicable to transfers A and B made pursuant to Stipulation and Order 2, and these transfers are deemed made for full and adequate consideration in money or money's worth and, thus, are not subject to the gift tax.
> Accordingly, based on the facts submitted and representations made, we conclude that the payment by A to B of the Net Purchase Price and the corresponding transfer by B to A of B's 50 percent interest in Property constitute transfers for full and adequate consideration in money or money's worth under section 2516 that do not result in a taxable gift by either A or B.

[7250] Rev. Ruls. 68-379, 77-314, and 79-363.

[7251] *Estate of Spizzirri v. Commissioner*, T.C. Memo. 2023-25, citing *Estate of Pollard v. Commissioner*, 52 T.C. 741 (1969) and *Estate of Herrmann v. Commissioner*, T.C. Memo. 1995-90, *aff'd* 85 F.3d 1032 (2d Cir. 1996).

[7252] Regs. §§ 25.2702-1(c)(7) (no consequences if only the spouses are involved), 25.2702-4(d), Example (5) (remainder to children not protected by this exception); Letter Ruling 9235032 (giving spouse a qualified retained interest ascribes value to it for purposes of Code § 2516).

[7253] I have been told that support for this position is in *Estate of Kosow v. Commissioner*, 45 F.3d 1524 (11th Cir. 1995).

necessarily determined by the measure of enrichment resulting to the donee at the time of the transfer. The tax is a primary and personal liability of the donor, is an excise upon his act of making the transfer, is measured by the value of the property passing from the donor, and attaches at the time such property passes, regardless of the fact that the identity of the donee may not then be known or ascertainable. Section 25.2511-2(a) of the regulations. See also *Meta B. Robinette v. Helvering*, 318 U.S. 184 (1943), Ct. D. 1574, C.B. 1943, 1141.

The gift tax is aimed at every kind and type of transfer by way of gift, whether the gift is direct or indirect, and whether the property is real or personal, tangible or intangible. Section 25.2511-1(a) of the regulations. Generally, a gift is complete when the donor has so parted with dominion or control as to leave in him no power to change its disposition, whether for his own benefit or for the benefit of another. Section 25.2511-2(b) of the regulations.

In *John D. Archbold v. Commissioner*, 42 B.T.A. 453 (1940) (acquiescence in result only, page 20, this Bulletin) the taxpayer and his intended wife entered into an antenuptial agreement in 1936. Under the terms of the agreement, the taxpayer agreed to transfer 10x dollars to a trust for the benefit of his wife in each of the next nine years. The agreement did not become legally enforceable until the marriage, which took place in 1937. The Service asserted a gift tax deficiency for 1936, rather than for 1937, when the promise to make the payments described became legally enforceable.

The Board of Tax Appeals held that the taxpayer's promise to make future transfers of stated amounts did not constitute a taxable gift in 1936 (the taxable year in litigation), stating that the Commissioner had not rebutted the contention of the taxpayer that "a promise to make a gift in the future is not a present gift, even though the promise may be an enforceable one …", 42 B.T.A. 453, 455. Based on this statement the Service assumed that the Board considered that the promise before it was in fact an enforceable one in 1936.

In *Estate of Ira C. Copley, et al. v. Commissioner*, 15 T.C. 17 (1950), *affirmed* 194 F.2d 364 (1952), *acquiescence*, C.B. 1965-2, 4, the petitioner and his intended wife entered into an antenuptial agreement in 1931. Under the terms of the agreement, the petitioner promised to give his future wife a specified sum of money in consideration of the marriage and in lieu of all of her martial rights in his property. No date was specified for the transfer of such sum. The agreement became legally enforceable under state law on the date of the petitioner's marriage, which was also in 1931. The petitioner transferred part of the sum in 1936 and the remainder in 1944.

The Service relied on the *Archbold* opinion in contending that the 1936 and 1944 transfers were subject to a gift tax in such years. However, the Tax Court concluded that the petitioner's transfers were not subject to Federal gift taxes in 1936 and 1944, but that a gift tax would have been due in 1931 if there had been a gift tax law in effect at that time. The court stated:

> "Once the antenuptial contract became binding by the marriage, Copley became bound to make all of the payments and did not make a new gift each time he made a payment. 15 T.C. 17, 20."

> Having stated that the transfer took place when the contract became binding, the Tax Court accordingly rejected the Commissioner's reliance upon the *Archbold* case, in which, as noted above, the Board was not faced with a binding contract in the taxable year in litigation.
>
> The Tax Court also based its decision in *Copley* on *Cornelia Harris v. Commissioner*, 178 F. 2d 861 (1949), *reversed on other grounds*, 340 U.S. 106, Ct. D. 1737, C.B. 1950-2, 77. In *Harris*, the Court of Appeals held that a promise to make a gift becomes taxable in the year in which the obligation becomes binding and not when the discharging payments are made. In *Paul Rosenthal v. Commissioner*, 205 F. 2d 505 (1953), the court held that the fact that the donee's possession and enjoyment had not yet fully ripened did not postpone the effective date of a gift made subject to a contingency, provided the contingency was susceptible of actuarial appraisal.
>
> In the instant case, the taxpayer became legally obligated to perform according to the terms of the agreement at the time of his marriage in 1966. Since the instant gift is payable over a term of years, subject only to the wife's death, the value of the taxpayer's gift is determinable on the basis of recognized actuarial principles. See section 25.2512-5 of the regulations. It follows, therefore, that the effective date of his gift for Federal gift tax purposes is in 1966.

When a taxpayer sells property to a spouse, as described below, Code § 1041 would cause nonrecognition of the gain on sale;[7254] this treatment also applies when the taxpayer's grantor trust sells property to the spouse's grantor trust.[7255] The interest income and expense would be recognized for income tax purposes,[7256] with the interest deduction being based on the nature of the property transferred rather than being disallowed as a gift.[7257] However, neither

[7254] If the sale is for a loss, the basis would not be decreased to fair market value for purposes of calculating a loss. See Reg. § 1.1041-T(d), Q/A 11, expressly distinguishing Code § 1015(a). Also, the possible interaction between Code § 1041 nonrecognition and Code § 897 taxing the gain of a nonresident alien from the disposition of a U.S. real property interest. Thompson Coburn doc. no. 6236395 describes these issues and why an expert believes that Code § 1041 nonrecognition should prevail.

[7255] Letter Ruling 201927003. The trusts were grantor trusts under Code § 675(4), and the IRS cited Rev. Rul. 85-13 for treating the grantor of each trust as the owner of that trust's assets.

[7256] Code § 1041 provides that sales between spouses are not taxable. However, Code § 1041 does not provide for the exclusion of income; it merely provides for the nonrecognition of gain or loss. *Gibbs v. Commissioner*, T.C. Memo. 1997-196 (recognizing interest income), followed by *Craven v. U.S.*, 70 F.Supp.2d 1323 (D.C. Ga. 1999); *Yankwich v. Commissioner*, T.C. Memo. 2002-37 (interest income recognized); TAM 200624065 (compensation for the delay in the payment of the stated principal amount of amount awarded in divorce decree constituted stated interest). The *Gibbs* court pointed out that, although under certain circumstances specific statutes (such as Code §§ 104(a)(2) and 1033) control the Federal income tax consequences of certain awards, judgments, or payments, the statutes do not necessarily control the Federal income tax consequences of interest paid to the taxpayer in connection with such awards, judgments, or payments.

[7257] *Seymour v. Commissioner*, 109 T.C. 279 (1997), rebuffed the IRS' argument that interest expense was per se nondeductible personal interest and required looking at the use of the loan proceeds based on the interest tracing rule; allowed an interest deduction based on tracing. *Armacost v. Commissioner*, T.C. Memo. 1998-150, followed *Seymour* and held that interest was deductible to the extent that loan proceeds were used for taxable investments.

Code § 7872[7258] nor the original issue discount (OID) rule[7259] requires interest to be charged between spouses. Because Code § 7872 does not apply to such payments, we need to look to the common law, which does require charging interest to avoid gift taxation.[7260]

Code § 1041(a) provides that no gain or loss is recognized on a transfer of property from an individual to (or in trust for the benefit of) a spouse, or a former spouse, but only if the transfer is incident to the divorce. For purposes of the latter, a transfer of property is incident to the divorce if such transfer occurs within one year after the date on which the marriage ceases, or is related to the marriage's cessation.[7261] Being related to the marriage's cessation is presumed if within 6 years after divorce and is pursuant to the divorce or separation instrument; the taxpayer must overcome a presumption of no relatedness outside of that window.[7262]

[7258] Effectuating Code § 7872(f)(7), Prop. Reg. § 1.7872-11(c), provides:

> *Husband and wife treated as 1 person*. Section 7872(f)(7) provides that a husband and wife shall be treated as 1 person. Accordingly, all loans to or from the husband will be combined with all loans to or from the wife for purposes of applying section 7872. All loans between a husband and a wife are disregarded for purposes of section 7872.

[7259] Code § 1272(a)(1) imputes original issue discount (OID) income when annual stated interest payments are below the true economic interest. However, Code § 1272(a)(2)(D)(iii) provides that Code § 1272(a)(1) does not apply to certain loans between natural persons, including:

> *Treatment of husband and wife*. For purposes of this subparagraph, a husband and wife shall be treated as 1 person. The preceding sentence shall not apply where the spouses lived apart at all times during the taxable year in which the loan is made.

Effectuating this, Reg. § 1.1272-1(a)(2), "Debt instruments not subject to OID inclusion rules," provides:

> Sections 1272(a)(2) and 1272(c) list exceptions to the general inclusion rule of section 1272(a)(1). For purposes of section 1272(a)(2)(E) (relating to certain loans between natural persons), a loan does not include a stripped bond or stripped coupon within the meaning of section 1286(e), and the rule in section 1272(a)(2)(E)(iii), which treats a husband and wife as 1 person, does not apply to loans made between a husband and wife.

Also, Reg. § 1.1274-1(b)(3)(iii), "Certain transfers subject to section 1041," provides:

> Section 1274 does not apply to any debt instrument issued in consideration for a transfer of property subject to section 1041 (relating to transfers of property between spouses or incident to divorce).

[7260] *Dickman v. Commissioner*, 465 U.S. 330 (1984), discussed in fns 6209-6210 in part III.B.1.a Business Opportunities.

[7261] Code § 1041(c).

[7262] Reg. § 1.1041-1T(b), Q&A 7, provides:

> A transfer of property is treated as related to the cessation of the marriage if the transfer is pursuant to a divorce or separation instrument, as defined in section 71(b)(2), and the transfer occurs not more than 6 years after the date on which the marriage ceases. A divorce or separation instrument includes a modification or amendment to such decree or instrument. Any transfer not pursuant to a divorce or separation instrument and any transfer occurring more than 6 years after the cessation of the marriage is presumed to be not related to the cessation of the marriage. This presumption may be rebutted only by showing that the transfer was made to effect the division of property owned by the former spouses at the time of the cessation of the marriage. For example, the presumption may be rebutted by showing that (a) the transfer was not made within the one- and six-year periods described above because of factors which hampered an earlier transfer of the property, such as legal or business impediments to transfer or disputes concerning the value of the property owned at the time of the cessation of the marriage, and (b) the transfer is effected promptly after the impediment to transfer is removed.

2017 tax reform repealed Code § 71 for post-2018 divorces. Presumably the old definition continues to apply, although I am not aware of any authority on that point.

Letter Ruling 201901003 held:

If Code § 1041(a) applies, the property is treated as acquired by the transferee by gift for income tax purposes,[7263] and the transferee's basis in the property is the transferor's adjusted basis.[7264] Qualifying deferred payments are nontaxable to the extent they do not constitute interest.[7265]

> The transfer of B's undivided one-half interest in Property from B to A and the transfer of Net Purchase Price from A to B are pursuant to a divorce or separation instrument, as defined in section 71(b)(2) of the Code. While the transfers occurred more than 6 years after the date on which the marriage ceased, the Stipulation and Order 2 were a modification and amendment to Stipulation and Order 1. The transfers were made to effect the division of property owned by the former spouses at the time of the cessation of their marriage. Accordingly, based on the facts submitted and the representations made, the payment by A to B of the Net Purchase Price and the transfer of B's undivided one-half interest in Property from B to A constitutes transfers between former spouses that are `incident to divorce' under § 1041 of the Code.

Letter Ruling 9235026 explained why the taxpayer rebutted the "presumption that a transfer of property occurring more than six years after the cessation of marriage is not related to the cessation of the marriage":

> First, the transfer of Business C and the related property was made in order to effect the division of property owned at the time of the cessation of the marriage. Secondly, the reason the transfer was not effected within the six year period was due to a dispute concerning the purchase price and the terms of the payments relating to the transfer of Business C and the related property. This dispute resulted in litigation, which was finally settled more than six years after the date on which the marriage ceased. Q&A-7 of section 1.1041-1T(b) of the temporary regulations specifically provides that the presumption may be rebutted if factors such as "disputes concerning the value of the property" to be transferred prevented an earlier transfer. Finally, the transfer of Business C and the related property was effected promptly after the purchase price dispute was resolved.

[7263] This reference to treatment as a gift can be confusing. To clarify, Reg. § 1.1041-1T, A-11 includes:

> This carryover basis rule applies whether the adjusted basis of the transferred property is less than, equal to, or greater than its fair market value at the time of transfer (or the value of any consideration provided by the transferee) and applies for purposes of determining loss as well as gain upon the subsequent disposition of the property by the transferee. Thus, this rule is different from the rule applied in section 1015(a) for determining the basis of property acquired by gift.

[7264] Code § 1041(b).

[7265] Letter Ruling 9123053 stated:

> The instrument executed in Year B did not give Wife title to one-half of Husband's Benefits in Business B. Rather, in consideration for wife's community property interest, the instrument required Husband to pay Wife the cash equivalent of one-half of the Benefits. Accordingly, the payments are transfers of property between an individual and a former spouse, incident to divorce, and are non-taxable under section 1041 of the Code.
>
> Some of the payments will be made more than six years after the cessation of the marriage, and, as such, under section 1.1041-1T(b), Q6A-7 of the temporary regulations, there is a rebuttable presumption that those payments are not related to the cessation of the marriage. It is clear, however, that the transfers occurring more than six years after the divorce are being made to effect the division of property owned by the former spouses at the time of the divorce. The former spouses have simply chosen to extend the transfers over a period that will be more than six years after the cessation of the marriage. Accordingly, all of the payments are related to the cessation of the marriage under section 1041(c)(2) of the Code….
>
> The payments to Wife pursuant to the instrument executed in Year B by Husband and Wife, to the extent those payments constitute the principal of the $X wife is to receive, are non-taxable transfers of property under section 1041 of the Code. We express no opinion as to the tax consequences of the payments of interest received by Wife.

Code § 1041(a) nonrecognition does not apply if the spouse (or former spouse) of the individual making the transfer is a nonresident alien.[7266]

Code § 1041(a) nonrecognition also does not apply to the transfer of property in trust to the extent that the sum of the amount of the liabilities assumed, plus the amount of the liabilities to which the property is subject, exceeds the total of the adjusted basis of the property transferred.[7267] Any gain recognized by reason of the preceding sentence affects basis.[7268] For transfers directly between spouses, liabilities in excess of basis do not generate recognition.[7269] Presumably grantor trusts are disregarded for purposes of this rule.[7270]

A comprehensive article on Code § 1041 is cited in part III.B.2.i.xv Sale to Trust Created by Spouse.

III.B.7. Chapter 14

Congress enacted much of Chapter 14 to avoid perceived abuses in valuing transfers of family-controlled business entities. Below this portion considers how retained equity interests are valued (and how to avoid such valuation), and the circumstances under which agreements to require or restrict transfers are considered in determining the value of what is transferred. We will focus on how Chapter 14 might affect the beneficial equity structures and deferred compensation techniques described in part II Income Tax Flexibility. After focusing on this interaction, the portion further below after this one brings the Code §409A overlay into play and tries to find some "sweet spots" which one might seek in structuring businesses.

Running the gift tax statute of limitations for Chapter 14 transfers requires filing a gift tax return that provides:[7271]

(i) A description of the transactions, including a description of transferred and retained interests and the method (or methods) used to value each;

(ii) The identity of, and relationship between, the transferor, transferee, all other persons participating in the transactions, and all parties related to the transferor holding an equity interest in any entity involved in the transactions; and

(iii) A detailed description (including all actuarial factors and discount rates used) of the method used to determine the amount of the gift arising from the transfer (or taxable

---

[7266] Code § 1041(d).
[7267] Code § 1041(e).
[7268] Code § 1041(e).
[7269] Reg. § 1.1041-1T includes:

Q-12. Do the rules described in A-10 and A-11 apply even if the transferred property is subject to liabilities which exceed the adjusted basis of the property?

A-12. Yes. For example, assume A owns property having a fair market value of $10,000 and an adjusted basis of $1,000. In contemplation of making a transfer of this property incident to a divorce from B, A borrows $5,000 from a bank, using the property as security for the borrowing. A then transfers the property to B and B assumes, or takes the property subject to, the liability to pay the $5,000 debt. Under section 1041, A recognizes no gain or loss upon the transfer of the property, and the adjusted basis of the property in the hands of B is $1,000.

[7270] See part III.B.2.d Income Tax Effect of Irrevocable Grantor Trust Treatment.
[7271] Reg. § 301.6501(c)-1(e)(2). Reg. § 301.6501(c)-1(e)(1) prevents us from relying on the income tax return exception that Reg. § 301.6501(c)-1(f)(4) provides for transactions in the ordinary course of business.

event), including, in the case of an equity interest that is not actively traded, the financial and other data used in determining value. Financial data should generally include balance sheets and statements of net earnings, operating results, and dividends paid for each of the 5 years immediately before the valuation date.

III.B.7.a. Overview of Chapter 14 Rules Regarding Family-Controlled Business Entities

Generally, Code § 2701 values transfers from older family members to younger family members. Code § 2703 allows the IRS to disregard buy-sell and transfer restrictions in many situations. Code § 2704 allows the IRS to disregard restrictions on liquidating an entity in certain situations.

Does Chapter 14 apply to interests in family-controlled business entities when they are transferred as compensation for services rendered by a family member? The regulations governing transfers in the ordinary course of business are expressly subject to Chapter 14.[7272] Furthermore, those regulations generally apply to protect transactions made between unrelated parties from gift tax scrutiny, whereas transactions between related parties are subjected to the usual scrutiny even if the business is an operating business.[7273]

III.B.7.b. Code § 2701 Overview

Code § 2701 applies for gift tax purposes.[7274]

[7272] See the last sentence of Reg. § 25.2512-8.

[7273] See Rev. Ruls. 68-558 (no gift tax on citizens' contributions to company to entice it to invest to create jobs in the community), 72-583 (ignore subjective intent), 77-131 (ignore subjective intent), 80-196 (no gift tax when shareholders transferred stock to unrelated key employees; note that Reg. § 1.83-6(d)(1) treats such transactions for income tax purposes as a contribution to the capital of the corporation followed by compensation paid by the corporation to the employees) (see part II.M.4.c.i When a Gift to a Service Provider Is Compensation and Not a Gift), and 81-54 (transaction that had legitimate business purpose was done in a manner that constituted a taxable gift to children, with ongoing annual gifts to the extent of profits paid to the children); *Estate of Cullison v. Commissioner*, T.C. Memo. 1998-216 (applying the following standards in holding for the IRS: Transfers of property in the ordinary course of business … are not subject to gift tax. …. To qualify, the transaction must be bona fide, at arm's length, and free from donative intent. …. As we further noted in *Harwood v. Commissioner*…: 'Transactions within a family group are subject to special scrutiny, and the presumption is that a transfer between family members is a gift.), *aff'd* 221 F.3d 1347 (9th Cir. 2000); *Estate of Ellie B. Williams v. Commissioner*, T.C. Memo. 1998-59 (transfers were gifts, not compensation for services, in light of (a) the fact that decedent did not agree to transfer property to petitioner as part of their business relationship, (b) decedent's personal relationship with petitioner, (c) her history of making gifts to him, and (d) the estate's signing of the gift tax returns); Letter Rulings 9117035 (ESOP transaction that indirectly benefited son deemed gift), 9253018 (applying Code § 2701 in a different ESOP transaction), 199928013 (bonuses to son were not gifts because they were part of a larger plan that primarily benefited employees not related to the principal shareholder), and 200014004 (excess compensation for services rendered as trustee was a gift); and *Blount v. Commissioner*, 428 F.3d 1338 (11th Cir. 2005) (when an ESOP and decedent were the only shareholders in the company, the estate would have been required to pay estate taxes for having made a bargain sale to the ESOP; however, requirement to use death benefit to buy stock offset that difference), *aff'g in part and rev'g in part* T.C. Memo. 2004-116; but see *Estate of Pearl I. Amlie v. Commissioner*, T.C. Memo. 2006-76 (Code § 2703(b)(1) business purpose was also a business purpose under Reg. § 25.2512-8; business purposes included hedging the holdings of a conservatorship estate and planning for future liquidity needs of the decedent's estate).

[7274] See fn. 2108, found in part II.H.2.j Effect of Chapter 14 on Basis Step-Up.

Extreme caution is required when using irrevocable grantor trusts.[7275]

Rev. Rul. 83-120 provides general rules for valuing preferred stock (or presumably an interest in a preferred partnership). Also, if a recapitalization of a closely held corporation causes a shift in the value of the interests of the beneficiaries of trusts that own stock in the corporation, the shift is treated as a transfer for estate and gift tax purposes.[7276] With these general rules as background, consider that Code § 2701 imprints an additional layer of rules when preferred stock or an interest in a preferred partnership is involved.

Furthermore, it treats as held by an individual any equity interest "to the extent the interest is held indirectly through a corporation, partnership, estate, trust, or other entity."[7277]

Also note that Code § 2701 does not apply for purposes of the tax on generation-skipping transfers.[7278]

Practical uses of preferred partnerships include:

- Part II.H.11 Preferred Partnership to Obtain Basis Step-Up on Retained Portion.
- Migrating from a corporation into the structure described in part II.E Recommended Structure for Entities. See parts II.E.7.c Flowcharts: Migrating Existing Corporation into Preferred Structure and II.Q.7.h Distributing Assets; Drop-Down into Partnership, the latter including part II.Q.7.h.viii Value Freeze as Conservative Alternative.

Code § 2036 should not apply to a transaction covered by Code § 2701.[7279]

III.B.7.b.i. Code § 2701 Definitions

Code § 2701(a)(1) values "transfers" when a transferor or "applicable family member" (the older generation) holds an "applicable retained interest" (a preferential distribution or liquidation right) after making a transfer of an interest in a corporation or partnership[7280] to a "member of the

[7275] See fns 7309-7310 in part III.B.7.b.i Code § 2701 Definitions.
[7276] Rev. Rul. 86-39, reproduced in part II.J.4.f Making Trust a Partial Grantor Trust as to a Beneficiary.
[7277] Reg. § 25.2701-6(a)(1), which goes on to say, If an equity interest is treated as held by a particular individual in more than one capacity, the interest is treated as held by the individual in the manner that attributes the largest total ownership of the equity interest.
[7278] See part II.H.11.e Using Preferred Partnership that Intentionally Violates Code § 2701, especially fn. 2228
[7279] See fn. 2209.
[7280] Prop. Reg. § 25.2701-2(b)(5)(i) would provide:

> For purposes of section 2701, a controlled entity is a corporation, partnership, or any other entity or arrangement that is a business entity within the meaning of § 301.7701-2(a) of this chapter controlled, immediately before a transfer, by the transferor, applicable family members, and/or any lineal descendants of the parents of the transferor or the transferor's spouse. The form of the entity determines the applicable test for control. For purposes of determining the form of the entity, any business entity described in § 301.7701-2(b)(1), (3), (4), (5), (6), (7), or (8) of this chapter, an S corporation within the meaning of section 1361(a)(1), and a qualified subchapter S subsidiary within the meaning of section 1361(b)(3)(B) is a corporation. For this purpose, a qualified subchapter S subsidiary is treated as a corporation separate from its parent corporation. In the case of any business entity that is not a corporation under these provisions, the form of the entity is determined under local law, regardless of how the entity is classified for federal tax

transferor's family" (a younger generation); an example of such a transfer is a preferred stock or preferred partnership freeze.[7281] Let's examine the meaning of these quoted terms and consider exceptions to these rules.

"Transfer" generally includes a contribution to capital, a capital structure transaction such as redemption, recapitalization, or other change in the capital structure of a corporation or partnership, or certain terminations of an indirect holding in the entity.[7282] However, it does not include:[7283]

- A capital structure transaction, if the transferor, each applicable family member, and each member of the transferor's family holds substantially the same interest after the transaction as that individual held before the transaction.[7284]

- A shift of rights due to a Code § 2518 qualified disclaimer.

- A shift of rights occurring upon the release, exercise, or lapse of a nongeneral power of appointment, except to the extent the release, exercise, or lapse would otherwise be a transfer for gift tax purposes.

---

purposes or whether it is disregarded as an entity separate from its owner for federal tax purposes. For this purpose, local law is the law of the jurisdiction, whether domestic or foreign, under whose laws the entity is created or organized.

[7281] For more information on preferred partnerships, see part II.H.11 Preferred Partnership to Obtain Basis Step-Up on Retained Portion.

[7282] See Code § 2701(e)(5) and Reg. § 25.2701-1(b)(2)(i), the latter providing:

In general. Except as provided in paragraph (b)(3) of this section, for purposes of section 2701, transfer includes the following transactions:

(A) A contribution to the capital of a new or existing entity;

(B) A redemption, recapitalization, or other change in the capital structure of an entity (a capital structure transaction), if-

(1) The transferor or an applicable family member receives an applicable retained interest in the capital structure transaction;

(2) The transferor or an applicable family member holding an applicable retained interest before the capital structure transaction surrenders an equity interest that is junior to the applicable retained interest (a subordinate interest) and receives property other than an applicable retained interest; or

(3) The transferor or an applicable family member holding an applicable retained interest before the capital structure transaction surrenders an equity interest in the entity (other than a subordinate interest) and the fair market value of the applicable retained interest is increased; or

(C) The termination of an indirect holding in an entity (as defined in § 25.2701-6), (or contribution to capital by an entity to the extent an individual indirectly holds an interest in the entity), if-

(1) The property is held in a trust as to which the indirect holder is treated as the owner under subchapter J of chapter 1 of the Internal Revenue Code; or

(2) If the termination (or contribution) is not treated as a transfer under paragraph (b)(2)(i)(C)(1) of this section, to the extent the value of the indirectly-held interest would have been included in the value of the indirect holder's gross estate for Federal estate tax purposes if the indirect holder died immediately prior to the termination.

[7283] Reg. § 25.2701-1(b)(3).

[7284] See part III.B.7.b.iii Capital Structure Transaction, If Each Individual Holds Substantially the Same Interest After the Transaction as That Individual Held Before the Transaction.

For most purposes of Code § 2701, "applicable family member" means "the transferor's spouse, an ancestor of the transferor or the transferor's spouse, and the spouse of any such ancestor."[7285] ***Multigenerational partnerships can be quite tricky, in that every transfer the second generation makes needs to consider the interests retained by not only the second generation but also the first generation.***

"Member of the family" means "the transferor's spouse, a lineal descendant of the transferor or the transferor's spouse, and the spouse of any such descendant."[7286]

"Applicable retained interest" includes the following:

- <u>A "distribution right," but only if, immediately before the transfer, the transferor and applicable family members "control" the entity</u>:[7287]

    - A "distribution right" is a right to distributions from an entity with respect to stock in a corporation or a partner's interest in a partnership.[7288] However, it does not include:[7289]

        - a right to distributions with respect to an interest that is of the same class or subordinate to the transferred interest,

        - an extraordinary payment right (a liquidation, put, call, or conversion right), or

        - a right to receive guaranteed payments from a partnership of a fixed amount.

    - "Control" means:

        - In the case of a corporation, at least 50%, by vote or value, of the corporation's stock.[7290] To be considered, voting rights must extend beyond the right to vote in liquidation, merger, or a similar event.[7291] A person is considered to own a voting right if that person can exercise that right alone or in conjunction with another person.[7292] Permissible recipients of income from the equity interest and other beneficiaries, rather than the trustee, are considered to hold voting rights that are in trust.[7293] Voting rights subject to a contingency that has not occurred do not count unless the holder of the right can control the contingency.[7294]

        - In the case of a partnership:[7295]

[7285] Code § 2701(e)(2); see Reg. § 25.2701-1(d)(2).
[7286] Code § 2701(e)(1); see Reg. § 25.2701-1(d)(1).
[7287] Code § 2701(b)(1)(A); Reg. § 25.2701-2(b)(1)(ii).
[7288] Code § 2701(c)(1)(A).
[7289] Code § 2701(c)(1)(B); Reg. § 25.2701-2(b)(3).
[7290] Code § 2701(b)(2)(A).
[7291] Reg. § 25.2701-2(b)(5)(ii)(B).
[7292] Reg. § 25.2701-2(b)(5)(ii)(B).
[7293] Reg. § 25.2701-2(b)(5)(ii)(B).
[7294] Reg. § 25.2701-2(b)(5)(ii)(B).
[7295] Code § 2701(b)(2)(B). See Letter Ruling 9639054 for one limited partnership scenario, involving ownership of the corporate general partner. Jonathan Blattmachr said that he obtained it after bringing in the author of the regulations and holding four meetings.

- ❖ At least 50% of the capital or profits interests, or

- ❖ In the case of a limited partnership, any interest as a general partner.[7296]

- ➢ Under proposed regulations,[7297] for any other entity:

  - ❖ Holding at least 50% of either the capital interests or the profits interests in the entity or arrangement, or

  - ❖ Holding any equity interest with the ability to cause the liquidation of the entity or arrangement in whole or in part.

The above excludes any Code § 707(c) guaranteed payment of a fixed amount.[7298] *Smaldino v. Commissioner*, T.C. Memo. 2021-127, respected a guaranteed payment that was later canceled when the IRS did not argue Code § 2701 and did not assert that turning off the guaranteed payment was a gift. The donor who retained the guaranteed payment wanted to use a low interest rate in determining the discounted present value of the payments, but the court noted that the partnership agreement required him to contribute to the partnership if there is a shortfall in the payments, so the interest rate used for present value calculations had to reflect the partnership's risk.

Solely for purposes of this "control" test, "applicable family member" includes any descendant of any parent of the transferor or the transferor's spouse.[7299]

- An extraordinary payment right.[7300] Generally, an extraordinary payment right includes a liquidation, put, call, or conversion right, any right to compel liquidation, or any similar right, the exercise or non-exercise of which affects the transferred interest's value.[7301] A "call right" includes any warrant, option, or other right to acquire one or more equity interests.[7302]

Notwithstanding the above, certain rights are not applicable retained interests:[7303]

- A mandatory payment right.[7304] This is a right to receive a payment at a specific time (including a date certain or the holder's death) for a specific amount.

7296 Reg. § 25.2701-2(b)(5)(iii).

7298 Reg. § 25.2701-2(b)(5)(iii). See text accompanying footnote 7306. For details on Code § 707(c), see part II.C.8.a Code § 707 - Compensating a Partner for Services Performed, which focuses on guaranteed payments for services rather than for capital even though Code § 707 covers both.
7299 Code § 2701(b)(2)(C).
7300 Reg. § 25.2701-2(b)(1)(i), (b)(2); see Code § 2701(b)(1)(B).
7301 Reg. § 25.2701-2(b)(1)(i), (b)(2).
7302 Reg. § 25.2701-2(b)(2).
7303 Reg. § 25.2701-2(b)(4).
7304 Reg. § 25.2701-2(b)(4)(i). Letter Ruling 9535026 conditioned the non-application of Code § 2701 to a sale for a note on the note not being characterized as equity; however, the ruling did not address that notes would be excluded from Code § 2701 as mandatory payment rights. As to valuing the notes, it held:

> In *Frazee v. Commissioner*, 98 T.C. 554 (1992), the Tax Court addressed the issue of whether, for gift tax purposes, the fair market value of a promissory note issued by children to their parents in exchange for real property must be determined by use of a discount rate prescribed under

- A liquidation participation right.[7305] This is a right to participate in a liquidating distribution. However, generally the right to ***compel*** liquidation is treated as if it did not exist if the transferor, members of the transferor's family, or applicable family members have the ability to compel liquidation.

- A right to a guaranteed payment of a fixed amount under Code § 707(c).[7306] The time and amount of payment must be fixed. The amount is considered fixed if determined at a fixed rate, including a rate that bears a fixed relationship to a specified market interest rate.

- A non-lapsing conversion right.[7307] This is a non-lapsing right to convert an equity interest:

  - Into a fixed number or fixed percentage of shares in a corporation that are the same class as the transferred interest.

  - Into a specified interest in the partnership (not represented by a fixed dollar amount) that is the same class as the transferred interest.

In both cases:

- Differences in voting rights are ignored.

- The conversion right must be subject to proportionate adjustments:

  - For a corporation, such adjustments must be made with respect to splits, combinations, reclassifications, and similar changes in capital stock.

  - For a partnership, the equity interest must be protected from dilution resulting from changes in partnership structure.

In testing who holds an applicable retained interest, consider the broad attribution rules of Reg. § 25.2701-6, which attribute an interest held indirectly through a corporation, partnership, estate, trust, or other entity,[7308] even to the extent of attributing an interest held through a

section 7872, or the safe-harbor rate provided under section 483(e). The court also considered the application of the rates prescribed under section 1274. The court concluded that section 7872 applied in determining the gift tax treatment of below-market loans regardless of whether the transaction involved a sale of property or a cash loan. The court reaffirmed its earlier position in *Krabbenhoft v. Commissioner*, 94 T.C. 887 (1990), *aff'd* 939 F.2d 529 (8th Cir. 1991), that section 483 does not apply for gift tax purposes. In concluding that section 1274 was not applicable in valuing the note for gift tax purposes, the court stated that section 1274 characterizes installment payments as principal or interest and, where stated interest is inadequate, it imputes interest. On the other hand, the court noted section 7872 was enacted specifically to address the gift tax treatment of below-market loans. Thus, the court concluded that the application of section 7872 is not limited to loans of cash. Rather, the term "loan" under section 7872 is broadly interpreted to include any extension of credit.

[7308] Reg. § 25.2701-6(a)(1).

grantor trust in which the grantor holds no beneficial interest.[7309] Grantor trust attribution takes first priority in determining who owns applicable retained interest but takes a back seat to the actual transferee in determining who owns subordinate interests.[7310]

III.B.7.b.ii. Certain Exclusions from Code § 2701

Code § 2701 does not apply to:

- Transferred interests that are marketable securities.[7311]
- Applicable retained interests that are marketable securities.[7312]
- A capital structure transaction, if the transferor, each applicable family member, and each member of the transferor's family holds substantially the same interest after the transaction as that individual held before the transaction.[7313] Letter Ruling 9321046 held that this exception did not apply to an irrevocable trust that was deemed owned by the grantor, because attribution rules deem the grantor to own any senior interests and the trust to own any subordinate interests.[7314]

[7309] Reg. § 25.2701-6(a)(4)(ii)(C). And, if one has a beneficial interest in a trust, one must assume maximum exercise of the trustee's discretion in the beneficiary's favor. See the text accompanying fn 7390, found in part III.B.7.d Code § 2702 Overview, but also see fn. 7310 for limitations on that.

[7310] Reg. § 25.2701-6(a)(5) provides:

(i) *Applicable retained interests*. If this section attributes an applicable retained interest to more than one individual in a class consisting of the transferor and one or more applicable family members, the interest is attributed within that class in the following order—
   (A) If the interest is held in a grantor trust, to the individual treated as the holder thereof;
   (B) To the transferor;
   (C) To the transferor's spouse; or
   (D) To each applicable family member on a pro rata basis.

(ii) *Subordinate equity interests*. If this section attributes a subordinate equity interest to more than one individual in a class consisting of the transferor, applicable family members, and members of the transferor's family, the interest is attributed within that class in the following order—
   (A) To the transferee;
   (B) To each member of the transferor's family on a pro rata basis;
   (C) If the interest is held in a grantor trust, to the individual treated as the holder thereof;
   (D) To the transferor;
   (E) To the transferor's spouse; or
   (F) To each applicable family member on a pro rata basis.

[7311] Reg. § 25.2701-1(c)(1).

[7312] Reg. § 25.2701-1(c)(2).

[7313] Reg. § 25.2701-1(b)(3)(i).

[7314] See fn. 7310. Zaritsky & Aucutt, ¶ 2.02[4] Indirect Transfers, *Structuring Estate Freezes: Analysis With Forms* (WG&L), refer to the Letter Ruling as a fascinating and informative application of the indirect-holdings and indirect-transfer rules. Note that the ruling held, The taxpayer is treated as making a gift to the extent that the value of her life estate in the common stock held by her prior to the recapitalization exceeds the value of her life estate in the preferred and common stock received in the recapitalization, not mentioning the possible application of Code § 2702 to the transferor's retained interest in the trust. However, Code § 2702 might be unnecessary to protect the government's interest in a Code § 2701 case. See the text accompanying fn 7390, found in part III.B.7.d Code § 2702 Overview, but also see fn. 7310 for limitations on that.

- A retained interest that is of the same class of equity as the transferred interest or if the retained interest is of a class that is proportional to the class of the transferred interest.[7315]

- A transfer by an individual to a member of the individual's family of equity interests to the extent the transfer by that individual results in a proportionate reduction of each class of equity interest held by the individual and all applicable family members in the aggregate immediately before the transfer.[7316]

III.B.7.b.iii. Capital Structure Transaction, If Each Individual Holds Substantially the Same Interest After the Transaction as That Individual Held Before the Transaction

Among various exceptions, a capital structure transaction is not subject to Code § 2701 if the transferor, each applicable family member, and each member of the transferor's family holds substantially the same interest after the transaction as that individual held before the transaction.[7317] For this purpose, common stock with non-lapsing voting rights and nonvoting common stock are interests that are substantially the same.

Letter Ruling 9427023 invoked this exception when partners in a straight-up partnership made additional capital contributions in proportion to their then-current interests. Letter Ruling 200026011 invoked this exception when an S corporation underwent a Code § 368(a)(1)(E) recapitalization in which the shareholders received one share of voting and ten shares of nonvoting common stock for every share of voting common stock currently held. Letter Rulings 9414012 and 9414013 invoked this exception when an S corporation issued nonvoting stock and when the senior generation gave nonvoting stock (with identical distribution and liquidation rights) to the next generation. None of the above letter rulings sheds any light on this exception, because all of these entities were straight-up: each ownership interest had identical distribution and liquidation rights, so Code § 2701 really did not apply anyway.

In Code § 355 spin-offs involving applicable retained interests, Letter Ruling 9843010 invoked this exception because "the shareholders will have substantially the same interests, rights, and limitations in the new entities and in Corporation, and with respect to the underlying assets of each, as each shareholder had before the transaction."

Letter Ruling 9309018 invoked this exception to approve a reverse split intended to avoid Delaware franchise tax:

> In the instant case, each preferred stockholder would hold the same percentage of the issued and outstanding preferred stock and the same overall percentage interest in the equity of the corporation after the proposed recapitalization as he or she would prior to the proposed recapitalization. In similar fashion, each common stockholder would hold the same percentage of the issued and outstanding common stock and the same overall percentage interest in the equity of the corporation after the proposed

[7315] See Reg. § 25.2701-1(c)(3), reproduced in the text accompanying fn. 7351 and further analyzed in part III.B.7.c.iii Same Class Exception - Possible Application to Profits Interest.

[7316] Reg. § 25.2701-1(c)(4), which further provides:

> Thus, for example, section 2701 does not apply if P owns 50 percent of each class of equity interest in a corporation and transfers a portion of each class to P's child in a manner that reduces each interest held by P and any applicable family members, in the aggregate, by 10 percent even if the transfer does not proportionately reduce P's interest in each class. See § 25.2701-6 regarding indirect holding of interests.

[7317] Reg. § 25.2701-1(b)(3)(i).

> recapitalization as he or she would prior to the proposed recapitalization. Thus, each stockholder of [the corporation] would hold substantially the same interest in the corporation after the proposed transaction as he or she did prior to the proposed transaction.

Letter Ruling 199947034 invoked this exception to approve a Code § 368(a)(1)(F) reorganization of a C corporation, that had a complicated capital structure, from corporate form to an LLC so that:

> Taxpayer and the other shareholders of Corporation will exchange their shares in Corporation for an identical number of units in LLC with rights, preferences, and restrictions identical to the rights, preferences, and restrictions each shareholder held in Corporation before the transfer.

In ruling that Code § 2701 did not apply, the IRS reasoned:

> In this case, each share of stock held by Taxpayer carries the same rights and restrictions as every other share of stock held by Taxpayer including voting rights that will lapse if that share is transferred. Thus, because Taxpayer's entire interest in the Corporation is an interest in one class, if Taxpayer transfers less than Taxpayer's entire interest in the Corporation, the retained interest will be of the same class as the transferred interest.

The Conference Committee Report on which this exception presumably is based said:

> The conference agreement provides, however, that the provision would not apply to a change in capital structure other than a contribution to capital if the interests held by the transferor, applicable family members, and family members are substantially identical before and after the change. The provision would not apply, for example, to a recapitalization not involving a contribution to capital if all shareholders held substantially identical interests both before and after the recapitalization. Nor would it apply to a change in corporate name. In addition, the conferees intend that the addition of capital to an existing partnership or corporation would result in the application of these rules only to the extent of such contribution.

This exception is in some ways similar to the exception invoked when the retained interest that is of the same class of equity as the transferred interest, which is described in part III.B.7.c.iii Same Class Exception - Possible Application to Profits Interest.

III.B.7.b.iv. Divorce Planning to Avoid Code § 2701

The lack of family relationship between former spouses can create planning opportunities. Consider this example:[7318]

> If two individuals who are married to each other want to use this planning device for the benefit of their children, a divorce prior to implementing the plan would avoid the disadvantages of § 2701. For example, if spouse A owns preferred and common stock in corporation X, a divorce from spouse B would enable him or her to sell the preferred

[7318] C. McCaffrey & J. McCaffrey, *Obergefell* and the Authority of the IRS to Challenge Valid Marriages and Divorces, *Steve Leimberg's Estate Planning Email Newsletter*, No. 2345 (9/21/2015).

stock to B while simultaneously giving the common to their children because B will no longer be a family member of A.

See also part III.B.6.d Divorce as an Opportunity to Transfer.

III.B.7.c. Code § 2701 Interaction with Income Tax Planning

How does Code § 2701 inform the discussion further above on ways to plan for entity transfers? Below is a qualitative analysis; quantifying these amounts using the complicated subtraction method[7319] is beyond the scope of these materials, although an application is described in part III.B.7.c.i.(b) CCA 201442053 Discusses Profits Interest in a Partnership That Was a Straight-Up Partnership before the Transfer.

Our discussion begins with profits interests, which are favorable treated for income tax purposes and are not subject to the restrictions that Code § 409A places on deferred compensation.[7320] When we discover the Code § 2701 problems they present, we will discuss alternatives, which themselves can present challenges of Code § 409 or 2703.

III.B.7.c.i. Profits Interest in a Partnership that Was a Straight-Up Partnership before the Transfer

Some take the position that Code § 2701 would not apply to the issuance of profits interests.[7321] In planning, I would rather explore the IRS' possible arguments and work around the problem than argue which approach is correct.

III.B.7.c.i.(a). General Discussion of Implications of Profits Interest in a Partnership that Was a Straight-Up Partnership before the Transfer

Suppose a parent transfers a profits interest to a child and retains the parent's capital account. The IRS would argue that the parent's capital account would be an applicable retained interest, valued at significantly less than its face amount, so that the transfer to the child will be treated as a transfer of much of the parent's capital account as well.[7322] However:

- This rule will not apply if the following, added together, are less than 50% of the partnership's income and less than 50% of the partnership's capital:
  - The parent's and child's interests, and
  - Interests of any combination of:

[7319] Reg. § 25.2701-3(b). The lack of family attribution under the *Bright* case, which the IRS conceded in Rev. Rul. 93-12, was decided after this regulation was issued, so presumably that trumps certain aspects of the subtraction method. The person who pointed this out to me said that he has prepared Form 8275-R taking this position one time, and the tax return was not audited.
[7320] See part II.M.4.f Issuing a Profits Interest to a .
[7321] Dees, Profits Interests Gifts under Section 2701: 'I Am Not a Monster,' *Tax Notes* 5/11/2009, also found at http://www.mwe.com/info/pubs/profits.pdf. For a less optimistic view, see Wendel and Hatcher, How to Profit without Getting Carried Away: Carried Interests, Profits Interests, Or Black Holes? 2009 *ACTEC Annual Meeting* (paper dated 1/14/2009).
[7322] In determining the value of the payment of the retained capital account, one must ignore the family's right to compel liquidation. See text accompanying footnote 7305.

- Applicable family members (the parent's spouse, an ancestor of the parent or of the parent's spouse, and the spouse of any such ancestor), and

- Descendants of the parents of the parent or the parent's spouse (in other words, the parent's and parent's spouse's siblings and the descendants of the parent, of the parent's spouse, or of such siblings).

- The parent may reduce the gift based on the discounted present value of the right to receive the capital account if either:

  - The partnership must pay the capital account to the parent at a "specific time," such as a specific date or the parent's death, or

  - One does not rely on liquidation (at which time the capital account would be paid to the parent) being compelled by any combination of:

    - The parent,

    - Members of the parent's family (the parent's spouse, a descendant of the parent or the parent's spouse, and the spouse of any such descendant), and

    - Applicable family members (the parent's spouse, an ancestor of the parent or of the parent's spouse, and the spouse of any such ancestor).

The parent can enhance the retained capital account's present value by retaining a cumulative distribution right with respect to the capital account. For example, if the partnership were required to pay the parent annually 7% of the parent's capital account and that right either was not contingent on profits[7323] or was cumulative,[7324] then the parent could also reduce the gift on account of the present value of that payment right.

The value of a junior equity interest cannot be valued at less than 10% of the sum of the total value of all equity interests in the partnership and the total amount of the partnership's indebtedness to the parent and other applicable family members.[7325] In a partnership, "junior equity interest" means any partnership interest under which the rights to income and capital are

[7323] Thereby constituting a guaranteed payment right under Reg. § 25.2701-2(b)(4)(iii). Instead of using 7% (arbitrarily selected for this example), one could use the prime rate or some other market rate.
[7324] Thereby constituting a qualified payment under Code § 2701(c)(3)(C)(i) (first sentence) and Reg. § 25.2701-2(b)(6)(ii). The transferor or an applicable family member who holds a distribution right that does not qualify may nevertheless treat the right as a qualified payment if he or she makes a special election under Code § 2701(c)(3)(C)(i) (second sentence) and Reg. § 25.2701-2(c)(4). Finally, additional gift tax may be imposed under Code § 2701(d) if the qualified payment is not made within the four-year grace period allowed under Code § 2701(d)(2)(C).
[7325] Code § 2701(a)(4); Reg. § 25.2701-3(c). Such indebtedness does not include short-term indebtedness incurred with respect to the current conduct of the entity's trade or business (such as amounts payable for current services); indebtedness owed to a third party solely because it is guaranteed by the transferor or an applicable family member; amounts permanently set aside in a qualified deferred compensation arrangement, to the extent the amounts are unavailable for use by the entity; or a qualified lease. Reg. § 25.2701-3(c)(3). A lease of property is not indebtedness, without regard to the length of the lease term, if the lease payments represent full and adequate consideration for use of the property. Lease payments are considered full and adequate consideration if a good faith effort is made to determine the fair rental value under the lease and the terms of the lease conform to the value so determined. Arrearages with respect to a lease are indebtedness.

junior to the rights of all other classes of partnership interests.[7326] Although a profits interest typically would be junior with respect to capital, generally it would not be junior with respect to income.[7327] Thus, generally the 10% minimum value rule would not apply to profits interests. However, as a practical matter, often appraisers of qualified retained interests require junior interests to be worth at least 20% of the entity to give full valuation effect to the stated payments, so avoiding the 10% minimum value rule would not necessarily be helpful.

On the other hand, if one needs to go through all of this complexity, one might consider abandoning the profits interest idea and instead using a GRAT.[7328] If the parent wants to transfer only a small portion, the parent could transfer a vertical slice (described further below) of what the parent owns and place a ceiling on the amount that is ultimately transferred to the child. If the parent's goal in transferring a profits interest is to incentivize the child, the GRAT's ceiling could be based on objective business performance measures.

- The issuance of a pure profits interest[7329] does not have Code § 409A implications.[7330] The Code § 409A analysis is not affected by whether the profits interest is junior to another interest.

- Suppose the partnership issues the interest to the child, instead of the parent transferring the interest. Code § 2701 applies to a "change in the capital structure" of a partnership or corporation in certain situations.[7331] However, Code § 2701 applies to a change in capital structure only if:[7332]

  (1) The transferor or an applicable family member receives an applicable retained interest in the capital structure transaction;

  (2) The transferor or an applicable family member holding an applicable retained interest before the capital structure transaction surrenders an equity interest that is junior to the applicable retained interest (a "subordinate interest") and receives property other than an applicable retained interest; or

  (3) The transferor or an applicable family member holding an applicable retained interest before the capital structure transaction surrenders an equity interest in the entity (other than a subordinate interest) and the fair market value of the applicable retained interest is increased.

In this variation, the parent does not hold an applicable retained interest before the transaction. Thus, we look to paragraph (1) and not to paragraphs (2) or (3). Because the parent has

---

[7326] Code § 2701(a)(4)(B); Reg. § 25.2701-3(c)(2).
[7327] However, if the parent retained a cumulative distribution as recommended above, then the profits interest would be junior as to income, and presumably the 10% minimum value rule would apply.
[7328] The author remembers the late Mil Hatcher for his creativity in suggesting the GRAT alternatives described here.
[7329] By pure profits interest the author means a partnership interest that would be allocated nothing if liquidation were to occur at the time of transfer of such interest.
[7330] See II.M.4.f Issuing a Profits Interest to a .
[7331] Code § 2701(e)(5).
[7332] Reg. § 25.2701-1(b)(2)(i)(B).

retained the capital account that he had before the transaction, rather than receiving a capital account,[7333] has the parent "received" an applicable retained interest in the transaction?

Suppose a client has acquired a preferred interest in a partnership controlled by the next generation, but lots of others have invested in the partnership? Although Code § 2701 applies, the transaction might not constitute a gift, because it was done in the ordinary course of business.[7334] I would not plan a partnership assuming that exception applied, because the facts-and-circumstances nature makes the result uncertain, but it can provide relief when taxpayers business-motivations predominate.

III.B.7.c.i.(b). CCA 201442053 Discusses Profits Interest in a Partnership That Was a Straight-Up Partnership before the Transfer

Code § 7872 generally does not apply to transactions between partnerships and partners. See part II.G.4.a.i Loans to Businesses – Whether AFR Is Required.

CCA 201442053[7335] was essentially an attempt to make a 20-year interest-free loan to children using a partnership. The CCA applied Code § 2701 to fulfill the role of Code § 2701 in backstopping Code § 7872. After reviewing what the IRS said, this memo will discuss why this attempt was such a bad idea and that the taxpayers would have been better off simply loaning the money instead of messing around with a partnership structure.

In CCA 201442053, after forming and operating a straight-up partnership:

> …at a time when Donor held an X percent ownership interest, Child A and Child B each held a Y percent ownership interest and Donor's grandchildren collectively held the remaining Z percent ownership interest, Company was recapitalized. In exchange for the agreement of Child A and Child B to manage Company, the operating agreement was amended to provide that henceforth all profit and loss, including all gain or loss attributable to Company's assets, would be allocated equally to Child A and Child B. After the recapitalization, Donor's and the grandchildren's sole equity interest in Company was the right to distributions based on their capital account balances as they existed immediately prior to the recapitalization.
>
> The gift tax liability of the grandchildren is not at issue herein, and will not be further discussed.

The CCA concluded that the shifting of the profits interests constituted a gift:

> For purposes of § 2701, a transfer includes a recapitalization or other change in the capital structure of an entity if the transferor holding an applicable retained interest before the capital structure transaction surrenders a subordinate interest and receives

[7333] This approach cannot be taken if done in conjunction with a contribution to capital. Reg. § 25.2701-1(b)(2)(i)(A).

[7334] See text accompanying fns. 7272 (ordinary course of business exception is subject to Chapter 14) and 7273 (when the exception has or has not been applied).

[7335] I have heard that, although this is designated a CCA, it really was an informal legal memorandum, without any input from the taxpayer or other procedural safeguards.

property other than an applicable retained interest. section 25.2701-1(b)(2)(B)(2).[7336] An applicable retained interest is an interest in a family-controlled entity with respect to which there is a distribution right. section 25.2701-2(b)(1)(ii). A subordinate interest is an interest as to which an applicable retained interest is a senior interest. section 25.2701-3(a)(2)(iii). A senior interest is an interest that carries a right to distributions of income or capital that is preferred as to the rights of the transferred interest. section 25.2701-3(a)(2)(ii). The term "property" includes every species of right or interest protected by law and having an exchangeable value.

Here, at all relevant times, Donor and her family controlled Company. On Date 3, Company was recapitalized and Donor surrendered her right to participate in future profit and loss, including future gain or loss attributable to Company's assets. Both before and after the recapitalization, Donor held an applicable retained interest, an equity interest in Company coupled with a distribution right.[7337] Donor's interest, which carried a right to

---

[7336] [my footnote, not the CCA's:] Dees, Is Chief Counsel Resurrecting the Chapter 14 'Monster'? *Tax Notes* (12/15/2014 at p. 1279), argues that the regulations exceed their statutory mandate by applying Code § 2701 to this recapitalization. Judge for yourself by reading Code § 2701(e)(5), which provides:

> Except as provided in regulations, a contribution to capital or a redemption, recapitalization, or other change in the capital structure of a corporation or partnership shall be treated as a transfer of an interest in such entity to which this section applies if the taxpayer or an applicable family member—
>
> (A) receives an applicable retained interest in such entity pursuant to such transaction, or
>
> (B) under regulations, otherwise holds, immediately after such transactions, an applicable retained interest in such entity.
>
> This paragraph shall not apply to any transaction (other than a contribution to capital) if the interests in the entity held by the transferor, applicable family members, and members of the transferor's family before and after the transaction are substantially identical.

[7337] [my footnote, not the CCA's:] Dees, Is Chief Counsel Resurrecting the Chapter 14 'Monster'? *Tax Notes* (12/15/2014 at p. 1279), criticizes the CCA for referring to Donors' equity interest as an applicable retained interest. His analysis correctly points out that the CCA's fails to discuss extraordinary payment rights (EPRs) in its shorthand description of the definition an applicable retained interest (ARI). However, let's look past that sloppy shorthand and apply the definition of an ARI to the original interest and to the retained interest; refer to the analysis in part III.B.7.b.i Code § 2701 Definitions.

ARI means an equity interest with respect to which there is either an EPR ***<u>or</u>*** a distribution right, so all the CCA needed to find was either an EPR or a distribution right. Reg. § 25.2701-2(b)(1). Key to his analysis regarding the original rights is Reg. § 25.2701-2(b)(3)(i), which says that distribution right does not include any right to receive distributions with respect to an interest that is of the same class as, or a class that is subordinate to, the transferred interest. In this case, the original interest was a right to receive a capital account on liquidation, coupled with a right to profits. The transferred interest was a right to profits. Using the same reasoning as in fn. 7338, the original interest is not subordinate to the transferred interest. Thus, the remaining question in determining whether the original interest included a distribution right is whether it is the same class as the transferred interest. Dees views them as the same class, presumably because both interests have rights in the same assets and have no payment preferences. However, the IRS might argue that Dees' approach is too narrow, because Reg. § 25.2701-1(c)(3) seizes on any differences whatsoever other than voting rights and limitations on liability:

> A class is the same class as (or is proportional to the class of) the transferred interest if the rights are identical (or proportional) to the rights of the transferred interest, except for non-lapsing differences in voting rights (or, for a partnership, non-lapsing differences with respect to management and limitations on liability).

Presumably, the IRS would argue that the rights to the original and transferred interests were not identical, and that they were not proportional because the zero capital account associated with the transferred interest did not bear the same relationship to profits as the capital account of the original

> distributions based upon an existing capital account balance, is senior to the transferred interests, which carried only a right to distributions based on future profit and gain. Donor received property in the form of the agreement of Child A and Child B to manage Company. Accordingly, the recapitalization constitutes a transfer by Donor for purposes of § 2701.

The statement, "Donor's interest, which carried a right to distributions based upon an existing capital account balance, is senior to the transferred interests, which carried only a right to distributions based on future profit and gain," is an incorrect conclusion. Although the original interest had more rights than the transferred interest, the original interest had no rights that entitled it to payment earlier (higher in priority) than the transferred interest.[7338]

---

interest had to profits. Dees has a lot of background and experience with Code § 2701 and the regulations and, upon audit, would make a persuasive argument for the approach he takes. However, at the planning stage, I would not assume that they are the same class.

The donor retained no rights to ongoing distributions after the recapitalization, so I agree with Dees that the CCA erred in calling the retained interest a distribution right and that the only analysis of it is as an EPR. See Reg. § 25.2701-1(a)(2)(ii) (an example of a distribution right is a right to receive dividends), combined with the exclusion of EPRs from the definition of distribution rights. Dees argues that bells and whistles need to attach to a set of rights to make them constitute EPRs. He does not view the retained capital account as an EPR. His view would be correct if the capital account was not required to be paid by a date certain and therefore would, absent any distribution tights, have a value for regular gift tax purposes approaching zero. However, in the CCA, the LLC had a fixed 20-year term. The IRS might have been thinking that the donor retained the right to compel liquidation in 20 years, and the retained bare capital account was an EPR. On the other hand, the LLC's fixed terms could also be viewed as a mandatory payment right, which I view as being more correct. Weighing these two approaches, presumably the IRS would argue that an abuse that Code § 2701 wanted to prevent is saying that the entity had a term of a period of years, getting value ascribed to the retained right to payments on that liquidation, and then extending the term, claiming that the extension was not a gift; therefore, the IRS would argue, the right to receive the capital account at the end of the stated term is an EPR.

Thus, although Dees' arguments would be good ones to make in an audit and the IRS' view is probably wrong, for planning purposes one might be very conservative and assume that the CCA is correct in its conclusion that the original interest and the retained interests are ARIs.

[7338] Dees, Is Chief Counsel Resurrecting the Chapter 14 'Monster'? *Tax Notes* (12/15/2014 at p. 1279), criticizes the CCA for referring to the original interest as senior to the transferred interest. Let's compare this to Reg. § 25.2701-3(a)(2)(ii), which provides:

> Senior equity interest means an equity interest in the entity that carries a right to distributions of income or capital that is preferred as to the rights of the transferred interest.

The original interest and the transferred interest had identical rights to distributions of income, so the only distinction was a right to capital. Nowhere do the regulations define preferred. However, they refer to preferred stock in various places, and traditionally preferred stock carries the right to receive dividends before any dividends are paid to the holders of common stock. Therefore, I believe that the better reading is looking to see whether one interest in capital receives its payment of capital before another interest does. The CCA leaps to the conclusion that an interest that includes a current capital account balance is senior in capital to an interest that has a zero capital account, a conclusion that ignores the timing assumption that appears to be inherent in the word preferred. The CCA's facts state, "No member has priority over any other member as to … the return of capital contributions." Furthermore, the CCA inherently assumes that a profits interest never has a capital account. Although the pure profits interest transferred here had a zero initial capital account (see part II.M.4.f Issuing a Profits Interest to a), a partnership is required to maintain a capital account for each partner. Reg. § 1.704-1(b)(2)(iv)(a). When a partner is allocated profits, the allocation increases the partner's capital account. Reg. § 1.704-1(b)(2)(iv)(b)(3). Distributions of those profits decrease the partner's capital account. Reg. § 1.704-1(b)(2)(iv)(b)(4). It is not uncommon for a partnership to reinvest part of its earnings for contingencies or

The CCA calculated the gift applying the subtraction method of Reg. § 25.2701-3(b):

> If § 2701 applies to a transfer, the amount of the transferor's gift, if any, is determined using a subtraction method of valuation. Under this method, the amount of the gift is determined by subtracting the value of any family-held applicable retained interests and other non-transferred equity interests from the aggregate value of the family-held interests. In determining the value of any applicable retained interest held by the transferor or an applicable family member, any distribution right in a controlled entity (*e.g.*, a right to receive dividends) is generally valued at zero.
>
> Step 1 - Determine the fair market value of all family-held equity interests in the entity immediately after the transfer assuming that the interests are held by one individual, using a consistent set of assumptions. Here, all equity interests are held by Donor, her children, and her grandchildren, all of whom are members of Donor's family. The result of Step 1 is an amount equal to the fair market value of 100 percent of the Company interests valued as if they were held by a single holder.
>
> Step 2 - Subtract: (A) the sum of the fair market value of all family-held senior equity interests determined after the transfer as if all interests were held by a single holder; and (B) the value determined under § 25.2701-2 of all applicable retained interests held by the transferor and any applicable family members. A senior equity interest is an interest that carries a right to distributions of income or capital that is preferred as to the rights of the transferred interest. Section 25.2701-3(a)(2)(ii). The interests of Child A, Child B and the grandchildren are senior to the transferred interests in that each carried a right to distributions based upon an existing capital account balance, whereas the transferred interests did not. Accordingly, the amount determined in Step 1 is reduced by the fair market value of Child A's, Child B's and the grandchildren's interests. The amount determined in Step 1 is further reduced by the value of Donor's postrecapitalization applicable retained interest. In valuing Donor's interest, the distribution right, which does not constitute a qualified payment right, is valued at zero, and the liquidation participation right is valued as if the family's ability to compel liquidation did not exist.

The sentence, "The interests of Child A, Child B and the grandchildren are senior to the transferred interests in that each carried a right to distributions based upon an existing capital account balance, whereas the transferred interests did not," is incorrect (because there are no senior interests).[7339] Therefore, subtracting the value of the interests of Child A, Child B, and the grandchildren's interests is incorrect, and the CCA understates the value remaining to which Step 3 would apply.

The CCA continues:

> Step 3 - Allocate the remaining amount among the transferred interest and other non-transferred subordinate equity interests held by the transferor, applicable family members, and members of the transferor's family. A subordinate equity interest is an interest as to which an applicable retained interest is a senior interest. section 25.2701-3(a)(2)(iii). Here, all applicable retained interests carried a distribution right based upon an existing capital account balance, whereas the interest transferred by the

---

to expand its capital base (to grow the business or to create economies of scale in investing marketable securities). Thus, Dees correctly criticizes the CCA for calling the original interest senior.

[7339] See fn. 7338.

grandchildren did not. This interest, which was not transferred by Donor, is a subordinate equity interest. Based on Donor and the grandchildren's relative ownership percentages immediately prior to the recapitalization, X / X+Z percent of the Step 2 amount is allocated to the transferred interest. Donor is treated as transferring one-half of this amount to Child A and one-half to Child B.

Again, the CCA errs by viewing certain interests as subordinate.[7340] Therefore, all of the remaining amount would be allocated to the retained interest.

> Step 4 - If the value of the transferred interest determined without regard to § 2701 would be determined after application of a minority discount, the Step 3 amount is reduced by a pro rata portion of the fair market value of the family-held interests of the same class determined as if they were held by one person, over the fair market value of a transferred interest. The Step 3 amount is also reduced by the amount, if any, of any consideration in money or money's worth received by the transferor. Here, Donor transferred an interest to each of two transferees, implicating a minority discount. The reduction for each gift is the excess, if any, of a pro rata portion of the fair market value of the transferred interests determined as if all voting rights were held by a single holder over the fair market value of a single transferred interest. In the event that Donor establishes the value in money or money's worth of any consideration provided by either Child A or Child B, a further reduction may be appropriate.

The analysis of Step 4 appears correct and introduces an element not discussed in previous rulings. Let's read together the highlighted parts in the facts[7341] and in Step 4:

- Donor received property in the form of the agreement of Child A and Child B to manage Company.

- In the event that Donor establishes the value in money or money's worth of any consideration provided by either Child A or Child B, a further reduction may be appropriate.

These statements suggest to me that the fair market value of the children's services to be performed over the LLC's life will be subtracted at the end, if the Donor can prove that value. However, in this particular case, the children are benefitting only themselves by managing the partnership, so query how much value will be assigned to their services. This case represents an extreme example. Generally, a service provider in a venture capital arrangement receives a 2% management fee and then, after the investors have recovered their investment and a threshold rate of return, 20% of the profits.[7342]

Note in Step 2 that the Donor's right to receive the Donor's capital account – referred to as a "liquidation participation right" - is properly valued as if the family's ability to compel liquidation did not exist. However, if, contrary to the CCA's approach, the partnership's fixed term were construed as a mandatory payment right, it would set an outside date at which the partners would receive their capital accounts – in this case, 20 years. If an appropriate discount rate for

---

[7340] See fn. 7338.
[7341] Donor received property in the form of the agreement of Child A and Child B to manage Company.
[7342] Arrangements vary from deal to deal. To determine what is market, one should talk with a corporate lawyer who advises in a large number of venture capital cases or consult an online service, such as Thompson Reuter's *Practical Law* (formerly known as the Practical Law Company).

equity were 8%, the right to receive $100.00 in 20 years would be worth $21.45.[7343] Thus, whether or not the CCA's valuation approach applies, if Code § 2701 applies then the Donor has made a substantial gift.

Going through the complex subtraction method, obtaining the requisite appraisals, and using an equity rate of return to discount the Donor's interest might very well provide a much less favorable result than if the Donor had simply done a loan to the children at the AFR.

CCA 201442053 appears to shut the door on a potentially abusive transaction. It also illustrates how the IRS approaches the subtraction method. However, it is full of errors (and my understanding is that the IRS showed a lower Code § 2701 gift than one computed using the gift tax principles that would normally apply), making one wonder how the IRS will next attempt to apply Code § 2701. Profits interests do not fit neatly with the scheme of Code § 2701, so issuing them in a family-controlled partnership can generate uncertain results.

Partnerships play an important role in our economy, particularly in the venture capital/private equity area. However, for family transactions, they require applying a complex regime. Therefore, first try using AFR loans; then see whether a GRAT works; and, if those do not suffice, then perhaps consider using a partnership with commercially reasonable terms, making sure that the donor retains a preferred partnership interest, makes a Code § 2701(c)(3)(C) election, or retains Code § 707(c) guaranteed payments[7344] so that the donor can get credit for the donor's retained stream of payments.

III.B.7.c.ii. Profits Interest in a Partnership in Which Transferor and Applicable Family Members Initially Hold Only a Profits Interest

Suppose a parent is buying a partnership owned by an unrelated third party. The unrelated third party retains all of his capital interest and receives preferred payments of income in liquidation of the value of his interest in excess of his capital account. The parent is entitled to 100% of the profits in excess of the preferred payments. As discussion further above, preferred payments of income to the third party can be very beneficial to the parent who is buying the business, if the preferred payments are taxed to the third party as a distributive share of income under Code § 736(a) so that the parent is using pre-tax dollars to buy out the third party.

- Initially establishing this capital/income structure will not have Code § 2701 implications, because the parent is not a member of the third party's family.

- The partnership's capital/income structure could have Code § 2701 implications if the parent transfers an interest to his child or any other member of the parent's family.

    - Does the parent own at least "50% of the profits interests" that would be required for Code § 2701 to be considered (since the parent has no capital account yet) if the partnership is a general partnership? The statute and regulations do not clearly answer

[7343] As of October 2014, a typical preferred return would be 8% or 9%. That assumes an annual distribution. Where no distribution is made for 20 years, presumably the discount rate would be higher. Thus, the illustration of $21.45 value for every $100 probably overstates the value of the Donor's retained interest.

[7344] For details on Code § 707(c), see part II.C.8.a Code § 707 - Compensating a Partner for Services Performed, which focuses on guaranteed payments for services rather than for capital even though Code § 707 covers both.

the question.[7345] If the partnership is a limited partnership and the parent is a general partner, then Code § 2701 must be considered no matter what the parent's economic interests are.[7346] If the partnership is a manager-managed limited liability company, and the parent is a manager, would that be the same as being a general partner in a limited partnership?

- Even if one assumes that the parent's partnership interest is sufficient to make one consider Code § 2701, if the parent transfers a vertical slice of the parent's right to income and the same vertical slice of the parent's right to capital to his child, Code § 2701 should not apply to that transfer.[7347] Suppose, for example, that the parent owns 60% of the income and 10% of the capital and wants to give a vertical slice of 1/10 of his interest to his child.[7348] In that case, the parent would give the child a 6% income (60% multiplied by 1/10) and 1% capital interest (10% multiplied by 1/10) and would retain a 54% income and 9% capital interest. The vertical slice should be structured so that the child succeeds to 1/10 of every item of the parent's rights to distributions and financial obligations. For example, if the parent is obligated to leave a portion of his share of income in the partnership, the child should have a proportionate obligation to leave income in the partnership; the parent's leaving profits in the partnership might[7349] constitute a contribution to capital, triggering Code § 2701,[7350] in which case one needs to find an exception to Code § 2701, such as transactions involving proportionate vertical slices.

III.B.7.c.iii. Same Class Exception - Possible Application to Profits Interests and Other Situations

Not much guidance explains how to implement the regulations under Code § 2701. The "same class" exception provides:[7351]

> Section 2701 does not apply if the retained interest is of the same class of equity as the transferred interest or if the retained interest is of a class that is proportional to the class of the transferred interest. A class is the same class as (or is proportional to the class of) the transferred interest if the rights are identical (or proportional) to the rights of the transferred interest, except for non-lapsing differences in voting rights (or, for a partnership, non-lapsing differences with respect to management and limitations on liability). For purposes of this section, non-lapsing provisions necessary to comply with partnership allocation requirements of the Internal Revenue Code (*e.g.*, section 704(b)) are non-lapsing differences with respect to limitations on liability. A right that lapses by

[7345] Code § 2701(b)(2)(B)(i); Reg. § 25.2701-2(b)(5)(iii).
[7346] Code § 2701(b)(2)(B)(ii); Reg. § 25.2701-2(b)(5)(iii).
[7347] See Reg. § 25.2701-1(c)(3), (4).
[7348] In the example, the parent starts with a pure profits interest and no capital. However, the parent is likely to leave some income in the partnership, especially since the reinvested income might be used to buy the third party's capital account. The cumulative effect would be to decrease the third party's capital account and increase the parent's capital account until the third party's capital account and income interest have decreased to zero.
[7349] The next paragraph of text suggests a difference between the parent transferring a partnership interest and the partnership issuing a partnership interest. Therefore, the author's concern about leaving profits in the partnership could be creating an issue where there is none, because the parent is not transferring property to the child. Thus, this recommendation is an attempt to be very conservative.
[7350] Reg. § 25.2701-1(b)(2)(i)(A).
[7351] Reg. § 25.2701-1(c)(3).

> reason of Federal or State law is treated as a non-lapsing right unless the Secretary determines, by regulation or by published revenue ruling, that it is necessary to treat such a right as a lapsing right to accomplish the purposes of section 2701. An interest in a partnership is not an interest in the same class as the transferred interest if the transferor or applicable family members have the right to alter the liability of the transferee.

Relying on Reg. § 25.2701-1(c)(3), the IRS has ruled that a merger that did not change the parties' economic rights did not cause Code § 2701 valuation to apply "because the transaction involves a mere change in the form of Taxpayer's holdings in the business activity."[7352]

Private Letter Ruling 9451051 applied this exception to a corporate arrangement that seems very much like a profits interest. The preferred stock did not have any preferences on dividends. The only preference was as follows:

> Upon liquidation, dissolution, or winding up of Corporation, the holders of the Class A preferred stock are entitled to be paid out of the assets of Corporation then available for distribution an amount equal to a liquidation preference of $10 per share. If after the payments have been made there remain assets available for distribution, then all of the assets are to be distributed pro rata among the holders of the common stock and the convertible preferred stock as if each share of convertible preferred had been converted into common stock. However, there shall be subtracted from any residual distribution to the holders of the Class A preferred an amount equal to the liquidation preference received by each holder.

The IRS ruled that the preferred stock was "substantially the same" as the transferred common stock.

This exception is in some ways similar to the exception described in part III.B.7.b.iii Capital Structure Transaction, If Each Individual Holds Substantially the Same Interest After the Transaction as That Individual Held Before the Transaction.

It has been suggested that a profits interest is analogous to common stock in this letter ruling and therefore are not subject to Code § 2701.[7353] However, in the letter ruling, after the preferred owners receive their preferred liquidation payment, the common would receive the proportionate make-up payments; whereas the holder of a profits interest would not receive

---

[7352] Letter Ruling 9352012 approved a merger of Corporation B into Corporation A under the following facts, in which the taxpayer held only preferred stock (and all the preferred stock):

> The rights with respect to Corporation B common and preferred stock are identical to the rights of the common and preferred stock of Corporation A except that the Corporation B preferred stock is entitled to receive 85 percent of par value upon liquidation and is redeemable by the corporation at 85 percent of par.
>
> Under the proposed merger, Taxpayer will exchange her Corporation B preferred stock for an equal number of shares of new Class C preferred stock to be issued by Corporation A. The rights of the Class C shareholder will be identical to those of the Corporation B preferred shareholders, and the Class C shares will be redeemable for 85 percent of par value. The common stockholders of Corporation B will exchange their stock for common stock of Corporation A of equal value.

[7353] Robinson, Business Succession Planning, Profits Interests and § 2701, *ACTEC Journal* (Spring 2009).

make-up payments, absent a capital account. It might be possible to make up this difference by specially allocating to the holders of profits interests:

- Gain on liquidation to the holder of the profits interests. Whether that would make the profits interests close enough is unclear; presumably it would depend on the likelihood of that gain occurring.

- Current income first, then to gain on liquidation. That would certainly increase the likelihood of the capital accounts increasing until they are proportionate to those of the original partners. That would make the profits interests be preferred as to current income, but presumably the holders of the profits interests would be in a lower generation and therefore Code § 2701 would not apply to this reverse freeze.

One should also consider an earlier technical advice memorandum that refused to apply the same class exception:[7354]

> Underlying the statute and regulations, the legislative history states that a "retained interest is valued under present law if it is of a class which is proportionally the same as the transferred interest but for nonlapsing differences in voting power (or, in the case of a partnership, nonlapsing differences with respect to management and limitations on liability)." H.R. Rep. No. 101-964, at 1133 (1990). Further, the legislative history notes that section 2701 generally does not affect the valuation of a gift of a partnership interest if all interests in the partnership share equally in all items of income, deduction, loss and gain in the same proportion (i.e., straight-up allocations). See 136 Cong. Rec. 515681 (daily ed. October 18, 1990) (1990 Senate Report on Proposed Revision of Estate Freeze Rules). However, the legislative history also notes that the exception to the valuation rules of section 2701 "would not apply to a partnership with both a general and limited partner if one partner had a preference with respect to distributions." H.R. Rep. No. 101-964, at 1133 (1990). Thus, if either the transferred or applicable retained interest in Partnership enjoy a preference as to distributions, the applicable retained interest in Partnership will be valued under the rules of section 2701. See *Id.*
>
> In the present case, the Partnership Agreement provides that proceeds from capital transactions shall be distributed first to the limited partners until their Adjusted Capital Contributions are reduced to zero, then to the general partner until its Adjusted Capital Contribution is reduced to zero. The balance of any proceeds, if any, shall be distributed to the partners in proportion to their partnership interests. On its face, this provision in the Partnership Agreement is a preference enjoyed by the limited partner (Trust) with respect to distributions of proceeds from capital transactions. Thus, the transfers at issue are not excluded from the special valuation rules of section 2701(a)(1) because Donor's applicable retained interest is not of the same class of equity as the transferred interest, nor is Donor's applicable retained interest of a class that is proportional to the class of the transferred interest.

With this contrast, I would want to have a special allocation of profits to the holder of the profits interest as soon as possible, to try to make it look more like the letter ruling and less like the TAM, so long as that did not constitute an unacceptable change to the business deal.

[7354] TAM 199933002.

I would still rather avoid the issue altogether, by using a loan to the service provider at the AFR so that the service provider could simply start with a proportionate capital account. The service provider could then have compensation incentives to enable him or her to repay the loan.

III.B.7.c.iv. Transfers When Owner Holds Profits Interest/Carried Interest and Other Interests

How might one deal complexities of planning with profits interests discussed in part III.B.7.b Code § 2701 Overview and the discussion in the previous parts of this part III.B.7.c Code § 2701 Interaction with Income Tax Planning? (Generally, a "carried interest" is a profits interest that provides an interest in profits only after the partners who provided the capital have received cash as part of an agreed-upon return.)

One method would be transferring all of the person's interest into a single entity, such as an LLC, so that the person's interest is held as a single package. Then one might transfer an interest in that single entity, to satisfy the vertical slice exception described in part III.B.7.c.iii Same Class Exception - Possible Application to Profits Interest.

An owner can combine this vertical slice planning with transfers that include more than just a straight gift. For example, an owner might place the LLC into a GRAT[7355] or transfer it in exchange for a note or an interest in preferred partnership.[7356]

III.B.7.c.v. Income Tax Dynamics of Using Deferred Compensation Instead of Profits Interest

Suppose that the moneyed partners – who we will call the service recipient (SR) – agree to pay compensation to the partner who is providing the services – the service provider (SP), instead of giving the SP a profits interest.

The SR would receive any capital gain treatment from the SP's portion of the profits. However, they would be able to use the tax benefits from an ordinary deduction to gross-up the SP's payment.

Suppose, for example, that ordinary income were taxable at a 40% rate and capital gain at a 20% rate. For every $100 the SP would receive, the SP would have expected to net $80, after subtracting $20 capital gain tax. Instead, the partnership pays the SP $133. The SP receives the same $80, which consists of $133 minus $53 (40% of $133) ordinary income tax. The SR receives a $133 ordinary income tax deduction, which costs the SR only $80 ($133 minus $53 ordinary income tax benefit); this $80 cost to the SR matches the $100 sale proceeds the SR receives less the $20 capital gain tax that the SR pays.

Thus, the lack of capital gain treatment to the SP should not an obstacle to the transaction. This assumes that the SR has other ordinary income against which to deduct the payment to the SP. If that is not the case, the benefit of the deduction might be at capital gain rates that are less than the ordinary income tax that the SP would be required to pay.

[7355] The late Mil Hatcher suggested this idea to me. For information on GRATs, see part III.B.2.b General Description of GRAT vs. Sale to Irrevocable Grantor Trust.
[7356] See Angkatavanich and Stein, Going Non-Vertical with Fund Interests - Creative Carried Interest Transfer Planning When The 'Vertical Slice' Won't 'Cut It,' *Trusts and Estates* (11/2010), saved as Thompson Coburn LLP document no. 6174249.

One would also want to compare whether the deduction to the SR is against the SR's self-employment income and whether the payment to the SP is subject to self-employment tax.

Because changes to deferred compensation plans must meet certain requirements or trigger significant tax consequences, using a profits interest is much more flexible than paying deferred compensation.

III.B.7.c.vi. Deferred Compensation

Although deferred compensation is not equity, it reduces the entity's value for many purposes and makes it easier to sell; it also creates an income stream for the older generation without constituting an asset subject to estate tax (assuming that the deferred compensation payments are spent and do not promote the recipient's other assets to grow to exceed the recipient's unused estate tax exemption).[7357] It is realistically available only if the entity earns sufficient income. For draconian rules that apply to deferred compensation, see part II.M.4.d Introduction to Code § 409A Nonqualified Deferred Compensation Rules.

Suppose a parent is 55 years old and wants to retire in 10 years. The business entity (same analysis whether partnership or corporation) agrees to make the following series of payments:

- Retirement Payment. $100,000 per year for life,[7358] but only if the parent continues to work for the entity until the parent attains age 65.[7359] This should not violate Code § 409A; of course, to satisfy other tax issues, the retirement payment must, when combined with other compensation, constitute reasonable compensation for future services.[7360] Similarly, as a payment that is fixed in amount at a specific time, it is not subject to Code § 2701,[7361] whether or not the IRS attempts to classify it as equity.

- Disability Payment. The parent receives $100,000 for life if the parent becomes disabled before attaining age 65. If disability is defined consistent with Code § 409A(a)(2)(A)(ii) and (a)(2)(C) and the pronouncements thereunder, the payment would not violate Code § 409A. Unfortunately, this definition is more stringent than most good disability policies, and one might consider paying a bonus to the parent so that the parent can buy disability insurance instead.[7362]

[7357] For a married couple, the survivor's interest in the deferred compensation automatically qualifies for the marital deduction. Code § 2056(b)(7)(C).

[7358] If instead the payment were for a fixed period of years instead of for life, more planning opportunities are available if the arrangement provides at all times that the right to the series of installment payments is to be treated as a right to a series of separate payments. Reg. § 1.409A-2(b)(2)(iii).

[7359] When the parent reaches 65, the present value of the retirement payments vests for FICA purposes, and a lump-sum FICA tax payment is due. Reg. § 31.3121(v)(2)-1(c)(2). Although this might sound onerous, it is actually quite beneficial. See discussion at part II.Q.1.d Nonqualified Deferred Compensation

[7360] In this example, the requirement that the parent work for 10 years is an attempt to spread the period of earning the compensation for the purposes of determining reasonable compensation.

[7361] Reg. § 25.2701-2(b)(4)(i) (in the case of a corporation) or (iii) (in the case of a partnership).

[7362] A good disability policy will provide benefits if the disabled person cannot work in his or her ***own occupation***. Contrast this with Code § 409A(a)(2)(C), which provides (emphasis added):

> For purposes of subparagraph (A)(ii), a participant shall be considered disabled if the participant -

- Death Benefit. A death benefit to replace the disability and retirement payments would not violate Code § 409A.

The discussion in part III.B.7.c.viii Creative Bonus Arrangements convinces the author that none of the above would constitute an equity interest. Therefore, such arrangements would not constitute an "applicable retained interest" that would taint a transfer by the parent to a child.[7363]

Note that any liability to pay the amounts described above generally would be a liability that would reduce the business' value when planning transfers of an interest in the business. See part II.Q.1.d.ii.(b) Balance Sheet Effects of Deferred Compensation in part II.Q.1.d Nonqualified Deferred Compensation.

Suppose the plan described above did not offer a death benefit, so all benefits stopped at death. In that case, nothing related to those payments is includible in the parent's estate.[7364] The ability to receive an income stream without estate inclusion is a powerful tool. Caveat: the payments need to be, in substance, reasonable compensation, or the IRS might argue that they are an interest in the business.

III.B.7.c.vii. Stock Options

Stock options exercisable at a price that is at least the underlying stock's value on the date of grant generally are not subject to Code § 409A.[7365] Similar rules apply to partnerships.

(i) is unable to engage in ***any substantial gainful activity*** by reason of any medically determinable physical or mental impairment which can be expected to result in death or can be expected to last for a continuous period of not less than 12 months, or

(ii) is, by reason of any medically determinable physical or mental impairment which can be expected to result in death or can be expected to last for a continuous period of not less than 12 months, receiving income replacement benefits for a period of not less than 3 months under an accident and health plan covering employees of the participant's employer.

[7363] Code § 2701 applies only when the parent or a member of the parent's family holds an applicable retained interest. An applicable retained interest includes only a right to equity. See Code § 2701(b), (c)(1), (c)(2).

[7364] Reg. § 1.2039-1(b)(2), Example (4) provides:

> Pursuant to a retirement plan, the employer made contributions to a fund which was to provide the employee, upon his retirement at age 60, with an annuity for life, and which was to provide his designated beneficiary, upon the employee's death after retirement, with a similar annuity for life, and which was to provide his designated beneficiary, upon the employee's death after retirement, with a similar annuity for life. The plan provided, however, that no benefits were payable in the event of the employee's death before retirement. The retirement plan at no time met the requirements of section 401(a) (relating to qualified plans). Assume that the employee died at age 59 but that the employer nevertheless started payment of an annuity in a slightly reduced amount to the designated beneficiary. The value of the annuity is not includible in the decedent's gross estate under section 2039(a) and (b). Since the employee died before reaching the retirement age, the employer was under no obligation to pay the annuity to the employee's designated beneficiary. Therefore, the annuity was not paid under a "contract or agreement" as that term is used in section 2039(a). If, however, it can be established that the employer has consistently paid an annuity under such circumstances, the annuity will be considered as having been paid under a "contract or agreement".

[7365] See part II.M.4.f.iv Alternative If a Prospective Partner Wants a Capital Interest Instead of a Profits Interest.

In addition to being subject to FICA, nonqualified stock options are subject to tax under the Railroad Retirement Tax Act.[7366]

For purposes of Code § 2701, the IRS tends to view options as compensation, not equity:[7367]

> Until the options are exercised, the holder of the option has no right to receive dividends and no right to vote shares of the corporation. The holder has only the right to purchase an equity interest (i.e., shares of stock). In purchasing the shares of stock, the holder would then obtain an equity interest in which he would have these rights. The holder of the options, thus, does not hold an equity interest in the corporation and a transfer of the options is not subject to section 2701 of the Code.

Income tax cases have held than an option to acquire a partnership interest does not constitute an equity interest in the partnership.[7368] The author has not discovered Code § 2701 cases addressing that question.

However, options are subject to Code § 2703, which deals primarily with buy-sell agreements.[7369]

Code § 1014(a) applies to a testamentary option to buy stock for less than fair market value, so that the option has basis and any stock bought in exercising it receives basis equal to the option's basis and exercise price.[7370] However, a lapse of the option is treated as having been disclaimed or renounced.[7371] This treatment would also apply to real estate.[7372]

III.B.7.c.viii. Creative Bonus Arrangements

Suppose an employee who is a family member is entitled to receive a bonus based on the entity's profitability. If the bonus is required to be paid on March 15 following the calendar year

---

[7366] *Wisconsin Central Ltd. v. U.S.*, 118 A.F.T.R.2d 2016-XXXX (N.D. Ill. 7/8/2016), in holding that nonqualified stock options are subject to the RRTA, stated:

> Similar suits have been filed in recent years. See *BNSF Ry. Co. v. United States*, 775 F.3d 743 (5th Cir. 2015); *Union Pac. R.R. Co. v. United States*, No. 8:14-cv-00237, slip op. (D. Neb. Jul. 1, 2016) (reproduced at Doc. 35-1); *CSX Corp. v. United States*, No. 3:15-cv-00427 (M.D. Fla. filed Apr. 3, 2015). In the two judgments issued thus far, the Fifth Circuit in *BNSF Railway* and the District of Nebraska in *Union Pacific* both upheld the Treasury Department's interpretation of any form of money remuneration to include non-qualified stock options. For the following reasons, this court reaches the same result.

[7367] Letter Ruling 199952012 and CCA 199927002; see Letter Ruling 9616035. The IRS also compares the stock with respect to which the option is granted with the stock that the transferor retained. See Letter Ruling 9725032 (option related to publicly traded stock, and such stock is not subject to Code § 2701) and 9722022 (stock subject to option was same class as stock the transferor retained, so Code § 2701 did not apply).

[7368] *Dorman v. U.S.*, 296 F.2d 27 (9th Cir. 1961) (option was a capital asset but not a partnership interest); *Vestal v. U.S.*, 498 F.2d 487 (8th Cir. 1974) (option was neither a capital asset [because its value was too speculative] nor a partnership interest); *Mayhew v. Commissioner*, T.C. Memo. 1992-68 (option and right to bonus did not constitute a profits interest).

[7369] See text accompanying footnotes 4584-4591.

[7370] Rev. Rul. 67-96.

[7371] Rev. Rul. 67-96.

[7372] Letter Ruling 200340019 applied Rev. Rul. 67-96 to a testamentary option to buy a house. Regarding options involved in Code § 1031 tax-free exchanges of real estate, see Rev. Rul. 84-121, discussed in fn. 1638 in part II.G.16 Like-Kind Exchanges.

the results of which are being measured, the bonus plan generally would not be subject to Code § 409A. If this bonus is based on the entity's income, would the bonus plan constitute an equity interest?

The author is not aware of Code § 2701 cases addressing this issue, so the author has summarized selected income tax cases.

As in other areas, state law determines rights, but tax law determines the effect of those rights; whether a partnership exists depends on a weighting of several factors.[7373]

Some very entrepreneurial taxpayers have been treated as employees and not as owners when they:

- Received salary plus 50% of the profits.[7374]

- Developed a new product line, not only thinking of the idea but also reducing it to practical application and sales to the general public, receiving a percentage of sales.[7375]

The above tests all assume that the service provider is an employee. In a corporate setting, a shareholder who works in the business has two different capacities: an owner and an employee. The author is aware of only one situation in which the IRS combined the two concepts, and that was a clearly abusive situation.[7376] The discussion further above about S corporations compensating employees with stock options provide insight about when, for income tax purposes, an option constitutes equity in the corporation. Absent guidance in a Code § 2701 setting, the author suggests relying on the income tax principles, possibly requesting a Letter Ruling in appropriate situations.

Contrast that with a partnership setting: For income tax purposes, all partner compensation is considered in conjunction with the partner's equity interest. See part II.C.8.a Code § 707 - Compensating a Partner for Services Performed. The author suggests the following guidelines for partnerships:

- If the service provider has a clearly-defined vested[7377] equity interest in the partnership, any additional compensation constituting a guaranteed payment will be reported on the service provider's Schedule K-1.[7378] If the IRS audits an applicable family member's estate tax return and obtains partnership income tax returns, an agent is likely to argue that the service provider's guaranteed payments are part of the service provider's total equity interest and might argue that a testamentary or prior transfer of equity to the service provider should

---

[7373] See part II.C.10 Whether Tenancy-in-Common or other Arrangement Constitutes a Partnership.
[7374] *Friednash v. Commissioner*, 209 F.2d 601 (9th Cir 1954); *Duley v. Commissioner*, T.C. Memo. 1981-246.
[7375] *Luna v. Commissioner*, 42 T.C. 1067 (1964). This is one of many cases in which insurance agents unsuccessfully attempted to treat as the sale of a capital asset payments commuting their future commissions or similar contract rights.
[7376] In TAM 9352001, son-in-law was given an employment contract that paid him cash of at least three or four times the market value of his services, for a management position for which he was not qualified, as well as issuing him a control block of voting stock as part of his compensation. The IRS ruled that the stock was cumulative preferred stock, with the excess compensation constituting the preference.
[7377] See text accompanying fn. 3757 in part II.M.4.f.ii Tax Effects of Profits Interest for issues relating to a wholly unvested interest in partnership capital and profits.
[7378] See footnote 528.

have been valued considering this additional compensation. One should carefully consider the extent to which the service provider has the right as a partner to make these payments to himself/herself.

- Contrast this to a corporate setting, where these incentive payments are reported on Forms W-2. The IRS' main inquiry is likely to be whether the incentive payments constituted reasonable compensation. Although the IRS might argue that the payments were part of the service provider's rights as a shareholder, in most corporate settings the shareholder would need to elect a director to protect his/her interest, and then prove that the director would have conspired with the other directors to order the corporation's president to pay such compensation.[7379]

III.B.7.c.ix. Debt vs. Equity

Generally, for gift tax purposes courts look to income tax cases to determine when a transaction rises to the level of granting an equity interest. For income tax principles, see part II.G.20 Debt vs. Equity; Potential Denial of Deduction for Business Interest Expense.

III.B.7.d. Code § 2702 Overview

Code § 2702(a), "Valuation rules," provides:

(1) *In general*. Solely for purposes of determining whether a transfer of an interest in trust to (or for the benefit of) a member of the transferor's family is a gift (and the value of such transfer), the value of any interest in such trust retained by the transferor or any applicable family member (as defined in section 2701(e)(2))[7380] shall be determined as provided in paragraph (2).

(2) *Valuation of retained interests*.

(A) *In general*. The value of any retained interest which is not a qualified interest shall be treated as being zero.

(B) *Valuation of qualified interest*. The value of any retained interest which is a qualified interest shall be determined under section 7520.

(3) *Exceptions*.

(A) *In general*. This subsection shall not apply to any transfer -

(i) if such transfer is an incomplete gift,

(ii) if such transfer involves the transfer of an interest in trust all the property in which consists of a residence to be used as a personal residence by persons holding term interests in such trust, or

---

[7379] Many states have statutory close corporation provisions allowing a corporation to abolish such formalities; see fn 1138. Furthermore, a shareholders' agreement can purport to lock-in such arrangements; however, the general rule is that no agreement can legally bind future directors to a particular course of action.
[7380] See fn 7286 in part III.B.7.b.i Code § 2701 Definitions.

(iii) to the extent that regulations provide that such transfer is not inconsistent with the purposes of this section.

(B) *Incomplete gift*. For purposes of subparagraph (A), the term “incomplete gift” means any transfer which would not be treated as a gift whether or not consideration was received for such transfer.

Code § 2702(b), “Qualified interest,” provides:

For purposes of this section, the term “qualified interest” means-

(1) any interest which consists of the right to receive fixed amounts payable not less frequently than annually,

(2) any interest which consists of the right to receive amounts which are payable not less frequently than annually and are a fixed percentage of the fair market value of the property in the trust (determined annually), and

(3) any noncontingent remainder interest if all of the other interests in the trust consist of interests described in paragraph (1) or (2).

Code § 2702(c), “Certain property treated as held in trust,” provides:

For purposes of this section -

(1) *In general*. The transfer of an interest in property with respect to which there is 1 or more term interests shall be treated as a transfer of an interest in a trust.

(2) *Joint purchases*. If 2 or more members of the same family acquire interests in any property described in paragraph (1) in the same transaction (or a series of related transactions), the person (or persons) acquiring the term interests in such property shall be treated as having acquired the entire property and then transferred to the other persons the interests acquired by such other persons in the transaction (or series of transactions). Such transfer shall be treated as made in exchange for the consideration (if any) provided by such other persons for the acquisition of their interests in such property.

(3) *Term interest*. The term “term interest” means -

(A) a life interest in property, or

(B) an interest in property for a term of years.

(4) *Valuation rule for certain term interests*. If the nonexercise of rights under a term interest in tangible property would not have a substantial effect on the valuation of the remainder interest in such property -

(A) subparagraph (A) of subsection (a)(2) shall not apply to such term interest, and

(B) the value of such term interest for purposes of applying subsection (a)(1)shall be the amount which the holder of the term interest establishes as the amount for which such interest could be sold to an unrelated third party.

Code § 2702(d), "Treatment of transfers of interests in portion of trust," provides:

> In the case of a transfer of an income or remainder interest with respect to a specified portion of the property in a trust, only such portion shall be taken into account in applying this section to such transfer.

Code § 2702(e), "Member of the family," provides:

> For purposes of this section, the term "member of the family" shall have the meaning given such term by section 2704(c)(2).

Code § 2702(b)(1) and the regulations thereunder govern grantor retained annuity trusts (GRATs). See part III.B.2.b General Description of GRAT vs. Sale to Irrevocable Grantor Trust.

When the grantor retains an interest that is not a qualified interest, see part III.B.2.c Grantor Retained Income Trust (GRIT).

CCA 201208026 discussed the interaction of completed gift concepts and Code § 2702. It is reproduced in part in the completed gift discussion of part III.B.2.c.iii GRIT When Code § 2702 Applies.

Regulations under Code § 2702 also might create unexpected gift tax issues when trusts are modified, decanted, or otherwise adjusted. Code § 2702 provides special rules to determine the amount of the gift when an individual makes a transfer in trust to (or for the benefit of) a member of the individual's family and the individual or an applicable family member retains an interest in the trust.[7381] If Code § 2702 applies to a transfer, the value of any interest in the trust retained by the transferor or any applicable family member is determined under Reg. § 25.2702-2(b).[7382] The amount of the gift, if any, is then determined by subtracting the value of the interests retained by the transferor or any applicable family member from the value of the transferred property.[7383] If the retained interest is not a qualified interest,[7384] the retained interest is generally valued at zero, and the amount of the gift is the entire value of the property.[7385]

A potential trap is that a "transfer in trust" includes "a transfer to a new or existing trust and an assignment of an interest in an existing trust."[7386] An "assignment of an interest in an existing trust" is not explicitly limited to a transfer of the beneficiary's interest to a new trust, so the IRS might argue that it applies to a shift in beneficial interest from one beneficiary to a new or existing beneficiary. If all of a trust is decanted by being transferred to another trust, the beneficiary's entire interest is being transferred, and the IRS might assert that any diminishment in the beneficiary's interest is a gift of the value of the beneficiary's entire interest in a trust, without being reduced for any beneficial interest that the beneficiary retains except to the extent that the retained interest qualifies under Code § 2702 (such as a qualified annuity interest). However:

[7381] Reg. § 25.2702-1(a).
[7382] Reg. § 25.2702-1(b).
[7383] Reg. § 25.2702-1(b).
[7384] As defined in Reg. § 25.2702-3.
[7385] Reg. § 25.2702-1(b).
[7386] Reg. § 25.2702-2(a)(2).

- A “transfer in trust” does not include the exercise, release or lapse of a power of appointment over trust property that is not a transfer under the usual gift tax rules[7387] and does not include a Code § 2518 qualified disclaimer.[7388]

- Letter Ruling 9321046 did not apply Code § 2702 when applying Code § 2701 to a freeze transaction engaged in by a trust, making the gift equal to the difference in the beneficiary’s life estate before and after the freeze.[7389] On the other hand, if Code § 2701 applies, “A person is considered to hold an equity interest held by or for an estate or trust to the extent the person’s beneficial interest therein may be satisfied by the equity interest held by the estate or trust, or the income or proceeds thereof, assuming the maximum exercise of discretion in favor of the person.”[7390]

- Rev. Rul. 93-12 (see text accompanying fn 6337 in part III.B.1.b Transfers for Insufficient Consideration, Including Restructuring Businesses or Trusts) looks to the property that each transferee separately receives. If the transferee receives an interest in the entire trust, the IRS might argue that the entire beneficial interest was transferred. On the other hand, if the amount the transferee receives has a solid limit, presumably that would limit the gift’s value.

- “If a transfer is wholly incomplete as to an undivided fractional share of the property transferred (without regard to any consideration received by the transferor), for purposes of this paragraph the transfer is treated as incomplete as to that share.”[7391] So, if the transfer caps distributions to the transferee to certain percentage of the trust and is subject to the transferor beneficiary’s veto,[7392] the gift may be incomplete and measured based on actual distributions.

A common planning tool is for the beneficiary to hold such powers in the new trust as would make a gift of the beneficial interest in the old trust be an incomplete gift. See part III.B.1.c.iii Incomplete Gift. Note that this causes estate inclusion and may be inappropriate in a trust that was intended to be excluded from the beneficiary’s gross estate because it is grandfathered from GST tax or that is protected from GST tax by reason of the transferor allocating GST exemption.

Code § 2702 does not apply to a transfer in trust if the transfer of an interest to a spouse is deemed to be for full and adequate consideration by reason of Code § 2516 (relating to certain property settlements) and the remaining interests in the trust are retained by the other spouse.[7393] However, a settlement that provides benefits to the persons other than the couple,

---

[7387] Reg. § 25.2702-2(a)(2)(i).
[7388] Reg. § 25.2702-2(a)(2)(ii).
[7389] See fn. 7314. Whether the IRS overlooked the issue or decided that Code § 2702 did not apply is unclear. The ruling did not mention any consideration of Code § 2702.
[7390] Reg. § 25.2701-6(a)(4), but also see fn. 7310 for limitations on that.
[7391] Reg. § 25.2702-1(c)(1).
[7392] Reg. § 25.2511-2(e) provides:

> A donor is considered as himself having a power if it is exercisable by him in conjunction with any person not having a substantial adverse interest in the disposition of the transferred property or the income therefrom. A trustee, as such, is not a person having an adverse interest in the disposition of the trust property or its income.

[7393] Reg. § 25.2702-1(c)(7). Reg. § 25.2702-4(d), Example (5), provides:

> H and W enter into a written agreement relative to their marital and property rights that requires W to transfer property to an irrevocable trust, the terms of which provide that the income

such as their children, constitutes either a gift by the transferring spouse to the those other persons,[7394] a relinquishment by the transferee spouse of the transferee's marital rights,[7395] or some combination of those.[7396] In such a settlement involving other persons, Code § 2702 applies,[7397] and the beneficiary spouse's rights must be a qualified interest in order for them to be valued.[7398]

> of the trust will be paid to H for 10 years. On the expiration of the 10-year term, the trust is to terminate and the trust corpus is to be paid to W. H and W divorce within two years after the agreement is entered into. Pursuant to section 2516, the transfer to H would otherwise be deemed to be for full and adequate consideration. Section 2702 does not apply to the acquisition of the term interest by H because no member of H's family acquired an interest in the property in the same transaction or series of transactions. The result would not be the same if, on the termination of H's interest in the trust, the trust corpus were distributable to the children of H and W rather than W.

[7394] Rev. Rul. 79-363.

[7395] Rev. Rul. 77-314, Situation 2.

[7396] Reg. § 25.2702-4(c) applies to joint purchases:

> Solely for purposes of section 2702, if an individual acquires a term interest in property and, in the same transaction or series of transactions, one or more members of the individual's family acquire an interest in the same property, the individual acquiring the term interest is treated as acquiring the entire property so acquired, and transferring to each of those family members the interests acquired by that family member in exchange for any consideration paid by that family member. For purposes of this paragraph (c), the amount of the individual's gift will not exceed the amount of consideration furnished by that individual for all interests in the property.

Thus, if a transferee spouse acquires a term interest in the trust, and the children also acquire an interest, Code § 2702 would apply. However, if the transfer involves children of the transferee spouse and not of the transferor spouse and occurs after the divorce but pursuant to the divorce decree, the transferee spouse and the transferee spouse's children are not considered members of transferor spouse's family, so perhaps Code § 2702 would not apply.

[7397] See the last sentence of Reg. § 25.2702-4(d), Example (5), which fn. 7393 reproduces in full.

[7398] Letter Ruling 200408015 did not apply Code § 2702 when the transferee spouse had the right to annuity payments from the trust's income and principal and the remainder would pass to the transferor spouse's children. It ruled that that, to the extent of the transferee spouse's annuity interest, the transfer to the trust would constitute a transfer for full and adequate consideration under Code § 2516, and the only taxable gift transferor spouse Settlor will be the gift of the trust remainder's to the transferor spouse's children under Code § 2511. Letter Ruling 200408015 also held that creating the trust to discharge the transferor trust's support rights did not subject the transferor spouse to income tax:

> In this case, Settlor proposes to transfer funds to Trust pursuant to the Modification. In the event Trust is treated as a grantor trust, Settlor is treated as the owner of the Trust. Therefore, Settlor will not be considered to have made a transfer of property for federal income tax purposes and there is no section 1041 issue to consider. Thus, if Trust is a grantor trust, no gain or loss would be realized by Husband under section 1001.
>
> Alternatively, if Trust is not treated as a grantor trust, Settlor will be considered to have made a transfer of property, but no gain or loss would be recognized by Settlor under section 1001. To the extent that Settlor's proposed transfer of assets to the Trust is for the benefit of Wife, any realized gain on the transfer would not be recognized under section 1041(a). To the extent that Settlor's transfer of assets to the Trust is considered as a gift to Settlor's children, no gain or loss would be recognized.
>
> The transfer of property will be made pursuant to the Modification. Settlor's transfer of property to Trust for Wife's benefit is a transfer that is incident to the divorce within the meaning of section 1041(a)(2) and section 1.1041-1T, Q&A-7. The transfer is pursuant to a divorce or separation instrument and occurs not more than 6 years after the date on which the marriage ceased. Thus, no gain or loss is recognized on such transfer.

III.B.7.e. Code § 2703 Overview

See discussion in part II.Q.4.h Establishing Estate Tax Values.

Regulations assert that Code § 2703 applies for estate, gift, and generation-skipping transfer tax purposes, but one court held that it applies only to transfers at death.[7399]

Estate of Morrissette v. Commissioner, T.C. Memo. 2021-60, held that Code § 2703 did not apply to the split-dollar arrangement at issue:[7400]

> The first step in the valuation process is to determine the property includible in the gross estate. The parties agree that the split-dollar rights are assets that are includible in the gross estate. The estate included the split-dollar rights in the gross estate but reported values for the rights substantially discounted from the $30 million in premiums that the CMM trust paid. By doing so, the estate significantly undervalued the split-dollar rights. Before we determine the fair market values of the split-dollar rights, we must consider application of the special valuation rules of section 2703. Section 2703(a) provides that the value of any asset includible in the gross estate shall be determined without regard to (1) any option, agreement, or other right to acquire or use the property at a price less than its fair market value or (2) any restriction on the right to sell or use such property. Section 2703(b) provides an exception where the restriction is a bona fide business arrangement, not a device to transfer property to members of the decedent's family for

---

It also addressed the interaction of the transferor spouse's swap power (see part III.B.2.h.i Who Is the Grantor), which made the trust a grantor trust as to the transferor spouse, with Code § 682, which taxes the transferee spouse on amounts paid, credited, or required to be paid to the transferee spouse (see the paragraph accompanying fn. 5973, found in part III.A.3.e.i.(a) QSSTs Generally):

> The circumstances surrounding Trust's administration will determine whether the power of administration is exercisable in a fiduciary or a nonfiduciary capacity. This is a question of fact, the determination of which must be deferred until the federal income tax returns of the parties involved have been examined by the office with responsibility for such examination. Provided that the circumstances surrounding Trust's administration indicate that the power of administration held by Settlor over Trust *(i.e.*, the power to substitute assets for assets of equivalent value) is exercisable by Settlor in a nonfiduciary capacity without the approval or consent of a person in a fiduciary capacity, Settlor will be treated as the owner of Trust. We further conclude that while both Settlor and Wife are alive, section 682 governs the income taxation of Trust. Accordingly, distributions from Trust to Wife are deductible by Trust and includible by Wife in her gross income to the extent provided in sections 661 and 662. Under the terms of Trust, capital gains are not includible in the distributions to Wife. Accordingly, capital gains are not included in the distributions to Wife and are included in the gross income of Settlor under section 675(4) (subject to the conditions noted above regarding section 675(4)).
>
> We further conclude that if Wife predeceases Settlor, upon the death of Wife, section 682 would no longer apply and Trust will be treated as a grantor trust with Settlor as owner, provided that, after the death of Wife, Settlor retains the same powers of administration that cause Trust to be a grantor trust under section 675(4) (subject to the conditions noted above regarding section 675(4)). If Settlor predeceases Wife, section 682 no longer applies and payments to Wife will be deductible to Trust under section 661 and includible in Wife's gross income under section 662. Income allocable to principal will be taxable to Trust. If neither Settlor nor Wife are alive, then the income taxation of Trust is also governed by the rules of subchapter J, other than the grantor trust rules and section 682.

[7399] See fn. 4588, found in part II.Q.4.h Establishing Estate Tax Values.

[7400] See part II.Q.4.f Split-Dollar Arrangements, especially part II.Q.4.f.v Estate Tax Consequences of Split-Dollar Agreements.

less than adequate and full consideration, and comparable to the terms of similar arrangements in arm's-length transactions.

The parties filed cross-motions for partial summary judgment with respect to the application of section 2703(a). We denied both motions in an order dated February 19, 2019, citing *Estate of Cahill v. Commissioner*, at *28. We held that section 2703(a) would apply to disregard the mutual termination restriction unless the section 2703(b) exception is satisfied.[12] Petitioners have established that the section 2703(b) exception applies in this case. Under the exception, the restriction must be part of a bona fide business arrangement, not a device to transfer property at less than adequate and full consideration, and for terms comparable to similar arrangements entered into at arm's length. Sec. 2703(b); sec. 25.2703-1(b)(4), Gift Tax Regs.

[12] Respondent contends that once we disregard the mutual termination restriction, the split-dollar rights would have values equal to the cash surrender values. Because the sec. 2703(b) exception applies, we do not need to determine the values of the split-dollar rights under the assumption of a unilateral termination right.

1. Bona Fide Business Arrangement

A bona fide business arrangement is not defined in the Code or the regulations. Sec. 2703(b)(1). We have held that a restrictive arrangement must further some business purpose. *Amlie v. Commissioner*, T.C. Memo. 2006-76. As discussed above, the family members credibly testified that the split-dollar agreements were entered into for valid business purposes and the mutual termination restriction was added so that no brother could jeopardize the valid business purposes of the agreements. The split-dollar agreements were intended to address flaws in the 1996 plan, past disputes, and Interstate's future management while attempting to accomplish Mrs. Morrissette's wish for the company remain within her family for generations. See *Estate of Gloeckner v. Commissioner*, 152 F.3d 208, 214 (2d Cir. 1998), *rev'g on other grounds* T.C. Memo. 1996-148; *Kress v. United States*, 382 F. Supp. 3d 820, 839 (E.D. Wis. 2019) (recognizing maintenance of family ownership and control of a business as a valid business purpose).

The family members credibly testified about the difficulties created within Interstate's management and for its employees. Ken credibly testified that he would have engaged in the split-dollar agreements even if they had not provided any estate tax saving. It is not clear that the brothers would have agreed to terminate the split-dollar agreements during Mrs. Morrissette's life so that the CMM trust would receive repayment. Assuming that the split-dollar agreements are viewed as written, the dynasty trusts would receive nothing upon a termination of the split-dollar agreements.

Furthermore, the CMM trust had valid business reasons for entering into the split-dollar agreements. Planning for future liquidity needs of a decedent's estate constitutes a business purpose under section 2703(b)(1). *Amlie v. Commissioner*, T.C. Memo. 2006-76. We find that the mutual termination restriction furthered the business purposes of the split-dollar agreements and had a significant effect in supporting those business purposes.

2. Testamentary Device

Under the second prong of the exception, the restriction must not be a device to transfer property for less than adequate and full consideration in money or money's worth. Sec. 2703(b)(2). Some facts indicate a testamentary purpose of the split-dollar agreements. However, under the second prong of the exception, we consider whether the mutual termination restriction is a device, not whether the split-dollar agreements in their entirety were a device. Whether a restriction constitutes a testamentary device depends in part on the fairness of the consideration received by the transferor when it executed the transaction. See *Estate of True v. Commissioner*, T.C. Memo. 2001-167, *aff'd*, 390 F.3d 1210 (10th Cir. 2004). Respondent does not seek to disregard the split-dollar agreements in their entirety.

Under the totality of the facts and circumstances, we find that the mutual termination restriction was not a device to transfer funds at less than adequate and full consideration. As discussed above, the split-dollar agreements contained repayment terms that a reasonable investor would have accepted. They provided inside buildup at a guaranteed interest rate of 3% and in fact provided interest between 4.75% and 5.4%, higher than the CMM trust had been earning on the transferred funds. The inside buildup appreciated at rates comparable to those of long-term bonds. The split-dollar agreements were stable investments that also provided for tax deferral on the inside buildup. Petitioners argue that the inside buildup would have been tax exempt although we do not decide that question. Each of these facts negates a finding that the mutual termination restriction was a device to transfer property for less than adequate and full consideration.

The gift tax treatment of the split-dollar agreements does not change our conclusion that split-dollar agreements entered into at arm's length between unrelated parties would contain a mutual termination restriction comparable to the one at issue here. To do otherwise, we would need to ignore the insureds were also senior executives in a successful 75-year-old business who had not only run the company for nearly 40 years but also significantly developed it.

For reasons stated above with respect to the section 2036 and 2038 exceptions, the CMM Trust received other financial benefits from the premium payments. The CMM trust received value through continued family control and management succession and avoidance of uncertainty including possible future litigation. The turmoil among the family members who served as senior management executives exposed the fair market value of Interstate to risk that a prudent investor would have considered. Buddy, who was Interstate's CEO, had sought a buyout for years, and the split-dollar agreements provided for one. In respondent's view, the CMM trust benefited only because of estate tax saving. This is clearly not the case, on the basis of the record. The CMM trust received adequate and full consideration when it executed the split-dollar agreements. The CMM trust relinquished rights over the transferred amounts for additional certainty about Interstate's future.

Petitioners argue that the split-dollar agreements were not devices to evade tax because the net death rights were transferred in accordance with the split-dollar regulations. Compliance with the regulations does not itself establish that the split-dollar agreements were not a device to evade tax. See *Estate of Cahill v. Commissioner*, T.C. Memo. 2018-84. First, we note that the exception focuses not on the restriction as part of a bona fide business arrangement and not on the split-dollar agreements as a whole. Irrespective of the statutory or regulatory wording, the fact that the split-dollar agreements reduced the estate tax on Mrs. Morrissette's estate does not require a finding that the agreements were testamentary devices. The CMM trust through its cotrustees did not enter into the split-dollar agreements with an intent to evade estate tax. The cotrustees believed the terms to be fair at the time the CMM trust executed the split-dollar agreements including the mutual termination restriction. Accordingly, the mutual termination restriction satisfies the second requirement of the exception.

3. Comparability With Arm's-Length Transactions

The comparability prong requires that the restriction would have been part of an arm's-length transaction between unrelated parties. Sec. 2703(b)(3); sec. 25.2703-1(b)(4)(i), Gift Tax Regs. Thus, the issue for the third prong of the section 2703 exception is whether unrelated parties in an arm's-length transaction would include a mutual termination restriction in a split-dollar agreement that is comparable to the mutual termination restriction at issue.

The regulations instruct that the restriction must be comparable to one struck in a fair bargain among unrelated parties in the same business and that such a bargain occurs when it conforms with the general practices of negotiated agreements in that same business. Sec. 25.2703-1(b)(4)(i), Gift Tax Regs. The regulations caution against using "isolated comparables". *Id*. subdiv. (ii). We have described the third prong of the exception as "more of a safe harbor than an absolute requirement that multiple comparables be shown." *Amlie v. Commissioner*, T.C. Memo. 2006-76, slip op. at 41.

Respondent offered split-dollar agreements entered into as employee compensation by publicly traded corporations. Public corporations do not necessarily meet the regulations' directive to consider the same business. Mr. Burns did not provide an analysis of the business of the public corporations or whether any were in the same business as Interstate. The fact that the corporations were public alone causes us to question whether we should rely on the agreements as comparable. Interstate has been a family business for over 75 years. Split-dollar agreements entered into by public corporations have little relevance to ascertaining whether a closely held corporation or its majority shareholder would include a mutual termination restriction in a split-dollar agreement. In 2006 Mrs. Morrissette owned 75% of Interstate directly or indirectly.

However, this is not the only problem that we have with the corporate filings. On respondent's instruction, Mr. Burns limited his review to policies owned by the employer. Here, Interstate did not own the policies and did not have any ownership rights to the policies. The dynasty trusts owned the policies, and the split-dollar agreements placed restrictions on their ownership rights. They did not convey any ownership rights in the policies to the CMM trust. The fact that the economic benefit regime deems the CMM trust the policy owner for gift or income tax purposes is irrelevant. We consider the agreements as written just as Mr. Burns considered the public split-dollar agreements as written. Respondent has not articulated a convincing reason for placing such a restriction on Mr. Burns' testimony. [*105] Finally, we do not agree with Mr. Burns' characterization that 84% of the reviewed agreements provide a unilateral termination right to the employer or gave the employer full unilateral access to the cash surrender values. Twenty-six agreements provided some type of restriction of the employers' rights to unilaterally terminate the split-dollar agreements. Vesting for years of service is one such restriction which is particularly relevant here given the fact that the brothers were senior executives. Petitioners ask us to consider whether a closely held corporation would provide life insurance benefits to its senior executives who had worked within the business for over 40 years. Such consideration is appropriate. Long-term senior executives would likely demand a mutual termination restriction comparable to the one at issue, and the reviewed agreements provide vesting provisions. The mutual termination restriction would ensure the executives' rights to the net death benefits similar to vesting in employment compensation packages on the basis of years of service. In total, approximately 30% of the public agreements imposed some restriction on the employer's termination rights. The termination rights of another 13% are not as clear as respondent argues.

As discussed above, on these facts we hold the split-dollar agreements were entered into at arm's length especially in the light of the brothers' acrimonious [*106] relationships and disputes over Interstate's ownership. We are satisfied that a split-dollar agreement entered into by a closely held business and its long-term senior executives at arm's length may contain a mutual termination restriction similar to the one in the split-dollar agreements at issue. Accordingly, we hold that the third requirement of the section 2703(b)(3) exception has been met.

On this record, we conclude that the requirements of the section 2703(b) exception are satisfied and section 2703 does not require disregard of the mutual termination restriction for purposes of determining the fair market values of the split-dollar rights.

III.B.7.f. Code § 2704 Overview

Code § 2704 applies for estate, gift, and generation-skipping transfer tax purposes.[7401]

III.B.7.f.i. Code § 2704 – Current Law

In a family-controlled business, Code § 2704(a) treats as a transfer the lapse of any voting or liquidation right in a corporation or partnership.[7402] When valuing transfers, Code § 2704(b) disregards restrictions on liquidation that are not commercially reasonable and are more restrictive than state law defaults. In other words, Code § 2704(a) values what is not transferred but rather goes away, and Code § 2704(b) values what is transferred; in both cases, the true economic value is modified by federal tax law.

If the entity is not family-controlled (using a combination of Code § 2701 and 2704 principles), then Code § 2704 does not apply.

Code § 2704(a) provides that, if there is a lapse of any voting or liquidation right in a corporation or partnership, and the individual holding such right immediately before the lapse and members of such individual's family hold, both before and after the lapse, control of the entity, the lapse is treated as a transfer by the individual by gift, or a transfer which is includible in the gross estate

[7401] See fn. 2110, found in part II.H.2.j Effect of Chapter 14 on Basis Step-Up.
[7402] The lapse of voting rights at death was includible in the decedent's gross estate in the *Estate of Rankin Smith v. U.S.*, 103 Fed. Cl. 533 (2012). Why the decedent did not do a voting/nonvoting right recap and plan accordingly is not mentioned. The bona fide business arrangement is an exception to Code § 2703, not Code § 2704.

of the decedent, whichever applies.[7403] The amount of this transfer is the excess (if any) of (A) the value of all interests in the entity held by the individual immediately before the lapse (determined as if the voting and liquidation rights were nonlapsing), over (B) the value of such interests immediately after the lapse.[7404]

In the context of an affirmative transfer of an equity interest, existing regulations apply only regarding one's right to liquidate the entity.[7405] Proposed regulations would expand this to apply these rules to the ability to liquidate one's interest in the business.[7406]

Code § 2704(b) provides that, if there is a transfer of an interest in a corporation or partnership to (or for the benefit of) a member of the transferor's family, and the transferor and members of the transferor's family hold, immediately before the transfer, control of the entity, any applicable restriction shall be disregarded in determining the value of the transferred interest:[7407]

- An "applicable restriction" is any restriction which effectively limits the ability of the corporation or partnership to liquidate, and with respect to which either:[7408]

  (i) the restriction lapses, in whole or in part, after the transfer, or

  (ii) the transferor or any member of the transferor's family, either alone or collectively, has the right after such transfer to remove, in whole or in part, the restriction.

- "Applicable restriction" does not include:[7409]

  (A) any commercially reasonable restriction which arises as part of any financing by the corporation or partnership with a person who is not related to the transferor or transferee, or a member of the family of either, or

  (B) any restriction imposed, or required to be imposed, by any Federal or State law.

- Regulations may disregard other restrictions "in determining the value of the transfer of any interest in a corporation or partnership to a member of the transferor's family if such restriction has the effect of reducing the value of the transferred interest" for estate, gift, and generation-skipping transfer tax purposes "but does not ultimately reduce the value of such interest to the transferee."[7410]

III.B.7.f.ii. 2016 Proposed Regulations (Withdrawn)

For many years, taxpayers have been placing nonbusiness assets in business entities. Because business entities that are not publicly traded are illiquid and certain ownership interests

---

[7403] Code § 2704(a)(1). Code § 2704(a)(3) authorizes regulations to apply Code § 2704(a) to rights similar to voting and liquidation rights.
[7404] Code § 2704(a)(2).
[7405] *Kerr*, 292 F.3d 490 (5th Cir. 2002); compare Reg. § 25.2704-2(b) (for a transferred interest, an applicable restriction is a limitation on the ability to liquidate the entity) with Reg. § 25.2704-1(a)(2)(v) (for a lapse, liquidation right means right to compel the entity to redeem the interest).
[7406] See part III.B.7.f.ii.(a) Prop. Reg. § 25.2704-1 Regarding .
[7407] Code § 2704(b)(1).
[7408] Code § 2704(b)(2).
[7409] Code § 2704(b)(3).
[7410] Code § 2704(b)(4).

lack input into how the entities are run, the ownership interests are worth much less than a pro rata share of the entities' assets. The IRS has had only limited success increasing the value to a pro rata share of the entities' assets.

Fourteen years after losing a case in which the court suggested that the government consider changing the relevant regulations, the government took action.

REG-163113-02 (10/17/2017) withdrew the proposed regulations.

Further below are discussions of the following parts of the withdrawn proposed regulations:

- III.B.7.f.ii.(a) Prop. Reg. § 25.2704-1 Regarding Value That Disappears Without Being Transferred, including value that permanently disappears because of a change in rights and value that, if one dies too soon after the transfer, is brought back into one's estate because it reduced the value of one's retained interest in the entity by reason of losing control.

- III.B.7.f.ii.(c) Prop. Reg. § 25.2704-2 Disregarding "Applicable Restrictions" That Later Lapse or Can Be Removed.

- III.B.7.f.ii.(d) Prop. Reg. § 25.2704-3 Disregarding Restrictions under Governing Documents and State Law that Could Have Been Removed All Along.

The latter is very controversial and would not apply until 30 days after being finalized. Code § 2704(b)(4) authorizes the government to promulgate regulations disregarding a restriction "if such restriction has the effect of reducing the value of the transferred interest … but does not ultimately reduce the value of such interest to the transferee." If, as generally is the case for operating businesses, cashing in an owner's interest or liquidating the entity would decrease the value of the owner's interest, a regulation that assumes greater liquidity than is actually the case would seem to violate the regulation's authority.

Note that any value that the latter treats as being transferred would not be taxed as gifts under the first two proposed rules, because the value never disappeared. Also, to the extent that other tax attributes of transferred property are derived from gifts, they would apply to what the transferee received under the latter but have uncertain application to value treated as disappearing under the first two.

III.B.7.f.ii.(a). Prop. Reg. § 25.2704-1 Regarding Value That Disappears Without Being Transferred

The new rules apply only if the entity is controlled by the holder and/or members of the holder's family immediately before and after the lapse.[7411]

[7411] Prop. Reg. § 25.2704-1(a)(1). Prop. Reg. § 25.2704-1(a)(2)(i) would add the following to the end of existing Reg. § 25.2704-1(a)(2)(i):

> For purposes of determining whether the group consisting of the holder, the holder's estate and members of the holder's family control the entity, a member of the group is also treated as holding any interest held indirectly by such member through a corporation, partnership, trust, or other entity under the rules contained in § 25.2701-6.

Prop. Reg. § 25.2704-1(a)(2)(i) would add the following before the third sentence of existing Reg. § 25.2704-1(a)(2)(iii):

For purposes of subtitle B (relating to estate, gift, and generation-skipping transfer taxes), the lapse of a voting or a liquidation right[7412] in a corporation or a partnership (an entity),[7413] whether domestic or foreign, is a transfer by the individual directly or indirectly holding the right immediately before its lapse (the holder) to the extent provided in the rules below.[7414]

A lapse includes a transfer that results in the restriction or elimination of the transferee's ability to exercise the voting or liquidation rights that were associated with the interest while held by the transferor, specifically including the transfer of a voting partnership interest to an assignee who cannot vote.[7415]

Notwithstanding the repeal of rules against transfers in contemplation of death and the limitation of a 3-year rule in Code § 2035, the new rule would impose Code § 2704 estate inclusion on the lapse of a voting or liquidation right as a result of the transfer of an interest within three years of the transferor's death.[7416]

Whether an interest can be liquidated immediately after the lapse is determined under the local law generally applicable to the entity, as modified by the governing documents of the entity, but without regard to any restriction (in the governing documents, applicable local law, or otherwise) described in Code § 2704(b) and the regulations thereunder.[7417] See part III.B.7.f.ii.(b) Prop. Reg. §§ 25.2704-2 and 25.2704-3 Increasing Value.

In the case of a limited liability company, the right of a member to participate in company management is a voting right.

[7412] Prop. Reg. § 25.2704-1(a)(4) provides:

Source of right or lapse. A voting right or a liquidation right may be conferred by or lapse by reason of local law, the governing documents, an agreement, or otherwise. For this purpose, local law is the law of the jurisdiction, whether domestic or foreign, that governs voting or liquidation rights.

[7413] Prop. Reg. § 25.2704-1(a)(1) provides:

For purposes of this section, a corporation is any business entity described in § 301.7701-2(b)(1), (3), (4), (5), (6), (7), or (8) of this chapter, an S corporation within the meaning of section 1361(a)(1), and a qualified subchapter S subsidiary within the meaning of section 1361(b)(3)(B). For this purpose, a qualified subchapter S subsidiary is treated as a corporation separate from its parent corporation. A partnership is any other business entity within the meaning of § 301.7701-2(a) of this chapter regardless of how that entity is classified for federal tax purposes. Thus, for example, the term partnership includes a limited liability company that is not an S corporation, whether or not it is disregarded as an entity separate from its owner for federal tax purposes.

[7414] Prop. Reg. § 25.2704-1(a)(1).

[7415] Prop. Reg. § 25.2704-1(a)(5).

[7416] Prop. Reg. § 25.2704-1(c)(1).

[7417] Prop. Reg. § 25.2704-1(c)(2)(i)(B), which further provides:

The manner in which the interest may be liquidated is irrelevant for this purpose, whether by voting, taking other action authorized by the governing documents or applicable local law, revising the governing documents, merging the entity with an entity whose governing documents permit liquidation of the interest, terminating the entity, or otherwise. For purposes of making this determination, an interest held by a person other than a member of the holder's family (a nonfamilymember interest) may be disregarded. Whether a nonfamily-member interest is disregarded is determined under § 25.2704-3(b)(4), applying that section as if, by its terms, it also applies to the question of whether the holder (or the holder's estate) and members of the holder's family may liquidate an interest immediately after the lapse.

Transfers made within 3 years of death might also constitute a lapse,[7418] including transfers approved by Rev. Rul. 93-12.[7419]

The three-year period was purportedly to capture transfers in contemplation of death. However, it would apply if a very healthy person died accidentally and could have unfair results. For example, a young, healthy married person with a marital deduction designed to generate no estate tax transfers assets subject to this rule. The transferor is hit by a bus two years later. The phantom asset in the transferor's estate does not pass to the spouse and therefore might generate estate tax. My understanding is that comments would suggest that this be changed to whether, using Code § 7520 principles, the taxpayer is expected to live at least one year, which would still benefit the government more than current law.

The effective date of the lapse provision is unclear. If a transferor dies within three years, the lapse is treated as occurring at the date of death. If the transfer is made before the regulations' effective date and the transferor dies after the regulations' effective date, would the regulations capture the lapse? My understanding is that the final regulations are expected to clarify that the answer is no.

Note that selling one's interest to an unrelated third party in a sale that results in the transferor losing control may constitute a lapse that this provision reaches.

III.B.7.f.ii.(b). Prop. Reg. §§ 25.2704-2 and 25.2704-3 Increasing Value Transferred

III.B.7.f.ii.(c). Prop. Reg. § 25.2704-2 Disregarding "Applicable Restrictions" That Later Lapse or Can Be Removed

If an interest in an entity is transferred to or for the benefit of a member of the transferor's family, and the transferor and/or members of the transferor's family control the entity immediately before the transfer, any applicable restriction is disregarded in valuing the transferred interest.[7420]

"Applicable restriction" means "a limitation on the ability to liquidate the entity, in whole or in part (as opposed to a particular holder's interest in the entity), if, after the transfer, that limitation either lapses or may be removed by the transferor, the transferor's estate, and/or any member of the transferor's family, either alone or collectively."[7421]

[7418] Prop. Reg. § 25.2704-1(f), Example (7), would revise the third and fourth sentences and add a new conclusion:

> More than three years before D's death, D transfers 30 shares of common stock to D's child. The transfer is not a lapse of a liquidation right with respect to the common stock because the voting rights that enabled D to liquidate prior to the transfer are not restricted or eliminated, and the transfer occurs more than three years before D's death. * * * However, had the transfer occurred within three years of D's death, the transfer would have been treated as the lapse of D's liquidation right with respect to the common stock occurring at D's death.

[7419] See the regulation accompanied by a paragraph explaining Rev. Rul. 93-12 in part III.B.1.b Transfers for Insufficient Consideration, Including Restructuring Businesses or Trusts.

[7420] Prop. Reg. § 25.2704-2(a).

[7421] Prop. Reg. § 25.2704-2(b)(1), which further provides, "See § 25.2704-3 for restrictions on the ability to liquidate a particular holder's interest in the entity."

An "applicable restriction" may arise under an entity's governing documents or applicable law.[7422] Almost every law is subject to being disregarded.[7423]

"A restriction is an applicable restriction only to the extent that either the restriction by its terms will lapse at any time after the transfer, or the restriction may be removed after the transfer by any one or more members, either alone or collectively, of the group consisting of the transferor, the transferor's estate, and members of the transferor's family."[7424]

[7422] Prop. Reg. § 25.2704-2(b)(2) provides:

> *Source of limitation*. An applicable restriction includes a restriction that is imposed under the terms of the governing documents (for example, the corporation's by-laws, the partnership agreement, or other governing documents), a buy-sell agreement, a redemption agreement, or an assignment or deed of gift, or any other document, agreement, or arrangement; and a restriction imposed under local law regardless of whether that restriction may be superseded by or pursuant to the governing documents or otherwise. For this purpose, local law is the law of the jurisdiction, whether domestic or foreign, that governs the applicability of the restriction. For an exception for restrictions imposed or required to be imposed by federal or state law, see paragraph (b)(4)(ii) of this section.

[7423] Prop. Reg. § 25.2704-2(b)(4)(ii) provides:

> *Imposed by federal or state law*. An applicable restriction does not include a restriction imposed or required to be imposed by federal or state law. For this purpose, federal or state law means the laws of the United States, of any state thereof, or of the District of Columbia, but does not include the laws of any other jurisdiction. A provision of law that applies only in the absence of a contrary provision in the governing documents or that may be superseded with regard to a particular entity (whether by the shareholders, partners, members and/or managers of the entity or otherwise) is not a restriction that is imposed or required to be imposed by federal or state law. A law that is limited in its application to certain narrow classes of entities, particularly those types of entities (such as family-controlled entities) most likely to be subject to transfers described in section 2704, is not a restriction that is imposed or required to be imposed by federal or state law. For example, a law requiring a restriction that may not be removed or superseded and that applies only to family-controlled entities that otherwise would be subject to the rules of section 2704 is an applicable restriction. In addition, a restriction is not imposed or required to be imposed by federal or state law if that law also provides (either at the time the entity was organized or at some subsequent time) an optional provision that does not include the restriction or that allows it to be removed or overridden, or that provides a different statute for the creation and governance of that same type of entity that does not mandate the restriction, makes the restriction
>
> n optional, or permits the restriction to be superseded, whether by the entity's governing documents or otherwise. For purposes of determining the type of entity, there are only three types of entities, specifically, the three categories of entities described in § 25.2701-2(b)(5): corporations; partnerships (including limited partnerships); and other business entities.

[7424] Prop. Reg. § 25.2704-2(b)(3), which further provides:

> For purposes of determining whether the ability to remove the restriction is held by any member(s) of this group, members are treated as holding the interests attributed to them under the rules contained in § 25.2701-6, in addition to interests held directly. The manner in which the restriction may be removed is irrelevant f or this purpose, whether by voting, taking other action authorized by the governing documents or applicable local law, removing the restriction from the governing documents, revising the governing documents to override the restriction prescribed under local law in the absence of a contrary provision in the governing documents, merging the entity with an entity whose governing documents do not contain the restriction, terminating the entity, or otherwise.

However, an "applicable restriction does not include a commercially reasonable restriction on liquidation imposed by an unrelated person providing capital to the entity for the entity's trade or business operations, whether in the form of debt or equity."[7425]

"An option, right to use property, or agreement that is subject to section 2703 is not an applicable restriction."[7426]

Also, a put right as described further below is not an "applicable restriction."[7427]

Some of the calculations in examples need clarification or correction.

III.B.7.f.ii.(d). Prop. Reg. § 25.2704-3 Disregarding Restrictions under Governing Documents and State Law that Could Have Been Removed All Along

For purposes of subtitle B (relating to estate, gift and generation-skipping transfer taxes), and notwithstanding Reg. § 25.2704-2, if an interest in an entity is transferred to or for the benefit of a member of the transferor's family,[7428] and the transferor and/or members of the transferor's family control the entity immediately before the transfer, certain restrictions are disregarded and the transferred interest is valued using special rules.[7429]

A "disregarded restriction" is a restriction that is a limitation on the ability to redeem or liquidate an interest in an entity that is described as follows, if the restriction, in whole or in part, either lapses after the transfer or can be removed by the transferor or any member of the transferor's family (subject to certain exceptions), either alone or collectively:[7430]

1. The provision limits or permits the limitation of the ability of the holder of the interest to compel liquidation or redemption of the interest.[7431]

2. The provision limits or permits the limitation of the amount that may be received by the holder of the interest on liquidation or redemption of the interest to an amount that is less than a minimum value (described further below).[7432]

3. The provision defers or permits the deferral of the payment of the full amount of the liquidation or redemption proceeds for more than six months after the date the holder gives

---

[7425] Prop. Reg. § 25.2704-2(b)(4)(i), which further provides:

> An unrelated person is any person whose relationship to the transferor, the transferee, or any member of the family of either is not described in section 267(b), provided that for purposes of this section the term *fiduciary of a trust* as used in section 267(b) does not include a bank as defined in section 581 that is publicly held.

[7426] Prop. Reg. § 25.2704-2(b)(4)(iii).
[7427] Prop. Reg. § 25.2704-2(b)(4)(iv), referring to Reg. § 25.2704-3(b)(6), which is described in the text accompanying fn. 7455 in part III.B.7.f.ii.(d) Prop. Reg. § 25.2704-3 Disregarding Restrictions under Governing Documents and State Law .
[7428] Prop. Reg. § 25.2704-3(c) includes as family members descendants of the transferor's siblings when determining whether the entity is controlled by the transferor and the transferor's family but does not when determining family members otherwise.
[7429] Prop. Reg. § 25.2704-3(a).
[7430] Prop. Reg. § 25.2704-3(b)(1).
[7431] Prop. Reg. § 25.2704-3(b)(1)(i).
[7432] Prop. Reg. § 25.2704-3(b)(1)(ii).

notice to the entity of the holder's intent to have the holder's interest liquidated or redeemed.[7433]

4. The provision authorizes or permits the payment of any portion of the full amount of the liquidation or redemption proceeds in any manner other than in cash or property (described further below).[7434]

"Minimum value" means the interest's share of the net value of the entity determined on the date of liquidation or redemption:[7435]

- The net value of the entity is the fair market value, as determined under Code § 2031 or 2512 and the applicable regulations, of the property held by the entity, reduced by the outstanding obligations of the entity.

- Solely for purposes of determining minimum value, the only outstanding obligations of the entity that may be taken into account are those that would be allowable (if paid) as deductions under Code § 2053 if those obligations instead were claims against an estate.

- Subject to the above limitation on outstanding obligations, if the entity holds an operating business, the rules of Reg. § 20.2031-2(f)(2) or 20.2031-3 apply in the case of a testamentary transfer and the rules of Reg. § 25.2512-2(f)(2) or 25.2512-3 apply in the case of an inter vivos transfer. This proposed rule modifying the valuation under those regulations by taking into account only Code § 2053 deductions is heavily criticized. Sound valuation principles, as well as the fundamental Rev. Rul. 59-60, require considering various business risks across the continuum, many of which do not even rise to the level of a contingent liability. Although a regulation can certainly overrule a revenue ruling, this rule would seem punitive as applied to operating businesses.

- The minimum value of the interest is the net value of the entity multiplied by the interest's share of the entity. The interest's share takes into account any capital, profits, and other rights inherent in the interest in the entity. If the property held by the entity directly or indirectly includes an interest in another entity, and if a transfer of an interest in that other entity by the same transferor (had that transferor owned the interest directly) would be subject to Code § 2704(b), then the entity will be treated as owning a share of the property held by the other entity, determined and valued in accordance with the provisions of Code § 2704(b) and the regulations thereunder.

- Note that the above rules do not describe how one defines "net value." Does it consider business risks, even though obligations other than Code § 2053 deductions are ignored? Does it consider whether the interest being valued is a minority interest that cannot control related-party transaction that reduce the entity's value as a going concern but that would be normalized if the whole business were sold to a controlling owner? Does it assume that the business is liquidated to satisfy the put rights that the proposed regulations encourage?

[7433] Prop. Reg. § 25.2704-3(b)(1)(iii).
[7434] Prop. Reg. § 25.2704-3(b)(1)(iv).
[7435] Prop. Reg. § 25.2704-3(b)(1)(ii).

The prohibition against paying other than in cash or property referred to further above is subject to the following rules:[7436]

- For purposes of this prohibition, a note or other obligation issued directly or indirectly by the entity, by one or more holders of interests in the entity, or by a person related to either the entity or any holder of an interest in the entity, is deemed not to be property. In this context, a related person is any person whose relationship to the entity or to any holder of an interest in the entity is described in Code § 267(b).[7437]

- However, if the entity is engaged in an active trade or business, at least 60% of whose value consists of the nonpassive assets of that trade or business, and to the extent that the liquidation proceeds are not attributable to passive assets within the meaning of Code § 6166(b)(9)(B), those proceeds may include such a note or other obligation if such note or other obligation is adequately secured, requires periodic payments on a non-deferred basis, is issued at market interest rates, and has a fair market value on the date of liquidation or redemption equal to the liquidation proceeds. See Reg. § 25.2512-8.

The above test seems harsh. If the note is from an unrelated party, shouldn't it be respected regardless of whether the entity is an active trade or business?

A disregarded restriction includes a restriction that is:[7438]

- imposed under:
  - the terms of the governing documents (for example, the corporation's by-laws, the partnership agreement, or other governing documents),
  - a buy-sell agreement,
  - a redemption agreement,
  - an assignment or deed of gift, or any other document, agreement, or arrangement; and
- a restriction imposed under local law, regardless of whether that restriction may be superseded by or pursuant to the governing documents or otherwise:
  - For this purpose, local law is the law of the jurisdiction, whether domestic or foreign, which governs the applicability of the restriction.
  - Mandatory restrictions under federal or state law.

Mandatory restrictions are those imposed or required to be imposed by federal or state law:[7439]

[7436] Prop. Reg. § 25.2704-3(b)(1)(iv).
[7437] However, in applying the related party rule, the term fiduciary of a trust as used in Code § 267(b) does not include a bank as defined in Code § 581 that is publicly held. Code § 267(b) is reproduced in part II.G.4.l.iii Code § 267 Disallowance of Related-Party Deductions or Losses.
[7438] Prop. Reg. § 25.2704-3(b)(2).
[7439] Prop. Reg. § 25.2704-3(b)(5)(iii).

- "Federal or state law" means the laws of the United States, of any state thereof, or of the District of Columbia, but does not include the laws of any other jurisdiction.

- A provision of law that applies only in the absence of a contrary provision in the governing documents or that may be superseded with regard to a particular entity (whether by owners, managers, or otherwise) is not a restriction that is imposed or required to be imposed by law.

- A law that is limited in its application to certain narrow classes of entities, particularly those types of entities (such as family-controlled entities) most likely to be subject to transfers described in Code § 2704, is not a restriction that is imposed or required to be imposed by law. For example, a law requiring a restriction that may not be removed or superseded and that applies only to family-controlled entities that otherwise would be subject to Code § 2704 is a disregarded restriction.

- For purposes of determining the type of entity, the three categories of entities are corporations, partnerships (including limited partnerships), and other business entities.

- A restriction is not imposed or required to be imposed by law if that law also provides (either at the time the entity was organized or at some later time) an optional provision that:

    - does not include the restriction or that allows it to be removed or overridden, or

    - provides a different statute for the creation and governance of that same type of entity that:

        - does not mandate the restriction,

        - makes the restriction optional, or

        - permits the restriction to be superseded, whether by the entity's governing documents or otherwise.

This last provision – that an optional provision is disregarded – proves too much. All states have rules for creating and terminating entities. All of the owners can get together to vote to liquidate. Thus, any restriction on liquidation can be overridden and is therefore disregarded. Many commentators view this as creating a deemed put right – a result that government representatives emphatically deny. My understanding is that the government intended for "provision" to apply to anything requiring more than a majority vote to liquidate. Of course, those representatives will not be looking over an IRS examiner's shoulder or whispering into a judge's ear, so that understanding is worthless until the government integrates it into final regulations.

Those who say that these concerns exaggerate the proposed regulations' impact argue that, even if one ignored these restrictions, the owners would need to negotiate with each other over the terms of that liquidation. However, as will be seen later, the very existence of some owners is ignored. Even those who are left would need to negotiate on the basis of their legal rights. If their legal rights to block liquidation are ignored, then what is the basis for these negotiations? All that would remain is a slight delay in marshalling assets. Again, government representatives assure the public that is not the case, but skeptics will continue to assume the worse until final regulations clearly rebut this concern.

Returning to the proposed regulation's rules, a restriction is disregarded only to the extent that the restriction either will lapse by its terms at any time after the transfer or may be removed after the transfer by any one or more members, either alone or collectively, of the group consisting of the transferor, the transferor's estate, and members of the transferor's family:[7440]

- For purposes of determining whether the ability to remove the restriction is held by any one or more members of this group, members are treated as holding interests attributed to them under the rules contained in Reg. § 25.2701-6,[7441] in addition to interests held directly. As described further below, the interests of nonfamily members will be disregarded because the proposed regulations provide unrealistic requirements for considering them.[7442] Thus, the transferor and the transferor's family members will be deemed to have the power to remove restrictions.

- The manner in which the restriction may be removed is irrelevant for this purpose, whether by:

  - voting,

  - taking other action authorized by the governing documents or applicable local law,

  - removing the restriction from the governing documents,

  - revising the governing documents to override the restriction prescribed under local law in the absence of a contrary provision in the governing documents,

  - merging the entity with an entity whose governing documents do not contain the restriction,

  - terminating the entity, or

  - otherwise.

In the case of a transfer to or for the benefit of a member of the transferor's family, for purposes of determining whether the transferor (or the transferor's estate) or any member of the transferor's family, either alone or collectively, may remove a restriction under Prop. Reg. § 25.2704-3(b), a nonfamily-member's ownership is disregarded unless all of the following are satisfied:[7443]

(A) The interest has been held by the nonfamily member for at least three years immediately before the transfer;

(B) On the date of the transfer, in the case of a corporation, the interest constitutes at least 10% of the value of all of the equity interests in the corporation, and, in the case of a business entity[7444] other than a corporation, the interest constitutes at least a 10% interest in the business entity, for example, a 10% interest in the capital and profits of a partnership;

[7440] Prop. Reg. § 25.2704-3(b)(3).
[7441] See fns. 7308-7310, found in part III.B.7.b.i Code § 2701 Definitions.
[7442] Prop. Reg. § 25.2704-3(b)(4).
[7443] Prop. Reg. § 25.2704-3(b)(4)(i).
[7444] Within the meaning of Reg. § 301.7701-2(a).

(C) On the date of the transfer, in the case of a corporation, the total of the equity interests in the corporation held by shareholders who are not members of the transferor's family constitutes at least 20% of the value of all of the equity interests in the corporation, and, in the case of a business entity[7445] other than a corporation, the total interests in the entity held by owners who are not members of the transferor's family is at least 20% of all the interests in the entity, for example, a 20% interest in the capital and profits of a partnership; and

(D) Each nonfamily member, as owner, has a put right as described in Reg. § 25.2704-3(b)(6).

In applying the 10% and 20% tests when the property held by the corporation or other business entity is, in whole or in part, an interest in another entity, the attribution rules of Reg. § 25.2704-3(d) (described further below) apply in:[7446]

- determining the interest held by a nonfamily member, and
- measuring the interests owned through other entities.

The three-year holding requirement of (A) above is not unreasonable, except that it should be the lesser of three years or since the entity's inception, to avoid prejudicing start-up businesses. The Reg. § 25.2704-3(b)(6) put right described further below in is totally unrealistic, as operating businesses cannot afford to set aside liquidity to cash out owners without impairing their ability to operate, grow, and hopefully fulfill The American Dream.

If a nonfamily-member interest is disregarded under the above rule, Reg. § 25.2704-3 applies as if all interests other than disregarded nonfamily-member interests constitute all of the interests in the entity.[7447]

The following are not applicable restrictions:[7448]

- An applicable restriction on the liquidation of the entity as defined in and governed by Reg. § 25.2704-2.[7449]
- A commercially reasonable restriction on liquidation imposed by an unrelated person providing capital to the entity for the entity's trade or business operations whether in the form of debt or equity,[7450] and an unrelated person is any person whose relationship to the transferor, the transferee, or any member of the family of either is not described in Code § 267(b).[7451] Given that the restriction is being imposed by an unrelated person, one wonders why the proposed regulations regulate the use of the funds.
- A mandatory restriction under federal or state law.[7452]

[7445] Within the meaning of Reg. § 301.7701-2(a).
[7446] Prop. Reg. § 25.2704-3(b)(4)(iii).
[7447] Prop. Reg. § 25.2704-3(b)(4)(ii).
[7448] Prop. Reg. § 25.2704-3(b)(5).
[7449] Prop. Reg. § 25.2704-3(b)(5)(i).
[7450] Prop. Reg. § 25.2704-3(b)(5)(ii).
[7451] As applied here, fiduciary of a trust under Code § 267(b) does not include a is publicly held bank under Code § 581. Code § 267(b) is reproduced in part II.G.4.l.iii Code § 267 Disallowance of Related-Party Deductions or Losses.
[7452] Prop. Reg. § 25.2704-3(b)(5)(iii), as described in the text accompanying fn. 7439.

- An option, right to use property, or agreement that is subject to Code § 2703.[7453]

- A put right (described immediately below).[7454]

"Put right" means a right, enforceable under applicable local law, to receive from the entity or from one or more other holders, on liquidation or redemption of the holder's interest, within six months after the date the holder gives notice of the holder's intent to withdraw, cash and/or other property with a value that is at least equal to the minimum value of the interest determined as of the date of the liquidation or redemption:[7455]

- For this purpose, local law is the law of the jurisdiction, whether domestic or foreign, that governs liquidation or redemption rights with regard to interests in the entity.

- For purposes of this definition, the term other property does not include a note or other obligation issued directly or indirectly by the entity, by one or more holders of interests in the entity, or by one or more persons related either to the entity or to any holder of an interest in the entity. However, if the entity is engaged in an active trade or business, at least 60% of whose value consists of the non-passive assets of that trade or business, and to the extent that the liquidation proceeds are not attributable to passive assets within the meaning of Code § 6166(b)(9)(B), "other property" does include a note or other obligation if such note or other obligation is adequately secured, requires periodic payments on a non-deferred basis, is issued at market interest rates, and has a fair market value on the date of liquidation or redemption equal to the liquidation proceeds. See Reg. § 25.2512-8.

- The minimum value of the interest is the interest's share of the net value of the entity, as described above.[7456]

As mentioned above in the text accompanying fn. 7443, failure to give a put right to an unrelated person means that the unrelated person is treated as not being an owner.[7457] Furthermore, if a restriction is disregarded under Reg. § 25.2704-3, the fair market value of the transferred interest is determined under generally applicable valuation principles as if the disregarded restriction does not exist in the governing documents, local law, or otherwise.[7458]

When applying Code § 2704(b), if part of a decedent's interest in an entity includible in the gross estate passes by reason of death to one or more members of the decedent's family and part of that includible interest passes to one or more persons who are nonfamily members of the decedent, and if the part passing to the members of the decedent's family is to be valued as if the disregarded restriction does not exist in the governing documents, local law, or otherwise, then that part is treated as a single, separate property interest.[7459] In that case, the part passing

[7453] Prop. Reg. § 25.2704-3(b)(5)(iv).
[7454] Prop. Reg. § 25.2704-3(b)(5)(v).
[7455] Reg. § 25.2704-3(b)(6).
[7456] Reg. § 25.2704-3(b)(1)(ii), described in the text accompanying fn. 7435.
[7457] Reg. § 25.2704-3(b)(4)(ii) provides:

> *Effect of disregarding a nonfamily-member interest*. If a nonfamily-member interest is disregarded under this section, the rules of this section are applied as if all interests other than disregarded nonfamily-member interests constitute all of the interests in the entity.

[7458] Reg. § 25.2704-3(f), which further provides, For this purpose, local law is the law of the jurisdiction, whether domestic or foreign, under which the entity is created or organized.
[7459] Reg. § 25.2704-3(e).

to one or more persons who are not members of the decedent's family is also treated as a single, separate property interest.[7460]

Given that nonfamily members' interests will be disregarded because nobody will ever qualify and that which legal restrictions are given effect is unclear, one might argue that Prop. Reg. § 25.2704-3 treats the transferor and the transferor's family as if no restrictions on liquidating their interest existed. One might also argue that "provisions" of governing law that do not apply are a much narrower range, so that most aspects of the governing are given effect and far-reaching liquidation rights are not assumed. In light of this uncertainty, one might want to hope for the best and plan for the worst.

Although the proposed regulations encourage a put right for minimum value, they do not deem that right to exist. They merely use it as benchmarks for determining whether various restrictions exist. Although disregarded obligations that are not Code § 2035 debts might cause minimum value to be much higher than fair market value, consider that, if the entity liquidated, its owners could not collectively obtain more than fair market value. One of the best appraisers in the country suggested that this fair market value maximum is itself a mandatory restriction under applicable law that would be respected. Other comments appraisers have made include:

- Does one consider tenancy in common or restricted management agreements? How about rights of first refusal?

- A history of redemptions would tend to affect value.

- For an at-will general partnership, examiners argue under current law no discounts. However, the process required to liquidate can cause delay and uncertainty and require valuation adjustments. Although that adjustment might be relatively low, one appraiser reported settling for 20% where the liquidation process was going to be cumbersome and lengthy.

- Scrutinize control premiums, because merely deriving them public market minority discounts does not tell the whole story. Fair value would have normalized expenses, whereas fair market value might not. Control means different things for different types of businesses or investment portfolios.

- Environmental liabilities, key man risks, agreements that lock in executive compensation, and other business risks need to be considered in valuing a business. These can be larger issues than discounts, and minimum value should not disregard them the way that they might be doing under the proposed regulations.

- Family members do not necessarily work together. Although the proposed regulations may require that one assumes that they act together when deciding whether to liquidate, they might not agree how to operate the business or how to liquidate.

- What happens to the business when it sells assets to fund a redemption? Consider the tax and other economic issues.

[7460] Reg. § 25.2704-3(e), which references Reg. § 25.2704-3(g), Example 4.

- For pass-through entities, consider owners bargaining with each other and Code § 336, 338(h)(10) elections.[7461]

- How much of the value is based on a particular owner's vision and skills? Consider personal goodwill and similar issues.[7462]

- How about a lender's restrictions on the ability to liquidate? Although the proposed regulations provide an exception, the exception is not necessarily available. Furthermore, even if the family member is deemed to have a liquidation right, would liquidating the family member's interest generate a fire sale, due to the lender's restrictions?

- The right to a minority oppression lawsuit adds value under current law, and disregarding minority discounts also disregards the value given to that premium.

- If the family is cohesive, they might not let an unrelated party withdraw or might impose a withdrawal penalty.

- An owner who is difficult to deal with or imposes reputational risk to the business might reduce value.

- The proposed regulations' increasing the value in appraisals done for estate planning purposes might provide arguments for dissenting owners to argue to be bought out at a higher price.

- Complexity of corporate structure may reduce value.[7463]

- Be careful when comparing the business' value against hedge funds' values. Hedge fund managers have incentive to be fair, because they want to sell future hedge funds, whereas a family member might not have that incentive. Hedge fund restrictions on withdrawal allowed them to weather market downturns so that they didn't have to liquidate assets at depressed values.

- One would need to do a liquidity analysis regarding cashing out owners.

III.B.7.f.ii.(e). Practical Planning Implications of Controversial 2016 Proposed Regulations

Generally, practitioners assumed that the regulations would attack entities formed to hold nonbusiness assets. However, the proposed regulations apply to operating businesses. They would ignore any restrictions on an owner's ability to cash out in six months or to cause the business to liquidate if the family could remove those restrictions. Furthermore, they do not distinguish between restrictions under the entity's governing documents and restrictions imposed by "provisions" of state law. Consider that all state laws provide rules for forming and liquidating an entity, the latter of course having the effect of liquidating each owner's interest in the entity. Although the government agrees that it cannot create rights, disregarding restrictions on exercising rights might have the effect of granting rights. State law expressly prohibiting a

---

[7461] See part II.Q.8.e.iii.(f) Code §§ 338(g), 338(h)(10), and 336(e) Exceptions to Lack of Inside Basis Step-Up for Corporations: Election for Deemed Sale of Assets When All Stock Is Sold.
[7462] See part II.Q.1.c Personal Goodwill and Covenants Not to Compete.
[7463] *Estate of Newhouse v. Commissioner*, 94 T.C. 193 (1990).

limited partner from withdrawing and being cashed out absent a contrary provision in the partnership agreement is a "provision" that would be disregarded. Is a shareholder's inability to withdraw and cash out (including placing a term governing the entity's dissolution date) a "provision," given that this inability is implicit and not explicit? I have seen some of the top estate planning lawyers in the country lock horns on this issue. My understanding is that the government did not intend to eliminate all minority discounts or to impose a deemed put right. However, that intent is not clear from the proposed regulation. Thus, one might hope that the government would clarify these positions, while at the same time one would prepare for the possibility that the final regulations might not sufficiently clarify this intent and that an examiner or a judge would take a different view.

Any person who owns, or whose family owns, at least half of the entity would be subject to these rules. In determining whether an owner of that entity can cash out, one must assume that the family will act together to remove a covered restriction on cashing out and that nonfamily members cannot vote unless together they own at least 20% and are qualified: To count a nonfamily member's ownership, the person must have been an owner for at least 3 years, own at least 10%, and have a right to cash out with six months' notice for "minimum value" in exchange for a note at market interest rates that is adequately secured and requires periodic payments on a non-deferred basis. As a practical matter, a business is not going to want to let its owners cash out whenever they wish, and the proposed regulations disregard any covered restrictions on a person who owns, or whose family owns, at least half of the entity. Furthermore, this "minimum value" would not respect any contingent liabilities, without any explanation how one would draw the line between business risks that affect the business' going concern value and contingent liabilities.

The proposed regulations also provide that, if a person transfers part or all of the controlling interest within 3 years of death, that person's estate is treated as holding that level of control at death. For example, a sale to an unrelated party could create a lapse, given that the unrelated party held the property for less than 3 years and therefore is disregarded. However, the estate would not receive a marital or charitable deduction for that level of control, because that level of control does not pass to the surviving spouse or charity.

The proposed regulations apply to restrictions created after October 8, 1990, occurring either one or after day that, or at least 30 days after, the proposed regulations are finalized, depending on the provision of the proposed regulation. Written comments are due November 2, and on December 1 the government will hold a hearing, granting each speaker 10 minutes. My understanding is that, as of October 18, 2016, the government had processed 200 comments and had received but not yet processed another 3,200 comments. The usual process is to cross-reference each comment to each provision it references, although many of the comments express general dissatisfaction with the proposed regulations and do not provide comments on any particular provision. My understanding is that regulations usually take a year to finalize and that comments of this complexity might take three years to finalize. That being said, the regulations under Code § 385 were quite complex (over 500 pages between preamble and final regulations governing international financing transactions) but took just over 6 months to finalize. Given that a political announcement accompanied the proposed regulations, the prospect of a change in Administration might affect the timing. My understanding is that the government could have given 60 days for comments but chose to provide 90 days, a sign that the government did not appear to want to rush comments. As Yogi Berra said, "It's hard to predict – especially the future."

Effective dates:

- The amendments to Reg. § 25.2701-2 are proposed to be effective on and after the date of publication of a Treasury decision adopting these rules as final regulations in the Federal Register.

- The amendments to Reg. § 25.2704-1 are proposed to apply to lapses of rights created after October 8, 1990, occurring on or after the date these regulations are published as final regulations in the Federal Register. My understanding is that the final regulations would clarify that the amendments to this regulation would apply to lapses if the transfer occurred on or after that publication, not if the death triggering the lapse treatment occurred on or after that publication.

- The amendments to Reg. § 25.2704-2 are proposed to apply to transfers of property subject to restrictions created after October 8, 1990, occurring on or after the date these regulations are published as final regulations in the Federal Register.

- Prop. Reg. § 25.2704-3 is proposed to apply to transfers of property subject to restrictions created after October 8, 1990, occurring 30 or more days after the date these regulations are published as final regulations in the Federal Register.

Action items include:

1. Consider making transfers before the proposed regulations become final. These transfers might be gifts, sales, or perhaps using other estate planning tools. This might be of all of the client's interest, of enough to reduce the client's interest below 50%, or of enough to reduce the client's holding to below the liquidation right threshold. Revise the governing documents to require a level of consent for liquidation higher than whatever the client owns now.

2. Note that owning property 50/50 would cause the proposed regulations to apply. One lawyer suggested to me that each owner contribute an equal amount to a Code § 501(c)(4) organization. See part II.Q.6.g Gift Tax Exclusion for Gifts to Certain Noncharitable Organizations.

3. Review buy-sell agreements to consider whether any additional estate tax would apply under these rules and plan for who should pay that tax. Exercise caution in changing any provisions that existed on October 8, 1990.

4. The proposed regulations respect "a commercially reasonable restriction on liquidation imposed by an unrelated person providing capital to the entity for the entity's trade or business operations, whether in the form of debt or equity," so consider documenting the extent of those restrictions. When reviewing commercial loan agreements, carefully review any covenants that affect the owners' ability to cash out and document the extent to which these covenants require buy-sell provisions to prevent cashing out.

5. Some planners have suggested holding real estate as tenants in common instead of in an LLC or other entity, to avoid the new rules that would apply to business entities. Active rental can cause a tenant-in-common arrangement to be treated for state law purposes and tax purposes as a general partnership. General partners are subject to joint and several liability and have rights to cash out of their arrangements that would undermine valuation discounts, so expert advice is required before delving into this area. See part II.C.10 Whether Tenancy-in-Common or other Arrangement Constitutes a Partnership.

Note, also, that the proposed regulations under Code § 2704 are vague as to what is an "arrangement" that constitutes a business entity.

Appraisers might need to do more than one appraisal per transfer.

When preparing gift tax returns reporting transfers after the August 2016 promulgation of the proposed regulations, consider whether to attach a statement describing any position taken that is contrary to any proposed regulations published at the time of the transfer.[7464] Given that the proposed regulations were not proposed to apply to that period, this does not appear necessary, but each person can develop his or her own comfort level.

Also see part II.H.2.j Effect of Chapter 14 on Basis Step-Up, suggesting that taxpayers file an estate tax return to take advantage of the basis step-up for this inflated value.

III.C. Code § 2036

Code § 2036, "Transfers with retained life estate," provides:

(a) *General rule*. The value of the gross estate shall include the value of all property to the extent of any interest therein of which the decedent has at any time made a transfer (except in case of a bona fide sale for an adequate and full consideration in money or money's worth), by trust or otherwise, under which he has retained for his life or for any period not ascertainable without reference to his death or for any period which does not in fact end before his death—

(1) the possession or enjoyment of, or the right to the income from, the property, or

(2) the right, either alone or in conjunction with any person, to designate the persons who shall possess or enjoy the property or the income therefrom.

(b) *Voting rights*.

(1) *In general*. For purposes of subsection (a)(1), the retention of the right to vote (directly or indirectly) shares of stock of a controlled corporation shall be considered to be a retention of the enjoyment of transferred property.

(2) *Controlled corporation*. For purposes of paragraph (1), a corporation shall be treated as a controlled corporation if, at any time after the transfer of the property and during the 3-year period ending on the date of the decedent's death, the decedent owned (with the application of section 318), or had the right (either alone or in conjunction with any person) to vote, stock possessing at least 20 percent of the total combined voting power of all classes of stock.

(3) *Coordination with section 2035*. For purposes of applying section 2035 with respect to paragraph (1), the relinquishment or cessation of voting rights shall be treated as a transfer of property made by the decedent.

(c) *Limitation on application of general rule*. This section shall not apply to a transfer made before March 4, 1931; nor to a transfer made after March 3, 1931, and before

[7464] Reg. § 301.6501(c)-1(f)(2)(v).

June 7, 1932, unless the property transferred would have been includible in the decedent's gross estate by reason of the amendatory language of the joint resolution of March 3, 1931 (46 Stat. 1516).

III.C.1. Whether Code § 2036 Applies

A settlor participating in a trust modification should not implicate Code § 2036 or 2038,[7465] so long as the settlor does not do so often enough to appear to be controlling the trust's terms.

The Official Tax Court Syllabus of *Estate of Linderme v. Commissioner*, 52 T.C. 305 (1969), stated:[7466]

> In 1956, decedent executed a quitclaim deed of his residence in favor of his three sons. He continued his exclusive occupancy of the premises until he entered a nursing home in March 1963. The residence thereafter remained vacant until October 1964. *Held*, under all the facts and circumstances, decedent retained the "possession or enjoyment" of the residence until his death and the property is includable in his gross estate under sec. 2036(a)(1), I.R.C. 1954. *Estate of Allen D. Gutchess*, 46 T.C. 554 (1966), distinguished.

Guynn v. U.S., 437 F.2d 1148 (4th Cir. 1971), held:[7467]

> While the issue of implied agreement must turn on all the circumstances of each transaction, the continued exclusive possession by the donor, and the withholding of possession from the donee, are highly significant factors. On this basis, we distinguish those cases where a residence jointly occupied by the donor and the donee has been held not includable in the donor's gross estate.[2] The Tax Court has made the same distinction. Compare *Estate of Linderme*, 52 T.C. 305 (1969) with *Estate of Gutchess*, 46 T.C. 554 (1966).

[7467] *Guynn v. U.S.* is cited by the text accompanying fn 2058 in part II.H.2.c QTIP Trusts - Code § 2519 Trap.

[7468] *Estate of Reichardt v. Commissioner* is cited by the text accompanying fn 2060 in part II.H.2.c QTIP Trusts - Code § 2519 Trap.

> D transferred his residence and all of his other property (except for his car, personal property, and some cash) to the partnership through the trust. D's transfer was not a bona fide sale for full and adequate consideration. On Oct. 22, 1993, D gave C and W each a 30.4-percent interest in the limited partnership. D retained possession and enjoyment of and the right to here income from the property he transferred to the partnership until he died on Aug. 21, 1994.
>
> *Held*: The fair market value at D's date of death of assets D transferred to the partnership is included in D's gross estate. See sec. 2036(a), I.R.C.

The IRS has attacked (and courts have agreed) a donor's retention of control when transferring a business entity, unless the grantor can prove a legitimate and significant nontax reason for forming the entity. See *Bongard v. Commissioner*, 124 T.C. 95 (reviewed decision, 2005),[7469] and a host of other cases before and after, including *Purdue v. Commissioner*, T.C. Memo. 2015-249, and another reviewed decision, *Estate of Powell v. Commissioner*, 148 T.C. 392 (2017). For what happens when a taxpayer argues in favor of estate tax inclusion to try to get a basis step-up, see fn 5699 in part II.Q.8.e.iii.(b) Transfer of Partnership Interests: Effect on Partnership's Assets (Code § 754 Election or Required Adjustment for Built-in Loss).

Estate of Morrissette v. Commissioner, T.C. Memo. 2021-60, held that the split-dollar arrangement at issue[7470] had a legitimate nontax purpose:

> The first prong of the bona fide sale exception asks whether Mrs. Morrissette had a legitimate and significant nontax motive for entering into the split-dollar agreement. See *Estate of Bongard v. Commissioner*, 124 T.C. at 113, 118; *Estate of Hurford v. Commissioner*, T.C. Memo. 2008-278. The nontax purpose must be an actual motivation, not a theoretical justification, and we require some objective proof that the nontax reason was a significant factor that motivated the transfer. *Estate of Bongard v. Commissioner*, 124 T.C. at 118. We also recognize that "[l]egitimate nontax purposes are often inextricably interwoven with testamentary objectives." *Id*. at 121. Thus, a finding that the decedent sought to save estate tax does not preclude a finding of a bona

[7469] At 118-119, the majority held:

> In the context of family limited partnerships, the bona fide sale for adequate and full consideration exception is met where the record establishes the existence of a legitimate and significant nontax reason for creating the family limited partnership, and the transferors received partnership interests proportionate to the value of the property transferred. See, e.g., *Estate of Stone v. Commissioner*, *supra*; *Estate of Harrison v. Commissioner*, *supra*. The objective evidence must indicate that the nontax reason was a significant factor that motivated the partnership's creation. See *Estate of Harper v. Commissioner*, T.C. Memo. 2002-121; *Estate of Harrison v. Commissioner*, *supra*. A significant purpose must be an actual motivation, not a theoretical justification.
>
> By contrast, the bona fide sale exception is not applicable where the facts fail to establish that the transaction was motivated by a legitimate and significant nontax purpose. See *Estate of Hillgren v. Commissioner*, *supra*; *Estate of Thompson v. Commissioner*, *supra*; *Estate of Harper v. Commissioner*, *supra*; see also *Estate of Reichardt v. Commissioner*, 114 T.C. 144 (2000). A list of factors that support such a finding includes the taxpayer standing on both sides of the transaction, *Estate of Hillgren v. Commissioner*, *supra*; the taxpayer's financial dependence on distributions from the partnership, *Estate of Thompson v. Commissioner*, *supra*; *Estate of Harper v. Commissioner*, *supra*; the partners' commingling of partnership funds with their own, *Estate of Harper v. Commissioner*, *supra*, and the taxpayer's actual failure to transfer the property to the partnership, *Estate of Hillgren v. Commissioner*, *supra*.

[7470] See part II.Q.4.f Split-Dollar Arrangements, especially part II.Q.4.f.v Estate Tax Consequences of Split-Dollar Agreements.

fide sale so long as saving estate tax is not the predominant motive. *Estate of Black v. Commissioner*, 133 T.C. at 362-363. The bona fide sale exception further requires that the transfer be made in good faith. *Estate of Bongard v. Commissioner*, 124 T.C. at 118; see also sec. 20.2043-1(a), Estate Tax Regs. In the context of transfers with respect to business entities, we and other courts have held that efficient, active management of the business and management succession may be legitimate, nontax purposes. *Estate of Bigelow v. Commissioner*, 503 F.3d 955, 972 (9th Cir. 2007), *aff'g* T.C. Memo. 2005-65; *Estate of Strangi v. Commissioner*, 417 F.3d at 481; *Estate of Reynolds v. Commissioner*, 55 T.C. 172, 194 (1970). Maintaining control over a family business can also be a legitimate, nontax purpose. *Estate of Bischoff v. Commissioner*, 69 T.C. 32, 39-41 (1977). We have found that closely held, family entities can provide a legitimate, nontax purpose even where the entity does not have an active business and was formed merely to perpetuate the decedent's buy-hold investment philosophy with respect to publicly traded stock. *Estate of Schutt v. Commissioner*, T.C. Memo. 2005-126, 2005 WL 1244686, at *25. Management of family assets can also be a valid nontax purpose. See, *e.g.*, *Kimbell v. United States*, 371 F.3d 257 (5th Cir. 2004); *Estate of Mirowski v. Commissioner*, T.C. Memo. 2008-74; *Estate of Stone v. Commissioner*, T.C. Memo. 2003-309; *Estate of Harrison v. Commissioner*, T.C. Memo. 1987-8.

Mrs. Morrissette's desire to keep Interstate in her family is a legitimate, nontax reason for purposes of the bona fide sale exceptions. She put a premium on maintaining control over Interstate and passing on that control to future generations. At trial, petitioners established that the 1996 plan was seriously flawed and the 2006 plan corrected those flaws. The split-dollar agreements were instrumental to ensuring that Interstate's ownership remained in her family after her sons died. The brothers had the CMM trust enter into the split-dollar agreements in good faith.

The brothers wanted to honor their parents' wish that the three brothers inherit Interstate equally and pass the company on to their children. However, they were also realistic about the need to pay estate tax and the possibility that they would need to sell part of Interstate to pay it. They believed that there was a significant chance that the family would lose control of Interstate if their families were not given this option especially in the light of the history of the fighting and continued hard feelings from Ken and Don's buyout nearly 20 years before. They recognized other problems with the 1996 plan. The split-dollar agreements provided each brother's children with the option to exit the business and cash out their interests after the brother's death and at the same time allowed the remaining brothers and their families to purchase the interests by funding the buyout. The buy-sell provision also prevented the brothers from selling their Interstate stock to outsiders as a means to retaliate against one another for past disputes. The split-dollar agreements also served a second legitimate, nontax purpose, a smooth transition in Interstate's management. Bud and J.D. had dedicated their careers to Interstate and wanted to remain with the company for their professional futures. They had institutional knowledge. Bud and J.D. credibly testified about their concerns about the transition of Interstate's management to them. J.D. had considered leaving Interstate in 2005 because of these concerns and tried to talk to Buddy about them. Whenever Bud and J.D. raised management succession planning with Buddy, he was dismissive. Bud and J.D. had actually resorted to writing letters to Buddy because their attempts to discuss the issue with Buddy were not productive. Both Bud and J.D. had experienced the consequences in their jobs from the long-held grudges among the brothers.

Bud and J.D. also believed that their futures at Interstate could be jeopardized by the deficiencies in the 1996 plan, and they wanted better protection of Interstate as a family business. The 2006 plan helped to reduce the uncertainty of Bud and J.D.'s futures within Interstate by ensuring it would remain a family business. Bud and J.D. remained as executives and took over Interstate's management when the time came.

The family members faced a situation where many of them knew that the 1996 plan did not adequately protect Interstate and there was a significant risk that the family would lose control over the business after Mrs. Morrissette's death or the brothers' deaths. Yet Buddy refused to fix the deficiencies in the 1996 plan until he, his brothers, and his sons met Mr. Meltzer and Mr. McNair. Family members credibly testified about their concerns with the 1996 plan. Mr. and Mrs. Morrissette had devised the 1996 plan to ease the tensions among the brothers, but it did little to improve the brothers' relationships. In fact, the plan caused Buddy to have more hard feelings. He felt cheated and believed that his parents did not recognize or reward his loyalty.

For years family members believed that they needed a better plan to protect Interstate as a family business. They understood that the 1996 plan could negatively affect Interstate's financial stability and its Government contracts, which accounted for a substantial portion of its business. Interstate's accountant tried to warn Buddy about the potential problems with the 1996 plan, but Buddy refused to do anything. In fact, after meeting Mr. McNair, Buddy initially refused to discuss any changes to the 1996 plan because of past family animosity. It is not clear what changed Buddy's mind. But Bud's meeting Mr. Meltzer finally moved the family forward to establish a long overdue succession plan for Interstate and Mrs. Morrissette's real estate holdings. It is also clear to us that the split-dollar agreements were part of an estate tax saving strategy. The brothers were in part motivated by estate tax saving. It was not their only motivation, however. Respondent focuses on Mr. Meltzer's and Mr. McNair's marketing of the split-dollar arrangements as an estate tax saving strategy and the initial communications between the meeting attendances as evidence of tax motivations. The advisers' motives or marketing does not control our view of the purpose of the split-dollar agreements. Respondent also points to the fact that the brothers quickly decided to engage Mr. McNair after the June meeting as evidence of tax motivation. He ignores that it took approximately another five months to implement the transaction and it was not complete until approximately eight months after Bud first met Mr. Meltzer.

Our caselaw requires the presence of a legitimate, nontax purpose; it does not require the absence of a tax saving motivation. Tax saving was not the primary motivation. Significantly, Ken, who made most decisions relating to the split-dollar agreements, credibly testified that he would have engaged in the split-dollar agreements even if they had not provided any estate tax saving because of the nontax financial benefits that they provided. The record establishes decades of fighting among the brothers including over ownership and inheritance of Interstate. These are not simply theoretical justifications and were established by the witnesses' credible testimony. Respondent wants us to ignore credible testimony in favor of the initial communications among the family members, Mr. Meltzer, and Mr. McNair after the June meeting. We do not restrict our findings in such a manner.

The brothers, acting as the cotrustees of the CMM trust, sought to ensure that Mrs. Morrissette's wishes with respect to the future ownership of Interstate were met to the extent practical given business realities and family dynamics. The changes made as part of the 2006 plan went against Mrs. Morrissette's wishes, not only by allowing the sale of a brother's stock after his death but also by allowing adopted children and spouses to inherit Interstate stock. Under the 1996 plan, each brother also had a general power of appointment over the assets in his AEM subtrust which he could use to distribute assets in a manner that went against the parents' wishes. Another flaw with that plan.

The fact that the changes made by the 2006 plan were inconsistent with Mr. and Mrs. Morrissette's wishes does not cause us to find a lack of a significant, legitimate nontax purpose. The brothers did their best to honor their parents' wishes. On the basis of the above facts and the family members' credible testimony, we find a legitimate, nontax purpose.[8] Ken credibly testified at trial that he would have had the CMM trust enter the split-dollar arrangements even if there had been no tax saving.

[8] Respondent contends that Ken and Don made statements inconsistent with their trial testimony during informal interviews. Upon our review of interview transcripts, trial testimony, and the documents in the record, we find the brothers' trial testimony credible. We do not agree that Ken and Don made inconsistent statements during the interviews.

We dismiss respondent's arguments to the contrary. Respondent speculates that Mrs. Morrissette disapproved of the 2006 plan and was unwilling to pay the premiums, which is the reason the brothers had a conservator appointed. The facts in the record do not support that presumption. The circuit court appointing the conservator determined that Mrs. Morrissette was incapable of making financial decisions. Credible testimony establishes that the brothers decided to use a conservator to protect against future legal disputes over the 2006 plan and to protect against one brother's backing out of the plan at the last minute.

Respondent argues that the brothers stood on both sides of the split-dollar agreements. A taxpayer's standing on both sides of a transaction can indicate there is no legitimate, nontax purpose for the transfer. *Estate of Hillgren v. Commissioner*, T.C. Memo. 2004-46. Intrafamily transactions often involve a party's standing on both sides of the transactions, but such transactions can still satisfy the bona fide sale exception. *Estate of Thompson v. Commissioner*, 382 F.3d at 382. An intrafamily transfer requires heightened scrutiny to ensure that the transfer is not a sham or a disguised gift but does not foreclose the existence of a bona fide sale. *Estate of Bongard v. Commissioner*, 124 T.C. at 119. For an intrafamily transfer, even the absence of negotiations is not a compelling factor when other objective factors establish the bona fides of the transaction. *Kimbell*, 371 F.3d at 263. The brothers' presence on both sides of the split-dollar agreements does not change our factual determination of a bona fide transfer particularly in the light of the brothers' contentious relationship, which sometimes might have been more accurately described as hostile. It is likely that at least one brother would have objected to anything that another brother proposed even if it was in the objecting brother's best interest or a brother would object just to spite his brothers. See *Estate of Stone v. Commissioner*, T.C. Memo. 2003-309 (holding that resolving intrafamily disputes that had led to litigation in the past is a legitimate, nontax purpose).

More problematic is the distribution of the split-dollar agreements to the counterparty to the agreement. After that time, the brothers had complete control over the policies and could cancel them at any time although Ken credibly testified that he did not intend to do so. Respondent argues that the brothers understood that the dynasty trusts would inherit the split-dollar rights and the brothers would have complete control over the policies to surrender them at any time. We disagree for two reasons. The CMM trust agreement gave to the brothers as cotrustees the discretion to distribute each split-dollar agreement, and, given their relationships, distribution was not guaranteed. More importantly, the effects of the possible distribution of the split-dollar agreements after Mrs. Morrissette's death are more relevant to our determination of the fair market value of the split-dollar rights on the valuation date and not whether the transfers qualified as bona fide sales. The brothers also understood their future obligations under the buy-sell provision, and Ken and Don credibly testified that there was no prearranged plan to terminate the split-dollar agreements upon their mother's death.

Respondent also argues that the type of life insurance policies purchased, ones with high initial cash values and modest death benefits, is proof of the tax motivations of the split-dollar agreements. He argues that the high initial cash surrender values removed more assets from the gross estate. However, the brothers credibly explained the reasons they choose policies with high initial cash surrender values. They wanted to ensure that the CMM trust would be adequately compensated for financing the premiums from the outset, *i.e.*, that the CMM trust would earn interest for funding the premiums through inside buildup. Respondent also argues that the fact that Buddy's children retained his stock after his death establishes that the buy-sell provision was not a legitimate reason for the CMM trust's transfer of the premiums. He also cites the fact that the insurance proceeds were redistributed equally among the three dynasty trusts. But the buy-sell provision had substance. It makes sense that Bud and J.D. wanted to retain their father's voting stock as they worked at Interstate. They wanted the 2006 plan to protect their careers at Interstate. Even though they chose not to sell when their father died, the buy-sell provision and the split-dollar agreements protected them by giving them a chance to buy their uncles' stock. Moreover, respondent ignores Buddy's cashout of his nonvoting stock before Mrs. Morrissette died, making a buyout after his death less important from a financial standpoint.

Finally, respondent argues that the Van Lines loan used to pay the premiums is evidence that the split-dollar agreements were tax motivated. He speculates that the loan was not repaid and questions the CMM trust's ability to repay it. We agree with petitioners that the issue of nonpayment is a new issue raised on brief and is not properly before the Court.[9] A party may not raise a new issue on brief where consideration of the issue would surprise or prejudice the opposing party. *Smalley v. Commissioner*, 116 T.C. 450, 456 (2001). Furthermore, the loan was secured, and interest was charged and paid. The loan was treated as an advance of Interstate's shareholder distribution and was used to fund a small portion of the total premiums. The CMM trust had assets sufficient to repay the loan at its maturity apart from the insurance proceeds. The estate reported the loan, which was due after Mrs. Morrissette's death, as a liability. Upon distribution of the split-dollar rights, the dynasty trusts executed notes to Van Lines. Under the totality of the facts, use of the loan does not preclude a finding of legitimate, nontax purposes.

[9] Respondent also argues that the estate's reporting of the loan effectively reduced the reported value of the split-dollar rights by the loan amount for a net value of $3.3 million for the split-dollar rights. The netting argument is also a new issue not properly before the Court. We cannot evaluate respondent's netting argument unless petitioners had the opportunity to address relevant evidence such as whether the loan

> was reported as an asset of Interstate that would increase Interstate's value and the value of the gross estate.

> Taking into account the totality of the facts and circumstances, the CMM trust had legitimate and significant nontax purposes for entering into the split-dollar agreements and funding payment of the premiums in exchange for repayment plus interest in the form of inside buildup. An important purpose of the transfer was to promote the management succession and efficiency and to protect corporate profits for the accumulation of capital to develop the business. On the basis of the record before us, we find that unrelated parties would have agreed to similar terms. Respondent has not argued otherwise.

Thus, the Tax Court accepted the legitimacy of the sons appointing their employee to authorize them to cause their mother's revocable trust to enter into the split-dollar agreements.

The court also held that the split-dollar agreements were entered into for adequate and full consideration in money or money's worth:

> To qualify for the bona fide sale exceptions, the transfer must have been made for adequate and full consideration in money or money's worth. Secs. 20.2036-1(a), 20.2038-1(a), Estate Tax Regs. Adequate and full consideration for purposes of sections 2036 and 2038 requires an exchange of a roughly equivalent value that does not deplete the estate. *Estate of Bongard v. Commissioner*, 124 T.C. at 119; see also *Kimbell*, 371 F.3d at 262, 265 (describing adequate and full consideration as an exchange of a "commensurate (monetary) amount" that "does not deplete the estate"); Wheeler v. United States, 116 F.3d 744, 759 (5th Cir. 1997) (stating adequate and full consideration requires that the sale not deplete the gross estate). Petitioners have the burden to prove that the CMM trust received adequate and full consideration upon the execution of the split-dollar agreements. See *Estate of Bongard v. Commissioner*, 124 T.C. at 118.
>
> **a. Economic Benefit Regime**
>
> Before addressing whether the CMM trust received adequate and full consideration, we first address petitioners' argument that satisfaction of the economic benefit regime means that there was adequate and full consideration. Petitioners argue that estate tax consequences of the split-dollar agreements should be consistent with the economic benefit regime. The CMM trust's payment of the premiums was not a gift for gift tax purposes, which means, according to petitioners, the transfer was an exchange for adequate and full consideration.
>
> Compliance with the economic benefit regime does not mean that the adequate and full consideration requirement is met. *Estate of Cahill v. Commissioner*, at *33. Under the plain text of the regulations, the economic benefit regime does not apply for estate tax purposes. The regime is set out in the income tax regulations, and the regulations state that the regime applies for income, gift, employment, and self-employment tax purposes. Sec. 1.61-22(a), Income Tax Regs. Estate tax is not listed. The economic benefit regime does not use the phrase "adequate and full consideration" or otherwise invoke the concept of adequate and full consideration. Rather, it addresses a separate fundamental question of gift tax, whether there is a completed transfer. See sec. 2512 (requiring a completed transfer of property to impose gift tax). The economic benefit regime does not

require a comparison of the amount of the premium payment with the value of the rights that the CMM trust received in exchange. Accordingly, petitioners cannot rely on the economic benefit regime to establish that the CMM trust received adequate and full consideration.

b. Definition of Adequate and Full Consideration

Respondent argues that adequate and full consideration is determined on the basis of a willing buyer and a willing seller who are hypothetical persons dedicated to achieving maximum economic advantage. See *Estate of Bright v. United States*, 658 F.2d 999, 1005-1006 (5th Cir. 1981) (describing a willing buyer and a willing seller as hypothetical persons); *Estate of Davis v. Commissioner*, 110 T.C. 530, 535 (1998). He argues, and may be correct, that a hypothetical investor would demand a higher return than the CMM trust to account for the split-dollar agreement's lack of marketability and the risk associated with the brothers' unknown health or the uncertainty of their life expectancies. The CMM trust would discount such factors especially as we find, on the basis of the brothers' credible testimony, that the brothers' dynasty trusts and the CMM trust intended to retain the split-dollar agreements.

The adequacy of consideration is not defined on the basis of a willing buyer and willing seller and is not judged from the perspective of hypothetical persons. See *Kimbell*, 371 F.3d at 266. Rather, such concepts are part of the definition of fair market value. Id. Fair market value is the price at which property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of the relevant facts. *United States v. Cartwright*, 411 U.S. 546, 551 (1973); sec. 20.2031-1(b), Estate Tax Regs.

The bona fide sale exception does not require an arm's-length transaction, and an intrafamily transfer can constitute a bona fide sale. *Estate of Bongard v. Commissioner*, 124 T.C. at 122-123; see secs. 2036, 2038; secs. 20.2036-1(a), 20.2038-1(a), Estate Tax Regs.; see also *Estate of Thompson v. Commissioner*, 382 F.3d at 382-383. However, intrafamily transfers require heightened scrutiny. *Estate of Bongard v. Commissioner*, 124 T.C. at 122-123; see also *Estate of Thompson v. Commissioner*, 382 F.3d at 382-383; *Kimbell*, 371 F.2d at 262-263. Adequacy of consideration is ascertained on the basis of what would occur in an arm's-length transaction. *Estate of Bongard v. Commissioner*, 124 T.C. at 122- 123. We consider whether "the terms of transaction differed from those of two unrelated parties negotiating at arm's length." *Id*. at 123.

Respondent inappropriately conflates the definition of adequate and full consideration with that of fair market value. To the extent that respondent argues that adequate and full consideration should be defined as fair market value for purposes of this case, we disagree. Respondent contends without any support in the record that Mrs. Morrissette's unwillingness to enter into the split-dollar agreements is the reason the brothers sought the appointment of the conservator. The brothers credibly testified that they sought the appointment because of the past conflict among the brothers.

The parties' experts agree that an investor *may* make investment choices for reasons other than maximizing financial return. In Kimbell, 371 F.3d at 265-266, the Court of Appeals for the Fifth Circuit recognized that there was "nothing inconsistent" with acknowledging that an investor received a partnership interest for adequate and full consideration and the partnership interest had a substantially lower fair market value than the assets contributed to the partnership (a 50% discount in that case).[10] The court described the exchange as “a classic informed trade-off.” *Id*. at 266; see *Estate of Thompson v. Commissioner*, 382 F.3d at 381 (recognizing that the discounted value of the partnership interest does not automatically constitute inadequate consideration). It stated that the exchange involved financial considerations other than the transferor’s ability to immediately sell the newly acquired assets “for 100 cents on the dollar.” *Kimbell*, 371 F.3d at 266. It noted that investors who make such an investment do so for benefits such as management expertise, security or preservation of assets, and capital appreciation. *Id*. Petitioners refer to these financial benefits as intangible benefits.

[10] Petitioners incorrectly argue that Kimbell rejected the roughly equivalent test when the transferor receives financial benefits other than the purchase price. The court in Kimbell recognized the roughly equivalent test. None of the Court of Appeals cases cited by petitioners expressly rejected the roughly equivalent test.

As discussed above with respect to the legitimate, nontax purposes of the split-dollar agreements, the split-dollar agreements provided financial benefits other than the ability to immediately sell the split-dollar rights or to collect on the split-dollar rights, *i.e.*, repayment plus inside buildup, such as management succession and efficiency and capital accumulation. The split-dollar agreements as part of the 2006 plan provided incentives for Bud and J.D. to remain at Interstate. Overall, the 2006 plan protected against foreseeable risks to Interstate’s business.

An underlying problem of respondent’s case is that he did not provide expert testimony on the value of the split-dollar rights on the transfer date except for a rebuttal of Mr. Stephanson’s investment value, described *infra*.[11] He argued that consideration should be based on a fair market value standard but did not provide expert testimony on the split-dollar rights’ fair market value on the transfer date. Instead, he argues that the value that the estate reported for the split-dollar rights approximately three years later establishes that the CMM trust did not receive adequate and full consideration. We agree with respondent that a rational investor would not give up approximately $23 million in value to achieve the nontax purposes achieved through the split-dollar agreements. However, we do not rely on the estate’s reported value to determine the amount of consideration in the bargained-for exchange on the transfer date and do not agree that the claimed value is the fair market value of the split-dollar rights.

[11] Mr. Stephanson determined a discount rate of 4.54% for the investment value on the basis of yields on tax-exempt municipal bonds. Respondent argues that the death benefits would have been taxed when paid to the CMM trust because it was not a beneficiary of the policies. Petitioners argue that it was a beneficiary. Mr. Burns’ rebuttal changed only the tax treatment of the death benefits, increased the discount rate to 6.1% to account for the tax, and determined an investment value of approximately $21.2 million. We do not need to determine either whether the CMM trust was a beneficiary or the correct tax treatment of a payout of death benefits to the CMM trust because we do not adopt the investment value. Nor is it necessary to address respondent’s alternative argument that the opined investment value, $27 million, is not roughly equivalent to the $30 million in premium payments.

We measure the adequacy of consideration on the transfer date, not the decedent's death date. *Estate of D'Ambrosio v. Commissioner*, 101 F.3d 309, 313 (3d Cir. 1996), *rev'g* 105 T.C. 252 (1995). As the Court of Appeals for the Third Circuit there observed:

> There is no way to know ex ante what the value of an asset will be at the death of a testator; although the date of death can be estimated through the use of actuarial tables, the actual appreciation of the property is unknowable…. Consequently, there is no way to ever be certain in advance whether the consideration is adequate and thus no way to know what tax treatment a transfer will receive… *Id*.

We first consider whether the CMM trust received adequate and full consideration as part of a bona fide sale on the transfer date and, if it did, we then decide the fair market values of the split-dollar rights on the valuation date.

When we examine intervening events between the transfer date and the valuation date, which were significant, it is clear that the fair market values were not the same on the two dates. Don credibly testified that although Mrs. Morrissette had been diagnosed with Alzheimer's disease the previous year, she was in good health. Ken was diagnosed with terminal cancer and was no longer insurable. We would be remiss not to at least acknowledge that Mrs. Morrissette could have outlived any one of her sons. The split-dollar agreements were a safe investment with an adequate interest rate.

c. Investment Value Standard

Petitioners presented an investment value of $27 million as a measure of adequate and full consideration. Investment value measures value on the basis of the perspective of the individual investor and thus differs from fair market value, which relies on the perspective of hypothetical persons. Petitioners argue that we should consider Mrs. Morrissette's unique investment goals and individual circumstances when determining whether she received adequate and full consideration. To support this proposition, petitioners cite caselaw, including Kimbell, holding that adequate and full consideration is not determined on the basis of the willing buyer and willing seller standard.

Kimbell recognizes that an intrafamily transfer does not automatically disqualify a transfer from the bona fide sale exception. To this end, *Kimbell* and our caselaw establish an arm's-length standard. The adequate and full consideration requirement is met where the exchange is on terms similar to those that would occur in an arm's-length transaction. *Estate of Bongard v. Commissioner*, 124 T.C. at 122-123.

As the experts testified, a transferor for adequate and full consideration may have financial considerations other than obtaining the highest price. See *Kimbell*, 371 F.3d at 266. Such financial considerations are measurable by objective evidence without the need to adopt a value from Mrs. Morrissette's perspective. Accordingly, we do not adopt the investment value offered by Mr. Stephanson.

d. Adequacy of the Consideration

We hold that the CMM trust received adequate and full consideration on the basis of the split-dollar agreements' repayment terms that included interest earned in the form of inside buildup of the insurance policies. The minimum interest rates and the actual appreciation in the policies' cash values were higher than the interest rates that the

CMM trust had been earning on the money. Respondent does not argue that the repayment terms were inadequate. The split-dollar agreements also provide the additional benefit of deferral of tax on the policies' inside buildup and the tax-exempt payout of the death benefits to the beneficiaries.

Respondent argues that *Estate of Cahill* involved "essentially the exact same circumstances". In that case, the decedent, at age 90, obtained a five-year bank loan to pay the entire amount of the $10 million in premiums. Here we have a 75-year-old family business and a decedent with assets sufficient to pay a substantial portion of the premiums. Here also, the decedent owned assets and other sources of income to repay the small loan she did obtain.

In addition, *Estate of Cahill* did not involve active business operations with related financial considerations such as management efficiency and succession, capital accumulation and long-held grudges that put those financial considerations at risk. The split-dollar agreements provided financial benefits similar to those present in *Kimbell* including management expertise, security and preservation of assets, and capital appreciation. *Kimbell*, 371 F.3d at 266. *Kimbell* accepted these types of financial benefits as reducible to a money value.

The CMM trust and Mrs. Morrissette received financial benefits from the split-dollar agreements including retained family control over Interstate, a smooth management succession, organizational stability, and protection of Interstate's capital by providing a source of funding to pay estate tax on the brothers' deaths. Mrs. Morrissette placed a high value on keeping Interstate within the family. The financial benefits were significant and are relevant to ascertaining the consideration received. Kimbell accepted similar benefits without quantifying them. Id. at 266-267 (finding that partnership interest discounted at 50% of the value of the assets contributed to the partnership was adequate and full consideration without quantifying the value of the other financial benefits present).

Finally, respondent argues that the aggregate reported value of $7.5 million demonstrated the lack of adequate and full consideration. We do not rely on the reported values of the split-dollar rights to determine the amount of the consideration received and, for the reasons stated below, find that the estate substantially undervalued the split-dollar rights for reporting purposes. With the expert testimony, there is no need for us to rely on the reported value three years after the transfer date to ascertain the adequacy of the consideration.

Estate tax saving was not achieved through execution of the split-dollar agreements alone but rather through the undervaluation of the split-dollar rights. In exchange for $30 million, the dynasty trusts agreed to purchase life insurance and repay the CMM trust. The transactions created contract rights, and Mrs. Morrissette retained the contract rights during her lifetime and held them at the time of her death. She no longer had use of or access to the $30 million. The split-dollar agreements changed the nature of the CMM trust's relationship with the funds it transferred. See *Estate of Thompson v. Commissioner*, 382 F.3d at 377 (finding the decedent's relationship to the transferred assets remained the same after the transfer).

Thus, the disconnect between gift tax value and estate tax value did not disturb the court.

III.C.2. Planning Using Code § 2036

What if one's gross estate is way below the estate tax exemption, and one would like to include the transferred assets in the gross estate to get a free basis step-up?[7471]

- If taxpayer wants to engage in an uphill battle to argue that Code § 2036 causes estate tax inclusion,[7472] see fn 5699 in part II.Q.8.e.iii.(b) Transfer of Partnership Interests: Effect on Partnership's Assets (Code § 754 Election or Required Adjustment for Built-in Loss).

- I have had the CPA prepare the 706 because I do not want to be on record with IRS as disregarding any partnership I'm involved with. If this is truly "nothing ventured, nothing gained," then consider making the argument on the estate tax return and explain why. All of the above is contingent on the income tax return preparer being comfortable with it and on warning the client about possible penalties for overstatement of basis when an asset is sold. I would ask the income tax return preparer to take the lead on the penalty issue, because (s)he will be signing the returns that claim the higher basis and will know when those transactions occur and can take any steps (s)he deems appropriate when preparing those returns. My strategy of having the CPA prepare the 706 reinforces the responsibility for the penalty issue.

Reg. § 20.2036-1(c)(1), "Amount included in gross estate," provides:[7473]

> (i) *In general*. If the decedent retained or reserved an interest or right with respect to all of the property transferred by him, the amount to be included in his gross estate under section 2036 is the value of the entire property, less only the value of any outstanding income interest which is not subject to the decedent's interest or right and which is actually being enjoyed by another person at the time of the decedent's death. If the decedent retained or reserved an interest or right with respect to a part only of the property transferred by him, the amount to be included in his gross estate under section 2036 is only a corresponding proportion of the amount described in the preceding sentence. An interest or right is treated as having been retained or reserved if at the time of the transfer there was an understanding, express or implied, that the interest or right would later be conferred. If this section applies to an interest retained by the decedent in a trust or otherwise and the terms of the trust or other governing instrument provide that, after the decedent's death, payments the decedent was receiving during life are to continue to be made to the decedent's estate for a specified period (as opposed to payments that were payable to the decedent prior to the decedent's death but were not actually paid until after the decedent's death), such payments that become payable after the decedent's death are not includible in the decedent's gross estate under section 2033 because they are properly reflected in the value of the trust corpus included under this section. Payments that become payable to the decedent prior to the decedent's date of

[7471] See part II.H.3 Valuation Discounts – Friend or Enemy.

[7472] For when an entity is disregarded and Code § 2036 (an issue into which this document does not delve), see fn 91 in part II.A.2.d.i Benefits of Estate Planning Strategies Available Only for S Corporation Shareholders.

[7473] Reg. § 20.2036-1(c)(1)(i) is cited by the text accompanying fn 2056 in part II.H.2.c QTIP Trusts - Code § 2519 Trap.

death, but are not paid until after the decedent's date of death, are includible in the decedent's gross estate under section 2033.

(ii) *Examples*. The application of paragraph (c)(1)(i) of this section is illustrated in the following examples:

Example (1). Decedent (D) creates an irrevocable inter vivos trust. The terms of the trust provide that all of the trust income is to be paid to D and D's child, C, in equal shares during their joint lives and, on the death of the first to die of D and C, all of the trust income is to be paid to the survivor. On the death of the survivor of D and C, the remainder is to be paid to another individual, F. Subsequently, D dies survived by C. Fifty percent of the value of the trust corpus is includible in D's gross estate under section 2036(a)(1) because, under the terms of the trust, D retained the right to receive one-half of the trust income for D's life. In addition, the excess (if any) of the value of the remaining 50 percent of the trust corpus, over the present value of C's outstanding life estate in that 50 percent of trust corpus, also is includible in D's gross estate under section 2036(a)(1), because D retained the right to receive all of the trust income for such time as D survived C. If C had predeceased D, then 100 percent of the trust corpus would have been includible in D's gross estate.

Example (2). D transferred D's personal residence to D's child (C), but retained the right to use the residence for a term of years. D dies during the term. At D's death, the fair market value of the personal residence is includible in D's gross estate under section 2036(a)(1) because D retained the right to use the residence for a period that did not in fact end before D's death.

For a variety of strategies relating to basis step-up, see Bramwell & Madden, "Toggling Gross Estate Inclusion On and Off: A Powerful Strategy," *Estate Planning Journal* (3/2017),[7474] which describes strategies relevant to parts:

- II.H.2.c QTIP Trusts - Code § 2519 Trap
- III.C Code § 2036
- III.D Code § 2038.

See the companion for Code § 2036 in part III.D Code § 2038.

III.C.3. Safe Harbor re Right to Change Trustee - Rev. Rul. 95-58

Rev. Rul. 95-58 explained what prompted its issuance:

> The Internal Revenue Service has reconsidered whether a grantor's reservation of an unqualified power to remove a trustee and appoint a new trustee (other than the grantor) is tantamount to a reservation by the grantor of the trustee's discretionary powers of distribution. This issue is presented in Rev. Rul. 79-353, 1979-2 C.B. 325, as modified by Rev. Rul. 81-51, 1981-1 C.B. 458. An analogous issue is presented in Rev. Rul. 77-182, 1977-1 C.B. 273. The reconsideration is caused by the recent court decisions in

[7474] Excerpts accompany fn 2053 in part II.H.2.c QTIP Trusts - Code § 2519 Trap.

Estate of Wall v. Commissioner, 101 T.C. 300 (1993), and *Estate of Vak v. Commissioner*, 973 F.2d 1409 (8th Cir. 1992), *rev'g* T.C. Memo 1991-503.

Rev. Rul. 95-58 reasoned:

Section 2036(a) of the Internal Revenue Code, in general, provides that the value of the gross estate includes the value of all property to the extent of any interest in the property that was transferred by the decedent (for less than adequate consideration) if the decedent has retained for life the right, alone or in conjunction with any person, to designate the person who shall possess or enjoy the property or the income therefrom.

Section 2038(a)(1), in general, provides that the value of the gross estate includes the value of all property to the extent of any interest in the property that was transferred by the decedent (for less than adequate consideration) if the decedent held a power, exercisable alone or in conjunction with any person, to change the enjoyment of the property through the exercise of a power to alter, amend, revoke, or terminate.

Section 25.2511-2(c) of the Gift Tax Regulations provides that a gift of property is incomplete to the extent that the donor reserves the power to revest the beneficial title to the property in himself or herself or the power (other than a fiduciary power limited by a fixed or ascertainable standard) to name new beneficiaries or to change the interest of the beneficiaries among themselves. See also section 25.2511-2(f).

For purposes of sections 2036 and 2038, it is immaterial in what capacity the power was exercisable by the decedent. Thus, if a decedent transferred property in trust while retaining, as trustee, the discretionary power to distribute the principal and income, the trust property will be includible in the decedent's gross estate under sections 2036 and 2038. The regulations under sections 2036 and 2038 explain that a decedent is regarded as having possessed the powers of a trustee if the decedent possessed an unrestricted power to remove the trustee and appoint anyone (including the decedent) as trustee. Sections 20.2036-1(b)(3) and 20.2038-1(a) of the Estate Tax Regulations.

Rev. Rul. 79-353 concludes that, for purposes of sections 2036(a)(2) and 2038(a)(1), the reservation by a decedent-settlor of the unrestricted power to remove a corporate trustee and appoint a successor corporate trustee is equivalent to the decedent-settlor's reservation of the trustee's discretionary powers.

Rev. Rul. 81-51 modifies Rev. Rul. 79-353 so that it does not apply to a transfer or addition to a trust made before October 29, 1979, the publication date of Rev. Rul. 79-353, if the trust was irrevocable on October 28, 1979.

Rev. Rul. 77-182 concludes that a decedent's power to appoint a successor corporate trustee only in the event of the resignation or removal by judicial process of the original trustee did not amount to a power to remove the original trustee that would have endowed the decedent with the trustee's discretionary control over trust income.

In *Estate of Wall*, the decedent had created a trust for the benefit of others and designated an independent corporate fiduciary as trustee. The trustee possessed broad discretionary powers of distribution. The decedent reserved the right to remove and replace the corporate trustee with another independent corporate trustee. The court concluded that the decedent's retained power was not equivalent to a power to affect the beneficial enjoyment of the trust property as contemplated by sections 2036 and 2038. See also *Estate of Headrick v. Commissioner*, 93 T.C. 171 (1989), *aff'd* 918 F.2d 1263 (6th Cir. 1990).

> In *Estate of Vak*, the decedent had created a trust and appointed family members as the trustees with discretionary powers of distribution. The decedent reserved the right to remove and replace the trustees with successor trustees who were not related or subordinate to the decedent. The decedent was also a discretionary distributee. Three years later, the trust was amended to eliminate both the decedent's power to remove and replace the trustees and the decedent's eligibility to receive discretionary distributions.
>
> The issue considered in *Estate of Vak* was whether the decedent's gift in trust was complete when the decedent created the trust and transferred the property to it or, instead, when the decedent relinquished the removal and replacement power and his eligibility to receive discretionary distributions. The Eighth Circuit concluded that the decedent had not retained dominion and control over the transferred assets by reason of his removal and replacement power. Accordingly, the court held that under section 25.2511-2(c) the gift was complete when the decedent created the trust and transferred the assets to it.

Rev. Rul. 95-58 held:

> In view of the decisions in the above cases, Rev. Rul. 79-353 and Rev. Rul. 81-51 are revoked. Rev. Rul. 77-182 is modified to hold that even if the decedent had possessed the power to remove the trustee and appoint an individual or corporate successor trustee that was not related or subordinate to the decedent (within the meaning of section 672(c)), the decedent would not have retained a trustee's discretionary control over trust income.

Letter rulings have also applied Rev. Rul. 95-58 to Code § 2041 (general power of appointment) and Code § 2042 (life insurance incidents of ownership).[7475]

What if a beneficiary can control the corporate trustee? Letter Ruling 202120003 was a Code § 2041 ruling that looked to Rev. Rul. 95-58 and provided insight:

> Pursuant to Trust, Court may only appoint a national bank as successor trustee. Son represents that, from the viewpoint of voting control, Son does not own significant holdings of stock in any national bank; Son is not an executive of any national bank; and Son will not during his remaining lifetime purchase significant (from the viewpoint of voting control) holdings of stock in any national bank or become an executive of any national bank. Therefore, Son will not, at any time, have a significant interest in a national bank. Accordingly, Son will never possess the power, through the trustee, to distribute property of Trust to himself. Therefore, we conclude that Son's possession of the power to remove the trustee is not a general power of appointment for purposes of § 2041(b).

[7475] See part II.Q.4.i.ii.(a) Trust Ownership of Policy (Code § 2042 life insurance) and fn 6713 in part III.B.2.i Code § 678 Beneficiary Deemed-Owned Trusts (Code § 2041 general power of appointment).

III.C.4. Avoiding Possible Code § 2036(a)(2) Powers

Diana Zeydel suggested keeping any "Benefits Decision" away from anyone whose powers might be attributed to a family member that might give the IRS a hook to argue Code § 2036(a)(2) inclusion:[7476]

"Benefits Decision" means at any time with relation to any Entity (including, without limitation, the Company), any and all decisions, actions, determinations, approvals, consents, votes or undertakings of any kind, including, without limitation, decisions not to act, determine, approve, consent, vote or engage in any undertaking, of such Entity relating to any one or more of the following:

(i) all Distributions, whether arising from operations or capital transactions, including, without limitation, whether or not to make Distributions to the Interest Holders of such Entity and the timing and amounts of any such Distributions;

(ii) any funds set aside or amounts allocated to reserves, with respect to any fiscal period, for any purpose, including, without limitation, for working capital and to pay insurance, debt service, or other costs or expenses incident to the ownership or operation of the business of such Entity;

(iii) any determination of the fair market value of any property (other than cash) contributed to such Entity by any Interest Holder of such Entity or any other asset or liability of such Entity, including, without limitation, any determination of the manner in which securities or other instruments with a publicly quoted price shall be valued;

(iv) any loan or guarantee of a loan by such Entity to or for any Interest Holder of such Entity or any Affiliate of an Interest Holder of such Entity (or to or for (a) any Indirect Interest Holder of such Entity or (b) any other Entity in which an Interest Holder or Indirect Interest Holder of such Entity has any interest, direct or indirect), either with or without adequate interest and security, including, without limitation, any right to set off any Distributions otherwise payable to such Interest Holder in the event that any amount due to such Entity pursuant to the terms of such loan is not timely paid;

(v) withdrawal or resignation of any Interest Holder of such Entity, in whole or in part, or withdrawal of any portion of the capital contribution or capital account balance of any Interest Holder of such Entity;

(vi) dissolution or liquidation of such Entity, in whole or in part, including, without limitation, whether or not, at any time or times, to cause such Entity to dissolve or liquidate, in whole or in part, the establishment of reserves (if any) in relation thereto and any and all Distributions relating thereto;

(vii) the exercise of any discretion (including, but without limitation, any discretion which would constitute an "incident of ownership" within the meaning of Section 2042(2) of the Code) with respect to any insurance policy held by such Entity on the life of any Interest Holder of such Entity or any Indirect Interest Holder of such Entity;

[7476] "Drafting to Avoid the Application of Section 2036(a)(2) After *Powell*," ACTEC webinar *Estate Planning in This Election Year* (9/23/2020), reproduced with Diana's permission.

(viii) any voting stock held by such Entity which would be includable in the estate of any Interest Holder of such Entity or any Indirect Interest Holder of such Entity under Section 2036(b) of the Code, if such Interest Holder or Indirect Interest Holder held at or within three (3) years of his or her death the power to vote such stock;

(ix) any action, decision, or transaction by or on behalf of such entity in which an individual manager of such entity shall be directly or indirectly interested in his or her individual capacity, including, without limitation, negotiation, amendment, modification, execution and delivery of any and all agreements, documents, instruments and certifications in connection with, or in furtherance of, such action, decision or transaction, together with any amendments or modifications thereto, and all such other acts and things, payments and remittances, in connection with, or in furtherance of, such action, decision or transaction;

(x) any amendment to the governing instruments of such Entity with respect to any matter relating to one or more of the items described in the preceding clauses (i) through (ix); and

(xi) any action or decision to be taken or made by or on behalf of a Subsidiary that, if taken or made by or on behalf of the Company (x) would constitute a Benefits Decision and (y) would otherwise require the direction or approval of a Benefits Manager under this Agreement.

Let's give further thought to item (i) – the timing and amounts of distributions. Income tax elections[7477] or provisions for settling audits may affect the timing and amounts of distributions or income tax liability itself.[7478] To avoid possible IRS assertions of various transfer tax provisions,[7479] consider including tax elections in this list of Benefits Decisions. The latter's importance is a matter of an advisor's judgment; for example:

- Rev. Rul. 2004-64 did not view the ability to turn off grantor trust treatment as having gift tax consequences; see text accompanying fns. 6961-6980 in part III.B.2.j.iv.(a) Grantor Trust Reimbursing for Tax Paid by the Deemed Owner.

- Timing differences in distributions arising from income tax withholding are not considered to change rights to distributions in the S corporation arena; see part II.A.2.i.ii Temporary Timing Differences; Other Varying Differences.

To the extent practical, try to grant the authority to make Benefits Decisions to a person satisfying part III.C.3 Safe Harbor re Right to Change Trustee - Rev. Rul. 95-58.

[7477] See text accompanying fns 1439-1446 in part II.G.4.n Itemized Deductions; Deductions Disallowed for Purposes of the Alternative Minimum Tax.

[7478] For procedures for settling IRS audits of entities taxed as partnerships, including options relating to the impact of an audit on the owners, see part II.G.19.c Audits of Partnership Returns.

[7479] See Justak, "Remember Federal Transfer Tax Considerations When Electing into a State's Pass-Through Entity Tax," *Estate Planning Journal* (WG&L) (6/2022). That author is especially concerned whether authority to elect to have the entity instead of the owners pay tax might be relieving the tax burden of a deemed owner of a grantor trust that owns an interest in the entity; for deemed ownership, see part III.B.2 Irrevocable Grantor Trust Planning, Including GRAT vs. Sale to Irrevocable Grantor Trust, especially part III.B.2.d Income Tax Effect of Irrevocable Grantor Trust Treatment.

III.C.5. Holding Voting Stock under Code § 2036(b)

Code § 2036(b), “Voting rights,” provides:

> (1) *In general*. For purposes of subsection (a)(1) , the retention of the right to vote (directly or indirectly) shares of stock of a controlled corporation shall be considered to be a retention of the enjoyment of transferred property.
>
> (2) *Controlled corporation*. For purposes of paragraph (1) , a corporation shall be treated as a controlled corporation if, at any time after the transfer of the property and during the 3-year period ending on the date of the decedent’s death, the decedent owned (with the application of section 318), or had the right (either alone or in conjunction with any person) to vote, stock possessing at least 20 percent of the total combined voting power of all classes of stock.
>
> (3) *Coordination with section 2035*. For purposes of applying section 2035 with respect to paragraph (1) , the relinquishment or cessation of voting rights shall be treated as a transfer of property made by the decedent.

The House explanation of the 1976 enactment of Code § 2036(b) explains its intent to overrule *Byrum* in certain situations:

> Your committee believes that the voting rights are so significant with respect to corporate stock that the retention of voting rights by a donor should be treated as the retention of the enjoyment of the stock for estate tax purposes. Your committee believes that this treatment is necessary to prevent the avoidance of the estate and gift taxes.[3]
>
> > [3] One commentator has suggested that “[t]he “ultimate” in estate planning for most controlling stockholders of closely held corporations is the avoidance of a Federal estate tax on corporate voting shares that they have transferred to a trust in which they have reserved the uninterrupted right to continue voting the shares.” Pressmen. “Effect of Tax Court’s Gilman Decision on Estate Planning for the Close Corporation,” 44 “The Journal of Taxation,” 160 (March 1976). This commentator further suggests that the value of the gift might be reduced by the value attributable to the retained voting rights. If this is done, the value attributed to voting rights would not be subject to either the gift tax at the time of the gift or, under the *Byrum* decision, the estate tax upon the death of the donor.
>
> The bill would provide that the retention of voting rights in transferred stock is to be treated as a retention of the enjoyment of the stock. The stock is to be includible in a decedent’s gross estate if the decedent retained the voting rights for his life, for any period not ascertainable without reference to his death, or for any period which does not in fact end before his death. The provision is to apply even if the stock is issued by a corporation which had not been directly or indirectly controlled by the decedent. For purposes of the provision, the capacity in which the decedent exercised the voting rights is immaterial.

The Senate explanation of the 1978 changes to Code § 2036(b) explains:

> The bill...makes two amendments to the rule contained in the 1976 Act. First, the bill restricts the rule to stock in corporations which are controlled by the decedent and his

> relatives. Second, the bill clarifies the rule under the 1976 Act that indirect transfers are subject to the rule.
>
> Under the bill, the rule requiring inclusion in the gross estate only applies to stock in a “controlled corporation.” Where the stock is not in a “controlled corporation”, the stock is not included in the gross estate of the decedent even if the decedent directly held the power to vote those shares.
>
> A “controlled corporation” is defined to mean a corporation where the decedent and his relatives owned, or had the power to vote, stock possessing at least 20 percent of the total combined voting power of all classes of stock. The constructive ownership rules of section 318 apply solely for purposes of determining whether the corporation is a controlled corporation. In addition, in order for the corporation to be controlled, the ownership of, or power to vote, 20 percent of the total combined voting power of all classes of stock had to occur any time after the transfer of the property and during the 3-year period ending on the date of the decedent’s death.
>
> The rule requiring inclusion in the gross estate of stock of a controlled corporation applies where the decedent retained the voting rights of the stock which was directly or indirectly transferred by him. Thus, where the decedent transferred cash or other property prior to his death to a trust of which he is trustee within 3 years of his death, and then the trust uses that cash or other property to purchase stock in a controlled corporation from himself, the value of the stock would be included in his gross estate. In addition, the indirect retention of voting rights in the case of reciprocal transfers of stock in trust would result in the inclusion of the stock with respect to which the decedent had voting rights as trustee. However, voting rights in stock transferred in trust by the decedent will not be considered to have been retained by the decedent merely because a relative was the trustee who voted the stock. In these cases, the voting rights would be considered to have been indirectly retained by the decedent if in substance the decedent had retained such voting rights, *e.g.*, there had been an arrangement or agreement for the trustee to vote the stock in accordance with directions from the decedent.
>
> The rule would not apply to the transfer of stock in a controlled corporation where the decedent could not vote the transferred stock. For example, where a decedent transfers stock in a controlled corporation to his son and does not have the power to vote the stock any time during the 3-year period before his death, the rule does not apply even where the decedent owned, or could vote, a majority of the stock. Similarly, where the decedent owned both voting and nonvoting stock and transferred the nonvoting stock to another person, the rule does not apply to the nonvoting stock simply because of the decedent’s ownership of the voting stock.

Prop. Reg. § 20.2036-2 would elaborate on and expand the ideas set forth in the legislative history. However, Prop. Reg. § 20.2036-2(a) provides that Prop. Reg. § 20.2036-2 “does not require inclusion of stock in the gross estate if the transferred stock has not voting rights or if the donor has not retained voting rights in the stock transferred.”

III.D. Code § 2038

Code § 2038 is a companion to part III.C Code § 2036 that creates inclusion when a donor retains too many strings. Courts also tend to look to Code § 2038 when deciding whether an insured held incidents of ownership under Code § 2042; see part II.Q.4.i.ii Summary of Estate Tax Rules Governing Life Insurance Payable to a Business Entity.

Code § 2038(a) provides that the value of the gross estate includes the value of all property:

> (1) *Transfers after June 22, 1936*. To the extent of any interest therein of which the decedent has at any time made a transfer (except in case of a bona fide sale for an adequate and full consideration in money or money's worth), by trust or otherwise, where the enjoyment thereof was subject at the date of his death to any change through the exercise of a power (in whatever capacity exercisable) by the decedent alone or by the decedent in conjunction with any other person (without regard to when or from what source the decedent acquired such power), to alter, amend, revoke, or terminate, or where any such power is relinquished during the 3-year period ending on the date of the decedent's death.
>
> (2) *Transfers on or before June 22, 1936*. To the extent of any interest therein of which the decedent has at any time made a transfer (except in case of a bona fide sale for an adequate and full consideration in money or money's worth), by trust or otherwise, where the enjoyment thereof was subject at the date of his death to any change through the exercise of a power, either by the decedent alone or in conjunction with any person, to alter, amend, or revoke, or where the decedent relinquished any such power during the 3-year period ending on the date of the decedent's death. Except in the case of transfers made after June 22, 1936, no interest of the decedent of which he has made a transfer shall be included in the gross estate under paragraph (1) unless it is includible under this paragraph.

Reg. § 20.2038-1(a) provides:

> *In general*. A decedent's gross estate includes under section 2038 the value of any interest in property transferred by the decedent, whether in trust or otherwise, if the enjoyment of the interest was subject at the date of the decedent's death to any change through the exercise of a power by the decedent to alter, amend, revoke, or terminate, or if the decedent relinquished such a power in contemplation of death.[7480] However, section 2038 does not apply -
>
> (1) To the extent that the transfer was for an adequate and full consideration in money or money's worth (see § 20.2043-1);
>
> (2) If the decedent's power could be exercised only with the consent of all parties having an interest (vested or contingent) in the transferred property, and if the power adds nothing to the rights of the parties under local law; or

[7480] [My footnote:] Reg. § 20.2038-1 was last amended in 1962, and Code § 2035 was amended in 1976 to change "contemplation of death" to "during the 3-year period ending on the date of the decedent's death."

(3) To a power held solely by a person other than the decedent. But, for example, if the decedent had the unrestricted power to remove or discharge a trustee at any time and appoint himself trustee, the decedent is considered as having the powers of the trustee. However, this result would not follow if he only had the power to appoint himself trustee under limited conditions which did not exist at the time of his death. (See last two sentences of paragraph (b) of this section.)

Except as provided in this paragraph, it is immaterial in what capacity the power was exercisable by the decedent or by another person or persons in conjunction with the decedent; whether the power was exercisable alone or only in conjunction with another person or persons, whether or not having an adverse interest (unless the transfer was made before June 2, 1924; see paragraph (d) of this section); and at what time or from what source the decedent acquired his power (unless the transfer was made before June 23, 1936; see paragraph (c) of this section). Section 2038 is applicable to any power affecting the time or manner of enjoyment of property or its income, even though the identity of the beneficiary is not affected. For example, section 2038 is applicable to a power reserved by the grantor of a trust to accumulate income or distribute it to A, and to distribute corpus to A, even though the remainder is vested in A or his estate, and no other person has any beneficial interest in the trust. However, only the value of an interest in property subject to a power to which section 2038 applies is included in the decedent's gross estate under section 2038.

Code § 2038 does not apply to the grantor's power as a fiduciary to make distributions using an ascertainable standard or to exercise various administrative powers. *Estate of Ford v. Commissioner*, 53 T.C. 114 (1969) (a reviewed case), *acq. in part* 1978-2 C.B. 2, *nonacq. in part* 1978-2 C.B. 3, *aff'd per curiam*, 450 F.2d 878 (2d Cir. 1971), held:

Respondent argues that the powers reserved to the trustee under the instant trust instrument are so broad as to require the inclusion of the principal of the trust in the decedent's gross estate pursuant to the provisions of sections 2036(a)(2)[6] and/or 2038(a)(1).[7] Petitioner contends that the reserved powers are limited by judicially enforceable external standards sufficient to place the trust property beyond the reach of these inclusionary provisions. We agree with the petitioner….

[6] [quoting Code § 2036(a)(2)]

[7] [quoting Code § 2038(a)(1)]

a. Invasion Power

Under the terms of the trust instrument, the grantor-trustee has the power to invade corpus for Edward's benefit "for the purpose of defraying expenses occasioned by illness, infirmity or disability, either mental or physical, or for his support, maintenance, education, welfare and happiness." In support of his position that the trustee herein was given unusually broad discretionary power over the trust property, respondent stresses the trustee's power as enumerated above to invade corpus for the "happiness" of the income beneficiary. Undoubtedly, the word "happiness" standing alone, or in conjunction with language exhorting the trustee to administer the trust liberally for the benefit of one beneficiary over another, does not provide an ascertainable standard enforceable in a court of equity. *Cf. Merchants Bank v. Commissioner*, 320 U.S. 256, 261-263 (1943). But that is not the case here.[8]

[8] The invasion provision in issue does contain a clause advising the trustee that he should "consider primarily the welfare" of the income beneficiary, and not "*unduly* conserve the principal for later distribution to him or others having contingent remainder interests." (Emphasis supplied.) However, this language is not nearly so sweeping as that involved in the *Merchants Bank* case cited above.

However, the respondent would have us ignore the fact that the foregoing language is circumscribed by the precondition that, when the trustee is satisfied that the income beneficiary is "in need of funds in excess of the income which may then be available," then he may invade principal to "relieve or contribute toward the relief of *any such need*." (Emphasis added.) Thus, the instrument in question places a fiduciary responsibility on the trustee to determine "need" before he may invade principal for any of the prescribed reasons, *i.e.*, for the "illness, infirmity, or disability, either mental or physical" or for the "support, maintenance, education, welfare and happiness" of the income beneficiary. In its usual sense, the term "need" is synonymous with "necessity" or "exigency," and denotes an "urgency" or a "pressing lack of something essential." *Webster's New Collegiate Dictionary* (7th ed. 1965), based on *Webster's New International Dictionary* (3d ed. 1961). There is no indication that the word "need," as used in the trust instrument, was intended to carry any other than its customary meaning.

By virtue of the presence of the term "happiness" in the trust instrument, respondent would have us conclude that the grantor-trustee herein had unbridled discretion to invade corpus upon the whim of the income beneficiary. To the contrary, we do not accord this single word such as talismanic effect. A word, such as "happiness," must be construed in the context in which it appears "because its meaning may be affected by the words it accompanies." *Estate of Marvin L. Pardee*, 49 T.C. 140, 144 (1967). Viewing the invasion provision in its entirety, we conclude that its emphasis on "need" delimits "happiness" as well as the other enumerated terms, and provides an external, objective standard enforceable against the grantor-trustee in a court of equity. *United States v. Powell*, 307 F.2d 821, 826-828 (C.A. 10, 1962). It is well settled that where the trust instrument contains such a standard, the grantor-trustee is not deemed to have retained sufficient dispositive discretion to activate the operative provisions of either section 2036 or section 2038. *Jennings v. Smith*, 161 F.2d 74, 77-78 (C.A. 2, 1947). *Estate of C. Dudley Wilson*, 13 T.C. 869, 872-873 (1949), affirmed per curiam 187 F.2d 145 (C.A. 3, 1951); and *Delancey v. United States*, 264 F. Supp. 904, 907 (W.D. Ark. 1967).

Moreover, an examination of the applicable State law[9] reveals that an aggrieved beneficiary[10] could indeed enforce his rights against an imprudent or wrongdoing trustee. There is an abundance of New York authority stating that a trustee owes a duty of equal loyalty to all beneficiaries. See for example: *Matter of Dickson's Estate*, 38 Misc.2d 678, 237 N.Y.S.2d 572) (N.Y. Co. Surr. Ct. 1963); *Matter of Heinrich's Will*, 195 Misc. 803, N.Y.S.2d 875 (Monroe Co. Surr. Ct. 1949); and *Matter of James' Estate*, 86 N.Y.S.2d 78, 89 (N.Y. Co. Surr. Ct. 1948). The language of the Court of Appeals of New York in *Matter of Hubbell's Will*, 302 N.Y. 246, 254, 97 N.E.2d 888, 891 (1951), reflects the position taken by the New York courts on this question:

[9] The 12th provision of the trust indenture provides that "questions with respect to the administration of the trust estate shall be governed by the laws of the State of New York."

[10] In this case the aggrieved beneficiary could be, in terms of lives in being, the grantor's daughter. The fact that she is only a contingent beneficiary would not deter a New York court from hearing her plea that the trust assets are being despoiled in contravention of the trust provisions. *Klein v. Klein*, 64 N.Y.S.2d 96, 98 (Sup. Ct. 1946), and the cases cited therein.

> In judging the conduct of trustees, the basic consideration is the fiduciary obligation which they owe to all of the beneficiaries whom they represent… "A trustee", this court said in *Meinhard v. Salmon*, … "is held to something stricter than the morals of the market place. Not honesty alone, but the punctilio of an honor the most sensitive, is then the standard of behavior. As to this there has developed a tradition that is unbending and inveterate. Uncompromising rigidity has been the attitude of courts of equity when petitioned to undermine the rule of undivided loyalty by the 'disintegrating erosion' of particular exceptions…. ." [Citations omitted.]

Finally, as we said in *Estate of Lillie Macmunn Stewart*, 52 T.C. 830 (1969), in discussing a similar issue arising under section 2055, "The thrust of New York law is further reflected in a statutory provision declaring void any provision exonerating a fiduciary 'from liability for failure to exercise reasonable care, diligence, and prudence.'" N.Y. Est., Powers & Trust Law, sec. 11-1.7(a)(1) (McKinney 1967). It is patent from the foregoing authority that should the grantor-trustee overstep the boundaries of his discretion to favor one beneficiary over another, the New York courts would compel his "obedience to the great principles of equity which are the life of every trust." *Carrier v. Carrier*, 226 N.Y. 114, 123 N.E. 135, 138 (1919).

Thus, although we deem the question to be a close one, we conclude that the grantor-trustee herein did not have untrammeled discretion to invade corpus at his own whim or that of the income beneficiary. Consequently, the presence of the invasion power in the trust indenture does not in our view operate to trigger the provisions of sections 2036(a)(2) and/or 2038(a)(1).

b. The Administrative and Management Powers

Respondent next invites our attention to the administrative and management powers conferred upon the trustee, particularly stressing the power to allocate receipts, losses, and expenditures of the trust between income and principal. This latter provision is commonly included in trust instruments "to give the trustee some discretion so that he would not be required to seek court guidance in making doubtful allocations." *Estate of Marvin L. Pardee*, *supra* at 146. See also *State Street Trust Co. v. United States*, 263 F.2d 635, 638 (C.A. 1, 1959). The trustee herein is directed to exercise this power in an "advantageous and equitable" manner. Of course, should he abuse his discretion by classifying an obvious item of principal as income, he would be subject to equity court review. *Cf. Frances Carroll Brown*, 30 T.C. 831, 836-837 (1958); and *Caroline Gove Doty*, 3 T.C. 1013, 1017 (1944), *affd.* 148 F.2d 503 (C.A. 1, 1945).

Similarly, we find nothing unusual in the remaining administrative and management powers entrusted to the fiduciary's controlled discretion. For instance, this Court has found on more than one occasion that the power to invest in "nonlegals" (*i.e.*, investments not classified under a particular State law or ruling of the pertinent court as legal investments for trust funds) and the power to sell or exchange the trust property do

> not amount to a right to designate who shall enjoy the trust property or a right to alter, amend, or revoke the terms of the trust. See *Estate of Ralph Budd*, 49 T.C. 468, 475-476 (1968); *Estate of James H. Graham*, 46 T.C. 415, 429 (1966); and the cases cited in these two opinions.
>
> Respondent also relies on the fourth provision of the trust instrument giving the grantor's daughter the right to terminate the trust at any time before the income beneficiary attains age 25 by filing a written instrument with the trustee. We are at a loss to understand, and respondent fails to explain, how this power, which is reserved to the daughter alone, can be attributed to the grantor. It is clear from a fair reading of the statutory provisions here involved that the right or power must be reserved for the exercise of the decedent-grantor himself, either alone or in conjunction with another, before such provisions become operative. Secs. 2036(a)(2) and 2038(a)(1), I.R.C. 1954.
>
> Finally, respondent cites *State Street Trust Co. v. United States*, *supra*, for the proposition that although none of the reserved powers in itself may require the result he seeks, when such powers are viewed as a whole, they lodge such broad discretionary authority in the grantor-trustee as to require inclusion of the trust property in his gross estate. Due to our conclusion that a New York court of equity could, and would if called upon, contain the trustee within the bounds of his equal fiduciary responsibility to every beneficiary under the trust, we do not feel that the exceptional rule of the *State Street* case here applies. See *Estate of Willard V. King*, 37 T.C. 973, 978 (1962). Thus it is our view that, under the facts of the instant case, the whole is no greater than the sum of its parts.
>
> In view of the foregoing, we hold that no portion of the trust property, or the income therefrom, is includable in the decedent's estate under the provisions of sections 2036(a)(2) and 2038(a)(1) of the 1954 Code.

Note that Code § 2036(a) applies to any property "of which the decedent has *at any time* made a transfer" (emphasis added) unless the transfer was a bona fide sale, etc. What happens if the decedent makes an outright gift – no direct or indirect strings attached - and the donee later decides to make arrangements that grants the decedent a power of appointment? The IRS might take the position that Code § 2038 requires only that the decedent hold such a power – not that the decedent retained such a power. If one spouse gives property to another and the donee spouse gives that particular property to a trust for the donor spouse,[7481] the IRS might argue that Code § 2038 applies, even if the IRS cannot prove a step transaction. For example, Rev. Rul. 70-348 involved the following facts and held:

> The donor transferred securities to his wife as custodian for their minor children under the Uniform Gifts to Minors Act. After serving in this capacity for several years, the wife resigned and the donor was appointed successor custodian. He was serving in that capacity at the time of his death.
>
> Section 2038 of the Code provides that the gross estate shall include the value of all property transferred by the decedent, in trust or otherwise, over which he holds at the date of his death, either alone or in conjunction with any other person, the power to alter, amend, revoke, or terminate the enjoyment of the beneficial interest. It is immaterial in

[7481] This may inform whether property is gifted to fund a trust or is sold, the latter as described in part III.B.2.i.xv Sale to Trust Created by Spouse: An Alternative Way to Have a Trust Benefitting Client.

> what capacity the power is exercisable or when or from what source the decedent acquired such power.
>
> Revenue Ruling 59-357, C.B. 1959-2, 212, at 214, holds that the value of property transferred to a minor under the Uniform Gifts to Minors Act, or other similar legislation, is includible in the gross estate of the donor for Federal estate tax purposes if the donor appoints himself custodian and dies while serving in that capacity and before the donee attains the age of 21 years. See also *Estate of Jennie Vanderpool v. Commissioner*, 54 T.C. No. 52 (1970). However, it is not necessary that the power to alter, amend, revoke, or terminate the enjoyment of the beneficial interests be retained by the donor at the time of the transfer. The mere possession thereof by the donor at the time of death is the factor that results in the inclusion of the value of the transferred property in his gross estate. Section 20.2038-1(a) of the Estate Tax Regulations.
>
> Accordingly, it is held that, since the decedent transferred shares of stock to his minor children under the Uniform Gifts to Minors Act and died holding these shares as successor custodian for such minor children, the value of the stock is includible in his gross estate under section 2038 of the Code.

Skifter, a 1972 Code § 2042 case that viewed Code § 2038 as relevant to analyzing Code § 2042 incidents of ownership, approached Code § 2038 as not applying when the transferor parted completely with the property and the trust was created totally independently from the decedent's prior ownership.[7482]

In furtherance of Reg. § 20.2038-1(a)(2), Letter Rulings 200919008, 200919009, and 200919010 held that the modification of an irrevocable trust by the settlor and all interested parties did not implicate Code § 2038.[7483] Letter Rulings 200247037 and 200303016 reached the same conclusion and – without any further analysis – also ruled that Code § 2036 did not apply.

Estate of Tully v. United States, 528 F.2d 1401 (Ct. Cl. 1976), held that the ability to cancel a death benefit by divorcing one's spouse does not generate Code § 2038(a)(1) inclusion. For other examples of this general idea, see part III.B.1.i Transfers with Contingencies Based on Acts of Independent Significance.

Reg. § 20.2038-1(c), "Transfers made before June 23, 1936," provides:

> Notwithstanding anything to the contrary in paragraphs (a) and (b) of this section, the value of an interest in property transferred by a decedent before June 23, 1936, is not included in his gross estate under section 2038 unless the power to alter, amend, revoke, or terminate was reserved at the time of the transfer. For purposes of this paragraph, the phrase "reserved at the time of the transfer" has reference to a power (arising either by the express terms of the instrument of transfer or by operation of law) to which the transfer was subject when made and which continued to the date of the decedent's death (see paragraph (b) of this section) to be exercisable by the decedent alone or by the decedent in conjunction with any other person or persons. The phrase

---

[7482] See text accompanying fn 4604 in part II.Q.4.i.ii.(a) Trust Ownership of Policy.
[7483] This is important in designing trusts under part II.H.2.b.ii Marital Estate Trust, as pointed out in fn 2048.

> also has reference to any understanding, express or implied, had in connection with the making of the transfer that the power would later be created or conferred.

Code § 2038(b), "Date of existence of power," provides:

> For purposes of this section, the power to alter, amend, revoke, or terminate shall be considered to exist on the date of the decedent's death even though the exercise of the power is subject to a precedent giving of notice or even though the alteration, amendment, revocation, or termination takes effect only on the expiration of a stated period after the exercise of the power, whether or not on or before the date of the decedent's death notice has been given or the power has been exercised. In such cases proper adjustment shall be made representing the interests which would have been excluded from the power if the decedent had lived, and for such purpose, if the notice has not been given or the power has not been exercised on or before the date of his death, such notice shall be considered to have been given, or the power exercised, on the date of his death.

Reg. § 20.2038-1(b), "Date of existence of power," essentially restates the first sentence of Code § 2036(b) and then provides:

> In determining the value of the gross estate in such cases, the full value of the property transferred subject to the power is discounted for the period required to elapse between the date of the decedent's death and the date upon which the alteration, amendment, revocation, or termination could take effect. In this connection, see especially § 20.2031-7. However, section 2038 is not applicable to a power the exercise of which was subject to a contingency beyond the decedent's control which did not occur before his death (*e.g.*, the death of another person during the decedent's life). See, however, section 2036(a)(2) for the inclusion of property in the decedent's gross estate on account of such a power.

A powerful positive application of Code § 2038 is in part II.H.2.b.ii Marital Estate Trust, allowing residents of common law states to obtain a full basis step-up of all of a couple's property in the trust when the first spouse dies.[7484]

In *Estate of Reed v. U.S.*, 36 A.F.T.R.2d 75-6413 (M.D. Fla. 1975), the decedent gave stock to a custodianship for a child under the Uniform Gifts to Minors Act. After the child reached 21 and therefore owned the stock outright, the child created a trust and named the decedent as a trustee. In holding that the trust was not includible in the decedent's estate under Code § 2038, the court listed the following legal conclusions:

> (5.) The outcome of the issue raised in this case is controlled by the meaning and scope of section 2038(a)(1) as amended in 1936 to include a provision that applicability of the statutory provision is to be determined "without regard to when or from what source the decedent acquired" the power or control contemplated by the statute.
>
> (6.) The Court finds as a matter of law that section 2038(a)(1), aforesaid, is intended and thus does apply only where the power or control contemplated therein derives either from a direct reservation retained by the decedent at the time of the transfer from him

[7484] See fn 2048.

of the property contemplated or from the conditions of the original transfer from the decedent.

(7.) In *White v. Poor*, 296 U.S. 98 (1935), the United States Supreme Court held a transfer from a decedent to a trust created by the decedent, under which the decedent was not a trustee and had no power for a time, but subsequently under which the decedent was serving as a trustee at her death, was not includible in the decedent's tax estate notwithstanding the predecessor statute to section 2038(a)(1) [the predecessor statute to section 2038(a)(1) now in essence appears as section 2038(a)(2) of the 1954 Code]. In the *White v. Poor* situation, the decedent's power or control enjoyed at death grew out of her original transfer in trust or was derived from the conditions of the original transfer from the decedent. Concluding that the Court had misapprehended its intent, Congress amended the statute to its form now appearing as section 2038(a)(1).

(8.) At all times prior and subsequent to the statutory amendment of 1936, now appearing in section 2038(a)(1), the provision relating to revocable transfers has apparently been construed and applied to bring into the gross estate of a transferor (for Federal estate tax purposes) the values of property interests over which the transferor retained or reserved certain powers or control at the time of his original transfer. Section 2038(a)(1) thus seems to be designed to apply to situations where the transferor-decedent himself sets the machinery in motion that purposefully allows fiduciary powers over the property interest to subsequently return to him, such as by an incomplete transfer. *Estate of Skifter v. Commissioner of Internal Revenue*, 468 F.2d 699, 703-705 (2d Cir. 1972). Section 2038(a)(1) does not seem to be intended to reach the value of a property interest of which the decedent, prior to his death, made a complete, absolute disposition simply because, at the time of his death, by a totally unrelated and fortuitous reconveyance, he had some degree of fiduciary power or control over the interest. *Estate of Lumpkin v. Commissioner*, 474 F.2d 1092, 1097, 73-1 USTC ¶12,909 (5th Cir. 1973); *Estate of Skifter*, *supra*; *Howard v. United States*, 125 F.2d 986, 42-1 USTC ¶10,134 (5th Cir. 1942); *Rose v. United States*, 511 F.2d 259 (5th Cir. April 11, 1975).

(9.) The Court finds as a matter of law that there should not be included in the gross estate (for Federal estate tax purposes) of the decedent herein any part of the 384 shares of A-B Distributors, Inc., stock representing Marilynn Reed's stock interest in that corporation some or all of which may have been held as assets of the trust under agreement dated May 27, 1964, under which the decedent was a trustee at his death.

For other Code § 2038 analysis, see parts II.H.2.c QTIP Trusts - Code § 2519 Trap and II.Q.4.i.ii.(a) Trust Ownership of Policy. For a variety of strategies relating to basis step-up, see Bramwell & Madden, "Toggling Gross Estate Inclusion On and Off: A Powerful Strategy," *Estate Planning Journal* (3/2017), which describes strategies relevant to parts:

- II.H.2.c QTIP Trusts - Code § 2519 Trap
- III.C Code § 2036
- III.D Code § 2038.

III.E. Fairness Within Families; Valuation

A succession plan can be one of the most important factors contributing to the long-term success of a family business, yet the importance of these plans is often overlooked until it is too late. In many cases, the plans are technically sufficient, but the drafters have failed to consider the relationships that drive the business itself – the family.[7485] While the technical issues underlying family business succession plans are usually similar from case to case, the family issues are unique in every case. No two families are the same, and successful business succession plans consider those differences. The stakeholders in the business have to be treated fairly for the plan to succeed; thus, the plan has to consider the interests of family, non-family owners, and the employees.

The starting point for any business succession plan is determining an accurate valuation of the business. If the plan involves keeping the business in the family, it is important to have an accurate determination of its value in order to allocate wealth fairly among family members involved in the business and those who are not involved. Or, if the plan involves some sort of sale, accurate valuation will ensure the sellers receive fair compensation for their interests. And, regardless of whether the business stays in the family or is sold, an accurate valuation can help parties estimate a significant expense of the succession process – the transfer tax cost of the succession. See part II.H.3 Valuation Discounts – Friend or Enemy.

The general principle underlying business valuation is the “willing buyer – willing seller test”. Regulations define fair market value in the context of estate transfers as “the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts.”[7486] The test is easy to apply when dealing with publicly traded stock - one simply takes the mean between the highest and lowest quoted sales prices on the valuation date. In the context of non-publicly traded securities, ready-made market for the stocks exists, so valuation is more challenging. The Code states that the value of such stocks should be determined by examining numerous factors, including the value of stocks of corporations “engaged in the same or a similar line of business which are listed on an exchange.”[7487] Regulations expand on the factors to be considered, mentioning the company’s net worth, prospective earning power and dividend paying capacity and list other relevant factors, including the good will of the business, the economic outlook in a particular industry, the company’s position in the industry, the degree of control of the business represented by the block of stock to be valued, and the value of stock of other corporations engaged in similar lines of business which are listed on a stock exchange.[7488] Revenue Ruling 59-60 mirrors the Regulations and lists eight fundamental factors that should be considered in valuation cases: the nature of the business and the history of the enterprise; the general economic outlook and the business’ specific industry outlook; the book value of the stock and the company’s financial condition; the company’s earning capacity; the company’s dividend paying capacity; goodwill; sales of the stock and the size of the block of stock to be valued; and the market price of companies in similar lines of business with actively traded stock.

[7485] The discussion in this section comes in large part from some materials provided by James D. Spratt, Jr. of Djuric Spratt (https://djuricspratt.com/bio/jim-spratt), who is not responsible for whatever use this author made of his materials.

[7488] Reg. §20.2031-2(f)(2) and §25.2512-2(f)(2).

If the business has a contingent claim against it, consider making a protective claim for refund to deduct the amount actually paid.[7489]

In applying these factors, three methods are commonly used in business valuations: the net asset method, the market value method, and the earnings method. These methods are often used in conjunction with one another to come up with the best possible valuation of the business.

The net asset method (or the "underlying asset" method) is based on the accounting concept of net book value. Net book value of a company is the historical cost of the company's assets less its liabilities. Under this method, each asset and liability must be analyzed to determine if the historical balance sheet treatment needs to be restated. This approach is not always accurate when valuing operating companies, since the method does not consider the company's goodwill, so this method is usually considered to give a picture of the minimum value of a company and may be useful where a company is in financial distress with liquidation in its future. However, this method can be quite useful in valuing companies with little goodwill, like holding companies.

The market value method involves an analysis of the value of similar, publicly traded companies or of similar companies that have been recently acquired in private transactions. The comparison values are based on stock prices or transaction prices, which are then divided by a specific earnings parameter or balance sheet parameter. That multiple is then applied to the subject company's same parameter to get an estimated company value. Because the valuation's accuracy depends on the level of similarity between the two companies, this valuation method becomes less appropriate as the subject company becomes more unique and will be hard to apply in many cases.

The earnings method bases valuation on a company's cash flow capacity and earnings to determine the present value of the future economic benefits the company will bring to its investors. This valuation can be determined two ways, either through the discounted cash flow method or through the capitalization of earnings method. When a company has a past earnings stream that is not expected to indicate future earnings prospects, the discounted cash flow method is used. This entails projecting the business' future cash flows and discounting them to present value using an appropriate discount rate, usually the weighted average cost of capital (WACC), the rate of return the company's capital providers require on their investment. When a company has consistent historical earnings and expects that trend to continue, the capitalization of earnings method is often used. This method entails multiplying a normalized level of earnings by a capitalization factor, the inverse of the company's WACC.

Once the company's value has been established using any combination of the valuation methods, the value of the particular interest in the company has to be determined. In many cases, the value of the particular business interest will not be the proportionate share of the entire business value. Instead, adjustments often need to be made to get an accurate value of the interest. For example, a 51% interest may be just two percentage points larger than a 49% interest, but the 51% interest has more than just a two percentage point value advantage over the 49% interest, since the 51% interest is a controlling interest. Thus, controlling interests often are increased by a control premium, while minority interests are decreased by a minority interest discount. Other examples of valuation adjustments include a key employee discount, a non-voting stock discount or a blockage discount. When making these adjustments it is

[7489] Notice 2009-84.

important to consider whether the discount has already been taken into consideration in determining the company value as a whole. If it has, then the discount should be ignored for the particular business interest valuation. For example, a controlling interest valued using earnings will be based on the company's dividend paying capacity. On the other hand, a minority interest tends to be valued using dividends paid, since a holder of a minority interest may have difficulty forcing dividends to be paid and keeping compensation reasonable.

Restrictive agreements can also play a role in determining interest values. Buy-sell agreements, by definition, involve setting a price at which a particular business interest will be purchased or redeemed. Price can be set a number of ways: by using a formula, by agreement, or by an appraisal procedure.

The formula method usually involves applying some multiple to asset value or earnings, and the decision on whether to use asset value or earnings is usually dependent upon the particular business industry. The multiple applied to that factor will vary depending upon the company and the general business cycle, so finding the appropriate multiple can be challenging. Some of this difficulty can be eased if the company is similar to publicly traded companies, that would give the valuation expert a guideline in determining the multiple.

The agreed value method is exactly what one would assume – it involves the business owners agreeing to a buy-sell purchase price. The most important aspect of this method is the certificate of value itself. Owners must make sure the certificate is updated on a regular basis to ensure the agreed upon price is in fact fair. It is best if the agreement itself provides for an alternate method of valuation if the certificate is not kept up to date. Another potential problem with this approach comes into play where the relative bargaining power of the owners is not equal. In such a case, this method can lead to inequitable results.

The appraisal procedure is usually the most fair method of valuation, but many times it is not used because it can be very expensive. Additionally, because the method requires many judgment calls, no two appraisers are likely to come to the same conclusion about the company's value. Thus, results can be very uncertain, and a company and its owners need to be prepared to pay for multiple appraisals if the interested parties are not satisfied with the initial results.

Two other issues also need to be addressed in buy-sell agreements: whether the interest will be valued at fair market value or fair value, and whether contingent payments will be an option. These issues both address fairness to the parties involved in the transaction.[7490]

Fair value can be the appropriate measure to be used in buy-sell agreements. The goal of fair value is to reach a fair result for the party whose interest is being cashed out involuntarily. On the other hand, fair market value derives from the "willing buyer, willing seller" test, and involves the previously discussed valuation adjustments. But many business interest disposals are triggered by involuntary events, like a family death, meaning the seller is often not the "willing seller" referred to in the fair market value context and applying valuation adjustments could lead to inequitable results. A countervailing argument is that cashing out an owner disrupts the cash flow of a business or its owners, so paying fair market value provides some relief from that disruption. Ultimately, one might consider whether advance planning can provide the needed

[7490] See Cavendish and Kammerer, Determining the Fair Value of Minority Ownership Interests in Closely Held Corporations: Are Discounts for Lack of Control and Lack of Marketability Applicable? *The Florida Bar Journal*, Vol. 82, No. 2, at 10 (2/2008).

cash flow, whether the party who controls the event or the party whose wrongful conduct creates the event should bear the consequences, and who should bear the burden of events that are beyond everyone's control.

A buy-sell agreement also should include a contingent payment provision. Such a provision will come into play when a company undertakes a sale or merger after the triggering event of the buy-sell agreement. In many cases, the sale or merger will be based on a significantly different value than the one used in the buy-sell agreement. If this happens, the party who is bought out in the buy-sell agreement could end up receiving inequitable compensation for his interest. A contingent payment provision can correct this inequity by providing for additional consideration to be paid to those whose interests were retired under the buy-sell agreement within a certain amount of time before the sale or merger.

The valuation issue is so important in family business settings because of personal issues arising within a family business. These businesses' success can depend on how well the older generation plans and how clearly they delineate those plans to the younger generation. This is especially critical when family members actively participate in the business. It is highly unlikely that all of those members involved in the business participate equally in the success of the business; and, when a patriarch dies, arguments may quickly break out about those contributions. If the business owner does not deal with these issues, the business may fail. Family members involved in the business should take over, and other family members should receive other bequests. To divide assets fairly among family members, one has to know the assets' value. In funding bequests, a beneficiary who receives an interest to which discounts apply might argue strongly that they will bear the costs of any situation that requires agreements that are not easily achieved,[7491] whereas the other beneficiaries might argue that merely getting along with others allows the recipient to attain full value and the recipient should not be able to assume that bad things will happen and therefore should be charged with a fair value approach. Non-family owners and employees are also critical to a company's success, and their needs are important to address so that they will continue to be productive.

In addition to the valuation process discussed previously, consider expansion of the professional and business team, employment agreements, compensation, life insurance, ways to reduce estate taxes, capital structure, voting control, and communication.

When developing a business succession plan, professionals might help deal with family dynamics. These professionals usually have training areas like cultural anthropology, psychology or organizational dynamics and can help the business owner prepare for situations he or she would otherwise fail to see coming.

A successful succession plan may also integrate increased depth at the management level. Common sense would tell you that a company is more likely to succeed when the managers taking over have business experience, and succession planning should take that into consideration. It can also be helpful to incorporate outside directors into the board of directors. These "neutral" parties can not only help family members make smart business decisions after the patriarch's death, but can also help reassure the employees. In addition to having non-family board members, it may also be helpful to have a board of advisors. These advisors would not assume any fiduciary duty to the company, but can provide an impartial review of the

[7491] See *Zoldan v. Zohlman*, 11 So.3d 982 (Fla. App. 3rd D. 2009) (ACTEC Fellow David Pratt testified for the winning side that discounts applied).

company's operations and can be a significant aide to new family members or outside management who take over the company after the patriarch's death.

Employment agreements can help ease the anxieties surrounding their futures after a business owner's death. Key employees may be concerned about being run out or demoted by new family members who take over the business. Employment agreements can help to lessen these concerns by including protection from "without cause" terminations and by allowing for compensation if the employee resigns for "good reason." These agreements may also include a clause similar to a "retention bonus" that gives the employee additional compensation for staying on after the death of an owner to help the business complete the transition period.[7492]

In addition to addressing compensation in employment agreements, a succession plan should address compensation decisions. All parties involved need to know and understand who will make compensation decisions in the new management scheme and how abuses of the compensation system will be prevented.

Life insurance can help with liquidity issues that may arise at the time of an owner's death in two ways. First, the proceeds can assist in achieving fairness in the estate distribution process if the estate does not hold sufficient liquid assets. The proceeds can provide assets for family members who are not involved in the family business (or can provide liquidity for those who are involved so that they have a cushion if the business declines), while the business itself passes to interested family members. Additionally, if the estate does hold liquid assets, then the proceeds can provide liquidity for the business itself in the time of transition. Finally, life insurance payable to the company upon the death of key management can be used to help the company in retaining or recruiting management during the transition.

A business succession plan should include estate planning strategies to help preserve family wealth, thereby increasing the likelihood of continued success of the business. Some of these strategies are discussed elsewhere in these materials.

A business' capital structure can also be arranged to ensure fairness among owners. A plan needs to consider all owners' needs and determine what business structure gives the company and owners the most flexibility in meeting those needs. In addition, a business plan can use capital structure to segregate assets for estate planning purposes. For example, an LLC can be created to hold real estate, which it can lease to the operating company in exchange for rent. The real estate LLC can provide rental income to family members who are not active in the business. Long-term leases with inflation adjustments can provide stability for all interested parties.

Voting control allocation can also assist in the success of a fair business succession plan. A balance needs to be struck between giving the active family members enough power to fulfill their responsibilities and not giving them too much authority so as to enable abuse of power situations. A voting/non-voting interest dichotomy or a limited partnership structure can achieve this balance.[7493] In both cases, active family members can take control of the company,

---

[7492] Deferred compensation agreements are subject to Code §409A (added by the American Jobs Creation Act of 2004), which accelerates an employee's recognition of income and imposes a 20% penalty when such agreements do not satisfy its requirements. Payments contingent on future performance of services frequently satisfy its requirements.

[7493] State law often restricts a plan's ability to dictate corporate directors' actions. LLC statutes provide much more flexibility. Statutory close corporation rules can provide a fair amount of flexibility if a corporate form is essential; see fn. 1138.

regardless of how much of the company they actually own themselves. Family members who are not in control also need rights that give them some input into major company issues or at least some way to get out of the company if they are not satisfied with how management is running it. This could be accomplished by setting a level of performance of management, and if management falls below that performance level, then minority or non-controlling members would have the right to cash out their interest.

Essentially all of these issues come together under one theme – communication. Business owners need to address as many potential issues as they can and make sure all interested parties know and understand how those issues are to be resolved. This can be achieved through a clearly delineated business succession plan that is communicated to family members, non-family owners, key employees and the board of directors or advisors. Finally, when the plan involves keeping the business in the family under the control of certain family members, the client needs to make sure the family knows the reasoning behind the decisions, to minimize future conflict.

III.F. Hypothetical

III.F.1. Facts

Harvey Decedent died in 2002, leaving four children by his first marriage and a second wife, Wanda.[7494] All four children (Angie, Bob, Cindy, and Dan) are in their late thirties, and each has two children of his/her own. Harvey was diligent during his life in moving assets to his children, so that at his death all his business assets were held in family entities in which his children participated. Following estate administration virtually all the estate's assets ended up in a QTIP for Wanda with the remainder to Harvey's descendants per stirpes.

A) The Trust. The QTIP holds assets which include the following:

1) Approximately $5,000,000 in marketable securities.

2) An 80% interest in Cow Town LLC, an entity (taxable as a partnership) that owns the real estate and improvements of Cow Town Hotel, a well-known and valuable but aging urban hotel in Texas. The real estate is valued at $10,000,000 but is encumbered by a $4,000,000 mortgage that currently bears interest at 5% per annum. Payments are currently interest only for the next 3 years, until it balloons. The Hotel earns approximately $1.5 million per year in taxable income after management fees, but has been distributing only 50% of that amount to its members, the balance going to badly needed capital improvements. The remaining 20% of the LLC is owned in equal shares by the four children, two of whom are desperate for cash due to their wastrel ways and two of whom are the key employees of Cow Town, Inc., discussed below.

3) A 40% interest in Cow Town, Inc., an S corporation established by Harvey to manage the Hotel and, during his life, to provide cash flow to his kids from Hotel operations. The corporation has no assets other than a management agreement on the hotel which has 2 years to run before it must be renegotiated. The remaining 60% of the stock is held 15% each by the four children. To date the contract calls for a management fee equal to 50% of the Hotel's "profit," an amount deemed by dad to be equal to taxable

[7494] This hypothetical is based on a presentation done by Steve Salley, Jonathan Lander, Steve Kirkpatrick, and the author at the 2004 ABA RPPT/Tax Joint Fall Meeting.

income. Thus, the corporation has enjoyed $1,500,000/year in management fees, which after salaries and expenses of $500,000 annually, was distributed pro rata to the shareholders. The two key employees of the corporation and, indirectly, of the Hotel are Angie and Bob Decedent who have received the same $100,000/year salary since Harvey died. They complain about doing all the work for the benefit of their brother, sister, and Wanda and are demanding significant salary concessions to continue managing the hotel.

B) The Trustees. The QTIP has three trustees, Sam Tortte (Harvey's long-time lawyer), Tom Penny (Harvey's CPA), and FiDuc., a nationally known commercial trust company first nominated to serve under Harvey's will with no prior experience with the family.

C) The Problems.

1) The mortgage holder on Cow Town LLC has offered to extend the mortgage to a 15-year term with straight amortization and a 4.5% interest rate but only if the Trust, as the largest equity holder and source of liquidity, guarantees the mortgage.

2) FiDuc is requesting that the management agreement and the compensation of Angie and Bob be reviewed by an outside "expert" to determine reasonability; but the four kids threaten to stymie any efforts to change the ownership or cash flow for the benefit of Wanda, whom they believe is more than well taken care of from the trust's other assets.

3) The hotel is desperately in need of a new roof at a cost of $1,000,000, which will either have to come from the hotel's "profit" or a second mortgage. A second mortgage will require additional collateral beyond the guarantee of the Trust, including, perhaps, a pledge of a portion of the Trust's marketable securities.

4) FiDuc has demanded that any collateral or guarantee by the trust of Hotel debt must be accompanied by a loan agreement that assures the Trust control of the Board of Directors of Cow Town Inc. and the status of "sole managing member" of the LLC.

The trust is domiciled in a state that has adopted the most recent uniform trust-related laws. The trustees desire a "roadmap" of issues to be addressed in the upcoming negotiations.

III.F.2. Trust Accounting and Taxation

The QTIP trust holds an 80% interest in a partnership. As a QTIP trust, it must distribute all of its income. The partnership earns approximately $1.5 million in the current year, but distributes only 50% of that amount to its partners. Thus, the trust receives a K-1 with $1,200,000 of income (80% of $1,500,000), but receives only $600,000 in cash (50% of $1,200,000). Initially, one might think the entire $600,000 is distributable net income and must be distributed to the beneficiary, because under Uniform Principal and Income Act § 401, a trustee must allocate money received from an entity to income.[7495] However, if the trust does distribute the entire

[7495] See also RSMo §469.423.2. Uniform Principal and Income Act § 401 is found at http://www.uniformlaws.org/Act.aspx?title=Principal and Income Amendments (2008) and provides:

(a) In this section, "entity" means a corporation, partnership, limited liability company, regulated investment company, real estate investment trust, common trust fund, or any other organization in which a trustee has an interest other than a trust or estate to which amount, it will be unable to pay the tax on the other $600,000 of "phantom" taxable income from the K-1 that it could not distribute. So, the trust must retain some of the cash it received from the partnership. This withholding is supported by the language of § 505(c) of the Uniform Principal and Income Act,[7496] which states that taxes required to be paid by a trustee on a trust's share of an entity's taxable income are to be paid proportionately from income and principal based on the extent that receipts from the entity are allocated to each.

In this hypothetical, all $600,000 of cash received was properly allocated to income, so 100% of the tax due on the trust taxable income must come out of income. Thus, the trustee has to do a circular calculation to determine how much of the $600,000 must be withheld in order to cover the tax on that amount.

Assuming a 40% combined federal and state income tax rate, the trust will end up withholding $400,000 of the cash and distributing $200,000 to the beneficiary. This leaves the trust with $1,000,000 of taxable income ($1,200,000 K-1 income minus the $200,000 distribution deduction), resulting in a $400,000 tax due, which the trust will be able to pay with the $400,000 cash it retained. The beneficiary will receive $200,000 and pay $80,000 tax on that amount, leaving the beneficiary with $120,000.

Put another way, the K-1 income was $1,200,000, requiring $480,000 of tax to be paid by somebody, and $120,000 to be retained by the income beneficiary after tax ($600,000 cash distribution from the partnership minus $480,000 tax paid). Of the $480,000 tax to be paid, $400,000 is paid by the trust and $80,000 by the beneficiary (out of the beneficiary's $200,000 distribution).

Section 402 applies, a business or activity to which Section 403 applies, or an asset-backed security to which Section 415 applies.

(b) Except as otherwise provided in this section, a trustee shall allocate to income money received from an entity.

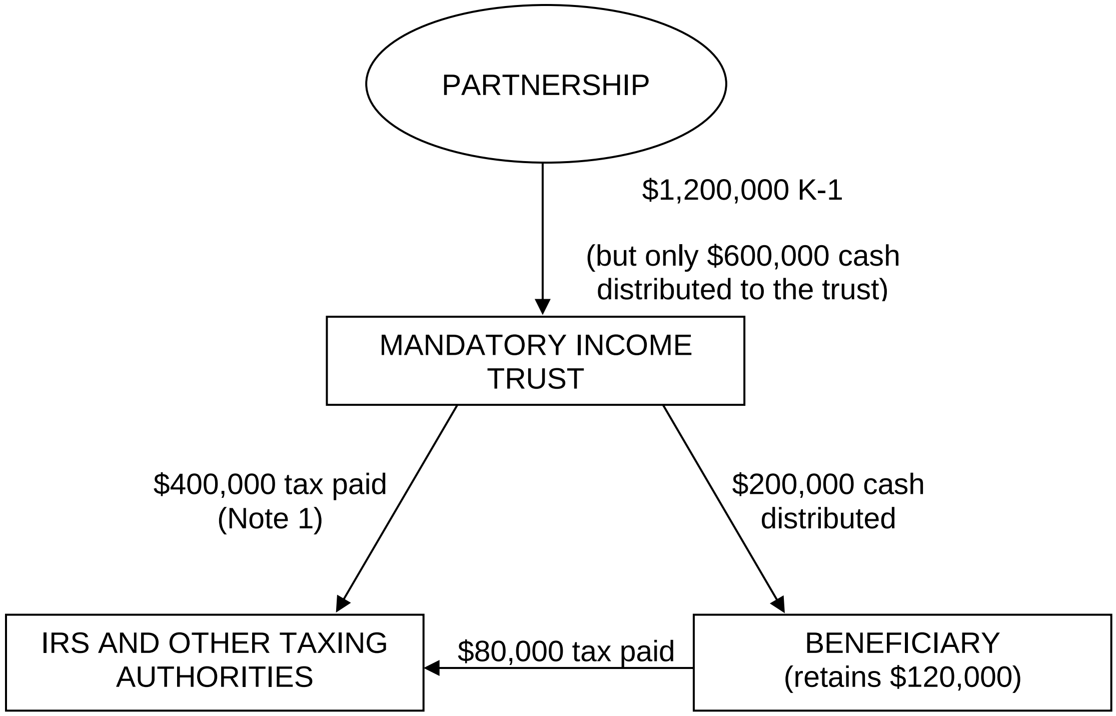
(c) A trustee shall allocate the following receipts from an entity to principal:
  - (1) property other than money;
  - (2) money received in one distribution or a series of related distributions in exchange for part or all of a trust's interest in the entity;
  - (3) money received in total or partial liquidation of the entity; and
  - (4) money received from an entity that is a regulated investment company or a real estate investment trust if the money distributed is a capital gain dividend for federal income tax purposes.

(d) Money is received in partial liquidation:
  - (1) to the extent that the entity, at or near the time of a distribution, indicates that it is a distribution in partial liquidation; or
  - (2) if the total amount of money and property received in a distribution or series of related distributions is greater than 20 percent of the entity's gross assets, as shown by the entity's year-end financial statements immediately preceding the initial receipt.

(e) Money is not received in partial liquidation, nor may it be taken into account under subsection (d)(2), to the extent that it does not exceed the amount of income tax that a trustee or beneficiary must pay on taxable income of the entity that distributes the money.

(f) A trustee may rely upon a statement made by an entity about the source or character of a distribution if the statement is made at or near the time of distribution by the entity's board of directors or other person or group of persons authorized to exercise powers to pay money or transfer property comparable to those of a corporation's board of directors.

[7496] See part III.A.4 Trust Accounting Income Regarding Business Interests. See also RSMo § 469.459.3.



Note 1: $1,200,000 K-1 income minus $200,000 income distribution deduction equals $1,000,000 taxable income. This example assumes a combined federal and state tax rate of 40%.
